Whether we endorse prize-fighting or not, it is nevertheless interesting to know the manner by which these men arrive at such physical perfection.

Stuart's Dyspepsia Tablets, the present champion heavy weight of the world, and his gallant opponent, Tom Sharkey, in the greatest fightable encounter that has ever taken place, both pursued much the same course of training, and the first and most important part of this training was to get the stomach in condition, and keep the digestion absolutely perfect, so that every muscle and nerve would be at its highest condition.

This was not done by a secret patent medicine, but by one of those great faithfuls used a well-known natural digestive tablet, sold by druggists under name of Stuart's Dyspepsia Tablets and composed of two digestive ferments which every stomach requires for healthy digestion.

"Stuart's Dyspepsia Tablets," says Stuart, "strengthen the stomach, and I become perfect digestion. They keep a man in the best of condition." Signed, James J. Stuart, champion of the world.

The greatest fighter, Sharkey, says: "Stuart's Dyspepsia Tablets relieve all discomfort after eating. They keep the stomach and restore it to a healthy condition. I heartily recommend them." Signed, Tom Sharkey.

The advantage of the daily use of Stuart's Dyspepsia Tablets is that they keep the people well and ward off sickness, and are equally valuable for well persons as for the dyspeptic. Another advantage is that Stuart's Tablets contain no narcotics, or poisons. Any stomach, but simply digestive ferments which are found in every healthy stomach, and when nature is imperfect it is because the stomach lacks some of these substances and Stuart's Dyspepsia Tablets supply it.

They are not cheap medicine, but a perfectly safe and efficient digestive, and the demand for them is greater than the sale of all other so-called dyspepsia cures combined. So remedy could possibly reach such a place in public esteem except as the result of positive merit.

Full sized packages are sold by all druggists at large, and the best hotel you can possibly turn to to take a Stuart's Tablet after each meal. They make weak stomachs strong and keep strong stomachs vigorous.

ASTHMA

FREE. If you suffer from any form of Asthma we want to send you free by mail, prepaid, a bottle of the famous Kola Plant Compound. It is Nature's Sure Remedy Cure for the disease, and we guarantee that it will forever stop all your suffering. EARN A BICYCLE Distributing Catalogue free on. Have earned a wheel last year. Free Particulars. Is even more liberal. Write at once for our largest List and special offer. Address Dept. 98 M. MEAD CYCLE CO., Chicago.

IMPROVED BREATHING TUBE

Unequalled for prevention and cure of throat and lung diseases, also for strengthening voice. Sent post-free including ever published on the great value of lung gymnastics, by Dr. Patchen. Send 2-cent stamp for testimonials to O. HYGIENIC SUPPLY CO., BOSTON, MASS.

COE'S ECZEMA CURE \$1 at druggists. See box of us. Coe Chem. Co., Cleveland, O.

Readers of THE LITERARY DIGEST are asked to mention the publication when

Tuesday, February 17.

—The British under General Wood seize Zoutpans Drift; the Boers make some successful flank attacks near Rensburg.

—Conditions in Kentucky remain quiet; both sides apply to the courts for injunctions.

—At the anti-trust conference in Chicago, socialistic speeches are made by ex-Governor Altgelt, Mayor Jones, ex-Attorney-General Monnett, etc.

—Susan B. Anthony retires from the presidency of the National Woman's Suffrage Association, and Mrs. Carrie Chapman Catt is elected her successor.

—Congressman Charles A. Chickering, of Copenhagen, N. Y., dies in New York City.

Wednesday, February 18.

—Lord Roberts's army enters the Orange Free State; General French with a cavalry brigade moves forward to the Modder River and captures five Boer laagers.

—Ex-Consul Macrum makes a public statement in Washington to the effect that his mails had been tampered with and delayed by British authorities in South Africa.

—Judge Taft, in the United States circuit court, refuses to grant the injunction requested by Governor Taylor of Kentucky.

—The Anti-Trust League at Chicago adjourns, after passing a resolution declaring for government ownership of railroads and direct legislation.

Thursday, February 19.

—Fighting takes place at many points; the Boers under General Buller inflict severe loss on a party of laagers.

—The British House of Commons adopts the Government's military scheme by a vote of 292 to 14.

—A severe engagement with Filipinos, resulting in their repulse, takes place in Ilocos, Luzon.

—Ex-Consul Macrum's statements are discredited in Washington; it is said that he never reported that his official letters had been tampered with.

—Sensational testimony in the Clark investigation indicates that attempts were made to bribe Justice Hunt and Attorney-General Nolan, of Montana.

—There is a clash in Kentucky. State prison officials recognizing a pardon by Buchanan, but not by Taylor.

Friday, February 20.

—General French, commanding the cavalry division of the British army, raises the siege of Kimberley; the Boer army under General Cronje abandon their trenches and retreat toward Bloemfontein.

—A strong expedition against the Filipinos, under Generals Bates and Hall, leaves Manila.

—Ratifications of the new Samoan Treaty are exchanged simultaneously in Washington, London, and Berlin.

—A lengthy discussion of the Philippine question takes place in the Senate, and the meeting of the Cabinet is chiefly devoted to the instructions that will be given the new commission.

—Roland B. Molineux, in the famous murder trial, is sentenced to death by Recorder Goff.

Saturday, February 21.

—General Cronje's army is reported to be in full retreat, with General Kelly-Kenny shelling his rear-guard; the Boers win a small victory near Rensburg, in Cape Colony.

—General Sir Charles Warren is elected to Parliament for the Newark Division of Nottinghamshire.

—The report of Mr. Hepburn on his Nicaragua Canal bill is made public.

—Senator Clark, of Montana, appears as a witness before the committee on privileges and elections, and denies all the charges of bribery which have been made against him.

—The South Carolina legislature votes down a resolution of sympathy with the Boers.

Sunday, February 22.

—The Boer retreat continues to be harassed by Kelly-Kenny; General Buller begins his fourth advance toward Ladysmith; a British steamer, suspected of carrying contraband, is seized by a British gunboat in Delagoa Bay.

—A joint resolution adopted by the Democratic legislature at Louisville adjourns the body to meet at Frankfort on Monday.

—At the Central Federated Union in New York, delegates from Puerto Rico speak of the wrongs inflicted upon Puerto Rican workingmen.

—A heavy snow-storm takes place in the Eastern States.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Above is our new 1912 style genuine Square Quaker Cabinet as it actually appears.

WHAT'S THE DIFFERENCE

Our New 1912 Style Square Quaker Folding Turkish Bath Cabinet

is not a cheap, shoddy, flimsy affair, but is GUARANTEED TO BE THE BEST OF ALL CABINETS AT ANY PRICE, OR YOUR MONEY CHEERFULLY REFUNDED.

It has a Real Door—opening wide, on hinges, not a bag to pull on over head, or a hole to crawl through. It has a strong, rigid, galv. steel frame. Covering best, antiseptic, hygiene cloth, rubber lined. Our Cabinet does not rest on the shoulders, nor pull on over head. No woodwork to rot, warp, crack or pull apart. A wooden frame for a Cabinet would be about as valuable as a wooden stove. Our Cabinet is large and roomy. Knees, arms and legs do not touch the sides. Plenty of room for hot foot bath and to sponge, towel and cool the body while inside. Has Top Curtains to open for cooling off; in fact, all the latest improvements. Will last twenty years.

TO OPERATE simply open door, step in, sit down. (All done in one minute). Bathe, open top curtains, cool off perfectly, step out. Only perfect Cabinet made. Folds flat in 1 inch space. Weighs but 10 lbs. Easily carried.

RECOMMENDED BY OVER 1,000,000 HAPPY USERS—

such eminent people as Alice B. Stockham, M. D.; Chicago, Editor of "Tokology"; Congressman John J. Latta; Louis Morrison; Mrs. Kendrick, Prin. Vassar College; Rt. Rev. Bishop J. L. Spaulding; Rev. C. M. Keith, Editor "Holiness Advocate"; K. M. S. Mayhew, M. D.; Pres. Woman's Club, Washington, D. C.; Edward Reschert, M. D. of Univ. of Penna.; Senator S. McCurrell and thousands of others.

HOT QUAKER BATHS BENEFIT EVERY MAN, WOMAN AND CHILD.

Open the 4,000,000 pores of the skin, sweat out all the poisons in the blood, which if retained, over-work the heart, lungs, liver and kidneys. Make clear skin, bright eyes, keeps you strong, vigorous and healthy. Prevents Colds, La Grippe, Fevers, consumption, and all diseases.

WE POSITIVELY GUARANTEE RESULTS.

Our medicated bath treatment will cure Nervous Troubles, Debility, Weakness, Sleeplessness, Neuritis, Aches, Pains, Colds, La Grippe, Obesity, and Cures Rheumatism. (We offer \$50 reward for a case that cannot be relieved). Cures Headaches, Gout, Sciatica, Piles, Dropsy, Diabetes, Indigestion, all blood, skin, liver, stomach and kidney troubles. Not only cures, but prevents all ailments peculiar to ladies. With the Cabinet, if desired, is a Head and Complexion Steaming Attachment. Beautifies complexion, cures and prevents skin eruptions and diseases, Eczema, Pimples, Blisters, Blackheads, Asthma, Catarrh, Bronchitis, all Throat Troubles.

IF OURS IS NOT THE BEST CABINET MADE WE DON'T WANT YOU TO KEEP IT. But so confident are we that it will please you, that

WE SEND IT ON 30 DAYS TRIAL, to be returned at our expense and your money refunded if not just as represented. What could be more fair? We have been making genuine Bath Cabinets for years, are the largest mfrs in the world. Annual sales 30,000 Cabinets. Value \$1,500,000. We're responsible capital \$100,000,000.

OUR PRICE IS WONDERFULLY LOW. Sent to any address upon receipt of \$5.00, complete with heater, directions, formulas for medicated baths and ailments. Face Steamer \$1.00 extra. Remit by Bank Draft, P. O. or Express Money Order, or certified check. **ORDER TODAY.** You won't be disappointed. Money refunded after 30 days use, if Cabinet is not just as represented.

IF WRITE US ANYWAY for Our "Book on Baths," Testimonials, etc., FREE. Address **THE WORLD MANUFACTURING CO., 1319 World Bldg., Cincinnati, Ohio.**

Not Ours.

All cheap affairs, pull on over head like this are Dangerous.

Not Ours.

Cheap, flimsy affair, top separate, pull on over head and is dangerous. Bottom or more over head falls to ground.

Not Ours.

Why pay \$7.50 or \$12.00 for wooden frame affairs, which rot, warp, split and are unsatisfactory, when a genuine Quaker with steel frame, costs only \$5.00? Lasts 20 years, and is guaranteed superior, or your money refunded.

Not Ours.

AGENTS AND SALESMEN WANTED

\$14 to \$50 WEEKLY.

MEN and WOMEN—At Home or Traveling.

Our Agents made over \$47,000 last month—Albert Hill, of N. J., \$236 first month. John Hunt, of R. R. Conductor, \$634. Mr. Muncey, of Texas, \$1730 first 2 hours. Rev. McDaniel, \$300 while preaching. Lida Kennedy, \$600 while teaching. Mrs. Hitchcock, \$222 besides housekeeping.

LET US START YOU—BE A MONEY MAKER.

We are spending \$350,000 ready, this Cabinet, creating an enormous demand right in your locality. You carry small stock and send it and appoint agents. Failure impossible. Every energetic man or woman makes \$25.00 to \$50.00 daily. Plenty good territory. Write for our Proposition, New Plan, Terms, etc., (stating age, town or county wanted).

Address **THE WORLD MANUFACTURING CO., 1319 World Bldg., Cincinnati, Ohio.**

BARGAIN OUTFIT NO. 2.

Send stamp for complete Catalogue.

Kind Words.

A correspondent (a literary man) writes: "I wish to congratulate you upon the Chess-Department of the DIGEST. I have never seen so much interesting matter concentrated in such small space."

Chess and Insanity.

Scientia, the great Master of Chess, is in an insane asylum. Because of this fact, we hear from many sides the old charge that insanity is closely allied to Chess. We are told that Paul Morphy went insane on account of his Chess-playing, and now comes Scientia for so many years the unbeaten Champion of the World. Some time ago, if we remember correctly, the *New Orleans Times-Democrat* produced evidence to prove that Chess was not in any sense the cause of Paul Morphy's insanity. The *Brooklyn Eagle* says that "it is more than likely that extreme poverty was largely responsible for the present condition of the famous old expert." We are glad to say that the physicians report favorably on the master's case, and promise a speedy and complete recovery. The *Cleveland Plain Dealer* says: "It has been asserted that great Chess-players, like great wits, are oft to madness close allied. No doubt the tremendous strain upon the mind involved in playing the game in its highest degree of excellence, such as is required in the world's tournaments, would wreck any but brains abnormally developed along these lines. Certainly no game known to man puts such a tremendous strain upon the mind. And yet the recorded cases of actual insanity among Chess-players have been few."

"A Morphy Muzio."

Comment by Henry Reichel in *The Times*, Philadelphia.

How Paul Morphy gave a Rook to the well-known Moncur D. Conway.

The best is Kt-K3, but the game could not be saved.	

A Game from the Vienna Tournament.

By H. BLITS SCHWARTZ.

Slipian Defense.

White.	Black.
1. P-K4	1. P-K4
2. P-KB4	2. P-KB4
3. Kt-KB3	3. P-K4
4. B-B4	4. P-Kt3
5. P-Q4	5. P-Kt4
6. Q x P	6. B-K3
7. Castles	7. Kt-K2
8. Q-B3	8. B x B
9. B x P ch	10. Q x R ch
11. B-K3	12. Q mates.

Note from *The Illustrated London News*.

1. A critical point in this variation. If P-K4, Q-R4 ch, and Kt-QB3 is answered by B-Kt3, perhaps the best is Q-Q2.

2. Very awkward, but Black has gained the attack and threatened Kt x B, followed by B-B4 or Q-Kt3.

3. The position is full of interest. White might, instead, try K-Kt3, threatening to win by B-Kt3. Black could not reply Q x P because of R-B4. Anyhow, the test move leads at once to a most hopeless game, and Black makes the best of a fine attack.

The Tarrasch Trap.

The Tarrasch Trap has a rather colorful history. In the Frankfurt Tournament, 1887, Dr. Tarrasch succeeded in inducing the late Dr. Zukertort, perhaps the greatest master of Chess-openings of known or any other time, to walk into this trap. At Manchester, 1890, Mr. Gunsberg, who, curiously enough, had been a competitor at Frankfurt in 1887 and might, therefore, have been supposed to know all about this trap, fell also a victim to the well-devised. Mr. Gunsberg resigned the game on the 14th move. But perhaps the funniest of all is that after this game was published and much commented upon in the Manchester papers on the following day, yet two days later one of the competitors in the Minor Tournament caught his opponent in the very same pitfall. If we remember rightly, the order of the moves is as follows:

White.	Black.
1. P-K4	1. P-K4
2. Kt-Kt3	2. Kt-QB3
3. B-K3	3. P-QK3
4. B-B4	4. Kt-B3
5. Castles	5. Kt x P
6. P-Q4	6. P-QK4
7. B-Kt3	7. P-Q4
8. P x P	8. B-K3
9. P-QB3!	9. B-K3
10. B x B	10. Castles
11. Kt-Q4	11. Q-Q2
12. Kt x B	

If now Black reply P x Kt, White wins by 13. R x Kt, and if 14. Q x Kt, then either 15. R x Kt, or R x P wins. Black's mistakes consist chiefly in 1. B-K3, which should be Kt-K3; but, failing this, he should play 2. B-Q4, instead of B-K3.—*Harvard Times*.

A Curious Book.

We have received from W. H. Lyons, Newport, R.I., a book bearing the title "Chess for Beginners and the Beginners of Chess." The title is a little misleading, for it is not the kind of a book that beginners in Chess need. It is, however, very interesting, especially the presentation of "the literary and historical features of this ancient pastime." The author, Mr. R. H. Swinton, is quite witty, and writes of the game in a charming manner. For instance, in giving the rule governing "Castling," "In Castling the player shall move the King and Rook simultaneously." Mr. Swinton's comment is, "A feat of juggling!"

Pillsbury's Diploma.

The committee of the Vienna Chess-Club which had the management of the International Tournament of 1898, held in honor of the Jubilee of the Emperor of Austria, sent a handsome engraved and richly ornamented diploma to the American Champion, bearing the following inscription:

Vienna Chess-Club—Diploma for MR. HARRY NELSON PILLSBURY, Emperor's Jubilee International Chess Tournament, Vienna 1898, Second prize, Vienna, July 24, 1898. For the Tournament Committee, LEONARD TREBITSCH.

The Literary Digest

VOL. XX., No. 9

NEW YORK, MARCH 3, 1900.

WHOLE NUMBER, 515

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

41 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$1.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

CRONJE'S GALLANT DEFENSE.

FRIEND and foe united last week in admiration of General Cronje's gallant ten days' resistance against overwhelming numbers before his surrender, which the reports had from the first declared inevitable.

Early last week, according to these reports, Cronje with 5,000 men had been surrounded by Field-Marshal Roberts's force of 45,000 men, and was confined to an area not more than a mile square, on the banks and in the bed of the Modder River, near Koodoesrand. The position was represented as one with almost no natural advantages for defense, and exposed to a deadly fire from British guns located less than 2,000 yards distant. Surrender or annihilation for the Boers was represented as a matter of hours. As day after day passed with the Boers still holding their position and even refusing permission to send away the women who were with them, admiration for their valor found free expression even in England, "mixed with censure of Cronje for the apparently wanton sacrifice of his men, and succeeded by doubt as to the truth of reports that described his position as hopeless. At the end of last week, the London correspondent of the New York *Sun* cabled as follows:

"All Europe looks on in mingled horror and admiration at the magnificent, but heartrending tragedy. Already a mighty voice of protest is rising up from one end of the Continent to the other. French and Germans and Russians unite in the cry: 'These men deserve to be free; Great Britain shall not crush such a nation of heroes.'

"England herself is aghast at the spectacle. She suddenly realizes that she will have no friend left on the earth, least of all America, if she permits the deliberate slaughter of these 5,000 helpless patriots. No Boer victory, however great, could so damage the British cause in the eyes of mankind as the completion of this wholesale execution with lyddite.

"Some realization of this fact has reached Roberts and Kitchener, for the bombardment at last accounts had slackened and become almost desultory. The green fumes of lyddite no longer stifle the survivors, if survivors there be, in that awful valley.

"A new problem confronts England—a problem so humiliating

that nowhere can be found its like. What shall be done with an enemy which carries out to the bitterest and literal end the motto 'Independence or Death'? Alexander or Caesar, with cold-blooded stoicism, might put all relentlessly to the sword. England, the boasted champion of liberty, can not do this. She dares not. She is defeated—hopelessly and completely defeated—in her scheme of conquest in Africa so long as the spirit which prompted Cronje's army to choose almost certain death at Paardeberg continues to animate the Boer nation.

"Few Englishmen have yet realized this truth, but it will soon come home to them. When it does—when this most stupendous dilemma of the age stares them in the face—they will turn alone, among the nations of the earth for suggestion or advice, to America. What word will come from over the sea? Much depends upon that message."

Says the New York *Tribune*:

Surrounded on a practically open plain, with no cover and no chance to make fortifications, by an army three times the size of his own, his camp the center of a circle of fire from guns of all types little more than a mile away, his position has aptly been likened to that in the crater of a volcano. Six hundred British troopers won immortal fame by riding through a 'valley of death.' But this man and his comrades have been for a week encamped in the very heart of such a valley. Whatever he may have done before, and whatever shall be his ultimate fate, General Cronje has in this campaign shown himself a man, a warrior, and a hero. Matched against one of the greatest soldiers in the world, he has shown himself a worthy antagonist.

"Since 1881 Britons and Boers have failed to appreciate one another. The British have regarded the Boers as half savages, to be swept aside by a single regiment. The Boers, who regarded what Gladstone meant for magnanimity as sheer cowardice and weakness, have despised the British and all English-speaking people. This war has opened the eyes of both. It has substituted esteem for contempt. And therefore, instead of its causing long race hatreds, it will probably do the very reverse. It will result in such mutual esteem as will lead to good-fellowship and mutual recognition of equal rights in all South Africa."

Mr. Ford, *The Tribune's* London correspondent, says:

"By a strange revulsion of feeling, peculiarly English, Cronje has suddenly been transformed through sheer love of fair play into a heroic figure. Every London journal expresses hearty admiration for the inflexible courage with which he has remained at bay when these powerful batteries were massing their fire upon a defenseless position not more than a mile square. Men have forgotten General Roberts's remarkable strategy and have talked of nothing but Cronje's fight to the death in that fiery furnace of shrapnel, lyddite, and common shell. It was not war, but it was so magnificent that the British casualty lists when they were posted were read with something like insensibility, altho they disclosed a loss of nearly one hundred and fifty of the rank and file, who were killed on Sunday. General Cronje's defense, hopeless as it seemed, touched the English imagination."

In spite of General Cronje's determined resistance, however, the British feel that Lord Roberts has him in his grasp, and that altho the Boers may retard the march to Pretoria, they can not stop it; and this feeling is giving London a large crumb of comfort. The London correspondent of the Associated Press says:

"Hand in hand with the relief of Kimberley and the daily expected relief of Ladysmith has come the relief of London. With the fate of those beleaguered places off their minds, with the national honor free once more to take its chances on a fair fighting field, London has evolved itself from the depressing gloom that for months overhung it. There is now talk of balls, dinners,

and entertaining; there are brighter looks in the faces of the crowds that throng the streets, and even the women seem to have brought out gayer gowns. There is to be something of a season after all."

And the man who is lionized as the hero of it all is Lord Roberts. The same correspondent continues:

"'Little Bobs' is the hero of the hour even at this stage of the war, which can scarcely be considered much more than initial from the British point of view. He would be granted every honor in the people's power to give if only public opinion and gratitude became operative. Above every other man and every other circumstance he stands out from those grim happenings in South Africa clothed in the halo of victory."

"Loudly Lord Roberts is hailed as giving the living lie to those who said that the pluck and brains that made Great Britain victorious in the Crimea, in India, and in Afghanistan had passed away from her. The circumstances of his hurried departure, when he subordinated the greatest personal sorrow to the needs of the country, his feats on the battle-fields of old, his tremendous personal magnetism, and his surpassing kindness and simplicity are all brought into rapid review by means of conversation or the newspapers before the average Englishman, until it is small wonder that the hero of Kandahar has reached that pinnacle where his country would deny him nothing."

"General Kitchener's automatic way of doing things and his hardness of heart have been so much paraded before the public since he first achieved greatness that he has lost much of his

popularity, and, while he possesses the national confidence to an almost unequalled extent, it is patent that the nation as a whole would rather that the opportunities fell to 'Bobs' than to his iron-willed chief-of-staff."

A warning note, however, in the midst of all the rejoicing, is sounded by the Cape Town correspondent of the *London Daily Mail*, who cables:

"It is of the very gravest importance that the British public should not be carried away by the recent successes into a belief that the war is practically over. Nothing could be more fatal to a satisfactory prosecution of the war, and above all to a satisfactory settlement of the whole country after the war, than any relaxation of military activity, any stoppage of reinforcements, any temporizing or bargaining with the Free State or the Transvaal through mistaken ideas of magnanimity toward an assumedly beaten foe."

"The highest authorities and the soundest opinion here say that the war has really only just begun in earnest. Indeed, they say that the real struggle will only begin when the present military operations end."

"I have the best reasons for asserting that an attempt is likely to be made by Boer supporters in the Colony to force easy terms for the Free Staters, now or soon, by holding out a threat of a Dutch rising in the Colony."

"Any idea of leaving the Free State its independence would be fatal to British interests. The British people must not deceive themselves into thinking that it is now only a walk-over. They

have to deal with a foe most dangerously subtle and powerful in methods and ways that it would not be politic to discuss publicly.

"There should be no halting in sending out troops. A quarter of a million of British troops will be none too many. The more we have, and the sooner they are here, the quicker will be the end of the war, and the surer will be the settlement that is to mean justice to every one, Dutch and British alike, and lasting peace and certain prosperity to South Africa."

ACCIDENTS TO WORKINGMEN.

COMPARISONS between military and industrial warfare have often been made, and the recent report of the New York State Bureau of Labor Statistics would seem to show that in some instances the industrial battle is the more deadly of the two. Only 280 American soldiers were killed in the war with Spain, and less than 400 have met death in the Philippines. Yet in New York State alone, last year, nearly 1,000 workers were killed outright through industrial accidents, and not less than 40,000 sustained injuries of some kind. These injuries, in nearly all cases, inflict terrible hardship on those who are least able to bear it. The report says:

"Few workmen carry accident insurance of any kind; only in the best-paid classes of labor does there exist the practise of paying contributions into a death or disability fund of some trade-union, fraternal order, or assessment society, in order to secure financial relief in time of affliction. In many cases the injured man and his family are dependent upon public charity for their means of living during the period of disability. Hence, from financial considerations alone, the State is interested in this question of industrial accidents."

In Germany, Austria, Norway, England, Denmark, Italy, France, and Switzerland, there exist workmen's compensation laws, which give to the workman injured at his work a stipulated compensation without recourse to the law-courts. "That the American States will sooner or later follow along the same path of social legislation," says the report, "is scarcely to be doubted," and a system is recommended similar to that in England, by which compensation for accidents is paid as a part of the regular running expenses of the business. "The underlying principle of these workmen's compensation acts," adds the report, "is the demonstrated fact that most accidents are an inci-

dent of the industry, rather than the fault of individuals. Laws for the prevention of accidents have accomplished so little principally because a vast number of accidents is positively inevitable under the pressure of competition."

Commenting on this report, the *New York Mail and Express* says: "The figures of the report vividly reveal the inherent perils of our complex industrial life. They show, too, the necessity for increased precautions against accidents in factories and workshops—a necessity to which employers as a class are paying closer attention every year." The *Rochester Post-Express* voices opposition to the liability laws advocated by the report. "It should be remembered," says *The Post-Express*, "that the employer does not require his workman to take a risk that would result in injury or death." The *New York Outlook* speaks of the report as a remarkable one, and states that "the facts presented are not only invaluable, but they are effectively put."

A GAIN FOR GOOD GOVERNMENT IN PHILADELPHIA.

A NOTABLE victory, so several papers think, was won by the Municipal League of Philadelphia in the city election last week, when four magistrates on its ticket—three of whom had been refused renomination by the politicians—were elected. Twelve other judges were also elected, ten of them Republican and two Democratic, but the fact that an independent organization, standing for purity in politics, could place four judges on the bench is hailed by most of the Philadelphia papers as an omen of a decidedly hopeful sort. The condition of Philadelphia politics has long been held up by the newspapers as an almost hopeless case of political iniquity. The *New York Evening Post* declares that "no one remembers an honest election" in Philadelphia, and says that "in some wards the number of illegal votes has probably been as great as that of the legal ones"—a state of affairs that the Municipal League has been doing much to remedy. The same paper continues:

"Perhaps in no city in the country is the work of reform so difficult as in Philadelphia. The control of the Republican Party has been so absolute, both in the city and in the State, that the Democratic Party has almost ceased to oppose it. In New York the contests between the parties are, to a considerable extent, at

KIMBERLEY AND THE CARTOONISTS.

least, genuine struggles, in which each party may make some appeal to Independent voters. But in Philadelphia the Independent voters have had to form their own organization and fight their own battles, and the fact that they have succeeded so well will encourage the friends of good government everywhere."

Both Democratic and Republican papers in Philadelphia seem to believe that the long-desired improvement of the politics of their city can be accomplished by the Municipal League. *The North American* (Rep.) says that "to outsiders, who are not acquainted with political conditions in this city, it will seem a small matter that three independent candidates for the magistracy should be reelected when all ten of the Republican machine's candidates and three Democrats were also successful. But to the initiated the election of these three men means that the concentrated power of the Quay machine has been defied and overcome. The Quay machine includes the Democratic machine, and both together have been beaten at the point where they massed their strength." *The Press* (Rep.) says: "The Municipal League has at present the confidence of voters on local affairs. If it forms an efficient local organization it can carry the city and force the Republican machine to nominate better men or stand defeat." *The Record* (Dem.) says that the election "developed two things very satisfactory to the friends of better government. The vote cast by the opponents of the Republican machine ticket was more than doubled; and the dishonest Democratic organization, which has been maintained as a Republican side-show, was practically dissolved in the public contempt. Out of this situation it ought not to be hard to build up an opposition to the Republican machine which would make its future mastery doubtful. The elements of opposition are all here. The situation is ripe for combination. The motive for revolt is overmastering. Nothing is lacking but leadership."

The Ledger (Ind.) says:

"The Municipal League has taken the second place in the politics of Philadelphia and there is no reason to doubt that it can, if it will sagaciously and energetically organize, not only in every ward, but in every division of the city, make itself the party of the majority. The Municipal League, under wise, provident leadership, can and should revolutionize our municipal politics and reestablish municipal government of, for, and by the taxpaying community. It can and it should defeat the unscrupulous spoilsmen in every part of the city's government, who have usurped the will and power of the people to govern themselves by naming those who make their laws and those who execute them."

City and State, a Good Government weekly, gives an indication of the task ahead when it says:

"While the League has good reason to be proud of what it has done in securing good magistrates, the community has still better reason to be ashamed of itself for permitting the election of so many bad ones. Any city that can reelect such men as Cunningham and Harrison has cause for a permanent blush. And as we of Philadelphia have not the capacity for heightened color from any such cause, we deserve to be morally pilloried by the rest of the country until we know that we can do better. A city which has a stay-at-home vote of 125,000, which is reported against us in this election, is, according to Captain Mahan's doctrine, a fit subject for conquest and enslavement by some more virtuous foreign power. In this large, indifferent, and politically speaking immoral element the League finds its strongest enemy."

"A very valuable result of the election is its vivid portrayal of the machine's tactics in erasing party lines to save its neck. Democrats and Republicans in such a contest are no longer twain, but one flesh. Let us have no more false pretense of party loyalty from these gentry."

"The League has fought a good fight; let it take courage, at once close up its ranks, perfect its organization, and prepare for the next contest. And let the citizens of Philadelphia ask themselves whether they do not owe a more general measure of support to the gallant little band of men who have been for years so pluckily fighting their battles for them."

DOES THE CONSTITUTION FOLLOW THE FLAG?

GREAT possibilities, say the press, are wrapped up in the decision of Congress on the Puerto Rico tariff bill. We go to press before the vote of the House is announced, but the feeling for free trade with Puerto Rico and the feeling against free trade are both so strong that it seems probable that, whatever the decision of the House, the fight will be only transferred to the Senate; and, indeed, some believe that, if this Congress declares for a tariff, the free-traders will raise the issue again in the next Congress. The present bill proposes to put on all goods entering Puerto Rico, and on all goods entering the United States from Puerto Rico, a tariff equal to one quarter of our present tariff, and to use the sums so collected in paying the expenses of the island's government. Simple as this proposition appears, there are many Congressmen and representatives of the press, both Republican and Democratic, who believe that such a law would be contrary to the federal Constitution, and would turn our "expansion" into "imperialism" by marking off the people of our new possessions as subjects, to be ruled by a Congress in which they have no voice. The paragraphs in the report of the House ways and means committee which have stirred up so much feeling are the following:

"That the term 'United States' in that provision of the Constitution which declares that all duties, imposts, and excises shall be uniform throughout the United States means and is confined to the States that constitute the Federal Union, and does not cover also the territory belonging to the United States."

"That Congress has power to govern Puerto Rico and the Philippines independent of the limitations of the Constitution."

The economic aspect of the Puerto Rican tariff was considered in these columns February 3. That question, however, the *Chicago Evening Post* points out, "sinks into absolute insignificance beside the momentous and far-reaching constitutional issue which the proposal raises. Has Congress the power to impose rates of duty for the West Indian island different from those prescribed for the United States? The Constitution demands uniform duties and excises for the United States, and the point to be determined is whether or not Puerto Rico is now part of the United States." The *Boston Transcript* declares this to be "one of the greatest constitutional questions that body has ever considered," and says that its decision "will mark an epoch in our history." "It may seem a small matter," says the *Boston Herald*, "what form of legislation is adopted in trade between this country and our newly acquired dependency; but the solution of this question goes down to the bed-rock of our government principles." The nub of the controversy, it will be seen, is the question whether Congress has a free hand in making laws for our new islands, or whether the islands are under the Constitution. Does the Constitution expand by its own power (*ex proprio vigore*) to cover all territory acquired by the United States, or must it await the bidding of Congress? Decisions of the Supreme Court bearing on this important point were considered in this department at some length on January 14, April 22, and May 13, 1899; but as each side has seemed able to find decisions countenancing its own view, it is pretty generally accepted that a new decision, bearing directly on the constitutionality of a separate tariff for Puerto Rico, will be necessary. In the mean time, while we are waiting for the decisions of Congress and the Supreme Court, it is interesting to notice what the press thinks of the matter.

One party to the controversy fears that "coolie labor," ignorant and half-civilized voters, and a ruinous flood of cheap sugar, tobacco, hemp, and other tropical products will greatly injure our economic and political condition if our new islands are given constitutional guaranties. The other party looks upon the unrestrained rule of President and Congress over millions of sub-

jects as a form of "imperialism" that is abhorrent to American spirit and institutions.

"Sound reason," says the *Seattle Post-Intelligencer* (Rep.), "seems with the conclusion that the Constitution of the United States, as a compact between the original States, is applicable in its terms only to them and to such other States as by admission into the Union have become parties to the compact, and that so far as after-acquired territory is concerned the power of passing needful rules and regulations for its government, in every respect, is left to be exercised by Congress in its discretion." So, too, thinks the *New York Journal of Commerce* (Fin.), which argues that "if a State, as the word is used in the Constitution, is only one of the equal members of the Union, it would seem to follow that the United States are only the sum of such members; and this conclusion is enforced by the care taken by the authors of the Constitution and its amendments to distinguish clearly and repeatedly between the United States and territory belonging to them, or between the United States and places subject to their jurisdiction." The *New York Tribune* (Rep.) thinks that it is

A DISCRIMINATING STEPFATHER.
—The New York World.

ridiculous to suppose that the United States can not acquire islands and pass what laws it pleases for them. Says *The Tribune*:

"If the power to acquire, own, hold, and govern property not within the Union does not belong to the United States, as some still contend, what has become of it? Every sovereign State has that power. Every one of the original colonies possessed it when they achieved their independence and became sovereign States. That the several States no longer possess that power everybody knows. If it was not transferred, with the other powers of sovereignty in respect to all nations and peoples outside the States to the Government of the United States, then how was it 'lost in the shuffle'? By what wonder-working magic did the several States get rid of that attribute of sovereignty without conferring it upon their duly constituted agent for dealing with foreign relations?"

The *Philadelphia Inquirer* (Rep.) brings up another phase of the question when it says that "it is very certain that we do not wish to place Puerto Rico in a position where she might claim the right to become a State, nor do we want States to be made out of our other island possessions." The *New York Press* (Rep.) believes that the men who framed the Constitution, "and who would not trust their own farm hands with the suffrage, in all their legislation contemplated only American citizens, and substantial American citizens at that, settled on American soil."

The sentiments of these Republican papers are heartily indorsed by the *New Orleans Picayune* (Dem.), which avers that the framers of the Constitution "founded a white man's republic, and intended it for the special use and benefit of white men forever." It continues: "The only safety for the republic is to maintain it as a white man's country. To seek to drag the white population down to the level of the lowest negroes and mongrels will result in a terrible and bloody revolution and race war, and such a result is not far off, if the Philippines and other countries filled with barbarous and inferior races are to be admitted as integral parts of the American Union."

The opposition to the measure, however, seems to be very strong. The *Chicago Times-Herald* (Rep.), after quoting President McKinley's declaration in his message that "our plain duty is to abolish all customs tariffs between the United States and Puerto Rico and give her products free access to our markets," says: "What was our plain duty last December is our plain duty to-day. Puerto Rico is as much entitled to be considered a part of the United States as Alaska." The *New York Mail and Express* (Rep.) declares that if Congress provides its contemplated "makeshift scheme of revenue laws," it will "shirk its obligation of honor and of justice to Puerto Rico."

As to the Supreme Court's opinion of the power of Congress over our new possessions, the *New York Evening Post* (Ind.) says that "it would be remarkable if a court created by the Constitution for the purpose of pronouncing on the constitutionality of the acts of a Congress created in the same way should declare that that body is not subject to constitutional limitations." The *Indianapolis Sentinel* (Dem.) says that "on this theory Congress, which is created by the Constitution, and derives its powers from the Constitution, may set every principle of the Constitution at defiance in these islands. This is revolution. It is a crime more serious than anything that has yet been attempted under the name of government." And the *Chicago Record* (Ind.) remarks that "it is doubtful if the American people desire to clothe their representatives with power over distant people which it is unsafe to permit them to exercise at home." The *Springfield Republican* (Ind.) says that "it only remains to be asked how long the Constitution is likely to remain binding upon Congress in the case of interstate legislation after it has so lightly been tossed aside in relation to all other territory coming within the jurisdiction of the United States." The *Brooklyn Citizen* (Dem.) says: "Puerto Rico is not a foreign state. It comprises territory as much under the jurisdiction of the United States as that of Arizona in the Southwest or Alaska in the Northwest; and if it is not right to hamper the trade of those territories by a tariff, it is not right to hamper that of Puerto Rico."

Some of the opposition papers think that the Republicans have made a great tactical blunder. "It will be observed," says the *Atlanta Constitution* (Dem.), "that the Republicans are beginning to wade in very deep water, and it will continue to grow deeper and deeper as long as they insist on carrying out their intention to make the inhabitants vassal subjects with no rights except such as a partisan Congress may see fit to recognize." The *Washington Times* (Ind. Dem.) says that "the Administration can not be unmindful of the risk it takes in thus creating a new grievance for the whole American people to nurse, and resent at the polls in November." The *National Watchman* (Dem.), of Washington, declares that "the party that will undertake to establish a vassal state in Puerto Rico or elsewhere departs from the great principles that distinguishes our Government from all others, and they only do so as the first step in a program of establishing privileged classes at home and destroying the American republic." The *Providence Journal* (Ind.) says: "If William McKinley backs down from what he himself called 'our plain duty,' it will be one of the most needless and shameful surrenders of principle ever made by an American

President, and a greater blot on the McKinley escutcheon than the broken promises in regard to civil-service reform."

Considerable indignation is manifested at the treatment the Puerto Ricans will receive. "According to the doctrine of the majority of the committee," says the *Philadelphia Ledger* (Ind. Rep.), "Puerto Rico is nothing but a dependency, a satrapy, or, rather, a patch of real estate which has come into our possession." "To give it special legislation by Louisiana planters," declares the *Chicago Times-Herald* (Rep.), "is in principle to put it at the mercy of a foreign tyranny and to deny it those blessings of free government which are our boast." The *St. Louis Republic* (Dem.) says that "the new policy treats the islands as if their inhabitants were baggage designed for the enrichment and magnification of the Cecil Rhodeses of the United States." "If we are not ready to treat the people of our annexed possessions as Americans, and give them the full advantage of the protection of our laws," says the *Cleveland Leader* (Rep.), "we should stop annexing and go out of the expansion business." The twenty-five-per-cent. tariff policy, declares the *Milwaukee Sentinel* (Rep.), is "worthy of Sparta. Unless the United States treats the Puerto Ricans as well as citizens of the United States are treated," it continues, "it ought not to hold a single colony or dependency." The *Philadelphia North American* (Rep.) says:

"So narrow a view of our obligations and of our own welfare will necessarily have a chilling effect upon the people of the island. It will also aid in cooling the growing desire of a section of the Cubans for annexation. Ultimately all the West Indies must become a part of our political, as they now are of our geographical, system. Whatever operates to check the desire of their people for the change is inimical to our larger interests. Congress is behaving in a small and niggardly spirit that is unworthy of the nation."

Indeed, some papers profess to see serious danger ahead if we adopt the proposed policy. "The acquisition of distant and alien dependencies, conquered by force of arms, denied the commercial privileges of other American citizens, without love for the American people or loyalty to the American flag," says the *San Francisco Chronicle* (Rep.), "would be the most colossal political blunder of modern times," and the *Portland Oregonian* (Rep.) declares that "if we are going to hold to protective tariffs against any people under our own flag, we must make up our minds to deal with them always as enemies, and to hold them down with the bayonet." If we do not establish free trade with our West Indian possessions, says the *Brooklyn Eagle* (Ind.), "we have annexed a rabbit warren of insurrections justified and excused by the same unjust exploitation of territory for the benefit of the home country that excused and justified the rebellion against Spanish extortion in Cuba." The *Yale Review* says:

"After specious promises of liberation this new monarch does less for these new subjects than the English Parliament has done for the negroes of Jamaica. The Jamaicans enjoy unrestricted trade with all the world; upon the Puerto Ricans are to be levied crushing duties on the necessities of life imported from the United States, and access to our markets, so indispensable to their economic development, is similarly restricted. Of economic liberty they will have less than England's most despotically governed crown colonies. To find a parallel to this policy one must go back to the ruthless commercial oppression of Ireland in the last century. What shall it profit the Republicans to create an Ireland at our doors?"

"Will the task of convincing the Filipinos that we are bringing them liberty be made easier by this sacrifice of the unresisting Puerto Ricans? What will be its effect on the solution of the Cuban question? Will not the Cubans justly suspect our intentions toward them when they see the outcome of our professions to Puerto Rico? Whatever settlement is attempted of the Cuban question can not fail to be embarrassed by this treatment of the neighbor island. Is it not for our interest to allay Cuban suspicion and to give every opportunity for the rise of a desire for annexation to the United States?"

DRUNKENNESS IN MANILA.

REGRET is expressed by several papers for the state of affairs pictured in a number of reports from the Philippines, which seem to agree that there is an immense amount of drunkenness among the Americans there. President Schurman, of the Philippine Commission, it will be remembered, said publicly soon after his return to this country: "I regret that Americans have been allowed to establish saloons in the Philippines, for the Filipinos are a temperate people, and the sight of an intoxicated American disgusts them. Nothing has done so much damage to the reputation of the American people as this." Capt. Frank M. Wells, chaplain of the First Regiment of Tennessee volunteers, who describes himself as "an Administration man clear through," said in an address in Washington, February 11, that before the American troops entered Manila there were only three saloons in the city, and that in each only "soft drinks" were sold; but that now there are four hundred saloons, selling whisky. And the drunkenness seemed to be as bad afloat as ashore. He said:

"While on board one of the transports to Cebu, I found that liquor-selling was the same as on the other transports. I tried to have it stopped, but failed. I took special care of the men in my regiment, with the determination that if I could not save their souls, I would at least get them to hell sober. I never saw so much liquor on a Mississippi steamboat, and I have traveled on a good many, as I saw on the transport *Sheridan* the last three days we were in Cebu."

Similar testimony was given a few weeks ago by Lieut. E. Hearne of the Fifty-first Iowa volunteers, who had just returned from Manila. In an address in New York City he said:

"The Filipinos, while pagans and semi-civilized, are moral and sober. They first learn of Christianity from the profane sailor, and when they see immense numbers of drunken, profane, and immoral soldiers representing this country, they have little respect for the religion they profess. 'If that is your religion,' they say, 'we prefer our own.' The soldier, when associated with others, loses his identity. Then his savage and lower nature displays itself. This is particularly true of the soldier in the Philippines, idle under a tropical sun. He loses all his religion. It is our duty first to send out Christian soldiers if we expect to make any sort of impression on the people there."

Mr. W. B. Miller, who has charge of the army and navy work of the Young Men's Christian Association, said in an address at the same meeting:

"So great was the effect of the drunkenness and irreverence of the American soldier in the Philippines that one man, writing to me from Manila, said that two missionaries gave up their work among the natives and went to work on the army. They realized the uselessness of their work when there was an immoral and drunken army representing this country on hand. One drunken soldier can do more evil than two missionaries can undo. The sending of whisky and questionable things to Manila is not a badge of honor for this country."

The latest report from Manila on this phase of expansion comes from Mr. H. Irving Hancock, Manila correspondent of *Leslie's Weekly*, who says:

"Of all the problems that confront us in the reconstruction of the Philippines the gravest and wickedest is one of our own importation. The Manila saloons, taken collectively, are the worst possible kind of a blot on Uncle Sam's fair name. The city's air reeks with the odors of the worst of English liquors. And all this has come to pass since the 13th of August, 1898! . . . To-day there is no thoroughfare of length in Manila that has not its long line of saloons. The street-cars carry flaunting advertisements of this brand of whisky and that kind of gin. The local papers derive their main revenue from the displayed advertisements of firms and companies eager for their share of Manila's drink-money. The city presents to the newcomer a saturnalia of alcoholism. . . ."

"I do not mean this as a tirade against all saloons. It is only

a much-needed protest against the worst features of the American saloon that have crept into Manila arm in arm with our boasted progress. There is nowhere in the world such an excessive amount of drinking, *per capita*, as among the few thousand Americans at present living in Manila. Nor does this mean that we have sent the worst dregs of Americanism there. Far from it; some of the best American blood is represented in Manila. There are men of brains and attainment there, who would nobly hold up our name, were it not for the saloon at every step. Gamblers and depraved women—in both classes the very dregs of this and other countries—have followed, and work hand in hand with their natural ally. These people are fast teaching the natives the depths of Caucasian wickedness, and the natives imagine it is Americanism. . . .

"Chairman Schurman of the Philippine Commission voices his regret that the American saloon was ever permitted to make its advent in Manila. Well may he regret it, as may every other American, too, who has been in Manila during the past year. It is a great mistake to suppose that every officer, soldier, and sailor in the Philippines is drinking to excess, but some of them do, and the same is true of a great percentage of the civilians. The native is not discriminating, and attributes this vice to all Americans. If saloons were carefully and honestly restricted in number, and put under the rigid regulations that decency requires, this shame of Uncle Sam would quickly vanish. It is the glaring opportunity for drunkenness that does so much harm.

"So far as my observation went, I found that the military authorities of Manila were not on record as having done anything to abate this crying disgrace. Indeed, one American officer, fairly high in the councils at the palace, is the potentate head of the concern that is doing the most to encourage and supply the thirst of Manila. We tried to civilize the Indian, and incidentally wiped him off the earth by permitting disreputable white traders to supply him with ardent liquors. Are we to repeat this disgrace tenfold, as we at present seem fair to do, in the Philippines?"

A Crime Against a People.—"The American soldiers, however, might drink themselves into death or idiocy, and it would be of less ultimate consequence than the simple fact of the introduction of the liquor traffic into the Philippine Islands. In one respect, at least, the civilization of the Filipinos was superior to our own, and that was in the use of intoxicating drinks. All travelers have testified to their temperateness and their very slight use of intoxicants. Our first step has been to flood their towns and cities with whisky and thus break down a conspicuous native virtue. For this liquor curse must remain in the Philippines long after the bulk of the American army has been withdrawn. It is the experience in all tropical countries that the whisky habit, once it secures a foothold, is difficult to extirpate. Whisky is a great decimator of tropical populations.

"The seriousness of the crime thus committed must be confessed by the Government itself, since, in its view, the Filipinos must be regarded as children. What would the world think of a nation that deliberately or heedlessly led millions of children into the liquor habit for the sake of profit? It is certainly remarkable that the Government, while regarding the Filipinos as children in their political capacity to govern themselves, should regard them as thoroughly mature in their capacity to govern their physical appetites. The Government has been extremely solicitous not to grant the Filipinos self-rule in political affairs, yet it has left them the prey of American rum-sellers in social affairs.

"One does not need to be a prohibitionist in the United States to believe that the sudden and unrestrained introduction of the liquor traffic into a country where it had never before existed was a crime against heaven and earth. The traffic could have been forbidden at the outset by one man; it could be forbidden to-day by one man, because the whole archipelago is under martial law."—*The Springfield Republican*.

Abstinence as a Business Rule in the Army.—"Here would seem to be a case illustrating the desirability of inaugurating in the American army a rule such as is now enforced by railway managers and by other employers upon all employees on whose mental or nervous condition may depend the lives of many others, the correct working of valuable machinery, and the safety of costly investment. That rule requires of every man, occupying any position thus important in its relations to others, absolute

abstinence from intoxicating liquors. No railroad will now employ an engineer, a conductor, brakeman, signal-man, or switch-tender who is known to use intoxicants. The managers do not pretend to raise a 'moral issue' in the case, or to question anybody's 'personal liberty.' But, simply as a matter of business, they refuse to employ a drinker, no matter how moderate. So it is with the managers of many other industrial enterprises.

"The position of our American soldiers in the Philippines, Puerto Rico, Cuba, and elsewhere is often one of considerable delicacy. In all those regions the American nation is 'on trial' in the minds of the natives; in some parts the American soldier is very nearly the only 'sample' of our civilization to be anywhere seen by them. When he is seen drunk we are degraded in their estimation; when his drunkenness leads to misconduct toward native women, he may awaken resentments which years of effort may not suffice to allay—which, sufficiently multiplied, may rob the nation of the fruits of soldierly achievement and painstaking statesmanship. Why should not our Government protect the nation against such possibilities and dangers in the same way that the railroads protect themselves? Why should any portion of our army be permitted, through the indulgence of drinking habits, to involve the nation in risks so easily avoidable?"

"Still, it be said that the total abstinence and orderly conduct that Kitchener enforced in his brilliant Sudanese campaigns are impossible of attainment among American troops? Not a drop of liquor was allowed to accompany Kitchener's expedition, for either officers or men, unless it may have been some small quantity among the medical stores. Why should any American soldiers (no matter how few) be permitted to make spectacles of themselves, imperiling the dignity of our Government and our peaceful relations with those among whom they are stationed? Why allow a comparison to be made between a drunken American 'Christian' and a temperate Mohammedan? The large majority of our soldier boys abroad are, we are proud to believe, temperate and well behaved. Why allow this majority to be disgraced by a few associates?"—*The St. Paul Pioneer Press*.

LETTERS AND ART.

IS THE CLASSICAL DRAMA IMMORAL?

IN many Christian circles there has been, and still is, a strong antipathy to the theater and all its belongings; but an exception has generally been made in favor of the classical drama and opera, on the ground that these were not objectionable from a moral point of view, as are the great majority of modern plays. But even this exception is not accepted by many teachers in the church; and in the *Lutheraner* (St. Louis), the official organ of the Lutheran synod of Missouri and other States, said to be the largest single ecclesiastical division in America, Prof. A. Graebner, of the Concordia Theological Seminary, in the course of a lengthy discussion on the modern theater, gives a surprisingly large, tho not complete, list of classical dramas and operas which either in their chief purpose or in the process of their development depict actions and describe scenes that he considers abhorrent to Christian morals. The list is as follows:

Mozart's "Figaro" depicts marital infidelity; his "Don Juan" describes the love adventures of a libertine; his "Cosi fan Tutte" describes the infidelity of two betrothed; and the "Zauberflöte" is a glorification of free-masonry. Beethoven's "Fidelio" treats of infidelity in love; Weber's "Freischütz" depicts immoralities that can scarcely be described; his "Oberon" brings forward marital infidelity; and his "Euryanthe," the attempted seduction of a bride. Flotow's "Martha" describes the amorous experiences of a woman in masquerade and of her female servant. Marschner's "Hans Heiling" treats of the infidelity of a bride. Rossini's "Barber of Seville" is the story of an abduction; Donizetti's "Lucia di Lammermoor" is the account of the deception of a betrothed woman and of suicide. "Lucretia Borgia" describes the vengeance of an unmarried mother and a woman killing others by giving them poison; "La Favorita" depicts marital infidelity; and "Don Pasquale" has practically the same theme. Bellini's "La Sonnambula" treats of the infidelity of a young man who is betrothed; his "Norma" of marital infidelity. Herold's "Zampa" depicts the vengeance of a woman who has been seduced. Meyerbeer's "Huguenots" deals with marital infidelity; his "Robert the Devil" is a tale of the love adventures of a young good-for-nothing; while the "Star of the North" is an account of infidelity in love. Halévy's "Jewess" is an account of the infidelity of a betrothed man. Auber's "Fra Diavolo" describes the love adventures of a robber chief with a married woman; his "Carlo Broschi" treats of the favorite theme of marital infidelity; the "Stumme von Portici" depicts the vengeance and suicide of a woman who had been seduced. Gounod's "Faust" is the story of a deception; and Thomas's "Mignon" the story of the adventures of a coquette and a jealous man. Bizet's "Carmen" consists of the love adventures and murder of a tricky gypsy woman. Massenet's "Manon" is the story of a mistress; his "Werther" describes a suicide resulting from illegitimate love. Verdi's "Otello" tells the story of forbidden love, of murder, and of suicide; his "Don Carlos" tells of unlawful love on the part of those who are wedded; his "Aida" describes jealousy and revenge; his "Masque Ball" treats of a somewhat similar theme; his "Rigoletto" is the love story of a libertine and a murder; while the "Elvira" describes the infidelity of a betrothed man and his suicide. Ponchielli's "La Gioconda" is the story of broken marriage vows, and of suicide. Puccini's "Le Villi" describes the infidelity of a young man who is betrothed; while "Ma non Lascia" contains the adventures of a low woman. Leoncavallo's "Pagliacci" is an account of illegitimate love and a double murder resulting from vengeance and jealousy. Mascagni's "Cavalleria Rusticana" is the story of an illegitimate affection of those who are wedded. Becker's "Praise of Women" is the narration of the vengeance of a seduced gypsy woman. In Lortzing's "Wildschütz" a bridegroom sells his bride to a married profligate; and his "Undine" tells the story of illegitimate love in married life. Goldmark's "Queen of Sheba" is a tale of infidelity of the married; and his "Merlin" brings forth the story of the love adventures of a very son of Satan. Meyer-Helmund, in his "Love's Battle," tells the story of infidelity, jealousy, and suicide; Forster, in his "Lore," depicts broken marriage vows; Graumann, in his "Melusine," treats of the same theme, and in his "Irrlicht" describes illegitimate love; Rubinstein, in his "Il Demonio," describes the love adventures of the devil with a woman; and Richard Wagner, in his "Flying Dutchman," treats of forbidden love; in his "Tannhäuser," of infidelity and unchaste things; in his "Parsifal" he describes the temptation to an unchaste career, and in his "Walküre" treats of marital infidelity and incest.

Need this list of "classical" pieces, objectionable in part or

throughout, be enlarged? asks the professor. And he answers substantially as follows:

This could easily be done. But we wish here to draw attention to the fact that a large percentage of the masterpieces of the great dramatists are also of this character, and it is noteworthy that just those productions of the great masters that are the most objectionable morally are the most popular on the stage at present. This is true of Schiller's "Kabale und Liebe" and his "Robbers"; of Shakespeare's "Merry Wives of Windsor," his "Romeo and Juliet," and others. In fact, attempts that have been made to produce only plays morally pure on the stage have signally failed. Edwin Booth made such an attempt, and only gave it up when his means were exhausted. There are unobjectionable plays, dramas, and operas; but these are the rare exceptions. In general, the tendency of the theater, even in its classical productions, is antagonistic to Christianity and inconsistent with high Christian ethical ideals. It is wise to follow the advice given by Dumas, himself the author of the favorite but not unobjectionable "Camille," to a friend, in these words: "You do not take your daughter to hear my play. You are right, and permit me to add in general, never take your daughter to the theater. Not only the play but the place itself is immoral."—*Translation made for THE LITERARY DIGEST.*

FUTURE OF GRAND OPERA IN NEW YORK.

IN spite of large houses it is reported that there has been a very noticeable falling-off—amounting almost to apathy—in the interest which the audiences at the grand opera in New York have manifested toward the music and the acting. Various explanations are given. It is said that the supply of great singers is exhausted; that new works, better mounting, and more frequent rehearsals are required if opera is to maintain its proud position in the American metropolis. The New York musical correspondent of the *Boston Transcript* (January 31) thus writes:

"It is doubtful if at any time since grand opera became a recognized part of New York's social and musical life so little interest has been shown by the spectators in what was going on in front of them. It has always been characteristic that the majority of patrons of the opera have paid little attention to the operas themselves, but this year they pay little heed to their beloved stars. The writer, who has attended every performance since the season began, can recall only a very few times when there has been an outbreak of real, spontaneous, and enthusiastic applause. Now and then when Alvarez succeeded in hitting a top note on the key the stalls and boxes rustled with grateful approval. The final trio of 'Faust' when Calvé sings it still rouses the audience to loud applause and Sembrich occasionally is rewarded with a genuine recall; but these times so dear to the heart of the singer are few and far between, and for the most part we have been treated continuously to the rather undignified spectacle of a string of artists walking in front of the curtain in response to a call which would have made their humbler brother in a continuous performance hesitate to do his second act for which he had been paid.

"The season began unpropitiously. Mr. Grau, after his wanderings up and down the country, brought back with him a disabled company. Van Dyck was not able to sing for several weeks; Saléza has attempted to sing but twice and has again retired to nurse his throat; Ternina was able to sing only on last Saturday, and many of the plans that had been made were of necessity given up. But all of this illness did not prevent the management from doing the operas undertaken in fairly good style. The loss of the tenors was severely felt because Alvarez has fallen decidedly flat and Saléza was needed all the more; and Van Dyck was wanted for German opera, since Dippel, the only other German tenor, has been overworked in the West and needed a rest; moreover, he has to sing in French and Italian now as well as in German."

The present method of mounting most of the operas, says the writer, is obsolete, and with few exceptions the scenery and costumes are shabby, incorrect, and tawdry. This must be improved, and new operas, works of the young Italians and of the

younger Frenchmen like Bruneau, De Lara, Goldmark, and Block, must be introduced to "vary the eternal grind of 'Faust,' 'Romeo,' 'Lohengrin,' 'Tannhäuser,' and 'Die Walküre.'"

"HARMONIC" LITERATURE.

MR. JOSEPH H. CHOATE, JR., has a new and startling proposition to propound, which, if accepted, would revolutionize our present literary forms. Whether Mr. Choate wishes to be taken seriously or not, is not quite determinable; he certainly maintains a commendable gravity of expression during the process of outlining his views. His proposal is for a new form of visual writing based on a broadening of the mental and visual focus, similar to that which is used in musical compositions. The mind is not to be concentrated on any one word, but is simultaneously to grasp and blend the meaning of several words as they lie together, one above the other, somewhat as the notes on a score. They are to be photographed, as it were, in a sort of flashlight mechanism. Mr. Choate thus explains (in *The Nineteenth Century*, February):

"Every one—except a few inhuman marvels of concentration—must occasionally, in the course of his ordinary reading, find himself staring vaguely at the page that he has just traversed, with a sudden realization that not a word of it has penetrated deeper than the back of his eye. In this state of mind most people must have noticed one curious effect. At times, as the reader sits looking blankly at the printed lines, something written there—his own name, some familiar catchword, a suggestive adjective, or what not—has suddenly flashed home to his consciousness, and he has then found himself quite unable to say in what part of the page it lay. His wandering attention seems to have left eye and mind focused broadly on the page instead of accurately upon a point; with the result that everything there has escaped him save the one word which by its associations had power to pierce the haze of vagueness that surrounded his mind.

"This is, of course, a very familiar occurrence indeed, but there is another of a closely related kind, which, tho it seems thus far to have escaped description, is, I believe, by no means rare. Occasionally when reading matter which was rather of weight than of interest, and especially passages where the author's descriptive zeal outran discretion, I have been startled to find my fading attention suddenly recalled by the unexpected flashing on my mind of a vivid impression. When this happens, the passage itself on rereading generally gives no clue to the source of the picture. The language seems usually as stiff and colorless as before, the choice of words as conventional and inaccurate, yet something in it has managed to set the imagination to work as vigorously as if it had been a literary masterpiece. I should like the reader to try to reach a similar result by experiment, but just as in teaching the young idea to whistle, the mere sound of the words 'prepare to pucker' make the act impossible, so the wish to receive one of these 'flashes' would be sure to fix the attention too closely to leave room for any such effect."

Mr. Choate compares the progress of written music and of literature as follows:

"People in general, it seems to me have never fully appreciated the wonders of mental gymnastics to which even ordinary musicians have attained, and one of these marvels—score-reading—seems to prove conclusively that the capacity of man in this direction is almost without limit. In any large city to-day you may find men who can sit at a piano before an orchestral score of perhaps thirty lines, which they have neither seen nor heard, and play you a fair version of it at full speed. Now these thirty lines, spread as they are over a long page are written in five different clefs, which have to be reduced, in the player's mind, to a common medium; and six or seven of the parts are those of 'transposing instruments,' which represent sounds above or below the written note. The music may be rapid and complicated to the limits of perception, yet the whole will not only be grasped instantaneously, but be arranged for piano on the way from the player's eyes to his fingers."

"The development of harmonic music throws light upon the way in which such an art might well unfold. For the purposes

of the comparison, harmonized music may be taken to have begun with the embellishment of a simple melody by a second tone sounded now and then when it pleased the player. As the taste for the new sound grew upon people, more accompanying tones were gradually added, and the time between the appearance of one harmony and the next was thus shortened. It then occurred to some one to fill up these intervals of silence in the accompanying voice by connecting the subsidiary tones into a continuous melody. This, however crude and incomplete, was real counterpoint; and from such beginnings that artistic science unfolded by processes obvious enough. Let us suppose now that we begin with what we may call the literary equivalent of a simple melody, say an ordinary narrative. In view of the power displayed in music, it seems certain that by grouping the adjectives and other qualifying words above and below the words qualified—as it were in a chord—each group could be seized as a whole by the reader's eye and mind together. If, then, it were found that the effect was unusually vivid, or approached that of the flashes I have described, the subsidiary upper and lower lines of qualifying words would become fuller and fuller, more and more complete. Then it would appear that, here and there, the subsidiary lines would, by the insertion of a word or two, show a complete phrase, and from that point to the connection of these subsidiary lines into continuous accompanying voices would be only a step. We should find our main story accompanied by one or two lines of distinct, self-contained, explanatory, or decorative sentences—true literary counterpoint—and the possibilities of this, inconceivable tho it be, are dazzling enough to be worth consideration.

"All this, of course, is 'new and startling' to the point of absurdity, but that is because I have been considering only its ultimate results. In essence, and from a practical standpoint, my suggestion is simply that of a new method of printing literary work; a mere device of typography. In the beginning, its sole effect would be to rid the main thread of the narrative of every superfluous word, and at the same time render the author free to pile up adjectives, indulge in repetitions, and wander from his subject to his heart's content. For generations, perhaps, it would serve only to make perfectly clear where lay the gist of the work, but as time went on the eye would fall into the way of unconsciously picking up the accompanying words and phrases, as the musician's eye became able to grasp the additional notes of a written chord. The art would find its initial impulse in the extraordinary conciseness and brevity of works written in the new form; but, in the end, readers would gradually acquire a power of visualization like that of the musicians and harmonic literature, as such, would really come into being."

"The Absent-Minded Beggar": A Protest.—

From Graaff Reinet, Cape Colony, comes a protest against Mr. Kipling's latest song of the British soldier. Mr. J. F. Comerford thus writes to *The Saturday Review* (January 20):

"Is it not time that some one should enter a protest against Kipling's continued degradation of the soldiers of the Queen? There is neither sense nor sentiment in the song. But the jingle of the phrase 'absent-minded' caught on to the 'gin-posed' muse of the rimester of the British army, and, tho it is in every sense absurd and inapplicable, was at once annexed and utilized. I confess that out here, just on the edge of the scene of action, the production jars cruelly on the nerves. Have we no better terms for our brave soldiers than these two, 'absent-minded' and 'beggar'? Believe me that neither is the type of man we want out here at all. We want for the defense of British interests in South Africa neither 'absent-minded' people nor 'beggars.' But really this comes from the unlimited indulgence and license allowed by the critics and reviewers to this, to my mind, the most vulgar of all our modern rimesters. In his 'Barrack-Room Ballads' he gives us the standards of morality and intelligence which, according to him (perhaps he knows), dominate the British army. He pursues Tommy into all his weaknesses and vices, and makes jingling rimes about them all. According to Kipling the British soldier is an insensate debauchee, a drunkard, and a mere human machine, to be moved about and destroyed at will by a government that treats him like a little whipped dog. The picture is disgusting and disheartening did not many of us happily know

it to be utterly untrue. . . . There is not another nation in the world whose army has suffered so much from a vulgar rimester. Can we wonder that the Boers out here regard the whole British army as vitiated by disease as stated in the Boer letter addressed to *The Times*? that owing to their debauchery and drunkenness they are a foe that can not withstand the rigors of a campaign that the Bible-reading Dutchmen's superior moral stamina can easily face? I do not speak of the officers of the British army. It is evident that Kipling eliminated them from his idea of 'Tommy Atkins' in his original writings; but I am greatly surprised that the protests and repudiations on the part of military men have not been very much more numerous than they have been. But to my mind the worst feature of Kipling's muse is the astounding way in which he not only exploits the worst slips and falls of the soldier from the moral code, but actually attempts to excuse, nay, to glorify them."

"FÉCONDITÉ" AND THE "KREUTZER SONATA": A CONTRAST.

THE singular contrast presented by Zola's latest story, "Fécondité," to Count Tolstoy's famous tale of a few years ago is emphasized by Miss Hannah Lynch, an English novelist and critic. Zola's teaching, to which he returns again and again, is represented in the following passage:

"Resist, subdue. In order to resist and subdue, increase and multiply. In the immortality of your stock, forget or accept the transience of your souls. Worship life; give life; life in all its forms. Be the parents of numerous children; make also two blades of grass grow where one grew before. Enlarge your hearts; enlarge your families; enlarge the sphere of your action. Have children, but not as the poor man who lets his offspring wither and blight in the gutter. Have children, and work to breed them fortunately in that large, free, adventurous, strong-willed, and strong-fibered liberty, which already, distinct on the horizon, is the ideal of to-morrow."

With this, says Miss Lynch (who writes in *The Fortnightly Review*, January), contrast the following from Tolstoy's "Kreutzer Sonata," in which he alludes to the ideas of love which the poets and romancers of all ages have taught us to reverence:

"What is peculiarly revolting about all this (the bickerings and hostilities of early married life) is that whereas, in theory, love is described as an ideal state, a sublime sentiment, in practice it is a thing which can not be mentioned or called to mind without a feeling of disgust. It was not without cause that nature made it so. But if it be revolting, let it be proclaimed so without any disguise. Instead of that, however, people go about preaching and teaching that it is something splendid and sublime."

And in speaking of woman's sexual servitude to man, he says bitterly:

"In the face of this, they prate about freedom, about woman's rights. Why, the cannibals might just as well boast that they were solicitous for the rights and liberty of the prisoners of war whom they feed and fatten for food."

On still another point Zola and Tolstoy are at the antipodes of human sentiment. The one delightful feature of "Fécondité," as Miss Lynch points out, is the upwelling joy which M. Zola takes in children. Says Miss Lynch:

"Could anything be more pure and charming than such a little picture of family life as this? Marianne is in bed, and a knocking against the wall is heard.

"Ah, the scamps," cried Mathieu gaily. "They're awake. Well, well, it's Sunday, so let them come."

In the next room for the past minute there was quite a noise of an aviary humming. You could hear a chatter, a shrill twitter, broken by cascades of laughter. Then there were dull thuds, no doubt pillows and bolsters flying, while two little fists continued to drum against the wall.

"Yes, yes," said the mother, smiling and uneasy; "tell them to come in, they'll break everything."

The father in turn rapped loudly. This, on the other side of the wall, was the signal for an explosion of victory, shrieks of

triumphant joy. And the father had barely time to open the door when in the passage was heard a patter and a rush. There was all the flock, and it was a magnificent invasion. The four were in their long nightdresses, which fell to their little naked feet, and they trotted and they laughed. Their soft brown hair flying, their visages so rosy, their eyes shining with such a candid joy that they shed light around. Ambroise, tho he was the second-born, hardly five, walked first, being the most enterprising, the boldest. Behind came the twins, Blaise and Denis, proud of their seven years, more thoughtful, above all the second, who was teaching the others to read, whereas the first, always timid, somewhat of a coward, remained the dreamer of the band. And each held a hand of Mlle. Rose, as lovely as a little angel, dragging her now to the right, now to the left, in the midst of shouts of laughter, but whose two years and two months held their own gallantly, and stood aloof.

"Ah, you know, mamma," cried Ambroise, "I'm not warm, not a lot. Make a wee place for me."

With a bound he sprang upon the bed and dived under the quilt, shivering up against his mother, so that only the little laughing head, with its fine curly hair, could be seen. At this sight the twins uttered a loud wail and, springing up in turn, invaded the besieged town.

"Make room for me, make a wee little place, mamma! There at your back, mamma, near your shoulder."

Only Rose remained on the floor, beside herself, furious. In vain did she attempt the assault; she inevitably fell down. "And me, mamma, and me," she cried.

The father had to help her as she crawled up and balanced herself with her two fists, and the mother caught her in her arms, and it was she who had the best place. At first the father trembled, fearing this band of invading conquerors would hurt their poor mamma. But she reassured him, laughing loudly with them. No, no; they would not hurt her; they only brought her happy caresses. And he stood marveling, so amusing, of such a gay and adorable beauty was the picture. Ah, the beautiful and goodly Mother Gigogne, as she laughingly called herself at times, with Rose on her breast, Ambroise half hidden against her side, Blaise and Denis behind her shoulders! It was quite a brood, little pink beaks lifted on all sides, soft ruffled hair like feathers, while she herself, with the whiteness and freshness of milk, triumphed gloriously in her fecundity, vibrant with the life she was ready to bestow again.

"Such a picture as that, written with such genuine enthusiasm and conviction, is enough to make the gruffest old bachelor in love with marriage. It is all laughter and sunshine; little pink faces and fluffy soft hair and pattering feet, and shrill cries of joy about an enchanted mother, with, for spectator, an enraptured father, in the early morning light. There is nothing common or sordid about the intimate scene, still less is it overdrawn or idealized. It is as pure and as lovely as dew, as fragrant as honeysuckle, as sweet-toned as the lilt of water or the song of birds. It is just an exquisite idyll, in which mere life and motherhood are revealed to us with freshness and charm. Turn now to Tolstoy upon the same subject. Joy in children is a joy he does not understand.

"Consider what lying goes on concerning children [he writes in the "Kreutzer Sonata"]. Children are a blessing from God—children are a joy. Now all this is a lie. Children are a torment, and nothing more. . . . Under the most favorable circumstances, that is, when in thriving health, children are a torment; but when they fall ill, life is positively not worth living, it is simply a hell on earth. . . . Word would suddenly be brought that Vasa was taken sick, that Mary had a bowel complaint, that a rash had broken out on Andy's body or face, and from that moment began our martyrdom anew. To what part of the city should we rush off, which doctor should we send for, in what room should we isolate the sick child? And then began the endless series of injections, measurings of temperatures, mixtures, potions, and doctors. And before this came to an end, something else would crop up unexpectedly, and so on without end. As I said before, it was one continual escape from fancied and from real dangers. And the same thing goes on still in the majority of families. In our family it was painfully palpable. My wife loved her children dearly, and was credulous; so that the presence of children, far from contributing to better our life, only poisoned it. Moreover, the children were for us a new pretext for quarreling. Each of us specially favored one child, which was our pet instrument in the quarrel. . . . and, as they grew up, they gradually became our allies, whom we sought to enlist on our side by every means at our disposal."

"This is a picture of fatherhood as bitter and somber as Zola's is radiant and fervent. The hesitating bachelor lured to consider favorably the thought of marriage by the latter's sunny page, is here invited to hug his celibacy as a blessing. All that Zola admires in marriage with extravagant passion Tolstoy condemns, but while the latter degrades marriage with his ascetic

contempt, Zola bestializes it with pagan devotion. I do not use the word 'bestialize' with the conventional implication. I mean that Zola reduces man and woman to the mere state of animal. He eliminates mind and soul; heart with him is interpreted as health; and virtue is the continuous production of the species."

THE AMERICAN COLLEGE IN THE TWENTIETH CENTURY.

THE notable advance of higher education in America during the past thirty years—as especially shown in the great growth of the elective system and the establishment of faculties of graduate study—suggests the thought that great changes are to be looked for in the future. Prof. Clement L. Smith, dean of the faculty of arts and sciences at Harvard, believes that one of the next advances in collegiate education will be the abridgment of the undergraduate course to three years. In *The Atlantic Monthly* (February), he says:

"It is to be observed, in the first place, that the question of a three-years' course is not now, as it might have been perhaps thirty years ago, a question of turning the student away at the end of three years, with no place to go to for further study—as he actually was turned away, in those days, at the end of four years. If there was danger of any such result then, there is surely no such danger now. The growth of the graduate school has familiarized every college student with the fact that the bachelor's degree is really, as it is called, only the first degree in arts, and not, as we used to regard it, the crown of a liberal education; and if he desires to carry his studies beyond that point, even with no thought of devoting his life to any particular field of learning, the way stands open for him. And this would be true, should the three-years' course be adopted, not only of the universities, with their fully organized graduate schools, but of the independent colleges, which are far more numerous, and are perhaps the most important factor in this problem. It would not be difficult for at least the best of these to provide instruction for a year or two beyond a three-years' baccalaureate course; and there is ground for confidence that the number of those who took such an extended course would be considerable."

The college must be "a place of freedom with responsibility," says Professor Smith, and the old question of classics versus modern learning will be decided by the student himself in accordance with his own mental needs and tastes.

One Art for All the World.—M. Jean François Raffaelli, a French artist of note, believes that the endeavors to foster national and provincial schools of art is a mistake, and that internationalism is to be the ideal of future art, as many believe it is to be also of the social organism and of religion. He says (*Philadelphia Times*, February 4):

"If we look back on the history of the past centuries, we shall see that every nation has had, in its turn, a national art. But the nations were separated by long distances. I would have laughed much if I had been told, some twenty years ago, that I would consent to cross the ocean and come to America in order to act as a member of the jury in Pittsburg, and I would have hastened to consult the map about the situation of the city. To-day, on the contrary, by the numerous and rapid means of communication the distances are annihilated or greatly reduced. And since there are no more distances, or scarcely any, this art, which the ancient nations transmitted to each other like a sacred relic, has no longer any reason for being national; it ought to be international and to belong, as the sacred mark of civilization, to all civilized nations. I repeat it. This is the idea which I came to salute among you. Indeed, when I was asked in this country: 'Is there an American art?' I answered: 'There is no American art any more than there is at present a French art. There is the Art, that is all.'"

"It was for the Americans, a nation cosmopolitan as no other is, to defend this idea of the universal art. And by this idea of a universal art artists may become the champions of the alliance

of all the civilized nations. A noble mission indeed which they should receive every encouragement to worthily fulfil."

"Let us congratulate one another in this idea. There is only one art in the world, as there is only one God. There is only one art, as there is only one ideal among civilized people. There is only one art, as there is only one brain in a head; as there is only one heart in a body; as there is only one soul in every one of us."

A Literary Eremit.—M. Huysmans, the novelist, is to join the Benedictine Order on March 19. "On that date," he says, "I shall put on the clothes of an oblate, and shall thus have mounted the first step of the celestial ladder." The *London Academy* thus comments on the announcement:

"We note, however, that M. Huysmans does not intend to put off the clothes of a novelist. As an oblate, indeed, M. Huysmans will not have to wear the dress of the order at all times, nor will he live within the walls of the monastery. He will reside in his own house at Ligugé, and one of his first occupations will be to complete his biography of St. Lydwine of Schiedam, and his novel, *L'Oblat*." Huysmans's career has been a strange one. The routine of many years' quill-driving at the Ministry of the Interior did not weaken his capacity for violent mental and spiritual experiences. In *La Bas* Huysmans looked down into the fetid abyss of Parisian Satanism. Through pessimism, mysticism, Satanism, and what not, Huysmans reached Catholicism. It would be stupid and unjust to question the sincerity of Huysmans's conversion, but one feels that his is a life that must be lived out before it can be understood."

NOTES.

ONE of the literary events of the season in Paris is to be the choice of a successor for Victor Cherbuliez in the Academy, and already the election bids fair to be a hotly contested one. Another coming event is the production of "*L'Aiglon*," by Edmond Rostand, author of "*Cyrano de Bergerac*." Mme. Bernhardt is to impersonate Napoleon's son in this play, which is to be the chief dramatic attraction during the Exposition.

It is reported in all seriousness from France that a careful father lately wrote to Zola asking him as to the fitness of his new novel, "*Péconière*," for young ladies' reading. In reply M. Zola wrote politely: "I don't write for young ladies. I don't believe my books are good for brains still in the process of development. You are perfectly right to direct the children's reading, who owe to you obedience. Later on, when their life is more free, they will read what they want. This opinion may guide other parents who are perplexed by similar problems."

HAUPTMANN'S new play, "*Schluck und Janoh*," written in the dialect of Silesia, was performed in Berlin a few days ago for the first time. The *Academy*, London, describes the plot as "slight and fantastic—an elaboration of Lamb's little chimney-sweep who found himself in a dual bed." Schluck "is invited to the castle, and is treated as if he were a prince. He succumbs to the dazzling illusion, but is finally sent back to his native fields with Janoh for his sweetheart, and a cottage and fields for his support. The burlesque scenes and situations evolved are said to be distinctly comical."

A WRITER in *The Pall Mall Gazette* tells the following anecdote of the late Dr. Benson, Archbishop of Canterbury and father of Mr. E. F. Benson, the author of "*Idola*." "Just after '*Idola*' had taken the town by storm, Archbishop Benson went down to Etonbridge School, of which he was visitor, to preside at a special function. There was a large gathering, and the archbishop made a speech, in which he dwelt on the by-gone customs of English public-school life, many of which, he said, 'are now as extinct as the—' Then he paused. It was not hard to divine the traditional simile which was on his tongue. A smile went round the room, spreading till it broke into a burst of laughter, in which the archbishop joined. The sentence was never finished."

THE death of the brilliant young war correspondent, Mr. G. W. Stevens, at Ladysmith, will be particularly regretted by those who have read his books, among which are included "*The Land of the Delta*," "*With the Conquering Turk*," "*Egypt in 1900*," and "*With Kitchener to Khartum*." The *Commercial Advertiser*, New York, says of him: "If not the duty, it has been at least the invariable practice of the best war correspondents not to spare themselves peril of any kind, and they have taken their lives in their hands with as much bravery as the soldier himself. Apart from all the talk about censorship and the danger of allowing despatches to be sent off the field too soon, it must not be forgotten that the war correspondent not infrequently performs services in carrying despatches, and that on more than one memorable occasion he has been useful to the general in command as well as to his newspaper. Mr. Stevens's work was exceptionally fine, showing a close and abundant observation and vivid descriptive power that remind one of Kipling. Whether in the Greco-Turkish war, with Kitchener in the Sudan, Lord Curzon in India, or General White at Ladysmith, his account of what he saw ranked high as descriptive literature."

SCIENCE AND INVENTION.

IS MATHEMATICS THE BASIS OF ALL EDUCATION?

THOSE persons who "never could understand mathematics" and who have consequently left this study out of their educational scheme, will probably be indignant over the attitude of a French educator, M. A. Bertrand. In a forthcoming work entitled "Studies in Democracy," some advance chapters of which appear in the *Revue Scientifique* (January 13), M. Bertrand asserts that a boy who is not apt in mathematics ought not to go beyond the primary school, because he who has no mathematical aptitude is simply a dunce. He maintains, however, that those who believe themselves to be without this faculty are generally mistaken, and that their belief is due to poor instruction. Mathematics he believes to be the proper basis of all forms of knowledge, and he urges that its teaching be reformed so that every one will see and admit this fact. Says M. Bertrand:

"The best minds hold that there are two studies essential in secondary education—languages and sciences; I should invert the terms, and hold that it is neither subversive nor revolutionary to say 'science and language.' Now there is no scientific study without a mathematical introduction. This is, so to speak, the ground floor of the house. You despise the ground floor because it is usually reserved for shops. . . .

"He who is totally without the aptitude for mathematics that is requisite for the assimilation of elementary science, will probably never be able to rise very high in intellectual work, and I could not with a good conscience advise him to take up secondary studies. . . . This may be considered somewhat brutal; but I stand by it. We are always talking of selection, but no one wants to submit to the conditions of all selection, which are the choice of the best and the rejection of the worthless. . . . The time is past when a professor of rhetoric could boast that he scarcely knew the four fundamental rules of arithmetic. We must accept the opinion of Leibnitz: 'Without mathematics we can never penetrate into the depths of philosophy; without philosophy we can never penetrate the depths of mathematics; without the two, we can never get to the bottom of anything.'

"But do not be discouraged; it is not a question of transcendental mathematics in secondary education. When we meet learned, distinguished, even eminent men in their specialty, who assure us . . . that they have always had a deep aversion and a radical distaste for mathematics, we should always inquire whether they are quite sincere, and whether the fault does not lie with methods of instruction rather than with their own minds. Arago made a very sensible remark when he said: 'People who have never studied geometry and algebra are always very much afraid of these big words; they make monsters out of them; but these studies are much easier than grammar; the rules of grammar are a hundred times harder to understand and remember.'"

The writer quotes from a recent work on the teaching of mathematics by C. A. Lasant (Paris, 1898) to fortify his position. The author concludes that mathematical notions are necessary to all, not only from the practical standpoint, but also from that of all science; and that every one of average intelligence can acquire these notions within certain limits. "To ask," he says, "whether a child is apt at mathematics is equivalent to asking whether he is apt at reading and writing." If we ask whether the child is able to become a mathematician, of course the answer would be different. It is not a question of training mathematicians. "Numbers," it has been said, "govern the world." In other words, says M. Bertrand, there are arithmetic and geometry everywhere, even in the domain of morals, which is a science of ratios or relations. In short, mathematical ideas regulate the rules and measures of all other things that we know and that we ever can know. A great English philosopher, Sir William Hamilton, M. Bertrand admits, entertained ideas quite opposed to those just set forth. He asserted that the exact sciences had no value as a mental discipline; that they distort the reasoning

powers, paralyze thought, and extinguish imagination. He sees nothing better in the physical sciences. John Stuart Mill answered him thus: "I am astonished at the sterility of imagination of a man who can see nothing admirable in the material universe." M. Bertrand thinks that such attacks as Hamilton's may be disregarded. He fears rather the prejudice of those who are too idle to inquire whether those prejudices rest on solid ground or not. Such people, he says, are the victims of false methods of teaching. An eminent mathematician recently declared that mathematical instruction in France is still the most difficult, the most pedantic, and the most fatiguing that it is possible to conceive of, and that the routine teaching of theology is nothing to it. He advises his fellow countrymen (and doubtless the advice may be heeded in other countries also) first to reform their methods of teaching mathematics, so that every person of average sense will be able to pursue the study with ease and profit and to see its importance; and then to insist that it shall be made an essential feature of every scheme of secondary instruction.—*Translation made for THE LITERARY DIGEST.*

WHAT HAPPENED TO A BILLIARD BALL.

A RECENT curious mishap to a billiard ball is interesting from the illustration that it gives of the internal structure of ivory. The ball in question was brought to the office of *The Scientific American*, which thus describes and explains its condition:

"At first sight one would naturally suppose that the perforated ball and snugly fitting plug were the work of some deft mechanic;

CURIOUS MISHAP TO A BILLIARD BALL.

for despite its taper and irregular section, the one fits the other so closely that it is difficult to detect the joint. As a matter of fact, however, the 'trick' was done, involuntarily, during a game of billiards, when this particular ball was struck heavily by another ball on the figure 13, with the result that the heart of the ivory was driven cleanly out, as shown in the illustration.

"If a cross-section be taken of an ivory tusk, the center will contain a spot (the remains of the pulp) of darker color than the rest, and concentric with this will be noticed numerous circular contour lines, which are due to minute curved spaces known as 'interglobular spaces.' In these spaces there is less of lime salts

and more of organic matter than in the rest of the ivory. Hence the ivory in these rings is less dense and more likely to decay, and fossil tusks and the tusks of mammoths are frequently found to have separated into a central solid cone, with several superposed hollow cones embracing it, as shown in our engraving.

"This billiard ball had evidently been turned from the heart of the ivory, the axis of the tusk coinciding closely with the axis of the ball. The sharp blow must have been delivered fairly in a line with the axis of the

SECTION OF DISINTEGRATED MAMMOTH TUSK, SHOWING NATURAL LINE OF SEPARATION.

heart, and the piece which was driven out gave way at the circular line of cleavage, marking the presence of the 'interglobular spaces' above referred to."

SCIENCE AND SPIRITUALISM.

AT no time has the attempt to explain certain well-known phenomena on the supposition that disembodied spirits of the dead can communicate with the living been accepted by scientific men, as a body. Yet from time to time individuals of high scientific reputation have announced their belief in this explanation or in something approximating it. For many years, the Society for Psychical Research has devoted itself to investigation of this class of phenomena. It has numbered among its ranks some eminent men of science; yet the majority of scientific men have not only held aloof from it, but have denied that the results of its investigations can properly be called science. Spiritualism, however, has hitherto received scant confirmation at its hands, so that the announcement by one or two men of reputation that they have discovered a "medium"—Mrs. Piper by name—in whom they have learned to place implicit trust, and whose performances will bear no other interpretation than that based on a practical admission of some of the claims of spiritualism, has caused a sensation. One of these men—Prof. James H. Hyslop, of Columbia University—read on February 13 before the New York Section of the society just mentioned a paper in which he explains the reasons for this belief. These are reported in *The Evening Post* (New York, February 14) as follows:

"Professor Hyslop began with an explanation of the nature of the problem which presents itself to the investigator of Mrs. Piper's phenomena. This is the question of personal identity after death, or the continuity of personal consciousness in another state of existence. It is not a problem regarding the general claims of 'spiritualism,' which comprehends a wide class of alleged phenomena that have no bearing whatsoever upon the primary matter at issue.

"In regard to the question of fraud, Professor Hyslop maintained that it was dismissed from consideration for all intelligent men ten years ago, and that suspicion persisted only in those who had not learned the facts. Those who choose to entertain it must make it good by specific facts and proofs or be thrown out of court, as Mrs. Piper has been relieved of all responsibility for the value of her phenomena, and no one can have 'sittings' with her except through the secretary of the society. Whenever any experiments of importance are conducted, Dr. Hodgson assumes the responsibility for secrecy in them."

After describing the precautions taken to prevent "suggestion" and the obtaining of information from the sitter, and to insure a correct and permanent record, the reporter goes on to say:

"The facts in the Piper phenomena at large consist of three kinds of 'messages': (1) Incidents in the ante-mortem life of the alleged communicator; (2) reflections, spiritual, moral, and medical advice, delivered in the appropriate manner; (3) description and philosophical accounts of the conditions of life in a transcendental world. Of these three types, only the first appears in Professor Hyslop's record. These are specific incidents in the lives of six different 'communicators.' One of them purported to be Professor Hyslop's father, two of them uncles, one his cousin, one his brother, and one his sister. Their names were given correctly, and they represented correctly also the actually deceased relatives that they claimed to be. The one claiming to be his father gave in proof of his personal identity as many as seventy-five or one hundred incidents that have been proved to be facts of his experience before his death in 1896. . . . Many of the facts were unknown to the son until ascertained in the West from friends and relatives to be true. There were as many as twenty-five of these, excluding direct telepathy with the sitter's mind. Five of the sittings were held in Professor Hyslop's behalf by Dr. Hodgson, while Professor Hyslop remained in New York, and all the facts then told were unknown to Dr. Hodgson, and perhaps one half of them unknown to Professor Hyslop also. The incidents given by all six of the 'com-

communicators' number some 150 to 200, some of them requiring three months' investigation to verify."

Disarding the hypothesis of fraud, Professor Hyslop concludes that only two explanations are possible—telepathy, or "mind-reading," and the persistence of individual consciousness after death. He holds that the former would in this case strain one's credulity far more than the latter. He says:

"The selective character of the telepathy involved is beyond comprehension, unless we suppose it equal to the task of reproducing all the phenomena of personal identity and individual consciousness, precisely as we should expect them in a surviving spirit. If all the facts were known to the sitter, the case in favor of telepathy would be more plausible, tho it would still remain extremely puzzling to find the selectiveness in favor of personal identity so perfect as it is in the hundreds of persons that have visited Mrs. Piper. But when large numbers of the facts are wholly unknown to the sitter, the telepathy that can select almost infallibly the right facts from the right person among all living consciousness or memory is something for which there is no scientific analogy outside the phenomena in the Piper case, so far as yet authenticated scientifically."

Professor Hyslop challenges those who do not accept his conclusions to adduce a more reasonable hypothesis than his. It is extremely unlikely that any scientific man, except those already within the bounds of the Psychical Research Society, will notice this challenge, for other members of the recognized learned bodies have given it to be understood that they do not consider the phenomena on which the psychical investigators are working as legitimate subject-matter for scientific research. So, right or wrong, the scientific journals have as yet furnished us with no comments for quotation. Some of the daily papers are not so reticent, altho most of them adopt the familiar tactics of ridicule in dealing with phenomena of this kind. The following from *The Sun* (New York, February 15) is a fair sample:

"Inasmuch as these so-called communications with the other world have been going on now for fifty years, it is rather remarkable that the thousands of 'spirits' consulted have not by this time got along further than such childish methods of revealing themselves. They have made no progress in the art since the days of the Fox sisters, and Mrs. Piper's 'communications' to Professor Hyslop are even in the lowest plane of intelligence of any which we can recall.

"Nothing in the whole volume of 'spiritualistic' revelations from the beginning is suggestive of an intelligence superior to mortal knowledge or which even approaches that of human beings of average intellectual capacity. If Professor Hyslop's 'spirit' father could think of no more convincing way of identifying himself to his son than by making inquiries about his pen-knife, his broken fence, his delinquent taxes, his neighbor's dog, and other matters of the sort, either the deceased gentleman has retrograded into childishness in the spiritual state or the son must have been humbugged by the 'medium' and her manager. . . .

"Of course, such witnesses can have no standing with sensible people. They are too dull and stupid to go on the witness-stand. The testimony which comes through the 'mediums,' instead of furnishing evidence of an intelligent personal existence beyond the grave, tends rather to convince anybody believing it that intelligence, as we know it, passes away at death. Mr. Hodgson, Mrs. Piper's manager, is a clever fellow. Why does he not teach her to do better?"

Leaving out the suggestions of fraud on the part of the society, the force of such a statement as this lies in its insistence on the triviality of the communications. In reply to this it is said that the object of the communications is personal identification, and that this may often be best accomplished by reference to facts and events of the most trivial character. Yet when this is admitted, the question remains: When the identification is completed to the satisfaction of the sitter, as in this case, why can not the disembodied intelligence go farther? Is it because of lack of will or lack of ability? And why should there be lack of

either? Altogether, it will probably be agreed that there is room for much more investigation of this subject; and, since the staid learned societies beg to be excused, most people will be glad to allow the psychical researches to continue.

EFFECTS OF MODERN GUNPOWDER.

THE powders used by the British and the Boers in the present conflict in South Africa are not those familiar to our fathers. They are of strange chemical composition, and their effects are equally strange. Owing to these facts, the conditions of warfare have greatly altered and there have been a good many surprises. In an article in *L'Illustration* (Paris), M. Clément Casciani tells

how the art of war has been revolutionized by the invention of these new forms of powder. He writes:

"The progress of ballistics has revolutionized the art of war. Our fathers, who fought with short-range guns

CORBITT FOR ARTILLERY (BLACK SIDE)

which required some time to reload, were obliged to wait until the enemy was near them before using their arms, and as they could fire only a limited number of projectiles in a given time, it followed that a bold body of men could disperse a battalion with the bayonet, in spite of their fire. Napoleon's soldiers charged with arms in hand.

"Nowadays it is different; we kill our enemy without seeing him. Projectiles coming generally from invisible points, at a distance of several miles, fall like hail on the advancing regiments, whose ranks they decimate; and if troops wish to make an assault, even if the space to be crossed is narrow, a storm of lead lays them low in a few seconds.

"This is what is now taking place in the South African war, where assaults are such murderous affairs and so rarely crowned with success that they reduce the number of effective troops without profit.

"The cause of this revolution is the present rapidity of fire and the invention of smokeless powder.

"For a long time a powder has been sought that should be more powerful than the old black powder; that is, that should be able to give the ball greater speed and consequently extend its range. The picrates, chlorated powders, and nitrated explosives such as guncotton and nitroglycerin, are much more powerful than black powder; but they can not be used in pure form, for

they are what are called shattering-powders. Their combustion, being too swift, produces a sharp reaction, which in a firearm breaks the gun before the projectile has time to move. Besides

BALL-LITE (LÉALE) ARTILLERY POWDER IN STRIPS

thus, the chlorated powders and pure nitroglycerin, which explode at the slightest shock, are too dangerous to handle."

The inventors of the new powders have endeavored to render the use of the explosives possible by retarding their combustion in various ways. This part of the subject was very thoroughly treated in a recent article by Hudson Maxim, quoted in these columns. The result has been the invention of various forms of powder much more powerful than the old black variety and giving off comparatively little smoke.

The illustrations herewith show the appearance of various kinds adopted by European nations. The author notes certain objectionable features of the new powders. One is their rapid deterioration, which has been specially noted in the Transvaal; another is their injurious effect on the bores of cannon. Says M. Casciani:

"One fault of the smokeless powders containing nitroglycerin is that they rapidly wear out the bores of the guns by erosion. This results from the escape of the highly heated

CORBITT CARTRIDGE FOR GUN

gases that are always produced between the projectile and the wall of the gun. The metal is worn away, partly melted, and corroded, as if by strong acid. Powders not containing nitroglycerin, such as those used by the French, have not this inconvenience."

The author notes here that powders for the bursting-charges of shells need not be slow-burning, the only requisite here being that the charge should not be exploded easily by shock. Powders used for this purpose are melinite and the English lyddite, now in use against the Boers. Of lyddite M. Casciani says:

"This substance has extraordinary energy: the effects of its explosion being six or seven times as great as those of black powder, on compact rock or masonry, and one and a half to two times as great in earth. The melinite or lyddite shell breaks the most solid and resisting plates of steel. Not only is the

FRAGMENTS OF A MELINITE SHELL

projectile shattered into small fragments, but all objects within the radius of action are likewise shattered. . . . This radius extends only from twenty to twenty-five yards . . . but we to those who are found within it! Even if they are not touched by the fragments they will be killed by the blast of gas produced by the explosion."—*Translation made for THE LITERARY DIGEST.*

CLIMATIC MISFITS.

A PHYSICIAN of Janesville, Wis., Dr. W. P. Roberts, has been making a study of local climatology throughout the United States and has come to the conclusion that what he calls "local climatic misfits," or places not favorable to health, are responsible for much of our disease, and especially for catarrh and consumption. He points out that while some parts of the country are almost fatal for consumptives, others are practically immune, and he believes that by taking advantage of these facts the present mortality from tuberculosis can be greatly decreased. From a recent lecture by Dr. Roberts, published in the *Boston Weekly Transcript* (February 9), we quote the following:

"That local climatic misfits exist, and that in many parts of our country the health and lives of the inhabitants are more in jeopardy than in other localities because of such misfits, is a conceded fact.

"So far as I am informed, there has not been any scientific reason made public as to the real cause of these life-destroying climatic misfits, altho some physicians and men of science have advanced theories.

"The late and eminent Dr. Henry I. Bowditch, of Boston, Mass., many years ago arrived at the conclusion that 'an excess of moisture in the ground' caused the largest number of such misfits along the line of producing consumption in New England. . . . After giving the subject my best thought, I concluded that the Dr. Bowditch theory had the preponderance of common sense in its favor. In every place throughout New England with which I am familiar there has been a much larger per cent. of mortality from consumption in sections where there is an excess of moisture in the ground than in scores of health resorts in the drier sections of the country. . . .

"My investigations led me to study the scientific weather reports, as gathered and published by our Signal Service Bureau.

"By comparing those reports with personal observations, I learned that in small areas, for example in a town, a circumscribed locality in a town, or even the area may include several towns or counties in a given State, or wherever consumption is causing a large per cent. of the deaths, we also find an excess of moisture in the ground; which proves the theory of Dr. Bowditch. I have little doubt in my mind that could he have had the aid of the very efficient Weather Bureau we now have, he would have been able to arrive at the cause, which, in my judgment, is that in all such localities whether found in New England, Wisconsin, or any other commonwealth, those excessively moist places have perceptibly higher and lower temperature in times of extreme changes of weather than do adjacent localities where the ground is drier. . . .

"It seems to me that as soon as the people become conversant with these facts, it ought not to be very long until the public servants—state officials—will realize that instead of recommending large outlays in money to build and equip state homes for consumptives in close proximity to those excessively moist locations, they will insist on having such institutions located in the most immune (dry) sections to be found within the bounds of the commonwealth.

"In my judgment, it would be far better for any commonwealth having a desire to rid itself of this scourge, at the least cost of lives and finances, to send a competent commission to locate a state home for consumptives within the bounds of the old American desert, where it has already been proven (through the admirable source of the Invalid Aid Society) that climate together with other environments cures more than ninety per cent. of such cases.

"There are plenty of locations which can easily be secured, and there is no good reason why Congress should not set apart enough of those waste lands to supply every State seeking to carry out such a desirable health, life, and money-saving scheme."

A Vegetarian View of Cosmetics.—Fruits and nuts are the best cosmetics, so says Dr. J. H. Kellogg in *Good Health*; but they must be taken internally. In other words, a vegetable diet insures a clear skin. The doctor puts it in this way:

"A preparation of apples, grapes, cherries, peaches, figs, bananas, and all other kinds of fruit, combined with nuts of various kinds—almonds, pecans, hickory nuts—and with well-cooked grains, applied to the inside of the stomach, is the best possible preparation for whitening the skin. The trouble with the skin when it is dingy and dirty, is that the dirt is more than skin deep. There are also dirty muscles and a dirty brain, dirty glands, dirty blood; the whole body is contaminated; the dingy color of the skin is merely a sign of the condition of the whole body. Simply to bleach the dirt off the face is a very hypocritical procedure. We may make the skin of the face clean while the rest of the body is filled with organic dirt, tissue debris, and effete, worn-out, and diseased matter which has accumulated as the result of vital work and improper diet. We should be interested in the whole skin rather than in the skin of the face alone."

Dr. Kellogg will not allow that beauty may spring from a meat diet. He says:

"To be beautiful we must eat beautiful things. What a beautiful cheek a ripe peach has! Who could wish a complexion more beautiful than the bloom of a peach? The way to get such a bloom is to use the peach itself.

"Now look upon another picture—oysters, snails, sprawling frogs, clawing crabs, wriggling shrimps. People eat such things, and then want something to spread on the outside of their faces to make them appear beautiful. If we make the stomach the hold of unclean things, we must expect that the body will be unclean and ugly. There is nothing beautiful in a dead creature—in the corpse of a pig or an ox or a hen lying upon the table. If we eat such things, we must abide the consequences."

New Metals in the Sun.—The announcement was first made by Norman Lockyer that certain bright lines in the solar spectrum indicated the presence in the sun of a hitherto unknown gas which he proposed to call "helium." In 1868 Ramsay isolated this gas, and we now know that its density is about twice that of hydrogen and that the atomic weights of the two gases bear the same proportion. "But at the same time," says *Cosmos*, abstracting an article in *Prometheus*, "Lockyer found in the spectrum of the corona other colored lines which he attributed to the presence of another element, to which he gave the name 'coronium.' Neither Ramsay nor any other chemist has yet been able to isolate this body. Nevertheless, an Italian spectroscopist has discovered the lines of coronium in the gases thrown out from the crater of Vesuvius. This has encouraged physicists to search for this pearl of all the gases, present, past, and future. But this is not all; at the same time other physicists have had their attention directed to other lines of the spectrum, and announce that there will next be discovered two new metals that exist in the sun. They have given to these elements by anticipation the names of 'aurorium' and 'nebulum.' The position occupied by these bodies in the atmospheric layers of the sun leads these scientists to think that they are lighter than hydrogen. . . . For chemists this discovery will be a veritable revolution. In fact, it will destroy Proust's hypothesis, which states that all the molecular weights of bodies are whole multiples of that of hydrogen. However, as no trace of either aurorium or nebulum has yet been found on the earth, the existence of these elements is yet far from conclusive demonstration."—*Translation made for THE LITERARY DIGEST.*

"THE project of maintaining the level of Lake Erie near its high-water stage during the navigation season by constructing a dam across Niagara River below Buffalo harbor is reported by the Deep-Waterways Commission as practicable and desirable. The water lost by evaporation in summer," says *The National Geographic Magazine*, "could be partially replaced by accumulating the surplus water during the closed season and releasing it when most necessary in the open season. The best location for a dam is, according to the board, at the foot of the lake, just below Buffalo harbor. A canal with a lock is provided on the American side around the end of the dam and the rapids at the head of the river. The cost of the regulating works is estimated at \$7,000,000 and of the lock and canal at \$2,000,000. The changes would raise the low-water stage about three feet in Lake Erie, two feet in Lake St. Clair, and one foot in Lake Huron."

THE RELIGIOUS WORLD.

DECLINING MEMBERSHIP IN THE CHURCHES.

NOTWITHSTANDING the figures published by *The Independent* (see *THE LITERARY DIGEST*, January 15), which seem to show a fair rate of increase during the past year in most of the churches, there are numerous evidences that individual denominations are not satisfied with the showing made, and are even manifesting some alarm. The relative decline of Presbyterianism is well known; but complaint is not confined to that body. The Methodist Episcopal Church, next to the Baptists the largest body of Protestant Christians, is seeking for a "remedy for declining membership." Dr. James M. Buckley, editor of *The Christian Advocate*, the leading organ of Methodism, writes (February 15):

"That the Methodist Episcopal Church, with nearly three millions of communicants and a vast army of Sunday-school scholars, should add less than seven thousand to its membership in 1899, is startling. That in the same period it should show a decline of twenty-eight thousand five hundred and ninety-five in those avowed and accepted candidates known as probationers, is ominous. Such a situation has not been frequent in our history, and when it has occurred the usual result has been to awaken the church to its need of divine assistance and concentrated work. In some such instances the year of drought has been succeeded by several years of extensive harvests. . . .

"No reverent person can charge the decline to God the Father Almighty, to Jesus Christ His only Son our Lord, or to the Holy Ghost, in whom the church ceaselessly declares its belief. It must therefore lie at the doors of every church. The only remedy is concentration upon the conviction and conversion of those whom the churches can reach through the preaching of the word, meetings for prayer, praise, and testimony, the Sabbath-school, and direct and intense personal effort.

"While conferences are steadily declining, population in the same territory is increasing. In these conferences districts are weakening, and in these districts societies are becoming lifeless. This inevitably leads back to pastors and people. In the most fruitless churches there may be some who are doing all that man can do to build up the waste places, but the majority are indifferent; hence the decay."

The Rev. Dr. W. S. Rainsford, rector of St. George's Protestant Episcopal Church, New York, in a recent address in Philadelphia, attributes the relative decline of religion to other causes. Speaking of his own church he says:

"The church is not fitting herself to new conditions. The people don't want her, because away down in her soul she don't want them. Our clergy are narrow and ignorant. If we are going to be able ministers of the New Testament we have got to know our country for one thing. Wherever I go I see churches that are failures. You never see printed records of the failing, but you hear of the sudden collapse. What causes these failures? Because the churches do not hold the fact that new times bring new duties. You don't suppose the church is absolutely right to-day. It is that spirit of life which means growth that the church wants. Church failures result not from lack of zeal or lack of earnestness, but because again and again the thing that is good in one age is not good in the next decade. New occasions have not taught the church new duties. Growth or death, choose which you will have. The living God's organization has to be the most vitally instinct with mind of any organization in the world. But it is not."

Governor Rollins of New Hampshire, whose proclamation a year ago concerning the decline of religion in the rural districts aroused so much discussion has still another diagnosis for the case so far as New England is concerned. Before the Boston Ministers' Union a few weeks ago he said:

"You clergymen are no longer the spiritual guides of the people, who now follow the religion of the newspapers. The ark has been overturned, the Bible account of the creation denied, Jonah repudiated, and the anchor of the old faith has been pulled

up before the sails are set for the new. The best blood of the country towns of northern New England has for generations been going to Boston and New York, leaving in some places only the weaklings to do the work in the old country home. These less energetic ones have intermarried till in one town I am acquainted with in Maine there is an imbecile in almost every family. The increase of foreign population is a gain rather than a loss to the country town, for it brings in new blood, so greatly needed, and the people are usually strong Catholics, not irreligious, and their increase is a favorable element."

Dr. Charles A. Briggs, in *Appleton's Popular Science Monthly* (February), takes the ground that the changes and apparent symptoms of decay in Christianity are evidence of a fermentation precedent to wide enlargement of growth and renewed vitality. "There can be no doubt," he writes, "that a large number of men absent themselves from church attendance because they dislike the popular orthodoxy, which seems to them antiquated, unscientific, and untrue." The churches are readjusting themselves to Christian doctrine, and the Christian community is doing likewise.

BABYLONIAN STORY OF PARADISE.

WITH every new find made in the cuneiform libraries in the Euphrates and Tigris valleys, the number of parallels to Biblical thought and expression increases, showing how closely interwoven was the life of Israel with that of their kin in Mesopotamia. This has again been made apparent in the recent pamphlet of Dr. Alfred Jeremias, a leading German *scholar*, entitled "Hölle und Paradies bei den Babyloniern." One of the most noteworthy parallels between Biblical and Babylonian ideas is found in the conceptions of Paradise. We quote from Dr. Jeremias an account of the abode of the blessed as furnished by the tablets of the Babylonians:

"The chief sources of our information on this subject are the fragments preserved from the famous twelve-table epic, in which is described the journey which Gilgamesh, a hero who has delivered his city (Uruk) from the oppression of a tyrant, makes to the 'island of the blessed.' This abode he finds 'at the outlet of the streams, *i.e.*, where at one time the Euphrates and the Tigris, as separate rivers, emptied into the sea. Here too was the place where the sacred water was secured which was used in the work of sorcery. But near this place was also situated at one time Eridu (the modern Aber-Shahreim, the Rata of the Ptolemies), the city of Ea, the chief of the magi among the gods. Here in these sacred precincts was to be found the garden of the gods, which contained a wonderful tree, the fruits of which were rich gems and jewels; and near by was the palace of the sea-symphs who watched the passageway across to the waters of death. Near this place was also the boatman who ferried Gilgamesh across, and who led him to the fountain of health and assisted him in plucking the branches from the tree of life. The boatman is called Arad-Ea, *i.e.*, the servant of the god Ea, and it is this same Ea who saves the progenitor of mankind and his wife at the time of the Deluge.

"This Eridu is pictured by the Babylonians as a Paradise. Thus, in an account in which the god of fire asks Ea, the wise son of Eridu, for help, we read:

"In Eridu grows the dark palm-tree in a pure spot.
"Its growth is as magnificent as a lazare stone: it overshadows the ocean.
"The abode of Ea is in Eridu, full of abundance.
"His dwelling is in the place of the lower world.
"His abode is in the camp of the goddess Ba'u.
"In the innermost parts of a magnificent house, where there is shade, as in a wood; and here nobody dare enter."

A recently discovered inscription shows that this Eridu was also the place where Adapa was created by the god Ea. The account of this act of creation is not preserved, but from parallel reports in cuneiform literature we learn that Ea, the divine "potter," formed his creature out of clay. The fragment also reports that the god endowed his creature "with divine power, a thorough capacity for establishing order by laws in the world,

and also wisdom, but did not give him eternal life; but that he did make him the master and the shepherd of mankind." Then, too, it is said that he was entrusted with all kinds of priestly functions and was made the baker and the cup-bearer for the gods. Daily it was his duty to prepare the necessary bread and provide the drink and secure the fish for Eridu. Another fragment reports that Anu, the god of the heavens, contemplated granting to this creature, who is expressly called "the sprout of mankind," the gift of eternal life. But this plan was not consummated. Once when Adapa was in the presence of the god of the heavens, Anu, the latter offered him bread and drink; but he refused to take it because Ea had warned him that it was the bread and the water of death. But in truth it was the bread and the water of life, and by his refusal to eat and drink he lost the gift of eternal life. And this bread and water of life, which is found in the palace of the god of heaven, is also found in the Paradise "at the outlet of the streams," in Eridu, the "island of the blessed." Gilgamesh, through the water from the fountain of life and through the mysterious food on this island, finds health, and through eating a wonderful plant gains immortality. Other inscriptions tell of this food of life and of the water of life.—*Translation made for THE LITERARY DIGEST.*

A JESUIT'S CRITICISM OF DR. MIVART.

THE prevailing note of comment in the Roman Catholic press upon Prof. St. George Mivart's recently expressed views (see THE LITERARY DIGEST, February 3 and 17) is one of regret, and the hope is expressed that this estrangement from the church may not be permanent. One of the most authoritative replies to his *Nineteenth Century* and *Fortnightly* articles is that by the Rev. R. F. Clarke, S.J., published in the first-named review (February). The fundamental misconception underlying Dr. Mivart's whole argument for doctrinal changes in the church, says Father Clarke, is a lack of appreciation of the true character of Catholic continuity. The real continuity of the church is a "fundamental and essential one, the only one that can keep it together and maintain its character permanently unchanged." He continues:

"This is what we may call *internal or doctrinal* continuity. It consists in the continuous adherence, on the part of all those who belong to that religious body, to the same beliefs that they professed from the beginning. This it is which constitutes the continuity of the Catholic Church. Her numbers may ebb and flow, her ritual may change, her discipline may undergo certain modifications, but her doctrine—never. What it was in the beginning, such it is now, and such it ever will be, as long as the world shall last. The very faintest derogation from any of the dogmas of the church would at once be her destruction.

"Here lies Dr. Mivart's radical error. His idea of continuity (so far as he has any idea of it at all and is not involved in a mere confusion of thought) seems to be an external continuity, united to a gradual modification of belief. He seems to think that all that is required for maintaining internal continuity is that there should be no violent disruption, no sudden and fundamental change. Black may have become white, and white may have become black, so long as the various shades of gray intervene and render the change imperceptible at each step, so long as it is gradually shaded off and no line can be drawn between the various shades. Such a continuity as this is utterly alien to the continuity of the Catholic Church. With her what was white at the beginning must remain white to the end, and what was black must remain black, and there must be no sort of change in the meaning of white or of black, after a thousand years have passed. This fact is fatal to Dr. Mivart's whole argument."

The original deposit of doctrine given by Christ to His apostles was full, complete, and unchangeable, "the faith once for all delivered to the saints"; and this can not be altered in its essential meaning tho it was given in embryo, and its meaning is made

clearer and more definite by successive dogmatic definitions of council and Pope. Dr. Mivart errs radically, says Father Clarke, in not distinguishing between these and unessential beliefs which have never been dogmatically defined, and which may change from age to age. The dogmas of the Trinity, of Christ's virgin birth, of the immaculate conception of the Blessed Virgin, and the infallibility of the Pope are all dogmas belonging to the first class; that is, they are definitely promulgated, unalterable dogmas, binding upon all Roman Catholics. Belonging to the second class are such doctrines, called proximates to faith, as the assumption of the body of the Virgin into heaven. In still a third class are to be numbered certain accretions to faith which have received no sort of ecclesiastical approval, altho accepted by many Christians. With regard to these three classes Father Clarke writes:

"It is of importance that my readers should clearly understand that, in respect of the dogmas it contains, the Catholic Church draws no distinction between one set of dogmas and another, as the some were fundamental, inasmuch as they have certainly been revealed by God Himself, and others were to be believed by Catholics only because they have been promulgated by the ruling power in the church, but were not binding on the faithful with the same fulness as the previous class. In the Catholic Church every dogma is essential and fundamental, and must be believed by every Catholic under pain of eternal damnation. 'This is the Catholic faith, which unless a man believe faithfully and firmly he can not be saved'; whether any dogma was defined by the Apostles' Creed, or by the Vatican Council, or by one of the long roll of popes speaking in his character of doctor and teacher of the universal church, makes no difference whatever. It carries with it the same authority, whether it was declared to be a part of the faith in the first century or the nineteenth, and he who refuses to accept it is just as completely an alien from the commonwealth of God in the one case as in the other. And this is not all. Not only must each defined dogma be accepted, but it must, under the same penalties, be accepted in the same sense in which it was originally laid down at the time of its definition. No change in language or in the meaning of words can affect the meaning of the doctrine as defined. Here it is that the value of Latin as the living language of the church is very conspicuous. The ecclesiastical language which has come down from the days of St. Augustine and St. Leo is the ecclesiastical language of the present day. The modern Catholic theologian reads the mind of the church in her early formularies with the same clear understanding of her meaning as if the definition was one of yesterday. To attribute to the *ex cathedra* utterance of any Pope a meaning in any way varying from that which was intended by the Pope who promulgated it is an act of heresy. Hence the Vatican Council declares that: 'Of all sacred dogmas, that sense is to be forever retained which our Holy Mother the church has once declared, nor may we ever recede from that sense under a pretext of a higher understanding of it.' Moreover, the church stamps with her anathema any departure from the sense originally given to any defined dogma. 'If any one shall assert that to dogmas proposed by the church it may be possible, according to the progress of science, to give a meaning different from that which the church has understood and now understands, let him be anathema.'"

There are many Roman Catholics, especially converts, who have never learned the true submission due to the church:

"They have learned to admire the church, and to recognize her superiority to any other religion in the world. They are attracted by her logical consistency, by her inviolable unity, by the holy lives of her saints, by her correspondence with the church of the New Testament, by the high standard which she proposes to her members, or by some other of the countless motives which constitute her credentials to mankind. In all this they act on their own private judgment (guided, it may be, by the Holy Spirit of God), as all must do outside the church. But when they enter the church's precincts they continue in the same habit of mind. They bring their private judgment with them into the church, instead of bidding farewell to it on the threshold. They continue to act on their private judgment just as they did before. They never lay it down at the feet of the Vicar of Christ, renouncing

henceforward all claim to judge of that which the church has stamped with the mark of her infallible teaching. Thus they are *in* the church, but not *of* it. They have not its true spirit. They are Catholics in name, but not in reality. And the natural result of this is that when they encounter some dogmatic decree that does not fit in with what they regard as sufficiently proved on grounds of their own fallible human reason, "by and by they are offended." They prefer their own private judgment to what the church declares to be true. And as the church can not give way, and they will not give way, they end, after a long course of internal and perhaps external revolt, by finding themselves at last outside the church altogether. They want to teach the church, and are indignant because the church will not be taught by them. They have never, from first to last, made that act of entire and absolute submission which every Catholic must make if he is to be a member of the church at all, or, if they have ever made it, they have afterward recalled it. They have not the humility which is required of those who look to the church as their teacher and guide in all questions that fall within her scope. Hence they find themselves out of place within her fold, and either leave the church of their own accord, or else are cut off from communion with her by the exercise of her authority.

"Now I can not help strongly suspecting that this is the history of Dr. Mivart's sojourn within the fold of the church. I am inclined to believe that, on his own showing, he originally entered it on insufficient grounds, and my reason for this belief is founded on his own confession, and on his statement of the motives that induced him to become a Catholic."

SOCIALISM AND THE ANGLICAN CHURCH.

THE Church of England as an exponent and ally of Socialism is an idea so novel to most of us as to appear in the light of a satire; yet the Rev. Arthur E. T. Newman, a clergyman of the Anglican Church, contends that the spirit of Socialism and that of Christianity are practically identical, and that sooner or later they will become one force fighting against the modern spirit of individualism and selfish greed. His program applies primarily to England, and is a striking one. The Liberal Party is the only party to which the friends of social reform can look for sympathy and succor, and this party is fast tending to advanced social principles. The party needs an ally, and a religious ally, since the progressive cause, he says, has never been successful in history except when it appeals to the deeper religious instincts of human nature. The national church is the only body which still possesses definite religious principles and therefore the only one with the elements of permanence within it. Yet the writer confesses that the bridge between the Liberal Party and the Church of England is apparently a formidable one.

"An alliance between the church and the Liberal Party sounds almost an absurdity when we recall the history of the last three hundred years, and the absurdity is increased when we reflect that the Liberal Party of the future will be more radical than ever. Is it possible that when Liberalism has passed into Socialism, the church which treated Robert Owen and Louis Blanc almost as the direct offspring of the devil can be expected to enter into an alliance with her ancient enemy? We must remember that those early days of modern Socialism are long over. Maurice, Kingsley, and the Christian Socialists bridged over the gulf which separated the antagonists, and the continual traffic which has passed over that bridge, since it was first opened, has produced relations which are certainly not unfriendly.

"Already the relation between the two parties is completely altered; the Christian Church admits that much of what is implied by Socialism is in agreement with Christian principles, while the Socialist regards the Christian with a certain amount of good-natured tolerance as one who possesses a book from which a large number of excellent Socialistic mottoes can be drawn. The present attitude of friendly toleration is not really satisfactory to either party. Two creeds, one of which claims to control the whole field of life and the other claims to control the whole of educational and industrial life, must either be in absolute agreement over the field which they cover in common, or they must be

opposed. The attitude of toleration ought to be impossible for either the Christian or the Socialist who believes in his creed to the exclusion of any other which does not agree with it. There ought to be either a struggle to the death or a close and active alliance."

The writer then goes on to show (in *The New Century Review*) how the principles of the reformed Liberal or Socialistic Party and of the church logically point to a common ideal of society. The ideal of Socialism implies the collective ownership of all property and the control of all industry by the state for the common good. This primary idea of brotherhood is also the essence of the early Christian spirit.

"It is scarcely necessary to enlarge on the consequences which follow from the acceptance of this premise. If men are a brotherhood, the gross inequalities between rich and poor, the hostility between class and class which are a necessary consequence of our present system, are instantly condemned. If men are limbs of a body, it follows that they must always be working for the common good and drawing from the common stock as much as, and only as much as, is needful for a healthy, vigorous, and complete life. In short, the results of applying Christian principles to daily life must be the adoption of Louis Blanc's maxim: A system which is confessedly competitive and individualistic has nothing in common with the Christian idea of men as a society and a kingdom. From this alone we can see that the idea of an alliance between the church and the new Liberal Party is not one that has no basis."

Mr. Newman is not alone among the clergy of the Church of England in this belief. The list of Anglican clergy who would unhesitatingly call themselves "Christian Socialists" includes such names as Bishop Westcott and Dean Kitchin of Durham, Dean Stubbs of Ely, Canon Scott Holland of St. Paul's Cathedral, Archdeacon Wilson of Manchester, Canon Barnett of Toynbee Hall, and Father Dolling, Father Adderley, the Rev. Henry Shuttleworth, and the Rev. Stewart Headlam, of London, not a few of whom are members of the Catholic or High-Church Party.

"Dangerous Character of Modern Theology."

Orthodox theology as enunciated by the reformers of the sixteenth century, can make no compromise with the modern theology based on the theory of evolution, says the Rev. Dr. Nicholas N. Steffens. Their antagonism is so fundamental that they can not be on friendly terms, and "the dangerous character of modern theology is not sufficiently recognized" by the adherents of the traditional Christianity. Dr. Steffens writes in *The Christian Intelligencer* (Presb.), February 7:

"It is impossible for a man to be orthodox and at the same time modern in his world- and life-view. I know, some try to combine the Biblical cosmogony with the theory of evolution. Their view is a combination of two world- and life-views. The first part of their cosmogony is in harmony with the doctrine of creation, the second is under the sway of Darwin's fascinating theory. They resemble Issachar, of whom Jacob said that he was 'a strong ass, crouching down between two burdens.' They are halting between two opinions, undecided whether Jehovah is God or Baal. Such a position is untenable. The idea of development, which was not known to our fathers, certainly is a precious acquisition of more modern times; but the hybrid product of a mixture of evolution and creation—i.e., the creation of protoplasm and the evolution of every creature out of it, with the later intervention of God's creative power at the point where man appeared upon the scene—is, in my judgment, neither Biblical nor scientific. Theistic evolutionists will not be recognized as scientific among consistent adherents of this theory, and they certainly find no place among consistent orthodox theologians.

"If you are inclined to recognize evolution to a certain extent, you will find out that only an arbitrary act of the will can save you from a complete surrender of all the bulwarks of our Christian religion. Evolution is a principle. There may be some grains of truth in evolution as far as the present condition of the

world is concerned; but as a principle it is pernicious. Our principle as Calvinists is the glory of God, revealed in the Holy Scriptures and manifested in the universe. Can you maintain this principle if you coquette with modern evolution? It is impossible. Evolution excludes revelation on account of its supernatural character. . . .

"Such a theory we ought to hate with a perfect hatred, instead of allowing ourselves to be overawed by its great influence upon our generation. Far be it from us to introduce it into our theology as a constructive principle."

ISIS WORSHIP IN PARIS.

AMONG the multitude of religious faiths which make their home in Paris, one of the most singular is the revival of the ancient Egyptian Isis worship by Count MacGregor, a Scotch gentleman of fortune, and his wife. We have already alluded to the "White Mass" celebrated in the French capital by the followers of Valentinus, who call themselves Perfecti, and to the "Black Mass" of the strange people who adopt the name of "followers of Satan" (see THE LITERARY DIGEST, August 19, 1899). The "Isis Mass" is still another form of religious mysticism. It is "Isis worship in its purest form," says Count MacGregor, who takes the religious title of the "Hierophant Rameses," while his wife is the "High Priestess Anari." The count and countess were led to this revival of a most ancient religion through their studies in Egyptian antiquities, in the course of which they came to believe that they had found a number of lost truths. It was at first a purely private matter, without any intention on their part to make other converts. M. Jules Bois, however, who had lectured at the Bodinière Theater in Paris upon Buddhism and had arranged for a Buddhist mass, asked the two Isis worshipers to give some account of their religion to the public. At first they refused, but the goddess appeared to them one night and sanctioned the proposal. Since that time several masses have been celebrated. A writer in *The Humanitarian* (London, February), Mr. Frederic Lees, thus describes two of these ceremonies:

"On the first of these occasions I was present. The second has been described to me by a friend. The Hierophant Rameses and the High Priestess Anari appeared on both occasions, of course, in their priestly robes—the most beautiful costumes which ever priest and priestess wore, beautiful because they express so much to the believer. The priest was dressed in his long white robe; around his waist was the zodiacal belt; around his arms and ankles were the sacred bracelets; over his shoulders was fastened a leopard skin, the spots of which symbolize stars in the world atmosphere, what the theosophists call the astral body. Similarly, the uskh, or collar, around his neck represents abundance of matter, while the sidelock is the emblem of youth. 'True wisdom is always young.' But the dress of the High Priestess Anari is better adapted for giving a good idea of the symbolism of the Isis worshiper. Her long, flowing hair expresses the idea of rays of light radiating through the universe. Upon her head is a little cone symbolical of the divine Spirit, and a lotus flower symbolic of purity and wisdom. 'The lotus springs up,' said the Hierophant Rameses, 'from the muddy waters of the Nile. The cone is the flame of life. The whole idea of the dress of the priestess is that the life of matter is purified and ruled by the divine spirit of life from above.'

"The second occasion upon which the Count and Countess MacGregor appeared at the Bodinière Theater, an Isis mass was celebrated. In the center of the stage was the figure of Isis, on each side of her were other figures of gods and goddesses, and in front was the little altar, upon which was the ever-burning green stone lamp. The Hierophant Rameses, holding in one hand the sistrum, which every now and then he shook, and in the other a spray of lotus, said the prayers before this altar, after which the High Priestess Anari invoked the goddess in penetrating and passionate tones. Then followed the 'dance of the four elements' by a young Parisian lady, who, dressed in long white robes, had previously recited some verses in French in honor of Isis. A short time before this lady had become a convert. Her four

dances were: the *danse des fleurs*, which symbolized the homage of the earth to the Egyptian goddess; the *danse du miroir*, which represented waves of water; the *danse de la chevelure*, symbolical of fire; and the *danse des parfums* for the air. Most of the ladies present in the fashionable Parisian audience brought offerings of flowers, while the gentlemen threw wheat on to the altar. The ceremony was artistic in the extreme."

The present worship of Isis is not the religion as practised in the later period of its decadence, when it possessed features regarded as repulsive, but a revival of the Isis worship in its primitive and purest form, as derived from a study of Egyptian archeology and from the sacred books. Its adherents are not monotheists in the ordinary sense, but call themselves pantheists and polytheists, altho their faith appears to be henotheistic. They believe, too, that a certain divine force at times resides in statues. A temple for the celebration of the Egyptian ceremonies is now in course of erection in Paris. Among the persons accepting or interested in this religion are said to be Protestants, Roman Catholics, scientists, physicians, lawyers, painters, men of letters, and several persons of high rank. The high priest and priestess believe that their ancient religion should be a great agency for good in the world. The Hierophant himself says that both Moses and Christ studied the Egyptian "Book of the Dead." The High Priestess Anari holds some interesting views on the subject of woman's sphere in religion. She says, as quoted by Mr. Lees:

"The idea of the priestess is at the root of all ancient beliefs. Only in our ephemeral time has it been neglected. Even in the Old Testament we find the Priestess Deborah, and the New Testament tells us of the Prophetess Anne. What do we find in the modern development of religion to replace the feminine idea, and consequently the priestess? When a religion symbolizes the universe by a divine being, is it not illogical to omit woman, who is the principal half of it, since she is the principal creator of the other half—that is, man? How can we hope that the world will become purer and less material when one excludes from the divine, which is the highest ideal, that part of its nature which represents at one and the same time the faculty of receiving and that of giving—that is to say, love itself in its highest form—love the symbol of universal sympathy? That is where the magical power of woman is found. She finds her force in her alliance with the sympathetic energies of nature. And what is nature if it is not an assemblage of thoughts clothed with matter and ideas which seek to materialize themselves? What is this eternal attraction between ideas and matter? It is the secret of life. Have you ever realized that there does not exist a single flame without a special intelligence which animates it, or a single grain of sand to which an idea is not attached, the idea which formed it? It is these intelligent ideas which are the elementals, or spirits of nature. Woman is the magician born of nature by reason of her great natural sensibility, and of her instructive sympathy with such subtle energies as these intelligent inhabitants of the air, the earth, fire, and water."

Reform in Theological Education.—The subject of reform in Protestant theological seminaries received some attention last summer from President Harper, of the University of Chicago, and his animadversions aroused considerable controversy. The question is again brought up (in *The Forum*, January) by Dr. W. F. Slocum, president of Colorado College.

Dr. Slocum suggests four points in which Protestant theological training might be improved. First, he says, the course in philosophy must be strengthened, for one who expects to be a leader of men must be preeminently a thinker. The study of the Bible is the second point in which some modification of present methods is needed, looking to a larger and broader knowledge of it as a whole. Dr. Slocum finds, as his third point of criticism, that the most serious defect of the theological seminary is—strange to say—in the department of ethics. In reference to the fourth point, the study of sociology, Dr. Slocum says that little more than a beginning has been made to give this study the position of importance and dignity which it deserves.

The most unique suggestion made by Dr. Slocum is that a consolidation of some of the leading theological seminaries—as, for instance, the four seminaries of New England—would lead to a notable enlargement and broadening of the theological course. Their equipment and endowment, brought together into one center, would enable them to provide a training for the ministry that would compare favorably with the higher work done in other professional schools.

FOREIGN TOPICS.

THE FRENCH GOVERNMENT AND THE ASSUMPTIONISTS.

THE trial and condemnation of the twelve Assumptionist fathers in Paris for maintaining an association hostile to the Republic, and the dissolution of the order, present one of those instances in which religion and politics are so closely interwoven as to render a just judgment more than ordinarily difficult. Cardinal Richard, Archbishop of Paris, evidently believes that the condemned priests are victims of anti-clerical and Republican hatred, and has submitted to a temporary withdrawal of his government stipend rather than forego his privilege of showing his sympathy by a visit to them in their prison. The order possesses large funds and publishes a number of papers, of which *La Croix* and *La Vie des Saints* are the most widely circulated and influential. The case against the Assumptionists is thus stated by the *London Times* (always strongly anti-Catholic):

"The Assumptionist Fathers, of course, profess to be a religious organization working for spiritual ends. As a matter of fact, there is nothing religious about them except the fact that they are ecclesiastics. They are a political organization working to extend the influence of the Church of Rome over the French army and the French legislature. To her simple adherents that church is a spiritual guide and a moral teacher. To those who direct its policy, and to those who direct the policy of nations, that church is a political organization everywhere working for interests always different from, and often directly hostile to, the interests of the secular organization which we call the state. Of this ever-active organization, always seeking to disintegrate the polity of nations, the Assumptionist Fathers represent the most violent and aggressive section. In the pursuit of their secular ends they acknowledge no restraints of patriotism, of morality, or of religion. They habitually descend to the use of methods condemned as corrupt and base by ordinary men of the world making no pretense whatever to spirituality. Their chief agency is the infamous *La Croix*, rightly described some time ago by our Paris correspondent as 'the most abominable newspaper published in the French language.' That description will not be thought too severe by anyone who has made the acquaintance of the journal in question, or who is aware of the part it played in the Dreyfus affair. Its Paris edition has an extensive sale, estimated at a quarter of a million copies, and it appears in addition in the form of local journals to the number of fifty published all over France. It is everywhere under the special patronage of the priests, and is sold in the porches of the churches, so that along with their spiritual food, and practically from the same hands, the population receive in the more efficient form of printed matter weekly doses of the most shameless mendacity and the most insidious attacks upon the established order."

The Paris correspondent of the *Amsterdam Handelsblad* in a long article describes how the work of influencing elections is carried on by the Assumptionists. We summarize as follows:

There is a large number of committees, all over the country, which work in admirable harmony. Besides the staff in Paris, each committee organizes another in the provincial capitals for the purpose of obtaining voters' lists. The well-wishers of the church are then strengthened, the radical element opposed in private life. All kinds of elections are thus influenced; but much of such influence naturally depends for its success upon secrecy, and the Clericals are not at all grateful to M. Bulot for having laid bare their system. Even the elected deputies are still under surveillance. Thus a letter was found from a lady who had been delegated to make sure of the character of M. Bernard, through his mother. That such associations are a danger to the state can not well be denied. When we remember that the female committees are bound to give time and money to the political influencing of electors, when we see that *La Croix* alone has a circulation of 250,000, *La Vie des Saints* 165,500, not counting the enormous circulation of a dozen other publications, it is easy to understand that the influence exercised under the guise of religious duty constitutes a danger.

The Assumptionists, however, do not lack defenders. The *Paris Journal des Debats* thinks the Government has overreached itself. It says:

"The Assumptionists were treated in the same way as the Patriotic League. Luckily their case was not one which disturbed our foreign relations, and it was less dramatic; but as the punishment meted out was not very severe, it may be said that the Government really suffered a check. The Government, indeed, wished to pose as saviors of the country; but a crime which can be expiated by the payment of a small fine can not really be a danger to the country. The Waldeck-Rousseau cabinet appears to us to be fighting windmills."

The *Rome Voce della Verità* denounces the French Government for its abolition of the Assumptionists, and rejoices to think that "providential circumstances thus make the Assumptionists the champions of liberty and progress."

In the *London Saturday Review* Mr. Richard Davey points out that the priests would not exercise so much power if they were not popular, and he argues that if the principles of liberty are to be upheld, the Clericals have as much right to capture the majority for themselves as have the atheists.

"A French Catholic," in the *London Tablet* (Rom. Cath., February 3) thus analyzes the situation, which he regards as due to an attempt on the part of the French Government to "satisfy the Freemasonic sections":

"There is such a haze of doubt enshrouding the acts affecting the rights of association that the judicial pronouncement decreeing the dissolution of the community is not likely to produce much effect. The Fathers have but to limit the numbers of their members living under one roof to twenty, and as for their organ, *La Croix*, it can be trusted to find its way as usual every morning into the hands of its innumerable and faithful subscribers. We have already asserted with a frankness which very probably is the only redeeming quality of these notes, that the paper, *La Croix*, is far from finding favor with all Catholics. It gives way to occasional outbursts of polemical violence which ill-become the sacred emblem of meekness and peace that is to be found on its cover. But even so, is this a reason why this journal should be singled out for prosecution, when so many others daily furnish far worse examples of intolerance and violence? Why this choice then? The truth is that religion itself is to be attacked under the cloak of repressing certain advanced and audacious ideas. The truth is that it is sought to bring about Republican unity under the guise of an anti-clerical régime. This mode of procedure has been for so many years in force under Republican governments that to forego its use would be almost an impossibility."

A QUARREL WITH A QUEEN.

AN interesting contention has been in progress recently in Berlin between the Queen and the magistrates of that metropolis. According to the *Evangel Kirchenzeitung* of that city, it is well known that the Empress of Germany has taken great interest in the erection of new churches in Berlin, and that she has been ably seconded by the master of her court, Count von Mirbach. She has not only contributed liberally from her own purse for this purpose and procured large subscriptions from other sources, but has also asked that the city of Berlin as a corporation grant a good-sized appropriation for this purpose. This request was made on the basis of an old law, dating back to 1573, according to which the cities of Prussia are obligated to aid in the erection of churches. The city council has protested against the appeal, and has been seconded by the supreme court of the empire, which has declared this law to be no longer in force. The church authorities and the Empress then proposed a compromise, namely, that the city council should give a grant of several million marks, and then all claims on the ground of the old law would be dropped. This, too, the city refused to do, and in the debate on the subject one member, Dr. Preuss, a Privatdocent in the university, caricatured the Scriptures in a most offensive way, as also some of the favorite hymns of the Protestant Church. The fact that Dr. Preuss is a Jew aggravated his

offense in the eyes of the church people, and this travesty was sharply criticized by other members of the council.

It was thought that matters would rest at this; but when the Queen's birthday came, shortly after, the city officials, as usual, sent their congratulations. The Queen, however, did not respond as usual, by sending her thanks, but through Count von Mirbach sent the city fathers a sharp lecture on the failure to do their duty, and drew special attention to the conduct of Dr. Preuss. In this communication, Her Majesty expresses her deep regret that the city council had not complied with the wishes of herself and the church authorities, and declared that such actions were an offense to the feelings of Christians.

While this document was being read, not only the Social Democrats but also some representatives of the Liberal party refused to arise from their seats, as is done when a communication from the royal family is presented, and sharp murmurings were heard when the reading was completed, and the members declared that the city as such has nothing to do with the erection of churches.

The quarrel between the Queen and the city fathers has aroused a widespread interest, especially as it is the first time that she has taken any independent part in public affairs.—*Translation made for THE LITERARY DIGEST.*

CRETE AND THE MOHAMMEDAN WORLD.

CRETE seems at last to have settled down to an age of peace. Prince George of Greece has become popular with the Mohammedans of the island as well as with the Christians, and there is every prospect that peace will bring prosperity to this rich isle of the Mediterranean Sea. The *London Speaker* says:

"For eighteen months after Turkish rule was doomed, the six great powers who formed Lord Salisbury's Arcopagus temporized 'out of sheer nervousness' with a situation materially and politically intolerable. Civil war fanned by religious passion and the memory of hideous massacres had devastated the olive-groves and decimated the families of the peasantry. Now the population is disarmed. Mohammedans have been conciliated by the prince, and their women by his queen mother. Those who emigrated to Turkey and Asia are already returning. To the Greek Christians—the great majority of the population—the new order of peace and justice brings happiness and contentment never before known or dreamed of. A prince of the Greek royal house is 'the tacit embodiment of the hope of union with Greece, which after all and in spite of all is the dearest hope of the Cretans.' It is pleasant for those who followed Mr. Gladstone to see the truths which have been mocked in Armenia and trampled down in South Africa at last recognized and triumphant in Crete."

The *Standard* points out that Russia and Great Britain together put Prince George at the head of affairs in Crete. "Events at the close of the Turco-Greek war were cleverly managed from St. Petersburg," says the paper, "and there are few things in recent diplomatic history more interesting than the alternate spells of Russian patience and rapid action by which Prince George of Greece was eventually seated in the governorship of Crete. The policy of Russia in this instance was in perfect accord with that of Lord Salisbury, and all, including the Cretans, have reason to be grateful for the fact." The *St. Petersburg Zeitung* fears, however, that the establishment of Prince George was hardly what England wanted, and asserts that England's unmistakable designs upon the island made the settlement difficult.

It is thought that the loss of Crete has strengthened Mohammedanism throughout the world rather than weakened it. It has established a feeling of solidarity which has long been wanting. Mustafa Kamel, in the Berlin *Tageblatt*, sketches the feelings of the educated Mohammedans to the following effect:

We know that the Christians aim at nothing so much as to break the power of Islam. We have been treated with the basest perfidy. Pretending to guarantee the integrity of the Ottoman empire, Europe has torn that empire to pieces. Pretending to guarantee the life and peace of the Christians in the Orient, Europe introduces dissent and anarchy. Why was there an intervention of the powers in Crete, and none in Cuba? Why were

the sufferings of the Irish, the Hindus, the Matabele not heeded? Are the Christians human beings, and we not? Wherever the Moslems are under Christian rule, they are oppressed. But the case of Crete has opened the eyes of those who formerly believed in Christian sincerity. Since then, Egypt has been definitely enslaved by the English. Some Europeans professed to be horrified by the body-snatching practised on the remains of the Mahdi; but that incident was only one of thousands of barbarities. "Humanity" has never been presented in a more disgusting form than by these English heroes of civilization. The Turks are censured for putting down rebellions by the same Christendom which practises antisemitism. In view of this European hatred for the Moslem, but one course remains open: the Moslems must strengthen the Caliphate. They must gather around the Sultan and make the dream of Pan-Islamism a reality.

Much is being done to further this object by the fanatical Senussi monks. How successful they are may be gathered from an article in the Cairo *Munifad*, which runs in the main as follows:

The Turkish empire has received important additions in Africa. Rabah, the powerful lord of the eastern and central Sudan, has asked the Sultan to accept him as a vassal. Wadai and any other country he may yet conquer shall henceforth obey the Osmanli, and Rabah will punish all who in Central Africa disobey the Sultan. An embassy with no less than seven hundred camels has gone to Constantinople via Tripoli. The Sultan will, on the other hand, send an imposing company of men to return the compliment. The work of Mohammedan missionaries is undoubtedly bearing fruit in Africa.

The German papers point out that this revival of Islamism may endanger the power of the whites in Africa, especially if the latter do not show a united front.—*Translations made for THE LITERARY DIGEST.*

BRITISH VIEWS OF THE NICARAGUA CANAL CONVENTION.

GENUINE disappointment is expressed in many English papers upon finding that the Nicaragua canal agreement has not met with unqualified approval in this country. On the whole, the impression prevails there that Great Britain has shown herself very anxious to please the United States. The Manchester *Guardian* (Radical) says:

"It is a little surprising to find that some members of the Senate regard the Anglo-American agreement about the Nicaragua canal as a concession made to, not by, this country. This is looking a gift horse in the mouth with a vengeance, for we are undoubtedly surrendering a treaty right to which successive American governments, at any rate, have attached considerable importance. . . . It is suggested that the jingoes in the Senate will be satisfied with nothing less than absolute control over the canal in time of war, and will wreck the new agreement rather than yield on this point. We prefer to believe that they will accept what, from a diplomatic point of view, is a distinctly generous offer of Lord Salisbury's."

The *Spectator* draws attention to its articles about eighteen months ago, in which it urged the British Government to take the initial move toward the abrogation of the Clayton-Bulwer treaty. The paper now says:

"We pointed out that it would be said, in answer to our plea: 'The Americans have never officially asked us to abrogate the Clayton-Bulwer treaty. It will be time, and the proper time, to consider the matter when they do.' We went on to challenge this notion, and to insist that, in truth, that would not be the proper time, for the Americans, being our children, and inheriting to the full our offensive and disagreeable ways in diplomacy, would be quite certain, when they did ask for the abrogation of the Clayton-Bulwer treaty, to do it in what would seem to us a thoroughly offensive and disagreeable way. . . ."

"But if the canal is to be made, and can not be in our own hands or under our control, like the Suez canal, it is of immense importance that it should be in the hands of a strong and friendly

neutral power. But what power answers that description anything like so well as the United States? If we were likely to quarrel with America, if she were the enemy, then no doubt the canal might, in her hands, prove a source of injury while we were at war with her. But, God be thanked, there is less fear of our being at war with America than with any other power in the world."

In another place *The Spectator* expresses doubt that the anti-fortification clause, which appears so objectionable to many people on this side of the Atlantic, was inserted to please Great Britain. We quote as follows:

"It is very much more likely that the United States Government had the anti-fortification clause inserted at their own request and in order not to wound the susceptibilities of the continental powers. Many American Senators really seem to think that the only two powers in the world are the United Kingdom and the United States. Some day they will realize their mistake. When they do, let us trust that their fleet will be as numerous as it is certain to be sound in quality. Meantime we can only say that so far as British interests are concerned it would be far better to have the canal fortified. Our prime object, in the event of war, is to have the neutrality of the water-way enforced at all costs. Therefore the stronger the hold of America on the canal, the more complete its neutrality. American forts at each end will enable America to maintain the neutrality of the canal against all comers."

The St. James's Gazette opposes the abrogation of the Clayton-Bulwer treaty, and gives the following reasons for its attitude:

"The Clayton-Bulwer treaty is fully in accord with the Monroe doctrine which every American upholds as a fundamental tenet of political faith. The true significance of this famous doctrine has not always been understood in this country; and even Americans have learnt a good deal on the subject through the Venezuela negotiations and the award of the court of arbitration. It does not mean, as has often been imagined, that the United States should insist on an absolute control of the American continent; but that in conjunction with Great Britain she should guarantee the various states on that continent against interference by other European nations. The doctrine was, in fact, suggested by Canning to the United States Government as a means of protecting the then newly emancipated Spanish colonies against the machinations of the Holy Alliance."

The Saturday Review opposes the abrogation of the Clayton-Bulwer treaty very strongly. Great Britain, this paper argues, receives no *quid pro quo* for her complaisance. The promised friendly feeling of the American people for Great Britain is not really forthcoming, and the British Government should not give up any substantial rights. We quote as follows:

"Because Americans speak English and the plutocracy of the States is united by family ties with the directing class, aristocratic and otherwise, of Great Britain is no reason for ordering our affairs with them on other than business principles. Before the Clayton-Bulwer treaty was signed Great Britain believed that she had certain claims to the Mosquito coast. She had gone so far as to enforce them by armed intervention. For the purpose of effecting this treaty, she consented to give them up, and undoubtedly any one who studies the map will see that the protectorate of the Mosquito coast was a very valuable asset indeed in the bargain. . . . We have certainly done the President a good turn. No one will deny that Mr. Hay has gained a diplomatic success. But we gave even more effectual assistance at the time of the war with Spain and have little enough to show in return. . . . Unfortunately the brutally logical mind of some Republicans and all Democrats will take another view. They will say 'You recede from your position of last year not because you love us more but because you are involved heavily in South Africa and wish to avoid complications in America.' This would not matter so much if Mr. McKinley's term of office was a certainty for another four years. There is no such certainty. The imperialism of the present Administration is by no means beloved throughout the States. With that policy we have succeeded in identifying ourselves in the public mind of America. Add to this that a majority of the people and the newspapers outside of New York are opposed to our proceedings in South Africa.

Whether our concessions will moderate their distrust we more than doubt."

The Canadians doubt that their interests were properly consulted in the matter. The majority of the Canadian papers believe it would have been wiser to use the Clayton-Bulwer treaty as a lever for obtaining advantages in the Alaskan boundary dispute. The *Montreal Herald* hopes the Canadian Government was consulted. The *Toronto World* says:

"It was all along expected that Great Britain would not relinquish her rights under that treaty except on condition that Canada should receive a *quid pro quo* in the shape of a port in Alaska. With the South African trouble on her hands, Great Britain may not feel justified in resisting too strenuously the claims of the United States. It was a piece of sharp practise for the United States to press the case at the present juncture. If our neighbors had the chivalrous instincts of the Kaiser they would have waited till the mother country had got through with the Boers. It would not do for Canada to embarrass the imperial Government at the present moment, but Canada certainly had a right to expect that she would be consulted in this question, which affects us as a member of this continent."

The *Ottawa Evening* says:

"We in Canada lose a strong argument to force a fair settlement of the Alaskan boundary, but other means will be, because they must be, found to bring that question to an issue. . . . In the discussion of the Hay-Pauncefote treaty, the *New York Sun* and other American papers have been quoting the Monroe doctrine, which is an evidence of a good deal of presumption. Time was when the United States could lay down the law for the American continent with some show of right as the dominant power; but whatever right they once had was 'abrogated' by the entrance of Dewey's fleet into Manila Bay, and the seizure of the Spanish possessions. That was an interference with a European power in a quarter so remote from the American continent that it had nothing to do with it. No one denies the right the Americans had to seize the territory of a nation at which they were at war, but when they exercised that right they assumed all the responsibilities that went with it. In short, the Americans can not expect that they can meddle with the powers of Europe, and not be meddled with in return. In the seizure and retention of the Philippines they showed no respect for the Monroe doctrine, and they can not expect that others are going to show more respect for it than themselves. The American continent has been thrown into the whirl of international politics, and the United States did it. To quote the Monroe doctrine now is a farce."

The *Cologne Kölnische Zeitung* doubts that, as has been suggested, the United States will eventually give preference to the Panama canal. The French papers, too, regard this probability as remote. The *Paris Journal des Débats* says:

"It may be, as *The Times* hints, that the Americans prefer the Panama route, and only provide for building the other canal in order to obtain better conditions. But that is an entirely different matter. It has nothing to do, directly, with the abrogation of the Clayton-Bulwer treaty. Now, does that treaty prevent the United States from constructing the canal? By rights it does. But as a matter of fact the Americans, with that pleasant freedom from restraint which marks their diplomatic traditions, have long since shown their intention to construct the canal themselves, whether Great Britain objects or not. How was England to escape humiliation? Clearly by renouncing benevolently her rights, before they were rudely trodden on. Hence the English give themselves airs as if the Hay-Pauncefote convention meant a fresh sacrifice made by Great Britain in the interest of the Anglo-Saxon alliance. True, the new agreement is not a complete renunciation of the old. It is but a modification, as the neutrality of the canal is stipulated. But, altho England has not abandoned everything, she has not received anything in exchange for what she has given up. And that is the only manner in which the Anglo-Saxon alliance is accepted by the United States. So little are the Americans inclined to make sacrifices, that there is among them a certain amount of discontent with the treaty. Should the opposition of certain Senators be successful, then the alliance will be seriously compromised, as the United States will doubtless continue to take no notice of the Clayton-Bulwer treaty. We speak of the alliance because it is mentioned in Article 6 of the new agreement, where it is said that the object is 'to strengthen the bonds of friendship and alliance existing between the contracting parties.' Which leads us to the following conclusions:

If the word 'alliance' is made use of so lightly even in a diplomatic document, it need not worry us if it is uttered *inter pocula*, either in Leicester or elsewhere."—*Translations made for THE LITERARY DIGEST.*

DIMINISHING LOSS OF LIFE IN BATTLE.

THE loss of life in some of the recent engagements in South Africa has been spoken of, sometimes in official reports, as tho it were something appalling and almost unprecedented. But a distinguished French military paper, the *Paris Revue Militaire*, asserts that the losses of the British are really very small, compared with the losses of armies in former times. We give some of the statistics of the *Revue Militaire* in condensed form:

Lord Methuen claimed that his engagement at Modder River was the bloodiest of the century. It is not easy to determine

OUR AMATEUR STRATEGISTS.—No. 11 The General Expert.

[“SIR—There is a singular lack both of foresight and determination in the conduct of the military operations of this war.”]

—*Westminster Gazette.*

what troops were engaged, but it would be difficult to prove that this battle was even the most disastrous of the present war. According to British accounts there were at—

	Engaged.	Killed.	Wounded.	Per Cent.
Glencoe.....	4,000	48	221	6.7
Elandslaagte.....	3,000	51	213	7.1
Tugela River.....	12,000	52	667	6.2

Turning to earlier battles of the century we find the following records:

	Engaged.	Killed and Wounded.	Per Cent.
Gravelotta.....	450,000	70,000	15.5
Weissenburg.....	23
Worth.....	26
Spicheren.....	17

These figures refer to the Germans only, who were the attacking party. In the same way the Prussians lost ten per cent. at Königgrätz, but they had breech-loaders and the Austrians muzzle-loaders. At Magenta and Solferino the French lost eleven per cent.

Especially bloody were the battles of the American Civil War. At Gettysburg the Northerners lost no less than 15,000 out of 80,000, *i.e.*, eighteen per cent.

At the battle of the Alma the French-English army lost six per cent., the Russian ten per cent. But all these wars in the second half of the nineteenth century appear tame compared with the Napoleonic battles. At Borodino (1812) 250,000 Russians and French lost 80,000 men, *i.e.*, thirty-two per cent. At Preussisch-Eylau, where the Prussians made their last stand against Napoleon (1807), they lost thirty-three per cent. At Salamanca, where 90,000 English and Germans in the pay of England were fighting against the French, thirty-four per cent. were killed. One of the worst losses was that of Albuera: 6,000 English stormed the hill; only 1,800 returned to tell the tale.

Going further back we find the following:

	French loss.	English and Austrian.	Spanish loss.
Fontenoy.....	31 per cent.	20 per cent.
Rocroi.....	30 per cent.

In explanation of the greater losses in the earlier wars it is said that the quick destruction of life in modern battles decides results speedily and prevents heavy aggregate losses.—*Translation made for THE LITERARY DIGEST.*

MISCELLANEOUS.

THE AMERICAN PRIVATEER IN HISTORY.

IN venturing upon "A History of American Privateers," Mr. Edgar Stanton Maclay is conscious that he enters upon "a new and most difficult field of historical research." No complete record of that peculiar service has ever before been published.

In our struggle for independence, more than sixty American craft, armed by private enterprise, were commanded by men who had been, or who soon became, officers in the regular service. Many of our most distinguished naval officers have "pointed with pride" to their probationary career in privateers. The mere mention of such names as Truxtun, Porter, Biddle, Decatur, Barney, Talbot, Barry, Perry, Murray, Rodgers, Cassin, Little, Robinson, and Hopkins will serve to demonstrate how closely related were the two arms of our maritime service.

Mr. Maclay's statements as to the comparative values of the work done by the land and sea forces in our two wars with England will surprise his American readers. He says:

"We all know that Washington captured about one thousand men at Trenton; that Gates made some eight thousand prisoners at Saratoga; and that the Americans and French secured seven thousand at Yorktown. But it is not so generally known that, in the same period, fully sixteen thousand prisoners were taken by our sea forces. While fewer than six thousand were taken by our land forces in the War of 1812, fully thirty thousand were taken at sea. . . . A careful review of British newspapers, periodicals, speeches in Parliament, and public addresses, for the periods covered by these two wars, will show that our land forces, in the estimation of the British, played an insignificant part, while our sea forces were constantly in their minds when the 'American war' was under discussion."

Had Englishmen anticipated that American cruisers and privateers would cross the Atlantic, and keep their coasts in continual alarm; that their shipping, even in their own harbors, would be in ever-present danger; that it would be unsafe for peers of the realm to remain at their country seats; that British commerce would be almost annihilated; that sixteen thousand seamen and eight hundred vessels would be taken from them—they would have been slow to embrace their coercive policy. It was, says Maclay, this devastation of British commerce that struck the mortal blow at British supremacy in America—"not Saratoga nor Yorktown."

The exploits of American rovers on the sea prevented the great fair at Chester, compelled a memorable rise in the rates of insurance, and even deterred English merchants from shipping goods in English bottoms at any rate of insurance. In a few weeks, forty French ships were loaded at the London docks with freight—a thing unheard of. British merchants even demanded the escort of armed cruisers in shipping linen from Ireland to England. When the War of 1812 was impending, the London *Statesman* recalled these forcible arguments to the minds of British merchants. "Were they not [the privateers] in the English and Irish channels, picking up our homeward-bound trade, sending their prizes into French and Spanish ports, to the great terror of our ship-owners?"

In June, 1813, flour in Great Britain was \$55 a barrel; beef, \$35; pork, \$36; and lumber, \$72 per thousand feet. The cry of the British tradesman was heard in Glasgow, in September, 1814, when, at a meeting of shippers and merchants, resolutions were passed to this effect: That the audacity of American privateers and the success of their enterprise "have proved damaging to our commerce, humbling to our pride, and discreditable to the directors of the naval power of the British nation, whose flag, till of late, waved over every sea, and triumphed over every rival"; and that, "at a time when, in the plenitude of our power we

have declared the whole American coast under blockade, our ships can not with safety transverse our own channels."

The Times for December 30, 1814, in summing up the results of that war, confessed:

"We have retired from the combat with the stripes yet bleeding on our backs. Even yet, however, if we could but close the war with some great naval triumph, the reputation of our maritime greatness might be partially restored. But to say that it has not suffered in the estimation of all Europe—and, what is worse, of *America herself*—is to belie common sense. . . . Scarcely is there an American ship of war which has not to boast of a victory over the British flag; scarcely one British ship in thirty or forty that has beaten an American."

The privateer, as understood at the outbreak of the war for American independence, was a ship armed and equipped at private cost, for the purpose of preying on an enemy's commerce, to the profit of her owners; and bearing a commission, or letter of marque, from the Government. Usually the Government claimed a portion of the proceeds realized from the sales of prizes and their cargoes. The owners, of course, had the lion's share; but a considerable part was divided among the officers and crew. It was this division of spoils, rather than the wages, that induced the best seamen to enter so dangerous a service. Even a "foremast hand" often received, in a single cruise, \$1,000 in prize money—quite a fortune for a mariner in those days.

The prime quality of a privateersman was audacity; lacking that, he was doomed to ignominious failure. The man-of-warman might go and come without meeting an enemy or taking a prize, and yet hold his own in the estimation of the department; but the privateersman steering for his home-port empty-handed returned with plucked and bedraggled plumes. The ideal privateersman was a cross between the handy sailor and the desperado. By way of illustration: the *Paul Jones*, of New York, put to sea at the outbreak of the War of 1812 with a complement of one hundred and twenty men, but with only three guns. She overhauled the *Hassan*, a British merchantman, carrying fourteen guns and twenty men, while her cargo was worth \$200,000. The commander of the *Paul Jones* sawed off some spare masts, painted them black, mounted them on buckets, and rolled them out of his empty ports, his vessel being pierced for seventeen guns. Then he manned his rigging with his formidable show of men; and shouted to the *Hassan* to surrender. Not a gun was fired; the capture was easy. The Americans helped themselves to the enemy's guns, ammunition, and the "loot," and went on their way rejoicing.

There was no generous Congress to vote \$30,000 to the privateersman if he sank his prize in the effort to capture her—as was voted to the captors of the *Guerrière* and the *Java*; nor could he look for \$25,000 if he lost both the prize and his own ship—as happened in the *Wasp-Frolic* fight. We quote again:

"For the first hundred years after the establishing of the colonies in the New World, the distinction between privateers, slavers, pirates, and even government cruisers, was vague, and at times obliterated altogether. Might was right; and when their home-governments were at war with each other—and sometimes when at peace—the colonial seaman seized whatever he could, whether he was pirate, privateer, or king's officer. . . . In some ports there was general connivance at this state of affairs, so long as the depredations were directed against 'others.' At Charleston, S. C., pirates of all degrees walked the streets with impunity. . . . Many of these pirates retired on their fortunes, and purchased lands in the colony around Charleston, doubtless leading honest lives as good subjects of King George. . . . The step from the privateer to the pirate was natural, and the moral difference not strongly marked. Men of good family became pirates because they loved adventure; it was profitable, if they were not hanged; and they had nothing to do at home but to fight."

Later, an interesting feature of the extraordinary development of privateering was the rapid increase in the size and efficiency

of the craft engaged. Earlier in the war for independence, any vessel, old or new, that could by any means be converted into a war craft was promptly seized and a few guns mounted on her; then she was sent to sea with, in some cases, the most fantastic company imaginable. Doctors, lawyers, army officers, politicians, merchants, even ministers of the Gospel, were found on the rolls. At the outbreak of hostilities, ten guns were regarded as a heavy armament for a privateer, and from thirty to fifty men a sufficient crew; but toward the close of the war privateers mounted from twenty to twenty-six guns, and carried from one hundred and fifty to two hundred men.

The career of Capt. Thomas Boyle, a Chesapeake privateersman in the War of 1812, was extraordinary. Under his flag, the *Comet* and the *Chasseur* were memorable terrors to British commerce. Twice he matched his ship successfully against men-of-war. On the coasts of Spain and Portugal, and in the British and Irish channels, he carried confusion and dismay to British trade, in defiance of fleet frigates and sloops-of-war. The *Chasseur* (famously known as the *Pride of Baltimore*) was frequently chased by British ships, expressly commissioned to capture her. In his first cruise in the *Chasseur* Boyle took eighteen merchantmen, most of them of great value, and brought into port forty-three prisoners, having released on parole one hundred and fifty. His "superb audacity" was amusingly illustrated on one occasion. It had been the custom of British admirals on the American stations to issue paper "blockades," declaring the entire coast of the United States "taboo." Admirals Sir John Borlase Warren and Sir Alexander Cochrane had distinguished themselves in this line. Boyle, cruising in the English Channel, sent by cartel to London a "proclamation," to be posted in Lloyd's Coffee House. Worded in good set terms, it declared all the ports, harbors, bays, creeks, rivers, inlets, outlets, islands, and seacoast of the United Kingdom of Great Britain and Ireland to a state of strict and rigorous blockade."

CORRESPONDENTS' CORNER.

Professor Atwater and the Northfield Conference.

Editor of THE LITERARY DIGEST: "In your number dated February 3, on page 149, I find a reference to a committee appointed at Northfield at the August Conference to investigate the statement by Professor Atwater, of Wesleyan University, regarding the chemical properties of alcohol. As I was personally absent from Northfield during the August Conference, I have no personal knowledge of the matter; but from inquiries from those connected with the work I am unable to learn that there was any officially appointed committee for the purpose you designate. Knowing also my father's position in such matters and the positive aversion to Northfield's being held responsible for such an undertaking, I question very much whether the committee was not a self-appointed one and absolutely untitled to being termed a committee of "Northfield Conference." I must state that, although my father was as strong a temperance advocate as any man in the country, he never considered himself in a position to question the result of scientific research, but based his convictions only upon what are the most evident results of intemperance. I should like very much to know where the authority of this committee of the "Northfield Conference" came from, and, if I am correct in my statement, I trust you will contradict the report that the "Northfield Conference" as a body officially question Professor Atwater's statement.

W. R. MOODY.
EAST NORTHFIELD, MASS.

An Appreciative View.

Editor of THE LITERARY DIGEST: Doubtless many people have been very much surprised at the "Objections to THE LITERARY DIGEST," as published in Correspondence Corner, December 23, 1899. As for me, I have never judged THE LITERARY DIGEST, as a journal, to be either Republican or Democrat, for gold or silver, imperialistic or anti-imperialistic, pro-British or anti-British. The editor must naturally have his own private views on all these questions, as well as on others; but from THE LITERARY DIGEST I could not guess what they are, and have never tried to do so. The duty of a non-partizan digest is, of course, to give the best and strongest that has been written on both sides, and this I have supposed THE LITERARY DIGEST has always done. That stronger articles are sometimes published on one side of the question than on the other, in the various periodicals of the world, is not the fault of THE LITERARY DIGEST; and a fair-minded person will not object to this valuable journal because it does not always represent his side of the question to the best advantage. I, for one, want to know the best things that can be said on the other side, as well as on my own side of a question; and I have always found THE LITERARY DIGEST an invaluable help—a greater help than I could find in any other one journal of the world—in arriving at a true knowledge of affairs, and in determining the drift of affairs in the world."

WHITFIELD, N. C.

We have no agents or branch stores.
All orders should be sent direct to us.

New Spring Suits, \$5.

The costumes and skirts which we make are exclusive in style and distinctly different from the ready-made garments. When wearing one of our styles you do not run the risk of meeting other ladies wearing garments which look exactly like yours. There are hundreds of firms selling ready-made suits, but we are the only house making fashionable goods to order at moderate prices.

Our catalogue illustrates an exclusive line of suits and skirts. We will mail it FREE, together with a choice line of samples to select from, to the lady who wishes to dress well at moderate cost. Our Catalogue illustrates:

New Skirts in the latest Paris cut, \$4 up.
Tailor-made Suits, \$5 up. Wash Suits, \$4 up.
Wash Skirts, \$3 up. Rainy-day Suits and Skirts made of double-face Materials.
Bicycle Suits, \$5. Bicycle Skirts, \$3.50.

We also make finer garments and send samples of all grades. We pay express charges everywhere. If you will mention any particular color of samples that you prefer, we shall be glad to send an assortment of the kind you wish. Write to-day for Catalogue and Samples—you will get them free by return mail.

Current Events.

Monday, February 19.

—Cronje's army is **hard pressed** by the British; General Buller wins all the hills south of the Tugela.

—In the Senate, Mr. Callom explains his bill providing a form of **government for Hawaii**.

—In the House, a debate on the question of the **Puerto Rican tariff** bill takes place.

—**Andrew Carnegie** starts from Florida to Pittsburgh in order to give his personal attention to a law-suit brought against him by his late partner in business, H. C. Frick.

—All the members of the **Kentucky legislature** meet at Frankfort, but the Senate divides on the question of the presiding officer, and no agreement is reached.

Tuesday, February 20.

—General Hart enters **Colenso**, meeting with only slight opposition, and continues his march toward Ladysmith.

—In the Senate, Mr. Kenney makes a speech advocating **independence for the Philippines**.

—The Massachusetts House of Representatives defeats a bill for **woman-suffrage** by 124 to 32.

—Secretary Root adopts plans for an **army war college** to be located on Governor's Island, New York.

—The State Department, replying to **ex-Consul Macrum's charges**, declares that he had made no report to the effect that his mails were tampered with.

Wednesday, February 21.

—General Warren's division **crosses the Tugela** at Colenso; General Roberts sends to the British War Office a casualty list of 33 British officers killed or wounded on the Modder River.

—**Henry Duff Traill**, an eminent English man of letters, dies in London.

—At the dinner of the Michigan Club at Detroit in celebration of **Washington**, speeches are made by Governors Nash and Shaw, Lieutenant-Governor Woodruff, and General Boynton.

—The new law building of the **University of Philadelphia** is dedicated in Philadelphia.

Miss Olga Nethersole and her managers are arrested in New York for producing "**Sapho**," an **alleged immoral play**.

Thursday, February 22.

—General Roberts reports that General Cronje's force is **surrounded**; a request for an armistice is refused.

—Washington's Farewell Address is read in the Senate by Mr. Foraker.

—The **Democratic National Convention** is called to meet in Kansas City, Mo., on July 4.

—An **anti-imperialist meeting** is held in Phil.

White Embroidered Swisses.

For summer and evening gowns no wash fabric is more fashionable, or more appropriate than the tenuous and filmy white Swisses.

The new goods show an almost endless variety of embroidered effects—the popular polka dot in all sizes and combinations, cords and wavy lines, open work, and fancy figures of all kinds.

Prices, 40 cents to \$1 a yard.

Equally complete and inviting is the display of the colored, and the black and white Swisses, and other wash fabrics.

adelphia, at which the principal speaker is Carl Schurz.

—The last two places on the new **Philippine Commission** are filled by Gen. Luke E. Wright, of Memphis, Tenn., and Henry Clay Ide, of Vermont.

Friday, February 23.

—General Cronje is **hard pressed** by the British forces; General Buller is still engaged on the Tugela.

—In the Senate, the case of **Mr. Quay**, of Pennsylvania, is debated.

—In the House, a vigorous debate continues regarding the question of the **Puerto Rican tariff bill**.

—The text of the **Gold Standard bill**, as finally adopted by the Senate and House conferees, is made public.

—The **Anti-Imperialist conference** at Philadelphia is concluded, and resolutions condemning the President's policy in the Philippines are adopted.

Saturday, February 24.

—Despatches from South Africa report that General Cronje is being shelled at Paardeburg but still holds out; General Clements suffers a repulse from the Boers at Arundel.

—**Deputy Marcel Habert** is sentenced to five years' banishment by the French High Court for inciting soldiers to mutiny.

—In the Senate, the Hawaiian Government bill is discussed; the House contains the debate on Puerto Rico.

—Marcus Daly and Senator Clark face one another in the **Montana bribery inquiry**.

—**Lieutenant-Governor Woodruff** is a guest of honor at a dinner of the Marquette Club, in Chicago.

Sunday, February 25.

—An attempt by Natal Boers to relieve General Cronje is **repulsed with great loss**; Cronje's position is regarded as desperate.

A **peace demonstration**, organized by the peace associations of the world and largely attended, is held at Vienna.

—The United States **Canal Commission**, after a conference with the President of Nicaragua, leave for Panama.

—The two **Socialist mayors** of Massachusetts—Chase of Haverhill, and Coulter of Brockton—address the Central Federated Union in New York.

PERSONALS.

In the late seventies, Henry George, the single tax reformer, came East from California. He was desperately poor and had but few acquaintances. Shortly after his arrival he lectured before the Saturday Ethical Club of New York.

For Debilitated Men, Horsford's Acid Phosphate.

Dr. J. B. ALXANDER, Charlotte, N. C., says: "It ranks among the best of nerve tonics for debilitated men." *Renews the vitality.*

YOU WASTE FUEL

by using an ordinary open fire. It sends three-fourths of the heat up the chimney.

The Jackson Ventilating Grate

prevents such loss, and will heat thoroughly several rooms on one or different floors. It can be fitted into any ordinary fireplace, and burns either coal, wood, or gas.

Write at once for catalogue "D." **EDWIN A. JACKSON & BRO.,**

"THEY COME AND GO LIKE CLOUDS UPON A SUMMER SKY."

The Advantage of Permanency.

Since the **SINGER** sewing-machine was first invented, more than four hundred different makes of sewing-machines have come and gone. Now it is a well known fact that sewing-machines wear out in parts; if such parts cannot be duplicated, the whole machine is no longer of any value to its owner.

All **SINGER** parts are absolutely interchangeable. Exact duplicates of each and every part are always and instantly obtainable at **SINGER** salesrooms in every city in the World; this makes the **SINGER** everlasting.

WHAT A CONTRAST WITH THE ANONYMOUS MACHINES SOLD BY IRRESPONSIBLE DEALERS.

Many a woman has experienced the annoying loss of some small part from one of these machines and has then found that the dealer had no duplicate or that the manufacturers had gone out of business and she must get out of her dilemma as best she could.

HALF-A-CENTURY'S PRODUCT.

During the last half-century nearly Seventeen Million **SINGER** Sewing-Machines have been made and sold. This tremendous product would make one gigantic machine head that would reach from the **SINGER** factory at Elizabeth, N. J., to the factory at Kilbowie, Scotland. Its base would be about three thousand miles long and twelve hundred miles wide. The top of its needle-bar would be fifteen hundred miles above the earth.

SOLD ON INSTALMENTS. OLD MACHINES EXCHANGED.

where his brilliant oratory and shabby attire made so striking a contrast as to excite the sympathy of those present. After he left the club appointed a committee to aid him in getting up a public lecture. Among others, the committee included Seth Low, who was then engaged in business. He was in consultation at the time, and the committee were in a hurry, so he told them to send him a lot of tickets. They forwarded twenty to him the same day, and felt happy at having secured \$20 for the lecture fund. The next morning came a letter of thanks from Mr. Low, praising the lecturer's intellectuality and enclosing a check for \$20. The affair was a success, nothing about \$20, so that President Low may be said to have been the first man to start Mr. George on his Eastern career. Twenty years later, in 1900, Mr. Low was the citizens' candidate and Mr. George the labor candidate for Mayor of New York. The latter made a vigorous campaign, and to all his speeches advised the citizens, if they could not vote for him, to vote for his friend, Seth Low; and on one occasion he said that if it had not been for the latter he would not be there now-candidate. Few understood his full meaning.

"HONESTY is the best policy." Nobody contradicts it.

Your dealer can get lamp-chimneys that almost never break from heat, or those that break continually. Which does he get? Which do you get?

Macbeth's "pearl top" and "pearl glass" are tough against heat; not one in a hundred breaks in use. The glass is clear as well as tough. They are accurate, uniform.

Be willing to pay more for chimneys that last till they rot, unless some accident happens to them.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Racine Cabinet For Turkish Baths

THE RACINE CABINET is a strong double-walled room, rubber-coated inside and outside and fitted with a door. When ready for use, the walls are rigid, yet by merely tipping the cabinet you fold it in a second into a 6-inch space.

A patent alcohol stove heats the cabinet to 100 degrees in three minutes. For a vapor bath, pour a pint of water into the vaporizer. For medicated baths, put the proper drugs in the water. We send 35 formulas with the cabinet.

The Racine cabinet places in your home all the benefits of the best Turkish bath rooms. Not an essential feature is lacking. You save breathing hot air, save the risk of exposure afterward, save time and expense. The cost is but 3 cents per bath.

For the cure of rheumatism, kidney and blood diseases, no other treatment can approach it. The hot-air bath forces the impurities that cause the disease out from five million pores at once. In all sanitariums the Turkish bath is the most important treatment. All who value cleanliness, complexion and health will eventually own one of these cabinets. The quieting, refreshing, invigorating effects of the bath are the pleasantest sensations possible. One bath will always stop a cold.

The Racine Cabinet is guaranteed to be the best one on the market. Not in any way similar to the worthless affairs now advertised for this purpose. We sell on approval, to be returned at our expense if not satisfactory. Send direct to us at from \$4 to \$12, express or freight prepaid; alcohol stove, vaporizer and face steaming attachment included. Send today for handsome illustrated catalogues, and order from that.

Problem 457.

By C. V. HARRY.
First Union Reading Library Tourney.
Black-Ten Pieces.

White—Nine Pieces.

White moves in last move.

Solution of Problems.

The solution of 457 will be given as soon as Mr. Politzer awards the prize.

458 and 459 were solved by the Rev. P. H. Johnston, Elizabeth City, N. C., and H. Meyer, Milwaukee. Concerning 458 P. H. J. says: "A beauty—five excellent age lines and 34 faster." The

A Wonderful Record.

The Prudential Insurance Company of America, whose Home Office is in Newark, N. J., made a wonderful record during the year ending December 31st, 1899.

In the Industrial Department alone the Prudential issued insurance to the amount of nearly \$100,000,000, thus again evidencing the popularity of the new Industrial policy issued by it in 1897. It issued new insurance to the amount of nearly \$100,000,000 more than was written by any other Life Insurance Company in the world.

The aggregate of the Company's business for 1899 shows a total insurance in force of over ONE HALF BILLION DOLLARS (\$500,000,000), being an increase over last year of more than \$100,000,000. It also shows an increase in assets to nearly \$140,000,000, a gain since 1898 of more than \$1,000,000, and an increase in surplus to over \$6,000,000.

During 1899 the Prudential paid to policy-holders over \$6,000,000, making a total of payments to policy-holders since its organization of more than \$100,000,000.

This splendid record cannot fail to inspire the confidence of persons contemplating taking out insurance, and to satisfy those already insured in the Prudential.

The Paris Tournament.

The International Chess-Tournament, to be held in Paris, beginning on May 15, promises to be one of the greatest events in the history of Chess. While the masters of the world will be present, one will be noticeable by his absence—the Grand Old Man of Chess, Steinitz. The following prizes have been offered: First prize, a vase by Lesbot from the Sèvres manufactory and 5,000 francs; second prize, a Sèvres vase by Delafosse and 2,500 francs; third prize, a Sèvres vase by Doat and 2,000 francs; fourth prize, a Sèvres vase and 1,500 francs; fifth prize, 1,500 francs; sixth prize, 1,000 francs. Two additional prizes of the value of 500 and 300 francs respectively have been given by Baron Albert de Rothschild for the two most brilliant games. The time-limit is fixed at thirty moves an hour for the first two hours, and fifteen moves for every subsequent hour. One of the rules requires the playing over of a drawn game. If another Draw is made, then each contestant scores half a point. The entrance-fee is 100 francs, with a deposit of 200 francs as a guarantee that the entrant will play all the games.

Candidates for the Cable-Match.

The fifth annual Cable-match between Great Britain and the United States will be played on March 23 and 24. The executive committee has selected the following-named persons as candi-

Duplicate Whist Tables...

All the advantages of trays with a table to play on. Hidden pockets for cards to play sixteen hands. No lost or mixed cards. Each player has four leads in sixteen hands. No errors or confusion possible. The table is a substantial piece of furniture, in oak or mahogany. It folds when not in use. Price delivered \$7.00. Explanatory circular free.

GEO. H. RICE, Green Bay, Wis.

dates for members of the American team: H. N. Pillsbury, J. W. Showalter, J. F. Barry, A. B. Hodges, E. Hymes, H. G. Voigt, F. J. Marshall, C. J. Newman, S. W. Rampton, E. Delmar, W. M. de Visser, S. P. Johnston, E. E. Southard, and G. H. Walcott. From these, ten men will be selected to do the playing.

John Ruskin and Chess.

In noticing the death of John Ruskin, *The British Chess Magazine* says: "We think of Ruskin as a votary of Chess—for he was an enthusiastic lover of the game—that is, of Chess of a sort, for he would have none of the Pawn-gaining, wood-shifting, snail-creeching Chess. He loved only the 'grand style,' the sweeping majesty of a game by Morphy, or the glittering beauty of a blindfold gem by Blackburne. He regarded Chess from its artistic side—as, indeed, was to be expected of him. He never played Chess in public or in any club, reserving it as a relaxation in his own home; but he took great interest in published games of a brilliant description. On the resuscitation of the British Chess Association in the early eighties, Mr. Ruskin became one of its vice-presidents, and at each of the Chess-Congresses of 1885, 1886, and 1887, there was a special competition open to players engaged in art, science, or literature, called the 'Ruskin' competition, a prize in each case being a fine selection of Ruskin's works, beautifully bound, presented by himself, and bearing his autograph."

Mr. Ruskin was by no means a strong practical player, but he was a student of Chess and a warm advocate of the game as a mental relaxation, or, as he put it, "a useful means of turning my thoughts out of any too deeply furrowed channel." He did a useful service in persistently advocating such games as can be appreciated by others than profound students and leading experts. He admired short, pithy contests, "easy and graceful, well managed, and wittily concluded," as opposed to those "in which the combatants exchange, first their Bishops, then their Queens and Rooks, and pass the rest of the time skulking about the board in chase of each other's Pawns."

Another American Blindfold Player.

Mr. Julius Finn, of New York City, recently played eight games of Chess simultaneously, *namely*, winning six games and drawing two. Finn made 238 moves in two hours and forty-five minutes.

United States vs. Canada.

The American team of the great International Correspondence Match on 100 boards represents twenty-two States, as follows:

New York	24	New Jersey	2
Illinois	18	Connecticut	2
Pennsylvania	8	District of Columbia	2
Wisconsin	8	Delaware	1
Michigan	6	Colorado	1
Massachusetts	5	Virginia	1
Ohio	4	Tennessee	1
Nebraska	4	Kentucky	1
Kansas	4	Indiana	1
Minnesota	3	Missouri	1
Maine	2	North Dakota	1

In Chicago, recently, Pillsbury played simultaneously twenty-two games of Chess and seven games of Checkers. Of the Chess games, he won twenty and drew two; while of the Checker games he won four and drew three.

Successful Fruit Growing.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticultural Society at Lenox, Mass. The address is almost a college education to fruit growers, fruit dealers, and in fact to anybody eating fruit or even having but few fruit trees, or in any way concerned. Had this address been placed on the market in book form it would no doubt have sold at a good price. The full address, profusely illustrated, in pamphlet form, will be sent complimentary to any one enclosing ten cents, for postage, to the Lenox Sprayer Company, 30 West St., Pittsfield, Mass.

Knowledge of Openings.

A correspondent writes us that he has carefully gone through Mr. Blackburne's lately published book, and he finds that in nearly every game won by Mr. Blackburne from weaker opponents, the loser had really a lost game, theoretically, somewhere about the tenth move in the game, and in many games even earlier. Our own experience is that 99 per cent. of games played between experts and inexperienced amateurs are practically lost by the amateurs before they have made a dozen moves. To play Chess well, a fair knowledge of the Openings is absolutely essential. The Chess-player who tries to construct his game on a faulty Opening is like the architect who builds his edifice on a rotten foundation. Moral: Look to your theory and beware of the individual who ostentatiously tells you that he knows nothing of the Openings. If you search him, it is more than likely you will find him possessed of a pocket-edition of Chess-Openings, to which he refers much oftener than his Bible or Prayer-book.—*Hereford Times*, quoted in *The B. C. M.*

Emanuel Lasker, the Chess-Champion of the World, has submitted a mathematical treatise, and secured a chair in the Erlangen University.

A SAFE INVESTMENT

NOT A SPECULATION

WE OWN AND OFFER:

\$50,000 FIRST MORTGAGE 30-YEAR 5% GOLD BONDS OF THE

Alliance Gas & Electric Company

OF ALLIANCE, OHIO

These bonds are secured by an absolute first mortgage upon all the property now owned, or that may be hereafter acquired by the company, in favor of the Savings and Trust Company, of Cleveland, Ohio, trustee for bondholders.

The net earnings of the Company for the past three years have been over twice the interest on the bonds.

Alliance, Ohio, is a city of 12,000. It has but this one Gas and Electric Company, whose franchises are very liberal and perpetual.

The bonds are redeemable after December 1, 1909, at 105 and interest, and the Company is compelled to pay off at least \$6,000 per year after 1909 at 105 and interest until all are redeemed.

The report of our experts, engineers, and others who have made examinations of the plant are at your service.

We have sold a large amount of the issue and offer the remainder at 101 and interest netting over 5%.

We are offering you a first-class investment at a liberal rate of interest. Money placed in these bonds is more secure than in most savings banks and pays better interest.

We invite correspondence.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

A NEW PHASE OF THE SOUTH AFRICAN WAR.

A NEW situation seems to be forming in South Africa along what is assumed to be the Boers' "second line of defense." American newspaper critics of the war interpret the Boer withdrawal from Ladysmith, Mafeking, and Colesberg as results of the new conditions created by Lord Roberts, by which the Boers are compelled to abandon their aggressive attitude and concentrate nearer home to stop the British advance. The rumor that the Boers have raised the siege of Mafeking comes from a Boer source, and altho not yet confirmed by the British, it is accepted as being in accord with the other Boer movements toward concentration. General White and Colonel Baden-Powell, the defenders of Ladysmith and Mafeking, are receiving praise similar to that given the doughty Cronje last week; but Lord Roberts is generally credited with having caused the relief of the two beleaguered British commanders by the same operations that caused Cronje's overthrow. General Buller is given credit for his persistence in hammering away so long at General Joubert's force around Ladysmith; but it seems to be generally believed, as the *Boston Journal* points out, that if Roberts had not threatened Bloemfontein Joubert would be still barring Buller's advance, and the latter would still be crossing and recrossing the Tugela.

In the spirit of the Pope's exclamation, upon hearing of the relief of Ladysmith—"May this be the beginning of the end"—the newspapers seem to be trying to forecast the length and outcome of the war as seen in the light of the Boer retreat to their second line of defense. Some think that the Boer cause has been badly crippled. Thus the *Brooklyn Eagle* thinks that "the last vestige of the advantage which the Boers gained from an early start and thorough preparation, an advantage which they have used with such skill and courage as to compel the admiration of the world, disappears with the relief of Ladysmith." The *Boston Transcript* says: "The Boers will undoubtedly draw together, to seek to turn back the central invading army, that of

Lord Roberts, and we may expect that they will make the stoutest resistance possible; but unless all signs fail they can only delay the eventual complete triumph of the British arms. Numbers and resources are both against them. They have played a desperate game well, but it was always desperate." "It can not be long," declares the *Atlanta Journal*, "before President Kruger will sue for peace." The *New York Tribune* thinks that the entire Boer defense has collapsed. It says:

"A shrewd observer some time ago likened the Boer lines of war to a shell. It was, he said, a well-designed shell, and a

GENERAL JOUBERT.

stiff, strong one. But it was only a shell, and the moment it was pierced at one point the whole would be in danger of collapse, for there was no solid backing. The incidents of the last fortnight have seemed to justify this estimate. For the shell has been pierced and has collapsed. Lord Roberts pierced it with his swift rush to the relief of Kimberley. The moment he reached Jacobsdal he was through the shell. In a few days General Cronje surrendered. Then there was a tremor all along the Orange River, and on the Tugela too; and then, in a single day, Ladysmith was relieved and Colesberg was redeemed, and the whole shell lay in ruins. The Boer line has failed at every point. . . . The exaggerated fancies of Boer strength and the wild hopes of foreign aid have alike collapsed along with the shell of the line of battle, and the Boers now see themselves for what they are—a small people in the irresistible grip of a mighty power, with no hope of aid or succor.

"In such a plight, what is there left? Nothing, one would say, but to accept the inevitable with a good grace. They may not. They may try to reconstruct the shell, with a smaller

radius, and try to make on the Vaal the defense which has failed on the Modder and the Tugela. But it will be a vain performance. The reconstructed shell can not be made as strong as the one which has been broken. And the shell of fancies and hopes can never be reconstructed. Henceforth the men must go to battle with the consciousness that they are overmatched and that they will get no outside help. Nor is there any moral excuse or reason for such desperate resistance. Their lives, their fortunes, their civic liberties are not in jeopardy. Every one of them knows, or should know, that after the war and after the establishment of British sovereignty his land and house and cattle and money will be as much his as they ever were, and he himself will be as free as he ever was—save in the one particular that he will not be so free to oppress his neighbor. . . . There is no doubt that the collapse of the Boer oligarchy and the establishment of British authority will mean liberty and good government for Boer as well as for Briton."

Under the circumstances, says the *St. Paul Dispatch*, "and when the Burghers by thousands are petitioning him to do so, it would seem the duty of President Kruger to seek a truce and sue for peace. All the world hopes to see the slaughter stopped, but all the world is helpless if Kruger remains obdurate. He, like his gallant Cronje, must ultimately surrender without terms, or be crushed beneath an irresistible power. Heaven send him wisdom!"

Not all the press, however, think the Boer case so desperate. The *Baltimore Herald* says:

"It must be borne in mind that the Boers did not at first intend to do more than remain on the defensive, and that the invasion of Northern Natal and of Cape Colony was an afterthought, prompted by the desire to gain the active support of the entire Boer population in South Africa and encouraged by the then existing military situation. Up to the present time Great Britain has really accomplished nothing more than to reach the point originally regarded as the beginning of the conflict. To what extent defeat has broken the spirit of the burghers and impaired their effectiveness in resisting invasion can not now be determined."

The *Springfield Republican*, too, notes that the Boers still have at least 40,000 men, under no less able a leader than Joubert, and "notwithstanding the recent British successes," it believes, "there are sound reasons for thinking that the war's end is not in sight."

The *Philadelphia North American* says:

"In all the mountain ranges, notably those of the Drakensberg separating both republics from Natal, determined stands will surely be made, but in the heart of the Transvaal the final struggle must take place. When this commences, with their fine military training the Boers will not overlook the fact that, while besieging Pretoria, the British will have nearly fifteen hundred miles of communications between themselves and the coast to protect. It is then that we may again become familiar with those clever Boer traps which have been a feature of the South African campaign."

If the Boers are of as determined a spirit as the British, says the *New York Sun*, "and in the opinion of the world they are, Great Britain has still a lamentable job before it in South Africa."

Some interesting lessons in the art of war as taught by the recent operations are also being noticed by the press. The small losses by artillery fire during the recent sieges have led to some disparaging reflections upon that arm of the service, while the rifle has considerably enhanced its reputation. The *Brooklyn Citizen* points out that in spite of the terrific bombardment of Cronje's camp, that turned the place, according to the war correspondents, into an "inferno," only fifty men were killed and two hundred wounded during the ten days' siege. Cronje had several small pieces of artillery, it appears; but he was unable to use them, and his little force held off the British army by rifle fire alone. Says the *St. Louis Globe-Democrat*: "A few thousand good marksmen with magazine rifles can hold back an army ten times their size for several days. Cronje has added this fact to military science." It is also noticed that it was a body of infantry that finally forced his surrender by gaining a position where they could enfilade his trenches with their rifle fire. The siege of Ladysmith, too, makes an equally bad showing for the big guns. A despatch from Ladysmith to the *London Standard* after the siege was raised said: "The bombardment was heavy, but on the whole ineffective. It is estimated that during the investment about 12,000 shells were thrown into the town, an average of three tons of explosives daily. Yet we had only 35 men killed and 158 wounded." The *Philadelphia Record* notes that General Buller lost as many men in his efforts to reach Ladysmith as there were men in the besieged town. "From the point of view of the cold and unemotional strategists, therefore,"

it says, "nothing has been gained by the rescue of General White's division; the gain is fully balanced by the loss."

Hawaii as a Territory.—The bill which passed the Senate last week and is now before the House, providing for a territorial government for Hawaii, has called out little or no adverse criticism. The *Philadelphia Press* (Rep.) describes and comments upon what the measure will do for the islands as follows:

"The Hawaiian Commission which framed the bill had a different task before them than confronted the authors of most of the acts creating Territories of the United States. The Commission found existing in Hawaii a substantial government, republican in form, well administered, with courts, decisions, and precedents. The republic itself is a continuation, with some modifications, of the preceding monarchy. The Commission wisely decided to disturb things as little as possible. The bill accordingly recognizes the existence of their system of courts, recognizes their legislature, and provides for many local officers to administer the laws of the Territory. It makes all who were citizens in Hawaii on August 12, 1898, as citizens of the United States, and continues in force all the laws of Hawaii not inconsistent with the Constitution of the United States.

"A peculiarity of the Hawaiian law retained in the original form of the Senate bill is the qualifications for suffrage. Voters for the lower house of the legislature must be able to read and write the Hawaiian or English language. To vote for a senator the voter must have, in addition to the intelligence qualification, an income of \$600 per annum or own real estate to the value of \$1,500 or personal property equal to \$3,000. This is held to be necessary to keep the native and Portuguese vote from swamping the American, English, and German votes. The appearance of this provision in the bill prompted Senator Tillman to extol the South Carolina election law. The Senate was not convinced, however, and struck out the property qualification, so that all male adult, native or naturalized, residents of Hawaii who can read and write the English or Hawaiian language may vote, except the Chinese.

"The contract-labor laws of our own country and the Chinese exclusion act are extended to Hawaii with the other laws of the United States, and are about the only features which change conditions there. The Senate amended the Commission's bill in several particulars, but in the main it was adopted as reported. The union of the two lands will be cemented by the passage of this bill. Experience will disclose its defects, and doubtless several supplementary acts will be necessary before the political amalgamation of the Hawaiian Islands with the United States will be perfected."

RADICAL PAPERS ON THE CARNEGIE-FRICK DISPUTE.

THE startling facts brought to light in connection with the impending lawsuit between two of the partners in the Carnegie Steel Company have naturally furnished the text for many emphatic comments in the radical press. The Socialists see in the enormous profits of this concern simply the results of so much robbery of labor. For example, *The Worker's Call* (Chicago) says:

"What produced this enormous mass of value? The surplus product of the labor of many thousands of workingmen. These profits represent all that these workingmen produced and didn't get. . . . Did Frick and Carnegie produce any of this profit? No. Do they labor? Yes. In what then does their labor consist? In appropriating to their own use the surplus value produced by labor, in fighting between themselves over its division, and occasionally preaching the virtue of 'honesty' and the 'blessings' of poverty for the benefit of those whose product they secrete."

The *New York People* sees in the incident a vindication of the Socialist doctrine of the "class struggle" between capital and labor. The workingmen are told that they are the "partners" of the capitalists; but, says *The People*, the working class, as a matter of fact, "is a slave class." When Mr. Frick, as a "partner," feels aggrieved, he can fight his battle in the courts. When the four thousand workingmen "partners" felt aggrieved eight years ago, did they file a bill in equity? *The People* answers its own question by saying:

"They could not; the mechanism of capitalist law provided no wheel for THEM to turn in their favor. The only wheels that could at all turn in that instance were not accessible to them; these were the police and militia; and these did turn, and with a vengeance, and ground the 'partner' workingman to dust."

The *Haverhill Social Democrat* declares that "as there will be no cessation of the labor-skinning process, whichever one of them wins, the workingman can have no concern as to the outcome of the trial." *The Public* (Chicago, single-tax organ) says:

"It is in the protected trusts that our much-vaunted prosperity abounds. But the prosperity of the protected trusts is coincident and coextensive with the depression which the unprotected classes feel. The death to everybody else, McKinley prosperity is great fun for the trusts."

THE PUERTO RICO TARIFF AGAIN.

IN spite of the fact that the Puerto Rico tariff bill, as it passed the House, was so amended that the rate of tariff it provides is only 15 per cent. of the rate of our tariff on goods from other countries, and even this diminished rate is to run for two years only, the compromise has not succeeded in quieting the rising storm of opposition. A large number of Republican papers are joining the Democratic papers in calling on the Senate to defeat the measure; commercial and financial interests are advocating free trade with the island; and even the tobacco- and sugar-growers are beginning to express the belief that the Puerto Rico competition will not prove so formidable as they feared. The New York Chamber of Commerce, at its monthly meeting last week, passed by a unanimous vote a resolution saying that it was its "emphatic opinion" that "every consideration of honor, justice, and humanity demands that trade between the United States and the island of Puerto Rico shall be unrestricted by any customs duties whatever"; and that "early and prompt action should be taken by the Congress to redeem the good faith and the implied pledges of this nation as sponsor for the future welfare of Puerto Rico." *The United States Tobacco Journal*, of New York, ridicules the idea that free Puerto Rico tobacco will hurt the American tobacco-growers. It says: "The bulk of it is unfit for a cigar. It is inferior in quality even to our Pennsylvania. If admitted free, it would be mostly cut up for cigarettes and smoking tobacco. But the chances are that more of it would be exported to Canada than used in our own country. Not a hundred cases, nay, not ten cases, of Connecticut less would be consumed."

The protectionist press, however, still look with disfavor upon the free-trade proposition, and declare that the 15-per-cent. tariff preserves the great principle of protection, and proclaims the power of Congress over our dependencies, while giving ample relief to the distressed islanders.

New Problem Requires a New Policy.—"The new problem requires a new policy. Empty territory such as the United States has hitherto annexed required prompt incorporation and the pledge and promise of full political rights and privileges, that this new territory might rapidly attract and absorb population from the States and be in its turn admitted to the Union. This was the problem of the past. It is over. A new task is here. It will be followed by others of like character. Puerto Rico is now full

of population. Its area is densely settled. It can not absorb a population from the States so as to be in time, as it equals their population and is assimilated to them, admitted among them. The present population is not ready for a share in political rights and privileges. It must be trained and developed. It is long before it will be. Its illiteracy must disappear. Political experience must create a capacity for political action. A long tutelage is before this and other islands.

"Many perils and problems must be guarded against in this period. There are differences of labor, of production, of industry, of wages, of habits and the general standards of life and of morals which must be wisely and carefully considered step by step. The long task will not be done in a day. Until it is completed Congress must keep in its hands the same entire control which Parliament retains over the dependencies of the British empire.

"For all concerned this is the best course. The risk and danger in this country has always been a too rapid extension of political rights. States have been admitted before they were ready. The Montana senatorial investigation is a speaking proof. The country at large has too many ignorant voters. If the work were to be done over again an educational qualification would undoubtedly be imposed. Less haste would be shown in filling the Union with States not ready for Statehood and in bringing to the polls voters unable to read and write, as are nine out of ten men in Puerto Rico.

"The party, the papers, and the public men opposed to our new acquisitions and the annexation of dependencies have seized on the Puerto Rico tariff to try and lead the House into premature incorporation. They have failed. The tariff was only a pretext. The needs of Puerto Rico were a mere sham. The one opportunity which the opponents of our present policy of expansion saw was to discredit this policy by leading the House to a course and action which would incorporate Puerto Rico in the Union before either the territory or the population was ready for this step. . . .

"The real issue the House decided yesterday was not one of mere tariff. The decision establishes the principle and practice that the new annexed populations shall not be clothed with political rights and powers in the Union until by training and development they are ready for them."—*The Philadelphia Press (Rep.)*.

A Tariff for Revenue Only.—"The real issue is not, as we have all along contended, whether there shall be free trade or a tariff *per se*. Either would be lawful, and either could be established without setting any embarrassing precedent—if the job were gone about rightly. The issue is, Which will be better for Puerto Rico, and, incidentally, for the United States? Puerto Rico needs, of course, a market in which to buy and to sell. But

"HELP!"—*The Chicago News*.

"YOU SELFISH OLD HOG!"—*The Detroit News*.

PUERTO RICO'S TROUBLES IN CARTOON.

that is not her only need. She needs a revenue for payment of the expenses of her local government, for schools, for roads, and for other public works of prime necessity. Such a revenue can be secured from direct taxation or from customs. The former method would be particularly burdensome and objectionable to the people. The latter, there is good reason to believe, would be effective, and would not be burdensome, nor interfere with the prosperity of the island. At any rate, that is a question susceptible of deliberate and rational consideration. Men ought to be able to determine by investigation and calculation pretty nearly what would be the effect of the proposed tariff upon the island. An attempt to do that would be vastly more creditable than this agile jumping up and down and shrill screaming for 'free trade or nothing.'—*The New York Tribune (Rep.)*.

Unjustifiable and Ridiculous.—"For the bill itself as a beginning of colonial legislation no justification is possible, and from the point of view of the high protectionists themselves it is a ridiculous compromise. . . .

"No advocate of this singular bill has frankly avowed the real reason which induced party support for it. To talk about its being enacted in the interest of humanity is nonsense, for if that was the actuating motive, the short way would have been to let Puerto Rico goods in duty free. It is not passed in the interests of the trusts, for they are not in the slightest degree benefited by it. The motive for its enactment is mixed between a desire to conciliate 'labor' by keeping down competition, or rather its scarecrow; and to begin a colonial policy—to show that Congress proposes to do 'what it pleases,' in spite of the Constitution, with all the islands of the sea controlled under the treaty with Spain, Cuba, Puerto Rico, and the Philippines and their inhabitants; as well as Hawaii and other recent and future acquisitions if any. Considered in its aspect as the inauguration in practice of our new colonial system, the bill is the work of the clumsiest empire builders the world has seen for a long time. As the question underlying the bill is to be carried up to the Supreme Court, there is ground for hope that through the agency of that tribunal this monstrous piece of legislation, with all its contradictions, its protection against imaginary competition and its cant about relieving humanity by a duty of only fifteen per cent., will be consigned to the dust heap where repose so many of the works of statesmen who did not know their business."—*The Boston Transcript (Ind. Rep.)*.

An Issue for the Democrats.—"The issue is one upon which democracy can go before the country with the most absolute confidence. The American people are not fools, and when the truth of this unpleasant history is explained to them, no honest man need worry about what they will do in consequence next November. They only need to be told that President McKinley, knowing that a customs tariff could not be constitutionally imposed between American possessions, tried to avoid that question by according Puerto Rico her rights as an act of grace. In this he was joined by his Secretary of War and the leaders of his party in Congress. But, when the Republican magnates of the oil, sugar, tobacco, and rum trusts heard of the proposition, they vetoed it and compelled the President and their people in Congress to face about, ignore the famine-stricken islanders, and defy the basic law of the Union. The Democracy has been looking for a paramount issue upon which to rally all its scattered and divided forces. Here is one, and a better could not be conceived: 'Honesty, humanity, and the Constitution!'"—*The Washington Times (Dem.)*.

No Such Favors for the Philippines.—"Of course the Philippines will not be accorded such favors as are being granted to Puerto Rico. The action which has been taken in regard to the island in the Caribbean will be no precedent for the Philippine case. Congress will be at liberty to put any sort of a duty it wants on Philippine imports, and to continue it as long as it desires. There is a possibility, to be sure, that the Supreme Court, in the case which will soon be made up, may decide that all the islands are an integral part of the United States, and subject to the limitations and requirements of the Constitution, but the general opinion among Republicans is that the decision will not take this direction. If the court decides that the Constitution is in full operation in all the region over which the flag flies, then no duties can be levied on imports from either the Philippines or any other part of the territory gained in 1898. This point will

be cleared up before long. In the mean time the moderate rate of duty on Puerto Rican articles will not be found to be burdensome to the islanders, and the uses to which the revenue thus obtained will be put will reconcile them to its imposition."—*The St. Louis Globe-Democrat (Rep.)*.

ENACTING THE GOLD STANDARD.

THE first measure to which Congress gave its attention last December is again claiming public attention, being about to become a law. It is a measure which the gold-standard papers call "a safeguard of the honor and credit of the United States," and which the silver papers refer to as "infamous legislation," as "this ill-omened currency bill," "intended to make the rich richer and the poor poorer."

The bill as agreed upon by the House and Senate conference committee, a compromise, of course, between the original House and Senate measures, is thus outlined in its main features by the *Philadelphia Ledger (Ind. Rep.)*:

"It commits the country positively to the gold standard, and redeems the pledges of the Republican Party. By its passage, the discretion now vested in the Secretary of the Treasury of redeeming government obligations in silver, if he should so elect, will be taken from

SAILING IT TO THE MAST.
—*The New York Herald.*

that official, and he will be firmly bound by law to keep at a parity all kinds of money issued by the United States. The present legal-tender quality of the silver dollar and of other money of the United States remains unaffected. The Secretary of the Treasury is required to set apart a reserve fund of \$150,000,000 in gold, which is to be used for redemption purposes exclusively, and notes redeemed for gold are not to be reissued, except in exchange for gold. The Secretary is authorized to sell three-per-cent. bonds whenever necessary to maintain the reserve, and the money so received is not to be used to defray current expenses. Provision is made for small national banks and for the issue of silver certificates in small denominations. In the bill is incorporated the Senate's refunding proposition for the sale of two-per-cent. bonds, to run for thirty years. Opinion is not unified on this latter provision; but the conferees have agreed to it upon the assurance of Secretary Gage that it is feasible to float such bonds, which bear a rate of interest less than those of the principal bonds of any other nation.

"Simply as a concession to a few Republican members of Congress from Western constituencies, a section has been added providing that—

"the provisions of this act are not intended to preclude the accomplishment of international bimetallism, whenever conditions shall make it expedient and practicable to secure the same by concurrent action of the leading commercial nations of the world and at a ratio which shall insure permanence of relative value between gold and silver."

The provision that notes redeemed for gold are not to be reissued except in exchange for gold is intended to make impossible a repetition of the "endless-chain" trouble alleged a few years ago. When this provision is law, says the *New York Sun (Rep.)*, "in spite of the superficial incongruities and absurdities still left in our system of money, the foundation of that system will be as solid as a rock."

By the "refunding proposition," referred to above, the government bonds which mature within a few years, and which would otherwise be redeemed and canceled, are to be replaced by other bonds that will run thirty years. This provision is meeting with

some opposition. The *Springfield Republican* (Ind.) calls it "highly objectionable," because "it changes the wise and time-honored policy of the Government in regard to the reduction and payment of its debt. It provides for the buying up of a temporary debt at a large premium with a perpetual debt. . . . It is a provision which will tell against the Republicans in the coming popular canvass." The *New York Evening Post* (Ind.) says that "the Republican Party has in this respect reversed its own financial past, and indorsed the policy of a permanent national debt. This is one of the issues it will have to meet in the next campaign." The *Philadelphia Evening Telegraph* (Rep.) says:

"It may prove a difficult task to convince the masses of the people that there is any imperative necessity for such surrender. During the coming decade the Government will have the option of paying about \$750,000,000 of outstanding obligations. It is a very serious matter to postpone the possibility of effecting this release from debt for another thirty years. Such a step should not be taken except under the pressure of necessity, and that such a necessity exists at this time the people of the United States will be slow to believe."

The paragraph in regard to international bimetalism is referred to by the gold papers as "a sop to the silverites." This section "will work no mischief," says the *Philadelphia Ledger* (Ind. Rep.), because "there is no prospect whatever that the leading commercial nations will at any time agree to a coining ratio for gold and silver." Mr. Bryan, however, says of this section: "The action of the Republican Party in amending the currency bill as a last resort, so as to revive the promise of international bimetalism, is a confession that the gold standard is not satisfactory, and no Republican editor can explain that amendment except by acknowledging that it is an attempt to thrust fraud upon the American people."

A good example of gold-standard opinion upon the measure as a whole may be seen in the following comment by the *New York Journal of Commerce* (Fin.):

"The country is to be profoundly congratulated upon this agreement of Congress to eliminate the theoretical silver standard and to make the law conform to the facts. Twenty-five years is not a very long period for the education of the people upon a matter as to which financiers were very much in the dark a good deal less than a century ago, and upon which approximate unanimity has been attained among them only within very recent years. And if the legal tenders are to be continued, the country is to be congratulated upon adequate provision for their redemption in gold at any and all times. The moderate increase of the bank circulation allowed is good so far as it goes. But it is quite insufficient in extent, and it retains the vicious principle of bond security; the banks are still to lend their capital to the Government instead of to their customers. The friends of sound currency may be thankful for what they now get, but they will make a serious mistake if they relax for a day their efforts to get a comprehensive and scientific reconstruction of our whole currency system."

Few comments on the bill appear in the silver papers, most of them evidently considering their position sufficiently well known without further comment. The *New Orleans Times-Democrat* (Dem.), however, after calling the bimetalism clause of the bill "mere *brutum fulmen*," adds:

"This nation will get bimetalism only by its own legislative decree. If the free coinage of silver is a good thing, we want it, even tho every other Government should interpose a veto; if free-coinage of the white metal is a bad thing, we do not want it, even tho the united nations should seek to urge us in that direction. Coinage is one of the distinctive prerogatives of sovereignty. The people which ceases to control its currency is *ipso facto* enslaved."

"With the enactment of this bill, the United States abandons the financial system which was established by the founders of the Government, and adopts the English plan. The adoption of this course lays us open to all the disturbances which may shake

the European exchanges from time to time. With a serious decline in the production of gold, a revolutionary shrinkage of values must occur. Nevertheless, it is entirely right that this thing should be done. The American people passed upon the matter in the election of 1896, and their verdict must be accepted, until it shall be reversed in the light of history. From this time forth, the nations of the world will battle for the only money of final redemption. The struggle will be fierce and deadly, and the survivors will bear disfiguring scars. Franklin's adage holds in the case of nations, as of men: 'Experience keeps a dear school, but fools will learn in no other.'"

MR. OLNEY ON THE FRUITS AND FOLLIES OF EXPANSION.

RICHARD OLNEY, President Cleveland's Secretary of State, who is being invited by some of the Gold Democratic papers to become a Presidential candidate this year, has just given, at some length in *The Atlantic Monthly* for March, his opinion concerning our new expansion policy. It is an opinion that cuts both ways, and elicits both approval and dissent on each side of the discussion. For Mr. Olney heartily indorses the general principle of national growth and expansion, while condemning its application to the Philippines as a bad blunder. The absence of the national instinct and impulse to grow would be, he says, "a sure symptom of our national deterioration." "The United States has come out of its shell and ceased to be a hermit among the nations naturally and properly." But, he adds in the next sentence, "what was not necessary and is certainly of the most doubtful expediency is that it [the United States] should at the same time become a colonizing power on an immense scale."

As if to lend emphasis to his positive views on the general principle of expansion, Mr. Olney goes farther even than most expansionists have yet gone by advocating the annexation of Cuba forthwith. He says:

"The spectacle now exhibited of a President and his Cabinet sitting in Washington with an appointee and sort of imitation President sitting with his Cabinet in the Antilles must have an end, the sooner the better, and will end when Congress ceases to ignore its functions and makes Cuba in point of law what she already is in point of fact, namely, United States territory. Were there to be a plebiscite on the subject, such a consummation would be favored by practically the entire body of the intelligence and wealth of the island. Until it is reached, capital will hesitate to go there, emigration from this country will be insignificant, and Cuba will fail to enter upon that new era of progress and development, industrial, political, and social, which is relied upon to justify and ought to justify the substitution of American for Spanish control."

Returning again to the general principle of expansion, Mr. Olney holds that our former isolation, from which we are emerging, was marked by such features as the Monroe doctrine and the high protective tariff, and showed its results in provincialism and "narrow views of our duties and functions as a nation." The spirit of expansion was upon us, however, and "the historians will probably assign the abandonment of the isolation policy of the United States to the time when this country and Spain went to war over Cuba, and tho the abandonment may have been precipitated by that contest, the change was inevitable, had been long preparing, and could not have been long delayed." He continues:

"In short, when our troubles with Spain came to a head, it had, it is believed, already dawned upon the American mind that the international policy suitable to our infancy and our weakness was unworthy of our maturity and our strength; that the traditional rules regulating our relations to Europe, almost a necessity of the conditions prevailing a century ago, were inapplicable to the changed conditions of the present day; and that both duty

and interest required us to take our true position in the European family and to both reap all the advantages and assume all the burdens incident to that position. Therefore, while the Spanish war of 1898 is synchronous with the abandonment of its isolation policy by the United States, it was not the cause of such abandonment and at the most only hastened it by an inconsiderable period."

But Mr. Olney's satisfaction over the new policy of growth is, as we have said, counterbalanced by his dissatisfaction over the application being made of it. "Why," he asks, "do we find our-

RICHARD OLNEY.

selves laboring under the huge incubas of the Philippines?" He takes up several of the replies that are made to that question and disposes of them all with but scanty respect. The idea that we "drifted into the Philippines" is, he avers, utterly mistaken, for "it is certain and has recently been declared by the highest authority that, having acquired by our arms nothing but a military occupation of the

port and city of Manila, we voluntarily purchased the entire Philippine archipelago for twenty millions of dollars." As to the claim, called by Mr. Olney "a cheap resource of demagoguery," that "where the flag has once been hoisted it must never be taken down," he points out that as the flag "had never been hoisted over more than the city and port of Manila, no removal of it from the rest of the archipelago was possible in the nature of things." And the theory that we are under solemn obligation to carry the blessings of good government and civilization to the natives, he declares to be one than which "it is not easy to conceive of anything more baseless and more fantastic." The slums of New York, Boston, and our other cities and towns have their "millions of suffering and deserving poor whose welfare is of infinitely greater importance to us than that of the Kanakas and Malays of the Orient, and whose relief would readily absorb all the energies and all the funds the United States can well spare for humane enterprises. No wonder our British kinsmen guffaw at such extraordinary justifications of our Philippine policy." It is certain, Mr. Olney concludes, that we were "not bound to buy the Philippines by any considerations of honor or duty."

If not, he asks, "was it our interest to buy them?" As we do not need colonies to drain off a surplus of population, and as white laborers could not live in the Philippines if we did, our purchase can be justified, if at all, "only by its effect in creating or extending trade and commerce with the Philippines and with China." He analyzes this phase of the subject as follows:

"On this subject the thick-and-thin supporters of the Administration seek to dazzle our eyes with the most glowing visions. A soil as fertile as any on the globe needs but to be tickled with the hoe—to use Douglas Jerrold's figure—to laugh with abundant harvests of all the most desired tropical fruits. Minerals of all kinds are declared to abound everywhere—virgin forests of the choicest woods to be almost limitless in extent—while as for coal, it is solemnly asserted to be even dropping out of the tops of mountains."

"They do not stop to tell us what we are to sell to a community

whose members live on the spontaneous growth of their mother earth, and clothe themselves very much as did our first parents after the expulsion from Eden. They fail to tell us, further, with what labor the vaunted resources of the islands are to be exploited, since the white laborer can not work there and the native will not."

Nor will our new archipelago open the gate to China's markets. Indeed, says Mr. Olney, "it is not too much to assert quite positively that we should have been in a better position to command our share of the Philippine and Chinese trade without the Philippines than with them." After declaring that the recent "assurances" the Administration has received guaranteeing the "open door" in China are worth little or nothing, Mr. Olney declares that we can get our share of China's trade by two means only—reciprocal concessions, or a show of force. If we insist on free trade with China, we shall certainly be embarrassed by demands from the powers for free trade with the Philippines. If we had acquired only "such part of the Philippines as was necessary to give us proper coaling-stations and an adequate naval base," says Mr. Olney, "we should have been in a better position to secure and protect our interests in trade with China than we are with the Philippine load on our backs," and we should have less difficulty with our "anomalous attitude in demanding free trade with the dependencies of other countries while hampering free trade with our own by the severest restrictions."

Moreover, if the islands embarrass negotiations, they will embarrass military operations even more:

"Whereas our trade with China would have been amply secured and protected by the enlarged navy we must and should have under any circumstances, supplemented by an adequate naval base and coaling-stations in the Philippines, the taking over of the whole archipelago enfeebles us for all purposes—by the immense, remote, and peculiarly vulnerable area we must defend; by the large permanent army we must transport and maintain, not merely to prevent and deter aggression from without, but to hold down a native population thoroughly disaffected and resentful of the tactless and brutal policy hitherto pursued toward it; and by the tremendous drain on our resources which the civil and military administration of the islands will inevitably entail."

Mr. Olney does not recommend that we now proceed to get rid of the islands. "Whether we want the Philippines or not, and whether we ought to have them or not," he says, "that we have got them is something not to be denied. . . . we are committed—the Philippines are ours—how we shall deal with them is a domestic question simply."

What, then, will be the effect of this situation upon our foreign relations? Our diplomatic agencies "must be greatly enlarged, strengthened, and improved, while a powerful navy up to date in all points of construction, armament, general efficiency, and readiness for instant service, becomes of equal necessity." "A large force of highly educated and trained administrators" for

THE FLAG AND THE TRADE.
—The Minneapolis Times.

the islands will also be needed, and large additions to our regular standing army.

What of our future relation to the great powers? Are we likely to find an alliance desirable or necessary? Our status as an Asiatic power, Mr. Olney says, "must have some tendency to qualify the attitude which, as a strictly American power, the United States has successfully maintained toward the states of Europe"; but aside from that tendency, our general policy, hereafter as heretofore, "must be and will be non-interference in the internal affairs of European states—hereafter as heretofore we shall claim paramountcy in things purely American—and hereafter as heretofore we shall antagonize any attempt by an European power to forcibly plant its flag on the American continents."

In spite of our traditional dislike of alliances, however, the Philippines seem to have brought us one. Mr. Olney says:

"The true, the ideal position for us, would be complete freedom of action, perfect liberty to pick allies from time to time as special occasions might warrant and an enlightened view of our own interests might dictate. Without the Philippines, we might closely approach that position. With them, not merely is our need of friendship imperative, but it is a need which only one of the great powers can satisfy or is disposed to satisfy. Except for Great Britain's countenance, we should almost certainly never have got the Philippines—except for her continued support, our hold upon them would be likely to prove precarious, perhaps altogether unstable. It follows that we now find ourselves actually caught in an entangling alliance, forced there not by any treaty, or compact of any sort, formal or informal, but by the stress of the inexorable facts of the situation. It is an alliance that entangles because we might be and should be friends with all the world and because our necessary intimacy with and dependence upon one of them is certain to excite the suspicion and ill-will of other nations. Still, however much better off we might have been, regrets, the irrevocable having happened, are often worse than useless, and it is much more profitable to note such compensatory advantages as the actual situation offers. In that view, it is consoling to reflect that, if we must single out an ally from among the nations at the cost of alienating all others, and consequently have thrown ourselves into the arms of England, our choice is probably unexceptionable. We join ourselves to that one of the great powers most formidable as a foe and most effective as a friend; whose people make with our own but one family, whose internal differences should not prevent a united front as against the world outside; whose influence upon the material and spiritual conditions of the human race has on the whole been elevating and beneficent; and whose example and

experience can not help being of the utmost service in our dealing with the difficult problems before us."

The advent of the expansion policy has brought a "momentous change" to our national life; but, says Mr. Olney:

"Such a change will import no decline of patriotism, no lessening of the loyalty justly expected of every man to the country of his nativity or adoption. But it will import, if not for us, for coming generations, a larger knowledge of the earth and its diverse peoples; a familiarity with problems world-wide in their bearings; the abatement of racial prejudices; in short, such enlarged mental and moral vision as is ascribed to the Roman citizen in the memorable saying that, being a man, nothing human was foreign to him."

TOPICS IN BRIEF.

AT another peace conference England might be tempted to suggest that the koppe be excluded from civilized warfare.—*The Washington Star*.

JAPAN has discovered gold-mines, but no foreigner will be allowed to work them. No Uhlender business for Japan.—*The Philadelphia Ledger*.

MR. MACRUM insists that the affection between England and America should not be so great as to cause them to open each other's letters.—*The Washington Star*.

WHILE feeling duly grateful that the Kentucky controversy is, at last, in the courts, we should not be without some sense of sympathy for the courts.—*The Detroit News*.

FIRST MONTANA LADY: "Do you call on the Gettits?" SECOND MONTANA LADY: "I should say not. Why, Mr. Gettit has never been offered more than \$1,000 for his vote."—*The Baltimore American*.

If the Puerto Ricans had understood that they were to be plunged into the midst of abstruse tariff logic they might not have been so joyously welcoming the soldiers.—*The Washington Star*.

AS we understand Mr. Clark's testimony, he was not a candidate for United States Senator, but the Montana legislature insisted on electing him because he spent so much money to purify the State's politics.—*The Philadelphia Ledger*.

GOVERNMENT OWNERSHIP.—The United States owns a railroad in Luzon and is building another. It is not likely that any of the New York bankers are aware of the fact, as there were no deaths from heart failure reported at their banquet the other night.—*The Chicago Record*.

NICKEL: "Yes. Eddie was slightly wounded in the first fight. We have a letter from the army surgeon." AUNT: "Where was he wounded?" "We are not quite sure. The surgeon mentioned the place, but we don't know whether it is an anatomical phrase or a Transvaal town."—*Tid-Bits*.

A BARBAIN.—J. B.: "Now, about this 'ere canal, William. Hi wants to be fair and square, an' so Hi makes this 'ere proposal: You dig an' repair it an' police it an' Hi'll take the benefits; or, hi'll take the bloomin' benefits and you can dig an' police it an' repair it. Ye can't hank no fairer than that!" DEEP AND DIPLOMATIC WILLIAM: "Now I must admit that this sounds reasonable."—*The New York World*.

PRONUNCIATION OF WORDS IN CURRENT HISTORY.

THE following are some names made prominent in connection with the South African war. In each case the native pronunciation, so far as obtainable, is given unless otherwise stated. That is, Dutch words are given with the Dutch sounds, Portuguese with Portuguese sounds, etc.

Baden-Powell	bā'dn pōw'el
Cecil Rhodes	sē'sil rōdz
Meibuen	mēth'yū-en
Wanchope	wā'chop
Clery	clē'ri
Balfour	bāl'fūr
Lourenço Marques	lō-rē'n'sō mār-ōes' (Portuguese).
Joubert	jōh'bert (French).
	jōm'bert (Dutch).
Kruger	kro'gēr (English).
	kru'gēr (Dutch).
Oom Paul	ōm'paul
Cronje	crōn'yū
Botha	bō'thā
Leyds	lēids
Uitlander	ūt'land' er
Paardeberg	pār'ds-bērg
Jacobsdal	jā'cōbz-dāl

Magerfontein	mā'grz-fōn-tōin'
Bloemfontein	blōm'fōn-tōin'
Tugela	tū-g'la
Gras Pan	grās pān'
Elands-laagte	ē'lands-lāu'tā
Spion Kop	sp'ion cōp'
Johannesburg	jō-han'es-burg
Pietermaritzburg	pī'tēr-mār'its-burg
Majuba	mā-jū'ba (Dutch).
	mā-jū'ba (English).

In connection with domestic events are the following:

Quay	kwē
Puerto Rico	pwer'tu rī'co

The form "Porto Rico," an anglicized or mongrel term made up of the Portuguese word *porto* and the Spanish *rico*, is also widely used in this country. Neither form has been officially adopted by all the departments of the United States Government, altho it is stated that President McKinley prefers the form used by the inhabitants themselves and by all Spanish-speaking people, namely, "Puerto Rico."

a (as in sofa), d (arm), a (at), f (fare), au (angry), b (bed), c (cat), ch (church), n=ch (loch), d (did), dh=ch (fibre), dz (adze), e (net), o (over), o (fate), f (fan), g (go), h (hat), i (it), t (machine), ol (isle), j (jest), k (kink), l (lad), l or ly=ll (brilliant), m (man), n (nut), n=ny (union), o (non) F., u (ink), o (obey), o (oil), o (not), o (nor), ol (oil), an (house), p (pay), pa (Japae), cw=qu (queen), r (roll), s (hiss), sh (she), t (tell), th (thin), ts (lasts), u (full), u (rule), u (mute), u (ditch), G., u (up), o (burn), v (van), wā (waft), wāwe (wail), x (wax), y (yet), yā (yard), z (zone), zh=z (azure).

LETTERS AND ART.

EUROPEAN VIEWS OF RUSKIN.

RUSKIN'S death has, almost needless to say, brought forth a vast amount of reverent comment upon his life and character in the columns of journals printed in the English language; and the end is not yet. But an examination of the periodicals published in other languages proves somewhat disappointing. Ruskin is hardly as well known in Europe as we are apt to think he should be, and not always appreciated when known. Quite likely his intensity of patriotism may have repelled to some extent readers of other lands than his own.

"An Italian student can not understand Ruskin ere he has made himself acquainted with the national and social conditions of his life," writes Ugo Fleres in the *Roma Nuova Antologia*; and he continues, in substance, as follows:

Both as a philosopher and as a sociologist, Ruskin was extremely reactionary. His strongest point was his analytical ability, for which his wonderful eloquence stood him in good stead. His originality is shown by the fact that he was at once critical and utopian. He demonstrated the fallacy of modern material progress, and offered us a dream instead. His love of nature was almost wholly rural. A landscape was more to him than a beautiful human figure; for the leaves of a tree he cared more than for the tresses of a woman. Of all his senses, sight was the keenest. With most of us it is the principal sense; to him it was more; he was ruled by it. Hence nature was dearest to him; and, after nature, the art of painting; and, of all paintings, pictures of landscapes. Architecture he appreciated as the continuation of nature herself.

The *Revue Bleue* (Paris) reminds us that Tolstoy regards Ruskin as one of the greatest geniuses of his time. It says:

"Ruskin certainly was gifted to a remarkable extent with the 'religion of beauty.' At first sight, he appears to us a little strange. But gradually we become convinced that his charm was in his profound appreciation of nature and his great love of everything pure. These rare gifts made him for fifty years the idol of English esthetes. It is due to Ruskin that pre-Raphaelism was recognized as the noblest manifestation of artistic thought."

Charles Boissevain, in the Amsterdam *Handelsblad*, speaks with personal regret of Ruskin, whom he praises as one of the greatest masters of English. "All who wish to study English thoroughly must read Ruskin," says Boissevain, and he adds:

"Surely literature is as worthy of our care as music? Many cultured people are spellbound when great masters touch the keys or press the violin to their shoulder. Yet these same refined persons leave Ruskin uncut and choose the latest novel! Men who are very careful in the choice of their friends and intimates are often very careless in the choice of the books to whose influence they submit. In Ruskin I would point out to them a composer of literature as great as Germany's most famous composers of music. When Ruskin spoke, when he led us, when he was angry, or jubilant, or reverent, we who loved and honored him followed him, forgetting the world. We felt as if the ages of saints and miracles had not yet passed. Everything true and honest, everything beautiful and good, found a zealous supporter in Ruskin while life lasted."

Mr. Boissevain describes Tolstoy as the one upon whom "the mantle of the master has fallen." Benno Rüttenauer, in the Berlin *Nation*, is much less enthusiastic. He begins by stating that Ruskin exercised little influence over German minds, "whether for good or for ill, we will not now discuss." We quote as follows:

"Each nation has taken from Christianity what best suited it. The English choose that which we, when we do not wish to praise it, call prudery. Ruskin did not differ from the rest of his race. Despite his naturalism, he is the enemy of the nude in art. He feels in that matter like a monk of the Middle Ages, and declares that Greece fell because she loved the nude. He

maltreats Dürer in his writings, not only because Dürer, unlike Holbein, did not choose to work for England, but also because he pictured Adam and Eve naked. And he does not treat Leonardo much better. It is this narrow view which has given us so many able English landscape painters, while Italians like Botticelli speak with contempt of pictures 'which are almost finished if you throw a sponge full of paint against the wall.' . . . Another trait likely to render Ruskin unpopular with us is his puritanical view of Christianity. In this he goes so far that no poetry finds his approval unless it describes things beautiful and Christian only." —*Translations made for THE LITERARY DIGEST.*

MR. BUCHANAN AND HOOLIGANISM AGAIN.

WE have already given some kinetoscopic views of the spirited tilt between Sir Walter Besant and Mr. Robert Buchanan over the question whether Kipling stands for righteousness or for "Hooliganism" in British literature (see THE LITERARY DIGEST, December 23, 1899, January 27, 1900). Sir Walter's blows have not silenced his adversary, for he returns to the lists with increased vigor of language and intensity of feeling. He says (in *The Contemporary Review*, February):

"According to Sir Walter, Literature is the only profession the members of which denounce wrongdoing in each other. If this were so, how proud and unique would be the position of Literature! Unfortunately, it is not so. Members of the Medical profession may hesitate to denounce individual quackery, altho they punish in the severest manner the slightest breach of professional etiquette; but it would be better for the world, a thousand times better, if in this profession and in all the others, including Literature, there were less etiquette and more honesty, more truth-speaking on the part of individuals, and less trimming and lying to conciliate trades and cliques. In the medical profession, for example, there is, I believe, a professional etiquette which forbids one practitioner, on being called in to a patient who is dying through the ignorance and malpractice of another practitioner, apprising those concerned of such ignorance and malpractice! An etiquette of the same sort, according to Sir Walter, forbids a man of letters avowing his detestation of a Hooliganism which, he believes, is not merely causing the death of one sick individual, but is sowing the whole world broadcast with butchered and martyred men."

"Here at last we come to the very core of the moral question, and reach the real inwardness of my criticism. According to Sir Walter Besant, a man of letters has no right to say a word against any Jack Cade of his own craft who rushes from street to street with a howling Mob at his heels, and is indirectly or directly concerned in fanning the evil passions of semibarbarous crowds. To our Knight, who vaunts Literature as a roaring trade, the question is merely one of professional etiquette, and of personal vanity, envy, and uncharitableness on the part of a craftsman! 'Self-respect, the dignity of the calling, nay, the ordinary laws of common courtesy,' should, Sir Walter thinks, prevent one author from expressing his bad opinion of another, especially when that other is generally admired. The expression of any such bad opinion can only be inspired by one sentiment, that of professional jealousy or trade malice. So that when Byron exposes in a masterpiece the shameful sycophancy and wicked servility of the laureate Southey, or when Shelley bewails in burning numbers the faults and backslidings of hireling poets, or when Browning says of a contemporary:

Just for a handful of silver he left us,
Just for a ribbon to stick on his coat,

the motive is always the same one—envy of the other's dirty gains! The truth must *not* be spoken, even if the Doctor is a murderous quack, the Lawyer a lying rogue, the Literary Man a public nuisance! Foul and evil teaching must *not* be exposed, even when it is poisoning the very Wells!

"I do not propose to examine in detail Sir Walter's vindication of Mr. Rudyard Kipling. So enthusiastic is it that it actually makes the good Knight drop into poetry, and talk in mixed metaphors about 'the hundred millions who read the Anglo-Saxon tongue and flock into the vast theater to listen spell-bound to a single voice'—that of him whom I have christened Hooligan. Sir Walter's literary tastes do not interest me; his moral predi-

lections are my chief concern. Let me now inquire, a little more closely, into these.

"'Kipling, in prose and in verse,' says Sir Walter, gloatingly, 'is one to whom War is an ever-present possibility and an ever-present certainty! There is a time to speak of Peace and a time to speak of War! At this moment it is well that some one who has a voice should speak of War!' And so on, and so on. The vein is 'Ercles vein, a tyrant's vein, a bloodthirsty vein, wonderful on the lips of so mild and home-bred a citizen! Sir Walter is frank enough, indeed, to avow that he likes bloodshed, that there are 'worse evils than War,' and he is not afraid to echo, at this hour of the day, the mad platitudes which drove Englishmen into homicidal frenzy forty years ago. There are worse things than War, quotha? Worse things even than War beginning and ending in the lust for Gold, and the anilor of freebooters to grab the solid Earth?

"Under one condition only is the slaying of our fellow men justifiable, or at least pardonable—the condition of righteous Self-defense. Our good Sir Walter, so full of anxiety for his fellow craftsmen, so shocked and shamed when one of those craftsmen protests against homicidal mania and Jingo-patriotism in another, can contemplate with serenity the bloody holocaust of suffering martyred thousands, snugly seated in his office chair, reclining out Literature at so much per thousand words, can assure his readers that the processes of Plunder and Slaughter are glorious and ultimately purifying; can glibly quote from a poem of which Tennyson lived long enough to be ashamed, but which is still among the few blots on a noble reputation; can talk of the 'potency of War,' 'the ennobling of a People by War'; nay, can utter the usual banalities about 'noble aims,' in connection with a crusade baser even, if that is possible, than the mad Crimean crusade which once deluged Europe with innocent blood!"

Indeed, the cry of "All's well" from Sir Walter's lips, his talk of free schools, free libraries, factory acts, and polytechnics, "sounds feeble almost to fatuousness at this epoch of plunder and bloodshed, of Jameson raids and chartered shares, of city train hands rushing to assist in the spoliation of Naboth's Vineyard":

"Philanthropy, quotha? Christianity, i' faith? I have but to open my *Daily Alarmist*, and my eye falls upon the following:

'THE BOY WHO SHOT THREE BOERS!

'ENGLISH BOYS AND GIRLS SEND HIM A CHRISTMAS PRESENT.

'Trumpeter Shurlock, who with his own hand shot three Boers at Elandslaagte, has stirred a practical responsive chord in the hearts of patriotic boys and girls at Benhall School, Saxmundham, Suffolk.

'We have received from Mr. John Chambers, the schoolmaster, a watch and chain, subscribed for by the children, and accompanied by a letter intended for the trumpeter of the Fifth Lancers. Here is the letter which Trumpeter Shurlock's youthful admirers are sending him:

'DEAR TRUMPETER SHURLOCK,—*Your schoolmaster reads us the war news every morning, and what we liked best was to hear about you, and how you shot the three Boers, and we thought we should like to send you a Christmas present.*

'We thought at first we would send you a plum pudding, and then a flannel shirt, but we got too much money for that. So, as some kind friends helped us, we got enough to send you a watch and chain, which we hope you will accept.

'If ever you come to Suffolk, we hope you will call and see us, so that we may give you a cheer.

'Please let us know if you get it and if you like it.

'Hoping you will come safe home and be able to show it to your mother. We are pleased you are our young countryman, and we hope if any of us are ever soldiers, we will do our duty like you.

'Wishing you all good luck, we remain,

'Your young English Friends,

GERTIE RACKHAM,

FRANK CHAMBERS,

(For the Children of Benhall School.)

So that the beneficent homicide of youthful England is *not* confined to 'Stalky and Co.' and other creations of the egregious

Mr. Kipling, but runs red in our very streets and lanes, and infects our very errand boys and urchins at play! The Boy who killed three Boers! How dear must he be to the heart of the Knight who dotes on War, and Bloodshed, and Mr. Kipling! Doubtless, too, this boy has partaken of the Christianity of the School Board, and may even have strolled in his regimentals through the very educational People's Palace!"

COMPLETION OF THE HARPER REORGANIZATION.

THE Harper firm without the Harpers is apparently to be the status of the new corporation which was organized on February 16, with a capital stock of \$2,000,000. From *The Publishers' Weekly* (February 24) we quote the following details.

JAMES HARPER.

JOHN HARPER.

JOSEPH W. HARPER.

FLETCHER HARPER.

THE FOUNDERS OF THE PUBLISHING HOUSE OF HARPER AND BROTHERS.

"In plain English, the committee's plan eliminates the present capital and the present control by providing for the organization of a new corporation, doubtless under the same or a similar name, which shall take over the assets of the old concern and provide both for the secured and the general creditors by the issue of first mortgage and of income bonds. Mr. Morgan, and other secured creditors, accept first mortgage bonds at half the nominal amount of the old bonds, but furnishing exactly the same security. The unsecured creditors are to receive income bonds—that is to say, certificates of indebtedness, on which interest is to be paid if earned, paying such interest at one per

cent. for the first two years, two per cent. for three years thereafter, and five per cent. after five years, these income bonds to be redeemable at the pleasure of the corporation. The excess of \$170,000 bonds and of any income bonds over general indebtedness is to remain in the treasury for corporation use. Capital stock is to be issued to the amount of \$2,000,000, under absolute control of the committee, with the understanding that a large part of this is to go to Colonel Harvey for his services as president for the next five years, the stock being meantime in a voting trust, comprising Mr. Morgan, Alexander E. Orr, and Colonel Harvey."

The new plan, Colonel Harvey states, "reestablishes the house of Harper & Brothers upon a financial basis which is absolutely impregnable." "The new organization appears to be solely in the interests of the creditors," says *The Publishers' Weekly*; "no provision seems to have been made by which the members of the old Harper family are to have a share in the future management of the concern."

WALT WHITMAN THROUGH GERMAN EYES.

THE severity with which several critics in Germany have censured Walt Whitman is a surprise to the many adherents of this poet who are to be found both in the Old and the New World. But, if studied from a psychological rather than a literary view-point, the conflict between two such remarkable intelligences as Walt Whitman and Kunst Hamsun (one of the poet's censors) can not fail to interest all who know either or both of these writers.

Referring to the first publication of "Leaves of Grass," written by the poet at the age of thirty-six, the critic asserts that its popularity is entirely due to Emerson's eulogistic letter, "without which it had unquestionably met the failure it merited." Says the writer (in *Gesellschaft*, January):

"Whitman himself, and after him Rudolf Schmidt, calls these poems songs; but Emerson, the order-loving, was unable to classify them. They are no more songs than multiplication tables, being nothing more than prose devoid of rime or meter; the alinement of one, two, or three words, then twenty-eight, then thirty-five, and then, actually, forty-three words, can alone suggest verse. The author styles himself a world realist, to which opinion I can hardly subscribe, cosmos or the universe being quite as applicable; so I shall simply classify Walt Whitman as a savage, an untutored, untrained Umland."

Whitman's poems, we are told, all reveal a strain of Indian insensibility, and this primeval Indian nature flares forth again in his predilection for Indian names when he sings of the elements of nature. Their soft witchery overwhelms him, and we find whole verses interspersed with words like Paumanok (Long Island) and maize, or whole lines of state nomenclature, without heed to any continuity of textual meaning. He tells us that echoes of wind and rain call to us soft Indian names—Okonec, Roosa, etc. The critic continues:

"His style is not English, nor does it belong to any cultured tongue; it is the mighty picture speech of the Indian, without the pictures. It is confused and obscure, little more than a nomenclature of names; a carnival of words, of which he has an imposing array without possessing the faculty of seizing or defining a single thought of the many that surge in his untutored brain. Note, for example, the poems entitled 'Farm Life' and 'Song of the Open Street.' . . . His poems echo throughout with an Indian warwhoop of victory. Names, names, that could as well be titles of poems, with no further reference to these objects of which 'he sings.' But in this very nomenclature lies his chief originality, and that it is which has inspired the admiration the English-speaking public share with Emerson.

"Again the unusual parenthetical form of many of his poems mars the directness of his thought. Take, for example, these lines:

¹ Still thro' the one I sing ye
(One yet of contradictions made) I dedicate to Nationality

I leave in him revolt (O latent right of insurrection,
O quenchless, indispensable fire!)

"It seems incredible that they are intended to convey the idea that the poet is a patriot; they could as well have any other meaning.

"Whitman was a deep student of the Bible, and his works reveal this influence; indeed, he seems to have found further encouragement therein for his daring style. He names each object his fancy summons forth with a brutal directness akin to Biblical frankness. It laid his works open to the charge of eroticism and caused his ultimate dismissal from the State Department. In reality his poems are no more erotic than any other literary product where thought is veiled by *double entendre*."

Hamsun disagrees with O'Connor and Conway when they say a personal acquaintance with this author brings a better comprehension of his works.

"I think the 'Leaves of Grass' give this impression of wild dreaminess far better than the poet himself. . . . Indeed, I doubt if personal acquaintance with any author can give a keener insight into his writings. . . . Walt Whitman was born too late. He is a literary phenomenon without parallel, and remains the last gifted example of a modern man born a savage; but his book is none the less a literary discord. Some call him the first American poet of the people. . . . He lacks simplicity and quiet strength; his language is too turbulent. . . . His intense self-appreciation permeates all his writings. When he tells us that he sat at the feet of the old masters, but now they must learn of him, we find it impossible to realize that he meant Socrates, Plato, etc. But he is so lovably human, his naiveté is so overwhelmingly natural, he is so essentially a child of nature, his realism suggests so little of responsible artistic conception, that we forgive him his seeming egotism; or rather his humor is so contagious that his self-praise is no longer vanity to us, but absolute truth.

"His best poems are gathered under the title 'Calamus,' . . . some of which attain such heights of grand simplicity that it seems incredible he could have written them. . . . Where his wild nature is held in check by civilized English his language is honey-sweet. Throughout, the touch of a masterhand eliminating faults of exuberance and technique . . . would bring his entire works to a state of perfection. He is past master in the art of talking much and saying little. His sensibility is refined, his temperament rich and musical, his talent lyrical. . . . Had he possessed the advantages of an education of culture he would probably have developed into a literary Wagner. Born in that land of rushing bustle, he is a changeling of primeval and present principles. The constant repetition of names that do not define his thought and his lack of form would indicate a man whose heart is warm but whose brain is cold. His language is passionate, impulsive, throbbing with the keenest enjoyment of life. But wherefore? He can not tell us. His life is imaginative, but he wends his way alone. In short he is a rich man rather than a talented author, a man who feels but can not write."

Still another German view of Whitman is given in an extended article in the *Deutsche Rundschau* (December). The writer, under the initials "J. R.," states that some years ago Walt Whitman was introduced to the German public by Ferdinand Freiligrath. Before that time (1877) Whitman had never been heard of in that country. A collection of Whitman's verses translated into German by Karl Knortz and T. W. Rolleston followed in 1889. Says the reviewer:

"The poetry of Whitman reminds us of the cataract of his native continent, the deafening roar of Niagara, which at first, when the senses have become accustomed to it, becomes melody, the old, eternal, primeval melody, appearing without beginning and without end. His poems are formed out of the colossal; they know no difference between the trivial and the exalted. They mount continually from the smallest to the grandest and most prodigious. His phantasy reckons with trillions and trillions of winters and summers . . . with myriads of spheres and myriads and myriads of those who inhabit them. He climbs a step; on this lie bunches of ages, with great bunches between the steps, and he mounts, mounts ever. He is old and

young, a child, to whom all things are new, who wonders at everything, rejoices at everything, and a man, who knows everything, believes everything, and doubts everything. . . . Now he speaks the speech of the prophets of the Old Testament, now that of the reporters of newspapers and penny-a-liners."

After several extracts from Whitman's verses, the critic continues:

"He will be free from all chains, he entirely himself, and he knows but three majesties, the majesty of love, the majesty of democracy, and a third, the majesty of religion, which combines the other two:

*Amerika, du bist es besser
Als unser Continent, das alte,
Hast keine verfallenen Schlösser
Und keine Baralle.
Dich übertrifft nicht im Innern
Zulebendiger Zeit
Unmühsamer Erinnerung
Und reichlicherer Streb.**

"Of all American poets, this verse of Goethe's has pictured none so strongly, none so truly as Walt Whitman. . . . From his verse one gains an idea of America's greatness as it has scarcely ever been pictured. In these rhapsodies, these inarticulate sentences, broken harmonies, these interjections and parentheses, it is seen; we might say that it appears before us in its gigantic form, and in the passionate stammering of a language which rings with it, we receive an idea of America's vast development and dimension. As if driven forth from a whirlwind, the numberless phenomena of American life rush to meet us—now we are in the tumult of New York or Chicago, now in the idyllic life of a Western farm; now on the great streams and the lakes, now on the cotton-field and the prairie, the forest, and the border of the sea; now among the gold-miners and now with the redskins."

The critic says of the memorial to Lincoln:

"This is the only place where he has fallen into measure and rime, as if the deep pain, comparable to the groans of a soul, could only find expression in the old measured manner. This is but a moment, more remarkable perhaps in a psychological aspect than in an esthetic one—a familiar sound in the midst of a foreign language, in which none before Walt Whitman had ever spoken and which none would use after him."—*Translation made for THE LITERARY DIGEST.*

"SHAKESPEARE, THE MAN."

IN his little volume with the foregoing title, Goldwin Smith aims to find, in the plays of Shakespeare, traces of their author's personal character. This has been essayed before by others, but Professor Smith's work is terse and clear and simple enough for a child. He says:

"There are things which strike us as said for their own sake more than because they fit the particular character; things which seem said with special feeling and emphasis; things which connect themselves naturally with the writer's personal history. There are things which could not be written even dramatically by one to whose beliefs and sentiments they were repugnant. Any knowledge which is displayed must of course be the writer's own; so must any proofs of insight, social or of other kinds. Inference as to the writer's character from such passages are precarious, no doubt; yet they may not be altogether futile."

Shakespeare was a poet before he became a dramatist, and Professor Smith thinks that he gives us unmistakable glimpses of himself in certain passages in "The Merchant of Venice," "Romeo and Juliet," and "A Midsummer's Night's Dream." There is abundance of evidence that Shakespeare knew "little Latin," but there is no evidence that he knew any Greek. He had read Rabelais and was acquainted with Italian; but when he came to town, about all he knew of the world was of country occupations, horses and hounds, and the wild thyme that grows upon

the banks of Avon. Fine music was his acme of enjoyment. He picked up law phrases from Templars in London, but knew no law.

Did Shakespeare travel outside of England? Professor Smith thinks it probable that he was in Italy. Shakespeare's reference in "Love's Labor's Lost" to Dan Cupid, Julio Romano's giant dwarf in the Vatican, seems to imply that he had been in Rome. If an Englishman had traveled anywhere in those days, he would probably have gone to Italy.

Shakespeare was not learned in history. He makes the Duke of Austria responsible for the death of Richard I. He follows the chronicles blindly. On the other hand, he had a wonderful eye for historical character. He dresses his Romans in cloaks and hats; but his delineation of Caesar, Brutus, Cassius, and Mark Antony can not be surpassed. For instance: "Speak, Caesar is turned to hear", and, "I rather tell thee what is to be feared, than what I fear; for I am always Caesar." But the dramatist makes strange mistakes. He introduces artillery in the reign of John, gives Bohemia a seacoast, and introduces nunneries into Athens. And yet it is suggested, may not this rather be said to be simple disregard of the limitations of time and place?

Professor Smith thinks the mystery of Shakespeare's sonnets will never be solved. It is certain that the series is the product of the Renaissance, a period of loose, irregular passions. Shakespeare's marriage was undoubtedly forced upon him, and for the soundness of his morality on this subject we have great reason to be thankful. Matrimony with him is always holy. There is no Don Juan among his heroes. The passages in his plays describing sexual looseness and obscenity are due to the vices of the age—an age in which Rabelais and Boccaccio were popular.

Professor Smith says it is difficult to learn what were Shakespeare's politics, if he had any. In "John" he does not refer at all to the Great Charter. In the early part of his career everybody was Royalist. His homage to the divine right of kings is manifest in "Henry VIII.," and he makes Richard II. king out of his own mouth. But much of this is for dramatic effect. Shakespeare's ideal was probably a popular monarchy. In "Henry V.," he expresses his conviction that the king is but a man like the rest of us. He detested mobs and mob rule in "Julius Caesar." He speaks of these mobs as having "stinking breaths," "chapped hands," and "sweaty nightcaps"; but at the same time there are not wanting passages breathing a strong sense of the injustice and inequality of society, such as a radical might be glad to repeat. Some of these passages appear in "King Lear" and "The Merchant of Venice."

Shakespeare must have been highly humane in his feelings. In "As You Like It," Duke Senior feels aversion to the idea of killing deer. In "Henry VI." Shakespeare speaks pathetically of the calf driven to the slaughter. With all his feeling for the glory of Henry V., Shakespeare shows his sorrow for the waste of lives in iniquitous wars.

His gallery of woman characters, ranging from *Beatrice* to *Juliet* or *Hero*, are unsurpassed in beauty and loveliness, and this is to be all the more highly appreciated when his probable experience is considered. Professor Smith says here:

"Shakespeare lived long before the advent of the new woman, and in a state of society when the weaker vessel was more dependent for protection on the stronger than it is now. But it would be difficult, whatever the state of society might be, to reconcile Shakespeare's view of the relation between husband and wife with that of John Stuart Mill or his female disciples."

Shakespeare wrote at a time when his country was pulsating with the story of new discoveries in foreign lands, yet he is unaccountably silent on this subject. Only in "The Tempest" does he allude to such discovery.

As to his religion, Professor Smith thinks that there can be

* "America, more blest than Europe old,
Hath ruined castles none nor basalt's old.
Vain recollections and inutile strife
Sap not the vigor of thy youthful life."

but little difficulty in pronouncing him a conformist, as a servant of the court was bound to be. At all events, he ridicules the nonconformists, especially the Puritans. Least of all can it be maintained that Shakespeare was a Roman Catholic. It would not have been possible for a Roman Catholic to have written even dramatically certain passages in "King John." The future life seems to have been to Shakespeare an unsolved mystery; and Professor Smith, in concluding, says:

"Among the absurdities of the Baconian theory, not one is greater than the idea that Bacon could have passed, in changing his kind of composition, from the scientific orthodoxy of his acknowledged works to the frame of mind characteristic of the Shakespearian drama."

TOLSTOY'S "RESURRECTION" ARTISTICALLY AND ETHICALLY CONSIDERED.

THE final words of Tolstoy's hero in "Resurrection" are a recognition of the belief that love—the divine love of God and neighbor, as taught by Christ—is the all in all. The book closes with these words of the hero, Nekludoff:

"I have lived, and we all have lived, in the absurd assurance that we are the masters of our life, that it is given us for our pleasure. And yet this is evidently absurd. If we are sent here it is by some one's will, and for some purpose. Yet we have thought that we are like mushrooms; we are born and live for our own joy. It is clear that we are uneasy, as uneasy as the workman who has failed to carry out the will of his master. And the will of the master is expressed in the words of Christ. Only follow His teaching, and there will be established on earth the kingdom of heaven, and men will receive the highest blessing of which it is capable. Seek God's kingdom and its truth, and everything else will be added unto you. We seek the other things, and do not find them; and not only do we not establish the kingdom of heaven, but we destroy it."

In this, Tolstoy shows the spiritual regeneration of Nekludoff, the aristocrat, the sinner, the man who first seduced a poor girl and subsequently was awakened to a sense of guilt and shame through the accidental circumstance that he is called upon to try, as a juror, the woman he had himself betrayed, on the charge of having murdered her illegitimate child. The reader is familiar with the general plot, and it is necessary to state merely that Nekludoff, actuated by remorse, follows the condemned woman to Siberia, incidentally sees a great deal of prison life, the convict-worked mines, the treatment of political prisoners, etc. He secures a pardon for the woman and offers to marry her. She refuses him, and decides to remain with one of the political prisoners who had been kind to her and from whom she had received new ideas and new sentiments. Nekludoff appreciates her sacrifice of self and inwardly approves it. He resolves to devote his own life to the service of his fellows, and therein is his "resurrection."

Here is one of Nekludoff's reflections, prompted by his observations of criminal justice:

"The whole trouble consists in this—that men think there are situations where it is possible to deal with human beings on another basis than love, whereas there are no such situations. With things it is possible to deal without love; it is possible to fell trees, fashion iron, make bricks, without love; but men it is impossible to treat without love, because mutual love among men is the fundamental law of human life. It is true that a man can not force himself to love as he can force himself to work; but it does not follow that he can dispense with love in dealing with men, especially when he demands something from them. You do not feel any love for men—well, sit quietly, occupy yourself with your own person, with things, with whatever you please, but not with men."

The moral of "Resurrection" is approved by the Russian critics who have had an opportunity to review the novel. One writer, however, attacks it as the gospel of passivity and of negation.

He says that Tolstoy does not bring life, activity, positive duty, and service; but indifference and sterile contemplation. From a literary view-point, it is agreed that the novel is inferior to Tolstoy's former creations, especially in its second half. V. Bourenin, the veteran critic, writing in the *Novoye Vremya*, concludes a long and enthusiastic review as follows:

"Only toward the end, a certain weariness on the part of the artist makes itself felt. The political prisoners are finely and correctly drawn, but in their delineation there is a lack of firmness and finish. Not sufficiently clear is the process of the psychological regeneration of Moslava under the influence of the new conditions and ideas to which she was exposed after her condemnation. Possibly the same observation may be made with regard to the spiritual resurrection of the hero; one feels that something has been left unsaid. Altogether, the finale of the novel is somewhat crude, owing perhaps to the unfavorable circumstances under which it was written."

"But, as a whole, 'Resurrection' is a profoundly significant and profoundly true artistic work."

"It may be that the great artist produces images and expresses ideas with more directness and severity; his work loses something on its artistic side, but gains in its didactic quality."

The literary critic of the *Voprosy*, Sieveroff, emphasizes the defects of style:

"Examples of epic terseness and wonderful completeness of portrayal are numerous. Tolstoy does not use superfluous words, and does not stop to select his phrases; indeed, his style is often heavy and strangely uncouth; it is the style of an eye-witness who writes exactly as he is in the habit of speaking, who is not troubled by the repetition of words and awkward expressions. On the other hand, his speech at times reaches wonderful eloquence, strength, and impressiveness, and every word sinks into the memory."

The same critic points out that nearly every character in the novel tries to fathom the mystery of life, to account for his or her presence in the world, and to solve the problem of existence. The hero arrives at the conclusion that faith in oneself, in the promptings of conscience, is the way to salvation, and the moment he decides to reject conventions, human traditions, and alleged practical rules of worldly wisdom he feels a moral emancipation. Obstacles and difficulties disappear, and the loftiest ideal becomes law and practical.—*Translation made for THE LITERARY DIGEST.*

NOTES.

MR. EDWARD CLARENCE STEPHEN, the banker, poet, and critic, has sold his seat on the New York Stock Exchange, and will in future devote more time to literature.

AN interesting contribution to the still rather scanty literature of the novel is "The Evolution of the English Novel," by Prof. E. H. Stoddard, of New York University, to be published shortly by The Macmillan Company.

HAUPTMANN'S new play "Schluck und Jan" proved to be a failure at the Deutsches Theater in Berlin last month, and was greeted with hisses. It is called a farce in five acts, and deals with the ancient fable of the vagabond who wakes up in a prince's court and believes himself to be the prince. It is said to be a better closet play than an acting drama.

PROF. ST. GEORGE MIVART'S first novel, "Castle or Manor?" a story of English social life, is just published, and will be received with especial interest at this time. To become both a novelist and a heretic at seventy-three is not given to every man. It is surmised that Cardinal Vaughan has already supplied himself with an advance copy. What view the London *Talks* takes of the book has not yet been announced, but it is believed that the editor thinks Dr. Mivart a better romancer than theologian.

SIR EDWARD CLARKE, M.P., in a recent address at the Robert Browning Hall, Waleworth, England, took occasion to lament the decadence of literary ideals in England. He said, as reported in *The Westminster Gazette*: "During the year just closed perhaps the two most notable books were Swinburne's 'Resound' and 'Statue & Co.' by Rudyard Kipling; the manuscript of the former ought to have been burnt instead of printed, and the latter work was a specimen of the degrading state to which present-day literature had sunk. There was only one remedy for this state of affairs, and that was a word of advice to parents not to allow their children to condescend to follow literature down to the gutter by reading such publications, but rather to keep the delightful works of a bygone day, works which never died and which always brought their intellectual reward."

SCIENCE AND INVENTION.

DO THE LOWER ANIMALS SUFFER PAIN?

THE older writers were apt to take a somewhat anthropomorphic view of the world of lower organisms. It was assumed that an insect has sensations and feelings resembling our own—that it sees what we see and suffers as we would suffer if treated in the same way. Recently the pendulum has swung in the other direction, and high authorities practically deny that the lowest organisms feel anything that can properly be called pain. Thus the late Prof. W. W. Norman, of the University of Texas, in a posthumous article in *The American Journal of Physiology* (January), maintains, as the result of experiments on the flounder and lower species, that the reactions of these creatures against injury do not indicate pain sensations at all. Professor Norman begins by criticizing the mode of reasoning that would demonstrate pain in animals from their movements, regarded as expressing certain moods of consciousness. Certain motions are said to express pain because they always accompany injury. Since they do accompany injury, they are said to indicate that the injury causes the animal to suffer. This, the professor says, is mere argument in a circle. He regards movements as the immediate consequence of physical stimulation, the psychic factor not entering the problem at all. Certain experiments that seem to the author to prove the correctness of this point of view are thus described in an abstract that appears in *Science* (February 16):

"The most striking and classic of these experiments were made on the common earth-worm. If such a low animal be divided at its middle transversely, only the posterior half shows those squirming and jerking movements which, anthropomorphically viewed, seem to indicate pain; the anterior half (containing the brain) crawls, as ordinarily, away. Now if each of these halves be halved, again the posterior segment of each squirms while the anterior halves crawl away. This same process may be continued with precisely like result until the pieces are no longer large enough to crawl independently. This striking phenomenon is explained in part by the two sets of muscular fibers in the worm, one longitudinal, causing the squirming and jerking, and the other circular, which produce the crawling. Why in the posterior segments the former set should be initially stimulated and in the anterior the latter set, Professor Norman says he does not know. For its purpose the experiment seems conclusive. Similarly, if a swimming leech be cut in two, both parts, after a pause, swim off as if nothing had happened. Like events take place with other species of worms, the anterior or brain part being regularly that undisturbed by the extraordinary stimulus.

"The abdomen of a hermit crab may be cut in two without any 'but a very slight response' from any remaining movable organ. *Limulus* stops a few seconds when four or five abdominal segments are cut away, then proceeds quietly breathing as before. Its order of events is regularly: cessation of breathing, flexion of abdomen, pause, extension of abdomen, respiratory movements. *Geophilus* cut in two in the middle continues its crawling, the front half going forward and the rear half backward. Millipedes divided while walking do not hasten nor stop nor jerk. Dragon flies lose parts of their abdomens without any appreciable change in position. As was long ago pointed out, bees continue to eat when their abdomens are cut away during the process.

"Lastly, sharks and flounders, provided a current of water circulate through their gills, will allow the most tedious and deep-going cutting operations on their heads without the slightest appreciable movement indicative of pain or even of sensation."

In a note to Professor Norman's article, Professor Loeb, who has recently come into public notice through his experiments on the artificial fertilization of sea-urchins' eggs, states that he regards the author's investigations as having proved at least these two things:

"(1) In a great number—perhaps the majority—of lower animals injuries cause no reaction which might be interpreted as

the expression of pain sensations. (2) In the limited number of cases where injury is followed by motions which have been considered as the expression of pain sensations (as in the case of worms), a closer analysis shows that this interpretation is unjustified."

Professor Norman's conclusions, or rather certain too sweeping inferences that they seem to invite, are criticized in the number of *Science* mentioned above by George V. N. Dearborn, of Harvard University. He says, in the first place:

"This article is noteworthy not least for what it neither says nor implies, namely, that animals other than those there considered probably do not feel pain. . . . The problem may be properly considered as insoluble—yet well worthy of debate. It will not be maintained that these animals do experience pain when they are injured, but only that they may, for all that experiments prove to the contrary. . . ."

"The highest, highly differentiated animals require painful sensations as a means teleologically protective of their different organs; in the lowest orders, on the other hand, this need does not exist, for their relative simplicity of plan makes possible the regeneration of any lost part or organ or even the perfecting of an individual from a part artificially cut off from another individual. It is therefore extremely reasonable, even from the pan-psychistic view-point to suppose that organs of pain would be undeveloped in these very lowly forms. The simplicity of neural structure in these orders makes it certain almost that much, present in higher forms as organs correlated to consciousness of various moods, would here be lacking."

In other words, even if Professor Norman's experiments be regarded as showing that worms and starfish feel absolutely no pain when mutilated, that is no reason for maintaining that dogs and horses do not. Again, spasmodic movement is only one mode of expression of pain. Pain is often greatest when there is no movement at all. Says Dr. Dearborn:

"Professor Norman expressly noted in most of his experimental reports a period of quiver on the animal subject's part, representing nervous shock. It is a pure presumption to conclude that such a condition is not 'painful' to the animal. In all the higher animals severe pain is essentially asthenic in its effect on the organism. *Limulus*, cited by the writer, shows this especially well, and furthermore presents yet further evidence of painful or destructive sensation in the extreme abdominal flexion, the general concomitant of pain, noted in the experiments."

In conclusion, the last writer reminds us, nature makes no leap. There can be no hard-and-fast line between pain-feeling and painless animals. Pain is nature's warning signal to protect the organism; is it reasonable to suppose that it should be altogether absent even in the lowest organisms?

What Becomes of the Microbes?—When a person dies of a contagious disease, what becomes of the germs that caused his death and that abound in his body? This question has been investigated in Germany by Dr. Klein, who has buried the bodies of infected animals for stated periods and then examined them for germ life. His results are thus given in the *Centralblatt für Bakteriologie*:

"The bacillus prodigiosus and the staphylococcus aureus are found living in dead bodies twenty-eight days after interment. Longer stay underground kills them. After six weeks, no culture develops. The bacillus of cholera lives nineteen days, but does not preserve its reproductive power after eighteen. The resistance of Eberth's bacillus (that of typhoid) is nearly the same. The germ of the plague is always alive after seventeen days of burial, but not after three weeks. The bacillus of tuberculosis (which, it should be insisted upon, destroys more lives than that of the plague, altho it frightens people less) does not survive the animal that it has killed. Klein has found it in the organs, but has never been able to make cultures of it, and (a more important fact) has never succeeded in reproducing tuberculosis by injections of bacilli found in dead bodies. These are interesting facts for those who are studying the influence of

cemeteries on the public health. It should be added that dead bodies may, of course, be unsanitary for other reasons than because of the microbes that have inhabited them during life.—*Translation made for THE LITERARY DIGEST.*

AN ELECTRIC GUN.

THE daily press has recently contained an account of a so-called powderless electric gun invented by a resident of New Orleans. The invention of a similar gun was reported in April, 1895, and a scheme for the rapid transport of packages on the same principle, to supersede pneumatic tubes, was put forth some time ago. All these schemes depend not on expansive or explosive force of any kind, but on the property of a solenoid, or tubular coil of wire traversed by electricity, to draw within itself an iron rod or cone. To quote the press despatches:

"If a tube is wound with insulated wire and an electric current is sent through the wire, magnetic attraction is set up inside the tube, and small pieces of iron or steel may be drawn toward the center. This is a familiar experiment in physics. If an iron rod fitting the tube is placed near it, it will be drawn into the tube by the force of the magnetism. The current is cut off the instant the iron rod or projectile reaches the center of the tube. Then it meets with no resistance beyond the center, but darts on through the tube. If after passing through one tube it enters a second tube in which the same process is repeated, it gains additional momentum, and if it passes through still another tube, all in a straight line, its momentum can be increased until it acquires enormous speed."

The 1895 gun was said to be able to throw projectiles five or six miles, but there is no record that it ever achieved this result, or any result at all. The 1900 gun, it is said, possesses equally wonderful powers. Of course it never gets hot, and it can be fired as fast as it can be fed; indeed, two or three shots can be going through it at the same time. Commenting on these reports *Electricity* (January 31) says editorially:

"The great trouble with a gun built on this principle would seem to be in the fact that in order to obtain a high-muzzle velocity an exceedingly long tube would be required, which must be kept in perfect alinement, which requirements would necessarily limit the field of usefulness of the weapon."

"Theoretically such a gun should accomplish what is expected of it, but unfortunately unforeseen difficulties have a habit of cropping up when inventions are tried on a practical scale, and the electric gun would probably be no exception to the rule; for as nearly as can be ascertained no model larger around than an ordinary lead-pencil has as yet been constructed by the New Orleans inventor."

The inventor admits that his cannon will not do for field service, as it would be necessary for the artillery to carry along powerful electric batteries, but that it is just the thing for fortifications. He is also of the opinion that it would be well adapted to the discharging of dynamite and gun-cotton.

Compensation in Weather.—It is the general belief that the characters of successive seasons bear some relation to one another. Either a summer is warm because the preceding winter was mild or because the preceding summer was cold. The truth or falsity of such a belief is considered in the Annual Summary for 1899 of *Climate and Crops*, in which data relating to temperature and rainfall in Denver, Colo., for twenty-eight years are compiled in the hope of throwing light on the so-called compensation theory of weather. Says *Science*, in a notice of this summary: "This theory, stated in a few words, is that a season with an excess or defect of temperature or precipitation is followed by compensating conditions in the succeeding season. The records show that the temperature for a season, or a longer period, furnishes no certain index of the conditions to be expected during the coming season. An exceptionally warm spring or summer following an abnormally cold winter is found to be the exception rather than, as is generally believed, the rule. The

conditions with respect to precipitation are much more variable than those connected with the temperature. Notably dry or wet seasons are more likely to be followed by nearly normal ones, than by seasons having compensating, or opposite, characteristics."

A RUSSIAN DIRIGIBLE BALLOON.

TO keep in touch with modern progress in "air-ships" would require most of an ordinarily busy man's leisure time. Occasionally, however, there is one that deserves special notice, and the dirigible balloon of Dr. K. Danilewsky, of Charkov, Russia, seems to be of this description. The inventor has sent some details of his recent experiments to *The Scientific American* (January 20), to which we are indebted for the following facts,

THE DANILEWSKY DIRIGIBLE BALLOON-AIRSHIP.—THE ASCENT.
Courtesy of *Scientific American*.

with the accompanying illustrations. Professor Danilewsky is well known as an engineer and an expert in aeronautics, and his experiments were conducted under the auspices of the Russian Government in order to demonstrate the practicability of his airship for use in the signal-service corps of the army. The results were remarkably successful; Dr. Danilewsky, mounted on his balloon chair, steered the flying-machine in any direction he desired. Says the account already mentioned:

"This balloon flying-machine is based on the hypothesis that if a man's strength, in proportion to his weight, is not sufficient to raise him in the air, he can raise himself if part of his weight is subtracted. By the use of a balloon filled with pure hydrogen, the weight of the man is eliminated from the problem, and he can devote all his efforts to propelling and steering the balloon which is supporting him. . . . It requires only three or four men to assist in making the start, which is a great advantage over the ordinary military balloon, which requires the service of fifteen men or more to launch it successfully. The Danilewsky balloon has the added advantage of being inflated in a short time, only half an hour being required, and when inflated it can be transported to any distance by the aid of a couple of men. In the trials to which we have referred, the balloon ascended to an altitude of 300 feet and after circling around was brought to a full stop. The descent was then made to the ground in order that the Russian officers could observe its action and see what absolute control of it the inventor had. This is the most important

matter connected with any former balloon. It is easy enough to make a balloon or air-ship which will ascend, but the descent is always a hazardous undertaking, and many aeronauts have lost

NEARING THE EARTH.
Courtesy of *Scientific American*.

their lives, or at least wrecked their machines, in their attempt. The balloon was then allowed to ascend again until it was completely lost to view. It seemed unaffected by the air currents

VIEW FROM UNDERNEATH.
Courtesy of *Scientific American*.

and went straight up without the slightest deviation. About two hours after it had disappeared a black speck was seen, and at first the officers could hardly believe that it was the returning

air-ship. The balloon gradually increased in size, and in the course of a quarter of an hour this peculiar air-ship could be distinguished, and in half an hour the trappings and inventor himself could be discerned. The balloon came down in nearly a straight line, and when about 500 feet above the earth the speed was slackened, and the adjustments were changed so that the direction was slightly altered in order to avoid a large clump of trees on the estate of the inventor. The balloon air-ship passed the trees safely, passing only a few feet over their tops. It then descended very near the great shed, and the inventor leaped out of the chair. It is little wonder that the Russian officers should have been delighted with the remarkable success of the invention."

The particular advantages of the Danilewsky balloon are that it requires the services of only a small number of men, takes far less time than the ordinary military balloon to fill, and occupies much less space when taken to pieces. Unlike a captive balloon, it can rise to any height, passing over the enemy at an altitude too great to be reached by the special balloon guns used with success in the France-Prussian war. Descent is also accomplished without risk. "The experiments," the writer of the notice concludes, "have induced a number of Russian experts to state that in their opinion Dr. Danilewsky has presented a practical solution of the problem of aerial navigation."

WAS ASTROLOGY THE PARENT OF ASTRONOMY?

IT is generally believed that the earliest astronomers were astrologers, just as the earliest chemists were alchemists, and that the first use to which practical knowledge of the heavenly bodies was put was the attempted prediction of future events. In an article in *Knowledge* (London, February 1), E. Walter Maunder expresses his belief that this statement is the reverse of the truth, and that astrology is rather a degenerate descendant of astronomy. Astrological nomenclature and procedure, he remarks, presuppose considerable astronomical knowledge. After quoting from Scott's "Guy Mannering" to show how complicated are the operations involved in casting a horoscope, he inquires what they imply, and replies thus:

"First of all, they imply that the constellations had been devised and mapped out; next, that the planets were recognized as such, and these are inferences with very significant consequences. The recognition of 'the seven planets,' tho it came so early in the history of the world that there is a numerous school which believes the week is a consequence of such recognition, was no simple matter. It was a triumph of careful observation and clear induction which led the early astronomers to see that Hesper and Phosphor, the evening and morning stars, were not two bodies, but one. Much more difficult was it to track the elusive Mercury, and recognize in it again a single wanderer. Mars and Jupiter would be followed with much greater ease, but the dull and slow-moving Saturn could only have revealed itself as a planet when observations of the relative positions of the stars had become systematic. . . .

"The recognition of the remaining two of 'the seven planets' must have been no easy matter, and implies a power of looking behind the mere superficial appearance of things in the highest degree creditable to the early workers in our science. For the effect produced by the sun and moon on the mind of the casual spectator is certainly that of an altogether different order and kind from the stars and other planets. Of course, it was easy to perceive that the moon moved among the stars, altho its motions differ in several important characteristics from those of any of the planets; but he must have been both a clear and a bold thinker who first told his fellow men that the stars were shining down upon them all day as well as all night, and that the explanation of the changes in the constellations visible at different seasons of the year was that the sun was moving round among them in the course of a year, as the moon did within the limits of a month.

"All this pioneer work must have been done, and done thor-

oughly—become familiar and commonplace—long before the very first step in astrology can have been taken. Men can not possibly have conceived that Jupiter brought good fortune, or Saturn sinister, before they had recognized the existence of those planets, and that they moved differently from the common herd of stars."

What was the purpose of all this previously acquired knowledge, which Mr. Maunder believes was not acquired at all with a view to its astrological use? He goes on to say:

"Astrology bears witness to a previous astronomy, then half forgotten. The signs of the Zodiac of the astrological scheme are not in the least the actual Zodiacal constellations, tho they derive their names from them. They are simply a method of recording celestial longitude, and bear no relation to the configurations of the actual stars.

"Yet whenever and however astronomy first arose, the initial step toward progress must have been the mapping out of the stars into constellations; until that had been done it was impossible for men to be sure that the stars they could see maintained the same relative positions toward each other. Not until that fact had been assimilated was it possible to appreciate the next, namely, that certain stars were planets, wandering among the others. Then when the constellations had been formed, there must have come quickly the recognition that different constellations were visible at varying times of the year, and this led no doubt at once to the idea of adapting the science to utilitarian purposes.

"Both tradition and, it seems to me, the inherent probability of the thing support the belief that the first use of astronomy was the determination of the length of the year and the announcement of the return of the seasons in their due course; and this must have been a service of the very first magnitude. For altho the early agriculturist could learn from flowers, or plants, or trees when spring was approaching, yet these phenological indications are somewhat vague and indefinite, and will vary considerably even in neighboring districts."

Mr. Maunder asserts that when astrology arose the development of astronomy proper, instead of being stimulated, was completely stopped. He says:

"Astronomy, therefore, which had made so great a progress before astrology could have made a start, remained perfectly dormant during the long ages when men studied the heavens, not to get a better knowledge of the laws of nature, but simply, if possible, to lift the veil which hid their own future. And when once again men began to inquire as to the real physical meaning of the movements of the planets, astrology decayed as rapidly as it had grown. The arguments of Copernicus, the telescopic discoveries of Galileo, the laws of Kepler, tho they have no direct bearing on the truth or falsity of astrology, yet by directing men's minds to the true problems which the heavens offer speedily put an end to the absurd inventions which had enchained men's minds for so many generations."

The writer believes that we can calculate roughly the dates of the beginnings of both astrology and astronomy. The constellations which have been handed down to us from the old inhabitants of Mesopotamia received their completion not quite 3,000 years B.C. This we know, since the region in the Southern heavens which the astronomers of old left unmapped is one the center of which coincided with the Southern Pole a little less than 5,000 years ago. Astrology, the writer asserts, is younger than astronomy by something like 2,000 years. It can not date back, as a complete system, farther than 1800 B.C., when the sun first entered Aries at the spring equinox; and it almost certainly arose even later than this by many centuries.

Porcelain from the Electric Furnace.—"The electric furnace," says *Cosmos*, "furnishes a new method of manufacturing porcelain. Instead of molding and working this while cold, it is finely pulverized, dried, and heated to 3,200° in the electric furnace. The paste fuses and is run out into molds previously prepared. The piece is thus enameled without the necessity of touching it, owing to the influence of the sides of the

mold. If this action does not take place because the mold is not properly prepared, the piece is powdered with pulverized glass when the temperature has fallen to about 1,800°. This process is very economical when the manufacturer has at his disposal a water-power capable of producing economically the necessary electric energy."—*Translation made for THE LITERARY DIGEST.*

WIRELESS TELEGRAPHY IN THE SOUTH AFRICAN WAR.

WE recently quoted some criticisms directed against the British War Office for its failure to use wireless telegraphy in South Africa, and also a statement that, owing to geological conditions, the system had proved a failure there. From a notice of a lecture delivered in London by Signor Marconi and reported in *The Standard* of that city (February 3), we learn that the new system is now in working order and is doing service to the British army in the field. We quote the following from the report just mentioned:

"It was the intention of the War Office that the wireless telegraphy should only be used at the base and on the railways; but officers on the spot realized that it could only be of any practical use at the front. Accordingly the assistants volunteered to go to the front, and on December 11 got up to the camp at De Aar; but when they arrived there they found that no arrangements had been made for the supply of poles, kites, and balloons which were essentially part of the apparatus, and had to be obtained on the spot. To get over the difficulty they manufactured some kites. . . . The partial failure was due to the lack of proper preparation on the part of the local military authorities, and had no real bearing on the practical utility of the system when carried out under normal conditions. It was reported that the difficulty of getting through from one station to the other was due to the iron in the hills. If it had not been telegraphed from South Africa, it would hardly be credible that any one should commit himself to such a statement. As a matter of fact, iron would have no more effect than any other metal on the 'waves.' During the naval manœuvres signals by means of wireless telegraphy went through a fleet of thirty ironclads, and the apparatus was not affected thereby. However, on getting the kites up, communication was easily established between De Aar and the Orange River over a distance of seventy miles. Poles had now been obtained, and altho not quite high enough for conveying messages long distances, yet they were sufficiently high to be useful. Stations were now established at Modder River, Belmont, Orange River, and De Aar, and had worked well, and would be invaluable in case the field lines should be cut by the enemy. It was also satisfactory to know that the military authorities had arranged to supply small balloons for portable installations on service wagons. . . . One of his assistants offered to go through the Boer lines and establish communication with Kimberley, but the military authorities did not grant permission, as it involved too great risk. What the effect would have been of establishing installations in Ladysmith, Kimberley, and Mafeking before the siege he left military strategists to state. It was much to be regretted that the system could not be got into these towns prior to hostilities."

The lecturer remarked in closing that wireless telegraph instruments intended for the Boers were seized at Cape Town, and that they turned out to have been manufactured in Germany. His assistants found that these instruments were not workable. He expressed his confidence that the progress made this year in space-telegraphy would greatly surpass what had been accomplished during the last twelve months, and that wireless telegrams would become as common and as much in daily use on the sea as ordinary telegrams are at present on land.

A METHOD of obtaining electricity collected by kites is said by the daily press to be the object of experiment by Prof. William Eddy, of Bayonne, N. J. He uses three tailless kites, 1,000 feet of threadlike copper wire, an iron rod, and a simple switch, and has progressed far enough to utilize the intense intermittent current for photographic and laboratory purposes. He says, according to the *New York Herald*, that "the system may become a powerful factor in army signaling, and that the future promises to disclose a means of lighting great sky-scrapers with electric fluid from the clouds."

THE RELIGIOUS WORLD.

GERMANY'S NOTABLE HERESY CASE.

WHILE American Protestant churches have been watching the ups and downs of the Briggs and McGiffert heresy charges, the church in Germany has witnessed an ecclesiastical episode of a similar kind which has received prompt attention on the part of the authorities, and which even now, after the court of last resort has spoken, is discussed with lively interest throughout the land. The leading points of the case, as reported by the church papers of Germany, are as follows:

Pastor Weingart has for years been in charge of a flourishing congregation in the city of Osnabrück, in the province of Hanover. His ministrations were very satisfactory; but in a series of discourses delivered several months ago, he denied the bodily resurrection of Christ and expressed his belief in one of the many "subjective" or vision theories that have been substituted, especially by the university professors, for the "objective" or bodily resurrection of the Lord. An appeal was addressed to the Consistory at Hanover, and this court of thirteen ecclesiastical and secular judges at once suspended Pastor Weingart. Appeal to higher authorities, made also by the great majority of the congregation in question, only ended in a confirmation of the decision of the Consistory. Finally, as a last resort, the petition was addressed to the Emperor himself, as the *summus episcopus* of the Protestant Church of Prussia; and here too the decision remained the same. Within a period of three months, the case has gone through all the courts and has ended in the final deposition of Weingart from the Christian ministry of the Protestant Church of Prussia because of heresy.

The case has been warmly discussed by all the leading church and secular papers of the country, not on account of any especial prominence of the man, but because of the principles involved. One of the most noteworthy documents in the case has been issued lately as a special appeal to "all the Protestants of Germany" by several hundreds of laymen from the leading cities of Hanover. This document says in substance:

Pastor Weingart has been condemned as a heretic by the ecclesiastical courts for teaching a doctrine concerning the resurrection of Christ which is claimed to be contrary to the Scriptures and the Confessions. And yet even his accusers must acknowledge that he has been a faithful pastor, and that, in the main things, he has confessed his faith in the living Christ; but he can not believe in the bodily resurrection of the Savior in the sense that this resurrection of the Lord, who died and was buried, could be the object of a sensual perception. This act signifies the condemnation of all those in the Protestant Church of Germany who do not acknowledge the very letter of the Scriptures and of the Confessions as absolutely binding. The most famous theological professors in the country, and many thousands in the ranks of the laity as well as hundreds among the pastors, must fall under the same condemnation. It is, in fact, the condemnation of the theological science of the day and of the spirit and result of the best detail research in this department. Weingart has taught nothing but what is taught in all the leading universities, and it is hard to see how the church can condemn him and yet permit the theological teachers to continue their work.

This decision has filled the hearts of tens of thousands of earnest Christians with deep concern over the attitude of the Protestant Church authorities, who in method and manners are approaching the models and spirit of the Church of Rome. We demand that the rights of the more liberal-minded Christians be respected, and we protest against such heresy-hunting as has driven Pastor Weingart out of his pulpit. He has only been true to the spirit of the Reformation, and is a representative of the best type of earnest yet liberty-loving Protestantism.

Religious and political papers view the case in various lights in accordance with their various religious convictions. Thus the

Leipzig *Volkzeitung*, a liberal political journal, says: "With the Weingart case we enter again into the Middle Ages." On the other hand, more positive papers, such as the *Kreuzzeitung* (Berlin) warmly approve the step taken. The majority of the church papers also approve. The *Allgemeine Lutherische Kirchenzeitung* ridicules the attempt to make the Weingart case a matter of general agitation throughout the empire in the interests of a radical kind of theology. It says that the liberal papers need not be surprised if the present agitation shall result in no good for their cause, as they have all along tried to kill all deeper interest in church affairs in the public at large, and are now reaping what they have sowed. It can not be denied that the liberal church papers, especially the leading representative of the class, the *Welt* (Leipzig), are frightened at the prospect that the powerful arm of the state shall be used in the interests of the confessional and of the long-established beliefs of the church.

Naturally, the Catholic papers are looking with interest upon this struggle between the two factions of the Protestant church and point to this contest as another proof of the fact that Protestantism can not endure. Thus, the Cologne *Volkzeitung*, one of the fairest and most influential Catholic journals of the country, says: "Modern Protestantism is no longer in a situation to demand obedience to its confessions and spirit. It lives still only by its inconsistencies and thrives only by its illogical compromises." To this the great Protestant *Reichshote* (Berlin) replies: "We do not envy the Catholic Church her consistency and her mechanical infallibility as a means of securing agreement and harmony in her own ranks. This is nothing but the principle of brutal force, and not moral suasion."—*Translations made for THE LITERARY DIGEST.*

THE ECUMENICAL MISSIONARY CONFERENCE.

PROBABLY no religious gathering of the present year will attract greater attention than the Ecumenical Conference on Missions to be convened in New York on April 21. It is to be truly ecumenical or "world-embracing," so far as Protestant Christianity is concerned. Two thousand delegates, representing nearly every country on earth and nearly every evangelical denomination, have been appointed, and the conference will be notable for the presence of men eminent not only as missionaries, but as educators, statesmen, and financiers. From *The Christian Observer* (February 25) we take the following account of the work to be done:

"The idea of this conference is not a new one. The first of the kind was held at Midway in England in 1878. The second was held in London, England, in 1888, and had a very decided influence in the development of foreign missionary work. In the year 1888, the British contributions to foreign missions were \$4,666,780; the next year after this conference (1889) they increased to \$5,367,946, and in 1890 to \$6,457,235. This is the first general conference that has ever been held in America, and we hope that its effects will be as marked and as encouraging as the previous conferences. . . .

"It will be a representative Christian gathering of the world. It is expected that ex-President Harrison will be the president of the conference, and that President McKinley and ex-President Cleveland will be among those who will preside at some of its sessions. A whole column would hardly be sufficient to enumerate the men of national and international reputation who have indicated their purpose to be present. Its topic will be, 'The Evangelization of the Nations.' Its discussions will bear upon the problems arising in the conduct of the work. Its *personnel* will include workers from almost every foreign missionary field. Its aim will be to promote unity, harmony, and cooperation between missionary organizations, and to stimulate the interest of the Christian world in foreign missions. Such topics as the following will be discussed: The authority and purpose of foreign missions; the consecration of the church to

this work, its support by home churches; the relations of students and other young people to the foreign missions; the best methods of the administration of the work; the various forms of the foreign mission work, viz., evangelistic, educational, literary, and medical; and benevolent work, such as orphanages, famine relief, etc. At this conference statistics from the Protestant missionary societies of the world, more complete than have ever before been obtained, will be secured. They will doubtless fairly represent the growth and the results of foreign missionary labors during the century now drawing to a close.

"Germany and England have very complete missionary museums. There is none in this country. One of the special features of this conference will be a missionary exhibit, which will combine a library and a museum. The library will contain a wide range of missionary publications, books, Bibles, and magazines in the languages of the nations to whom the Gospel is now being preached, also photographs and diagrams and maps and charts for the fullest understanding of the missionary labors of the Protestant world. The museum will contain a good many objects of religious worship, idols and fetishes, models of heathen temples and buildings, curios in dress and workmanship, which show the actual surroundings of the missionary in the field."

The Watchman (Baptist, February 22) says

"We believe that it [the conference] should be in the thought and prayer of all Christian people. During the last ten years the interest in foreign missions has not increased. There have been times when the outlook has not been at all bright. It is a great thing, just at this juncture, to bring together the men from all over the world who have this cause upon their hearts. The true principles and motives of Christian missions need to be explicated afresh. The work that has been done needs to be reviewed, and the opportunities and promise of the future restudied. Those who love this cause already need to look into each other's faces, and clasp each other's hands; they need to deliberate and pray together, that they may have their own hearts strengthened, and, through community of sympathy, fulfil the divine condition to receiving power from above. We hope that this conference may be often mentioned in public and private prayer, and that our ministers will direct the attention of their people to it.

"The great religious event, in the decade beginning in 1870, was the meeting of the Evangelical Alliance, held in New York in 1873. No one who attended those sessions has ever forgotten their spiritual impressiveness and power. Influences radiated from them all over the land. More than anything else they created the favorable conditions for the work of Moody in the years following. Are we not warranted in looking to this conference for new impulse to the work of foreign missions, and for a fresh realization of the obligations and privileges of discipleship?"

The Congregationalist (February 15) says

"This meeting will help to show our nation the meaning of Christian missions to foreign lands, and to convince the people of their supreme importance. Even now they are vastly underestimated by Christians, while most of those who are not followers of Christ have no idea of what they owe to this work. At the beginning of this century only 15,000,000 people spoke the English language. The number is now 130,000,000, and its use is far more rapidly increasing than any other tongue. Foreign missionaries have created and rehabilitated literatures, but the mother tongue of the most of those doing this work was English, and it has spread widely even among educated men of unevangelized lands. Foreign missionaries have been the pioneers of commerce all over the world. They have represented inventors, producers, builders, and have created wants which these could satisfy. In the paths which they have made with their own feet railroads and telegraphs have followed. The vanguard of progress during all this century has been the missionaries of the cross. Sometimes despised, often ignored by their own fellow countrymen, they have been and still are leaders in the march of civilization. These aspects of missionary work will probably receive greater attention from the secular press than it has ever before given to this subject. This will be one of the results of this conference."

The Evangelist (Presb., March 1), urging that contributions

be sent to the finance committee to help defray the expenses of the gathering, says

"This conference is not the affair of those only who can give largely to such a cause. We would not so belittle the interest of Christ's followers in the great cause of missions. This conference is the concern of the poorest among us not less than of the richest. Each of us should covet the privilege of having a part, however small, in this great effort to quicken popular interest and to increase the sum of information as to the progress of missions throughout the world."

LANGUAGE OF THE NEW TESTAMENT AND CONTEMPORARY THOUGHT.

THE "historical method" of Bible interpretation has constantly brought the language of the New-Testament writers into closer connection with the world of thought current in their age, and the conviction has steadily grown that the dependence of the sacred writers on the literary forms of their time was much greater than surface indications would suggest. Recently additional facts have come to light showing, it is claimed, that not a few of the verbal expressions long considered peculiar to the apostles and evangelists were common to contemporaneous literature. From a recent number of the *Mittheilungen* of the imperial German Archeological Institute of Berlin (vol. 23, Heft 3), we glean the following data

The German Exploration Expedition was recently sent out by the Institute to make archeological researches in the city of Priene, in Asia Minor. It has been fortunate enough to find a well-preserved Greek inscription of eighty-four lines, in which a full account is given of the introduction of the Julian calendar on the birthday of the Emperor Caesar Augustus, September 23. The existence of such inscriptions was known, and fragments had been found; but this is the first complete copy discovered. It has been edited by the famous Berlin historian, Mommsen, and his colleague, von Wilamowitz. Its chief interest lies in its deification of the Emperor Augustus and in the use of expressions that were later applied by New-Testament writers to Christ and His kingdom. The following is a reproduction of a part of the inscription.

"On this day [*i.e.*, the birthday of Augustus] the world has been given a different aspect. It would have been doomed to destruction if a great good fortune common to all men had not appeared in him who was born on this day.

"He judges aright who sees in this birthday the beginning of life and of all living powers for himself. Now at last the times are passed when man must be sorry that he had been born.

"From no other day does the individual and all humanity receive so much good as from this day, which has brought happiness to all.

"It is impossible to find words of thanksgiving sufficient for the great blessings which this day has brought.

"That Providence which presides over the destinies of all living creatures has fitted this man for the salvation of humanity with such gifts that he has been sent to us and to coming generations as a savior. He will put an end to all strife and will restore all things gloriously.

"In his appearance, all the hopes of ancestors have been fulfilled.

"He has not only surpassed all former benefactors of mankind, but it is impossible that a greater than he should come.

"The birthday of this god [*i.e.*, Augustus] has brought out the good news of great joy based upon him.

"From his birth a new era must begin."

Professor Harnack, the great church historian, in commenting on these statements, says that this "heathen" inscription written before the days of Christ, is more important for the understanding of the origins of Christianity than the great bulk of so-called "Christian" inscriptions. Here we find, from a heathen source and fully two generations before Paul began to preach in these districts, words applied to the Emperor Augustus and in deification of him that seem to belong to the world of thought in which the evangelists live and move and have their being. Only one conclusion is possible, namely, this: that these sentiments, which have traditionally been regarded as the peculiar development of Christianity, really originated among the Gentiles, and

that the New-Testament writers here, as so often in other cases, appropriated images and phrases which had originated in the religious needs of the heathen world of their times. Just how much of the language of the New Testament can be traced back in this way to contemporaneous literature will depend on further discoveries.

This inscription, however, is not the only one in which such New-Testament sentiments can be paralleled from Gentile sources. Von Wilamowitz, in his discussion of the Priene inscription, has drawn attention to an inscription found in Halcarnassus, and now in the British Museum, which reads as follows:

"Since the eternal and immortal nature of All [*i. e.*, the divinity] has graciously bestowed upon mankind the highest good for their surpassing blessings, and, in order that our lives might be happy, has given to us Caesar Augustus, the father of his country, which is the divine Rome; and he is the paternal Zeus and the savior of the whole race of man, who fulfils all the prayers, even more than is asked. For land and sea are in the enjoyment of peace; the cities are in a flourishing condition; everywhere are harmony and prosperity and happiness."—*Translation made for THE LITERARY DIGEST.*

THE MCGIFFERT HERESY CASE.

THE refusal of the New York presbytery to take up Dr. Birch's heresy charges against Dr. Arthur C. McGiffert, of the Union Theological Seminary, apparently closed the case, since the local ecclesiastical body refused either to try Dr. McGiffert or to ask the General Assembly which meets in May to do so. Dr. Birch, however, thereupon announced his intention to appeal to the highest court of the church. Shortly afterward, Dr. McGiffert, after consultation with a score of his friends, concluded to withdraw from the Presbyterian Church, and will make formal announcement to that effect before the New York presbytery on March 12. It is generally supposed that he will enter the Congregational ministry.

Commenting on the case before Dr. McGiffert's intention to withdraw had been reached, *The Independent* (undennom., March 1) expressed its belief that Dr. Birch is logical in his attitude as a Presbyterian, but that he is not a true Protestant.

"From the standpoint of a strict Presbyterian, there was absolutely no alternative. That there is any personal feeling in the matter no one supposes. For Dr. McGiffert as a Christian man Dr. Birch has high esteem; but Dr. McGiffert is not, in Dr. Birch's view, a Presbyterian, at least in good and regular standing, or should not be, and he wishes the supreme court of the church to decide upon it. We shall await with interest that decision. We hope that it will give large liberty. We confess to a belief that it will. The great body of Presbyterians in this country believe heart and soul in the inspiration of the Scriptures, in the guidance of the Holy Spirit, in the genuine consecration and devotion of the Christian ministry. At the same time they must realize the multiform methods by which the work of the church is and must be carried on, and the varying lights and shadows thrown upon its creed by the results of scholarly inquiry. If any one thing has been made clearer than another during the past half-century it is that we have not reached any complete statement with regard to the Scriptures. We are learning more and more every day. Neither have we reached a complete philosophy of religion, but over all the discussion and change we believe firmly that there is a sovereign guiding Providence, and that those who cast out devils in the name of Christ, even tho they do not agree entirely with each one of us, are to be reckoned as successful workers in His kingdom. Now we are well aware that Dr. Birch would in no sense deny Dr. McGiffert's Christian character. He simply asks the question, 'How can two walk together except they be agreed?' affirming that, as he can not agree with Professor McGiffert, he can not walk with him, and that therefore the professor must get out of the Presbyterian Church. That seems to us somewhat of a *non sequitur*. Unity is not uniformity, and if Dr. Birch thinks that he is going to secure the latter in his search for the former he will find himself greatly mistaken. There may legitimately be diverse opinions as to the wisdom manifest in Dr. McGiffert's refusal to accept

the invitation to leave. It is difficult for us to see how any man who believes in scholarship and in the right of private judgment can indorse the position of Dr. Birch."

The New York *Sun* takes issue with these opinions. It says:

"*The Independent* talks about interference with 'the right of private judgment,' when a church holds its ministers to their ordination vows; but where is the interference? Dr. McGiffert and every other Presbyterian minister or layman is free to exercise his private judgment in assenting to the Presbyterian creed or dissenting from it. He can stay in the church or he can leave it; he is under no compulsion. . . .

"If the Presbyterian Church has come to agree with the teachings of Dr. Briggs and Dr. McGiffert, there is nothing to prevent its next General Assembly from announcing the fact. It is free to give up its present standard of faith and doctrine and to fall back on its form of church government as its sole reason for maintaining a distinct existence, leaving to its ministers to believe and preach about the Bible and every other matter of religion as they happen to choose; but it is not free from the moral obligation to profess only the religious belief which is honestly in its heart. Infidelity parading under the colors of faith is an odious spectacle before God and man. If there is a sin against the Holy Ghost, an unpardonable sin, this is it, and not even cowardice can afford any color of excuse for it in these times when there is no stake for the heretic."

IS FREEMASONRY ANTI-CHRISTIAN?

IT is well understood that the Roman Catholic Church absolutely condemns Freemasonry, and forbids her members to connect themselves with that fraternity. The reasons for this hostility are not so well known, however. The chief reason given by the church itself is that Masonry is inimical to Christianity and is no less

than a secret plot to undermine the religion of Christ—a charge which, of course, is stoutly denied by the Masons. The Rev. Charles Coppins, S.J., of the Creighton University, Omaha, has recently revived the subject in two articles appearing in *The American Ecclesiastical Review* (December, 1899, February, 1900), in which he claims to prove that "Freemasonry—whatever other arguments it may pursue or pre-

THE LATE ALBERT PIKE.

tend to pursue—is subversive of Christianity, and directed to the restoration of paganism in the form of nature-worship of the vilest kind." He bases his articles entirely on a book written by the famous Grand Commander Albert Pike for Masons of the Thirty-third Degree, and copyrighted in Washington in 1871. The title is:

"*MORALS AND DOGMA OF THE ANCIENT AND ACCEPTED SCOTTISH RITE OF FREEMASONRY, Prepared for the Supreme Council of the Thirty-third Degree, for the Southern Jurisdiction of the United States, and Published by its Authority. Charleston, A. S. M., 1864.*"

Father Coppins says that in this book are revealed many aims

of the order not shown to those in the Blue Lodges, Royal Arch, and other lower degrees. He lays considerable stress upon this fact, and endeavors to show by quotations from Mr. Pike's book that there is a systematic purpose clearly shown to mislead those who are in the lower or "Blue" degrees. "It is not at all likely," we are told, "that preachers of the Gospel, and Christian men generally, but only rank infidels or wild speculators in religious and philosophic matters, are ever admitted to the highest degrees, in which the veil is totally withdrawn and the mask of morality laid aside." Without endeavoring to follow this alleged progressive revelation, step by step, we give the final quotations which the writer thinks sustain his charge of anti-Christian teaching. He writes:

"It [the book] accuses God of gross injustice and of savage cruelty (p. 164): 'Masonry sees with the eye of memory the ruthless extermination of all the people, of all sexes and ages, because it was their misfortune not to know the God of the Hebrews, or to worship Him under the wrong name, by the savage troops of Moses and Joshua.' Of course every Christian knows that Moses and Joshua were but obeying the direct commands of God, who, in very extraordinary circumstances, wished to give His chosen people a very extraordinary lesson, to guard them and their descendants against idolatry.

"The Grand Commander writes (p. 207): 'He [Jehovah] commanded the performance of the most shocking and hideous acts of cruelty and barbarity.' This brilliant gem of Masonic thought has been exhibited to gaping crowds by the most notorious infidel in this country. I did not know before where he had found his treasure; we now see that it is a jewel belonging to that secret society to which Bishop Potter proposes [referring to a recent speech by the bishop in praise of Masonry] to lead all the youths of this land. Father Lambert's masterly rebuke to the infidel lecturer should be read to every Mason. It occurs in the celebrated 'Notes on Ingersoll,' chapter viii.

"The Masons entirely reject the God revealed to Moses. At page 687 we read: 'The Deity of the Old Testament is everywhere represented as the direct author of evil, commissioning evil and lying spirits to men, hardening the heart of Pharaoh, and visiting the iniquity of the individual sinner on the whole people. The rude conception of sternness over mercy in the Deity can alone account for the human sacrifices of Abraham and Jephtha.' What could the bitterest enemy of Christianity say to improve on this?

"Here is another 'dark hint' (p. 688): 'In the God of Moses . . . the penalties denounced for worshiping other gods often seem dictated rather by a jealous regard for His own greatness in Deity than by the immorality and degraded nature of the worship itself.' . . .

"The Gospels are briefly stated to be but a tissue of legends and symbols (p. 840): 'Jerusalem . . . had at length in its turn lost the Holy "Word," when a Prophet, announced to the Magi by the consecrated star of Initiation, came to rend asunder the worn veil of the Temple, in order to give the Church a new tissue of legends and symbols that still and ever conceals from the profane, and ever preserves to the elect, the same truths.'

"Masonry denies that Christ is God (p. 310): 'This is the New Law, the "Word," for which the world had waited and pined so long; and every true Knight of the Rose will revere the memory of him who taught it, and look indulgently on those who assign to him a character far above his own conceptions or belief, even to the extent of deeming him divine.'

"Masonry puts Christ on a par with Mohammed and other false prophets (p. 525): 'It reverences all the great reformers. It sees in Moses, the lawgiver of the Jews, in Confucius and Zoroaster, in Jesus of Nazareth, and in the Arabian Iconoclast, great teachers of morality.'

"In fact, Masonry prefers Mohammedanism to Christianity. To prepare for this teaching, first a dark hint is thrown out (p. 35): 'Creed has in general very little influence on the conduct. . . . As a general thing, the Mohammedan, in the Orient, is far more honest and trustworthy than the Christian.' The next hint is bolder (p. 53): 'When Christianity had grown weak, profitless, and powerless, the Arab Restorer and Iconoclast came like a cleansing hurricane.' Why call Mohammed a *restorer* and speak of him as *cleansing Christianity*? . . .

"Even Atheism and Pantheism are put on a par with Christianity, if not above it; for the Grand Commander writes (p. 643): 'As the world grows in its development, it necessarily outgrows its ancient ideas of God, which were only temporary or provisional. A man says, "There is no God," that is, "no God that is self-originated, or that never originated, but always was and had been, who is the cause of existence, who is the Mind and the Providence of the universe." . . . But he says, "Nature," meaning by that the sum-total of existence . . . It is a mere change of name to call the Possessor of those qualities Nature and not God.'

In support of his assertion that Masonry is a return to the practises of the ancient Mysteries, which are commonly regarded as repulsive, Father Coppens says:

"Masonry, which Pike says is identical with them (p. 23), aims at the restoration of Nature-worship. He adds (p. 355): 'The Mysteries were a sacred drama, exhibiting some legend significant of Nature's change, of the visible universe in which the invisible is revealed'; and (p. 360): 'They were practised in Athens until the eighth century, in Greece and Rome for several centuries after Christ, and in Wales and Scotland down to the twelfth century.' Harper's 'Dictionary of Classical Antiquities' contains an article on the Mysteries, which says that, if they were pure at first—which is not proved—in later times they degenerated: the secrecy was removed, and they became orgies in the modern sense of the word, at which the most shameful indecencies were practised, until under the Romans they had to be suppressed as public nuisances.' Self-respect and regard for the modesty of my readers forbid that I should enter into details about these abominations: I can only refer the earnest inquirer to pages 40, etc., of the volume where the Grand Master describes the shameful secrets revealed in those pagan mysteries. This then is the 'glory' of Masonry; for, as we have seen before (p. 23), 'Masonry is identical with the Ancient Mysteries . . . an imperfect image of their brilliancy.'

"We have remarked that Masonry is doing the work that Julian the Apostate had attempted in his day, namely, to exalt paganism upon the ruins of Christianity. No wonder Pike speaks thus sympathetically of Julian (p. 731): 'To this epoch of ardent abstractions and impassioned logomachies belongs the philosophical reign of Julian, an *illuminatus* and initiate of the first order, who believed in the unity of God and the universal dogma of the Trinity, and regretted the loss of nothing of the old world but its magnificent symbols and too graceful images. He was no pagan, but a Gnostic, infected with the allegories of Grecian polytheism, and whose misfortune it was to find the name of Jesus Christ less sonorous than that of Orpheus.' Can any one, after reading all this, still doubt of the anti-Christian spirit of Masonry?"

It is claimed, says Father Coppens, that there is a difference between Masonry here and in Europe; but there is no difference in doctrine or religious aim, he says, except that Masonry, no longer having to plot the overthrow of "the throne," concentrates its energies against "the altar."

RELIGIOUS NOTES.

A GREAT advance in membership is reported for the Christian Science movement in all parts of the United States and in many foreign countries. The organization has now 394 charter churches, 80,000 enrolled members, and an active ministry of about 12,000, an especially large proportion of the whole body. One of the most striking indications of growth is the reported increase in the circulation of Mrs. Eddy's "Science and Health," which is the text-book of Christian Science. Already nearly 200,000 copies have been distributed.

IN connection with the oft-noted tendency of non-Roman Catholic churches to move uptown in the large cities, the work of several endowed churches in what is now getting to be lower New York is a matter of interest. A chain of endowed or partially endowed churches extends east and west, from the well-known Judson Memorial Church with its manifold institutional work, to Grace Church and old St. Mark's. In fact, endowment seems to be the only way to guarantee the permanence of churches in that part of the city, owing to the continued departure of old and wealthy parishioners to more fashionable districts. The old parish of the Ascension, whose beautiful church with Lafarge's altar-piece is at the corner of Fifth Avenue and Tenth Street, is now taking vigorous steps to raise an endowment fund of \$250,000. The church, besides being of interest on account of its musical services and many artistic embellishments by La Farge, St. Gaudens, and others, maintains an extensive mission on Horatio Street, with sewing-classes, cooking-school, meeting-rooms, and boys' gymnasium.

FOREIGN TOPICS.

WHY GERMANY WILL NOT JOIN AN ANTI-BRITISH COALITION.

THERE is plenty of talk in Europe of an anti-British coalition, but very little action so far. The Czar does not seem willing to act in downright opposition to the professions of his delegates at The Hague Conference, and France is interested more in her world's fair than in anything else at present. But there are many attempts on the part of the French press to embroil Germany and Great Britain, and Germany is urged to lead a European coalition. "If Germany does not now act in unison with France and Russia, she must not expect complaisance in colonial affairs later on," says the *Liberté* (Paris), and the *Matin* remarks:

"It is time for Germany to join with France and Russia in settling the Egyptian question. Germany has great interests at stake in the Suez canal, and must see to its neutrality. Germany knows the state of public opinion in France and Russia, and need not fear that she will be left in the lurch. The fleets of the three powers are strong enough to meet England's naval armaments. Public opinion in Germany certainly favors an anti-British policy; but the attitude of the Emperor arouses doubts. Is it possible that secret treaties and family considerations prevent Kaiser Wilhelm from acting against England? If that should be the case, then his new fleet may really be intended to assist England, not to combat her. If the Triple Alliance does not take up the Egyptian question, then Russia and France must do so alone."

It is certain that Germany does not trust her neighbors sufficiently to join them in a war against England. The *Post* (Berlin) says, in the main:

It has long been noticed on our side of the Vosges that the French are anxious to embroil us with England. Sometimes extravagant hopes are placed upon our Anglophobia, which is supposed to make us a fitting leader in a coalition against England. At other times, we are accused of treachery because we do not accept the position offered to us. France fears England. Many Frenchmen believe that England will endeavor to restore her lost prestige by an attack upon France as soon as the South African war is over, be it ended favorably or unfavorably. The French would prefer to see Great Britain and Germany engaged

WHY THEY DO NOT INTERFERE!

—South African Review, Cape Town.

in conflict first. The British navy, it is argued, would suffer very materially, the German fleet would be destroyed entirely, and France would be the gainer, even if she did not actively take part against either belligerent.

The *Weser Zeitung* regards the demand that Germany should fight the battles of France as very amusing, considering the fact that in 1896, when Kaiser Wilhelm sent his famous telegram to

President Kruger, the French Government immediately offered to ally itself with Great Britain. The *Tageblatt* (Berlin) declares that neither the destruction of Great Britain nor the friendship of France is worth the having to Germany. In the course of a long article that paper expresses itself to the following effect:

What is the cause of French civility to us? Hatred of England. Does any one trust to French gratitude? Were we to assist France to wrest Egypt from helpless England, even by diplomacy, and without an actual struggle, we would only have made every Briton our enemy, and France would have both hands free for us. Germany is strong enough to-day to obtain what is reasonably due to her. She need not nervously enter into entangling alliances to obtain more. The fact is, we should know when we are well off, and leave well enough alone. It is, of course, very sad to see nations hate each other; but there is such a thing as "beneficial" hatred. The hatred of the French for England is beneficial to us. For thirty years England profited all she could by the enmity between France and Germany. We have begun to profit by the hatred between French and English. If we would be comfortable, we must not interfere, for this hatred will last only as long as the British world-power is great enough to hinder French ambition. While it lasts, we will find occasion to act in unison with France, our artists will receive grand ovations in Paris, and our exhibits will be admired; but as soon as England shall become permanently a negligible quantity, there will be a change in the demeanor of the French toward us. Let us by all means inveigh against the sins of the English; but let us not saw off the branch upon which we are so comfortably seated.

NOT LIKELY!

THE KAISER: "Intervention, indeed! Look at this."
—Montreal Witness.

Similar views are expressed by many other influential papers. The *Kölnische Zeitung* remarks that, with a reasonably large navy, Germany will be strong enough to hold her own without alliances. But Germany, following a policy dictated by self-interest, must do so openly, and without misleading promises to others.—*Translation made for THE LITERARY DIGEST.*

INEFFICIENCY OF MODERN ARTILLERY FIRE.

ONE of the chief delights of the modern war correspondent is in describing the havoc wrought by the shells fired from his own side; and the effect is generally heightened by references to the harmless gunnery of the opposing forces. Yet each succeeding war, in the judgment of many competent observers, only proves that on the whole the value of artillery lies chiefly in the effect which the report of a gun, the shrieking and whistling of shells, the ominous "crack-zurr-spatter-spatter" of shrapnel, have upon the nerves of the most steady of men. The English admit that their artillery has not been as effective as might be expected, and the Government has been under severe criticism from Conservative as well as Liberal sources in consequence. It now appears that the Boers also are disappointed in theirartil-

lery and attach less and less value to it as the war goes on. An unimpeachable authority, Major Albrecht, of the Free State artillery, whose force has received the highest praise, and whose life-work has been the training of artillery, expresses himself as follows in the *Magdeburger Zeitung*:

"If all men were such fools as Bloch, the author of the 'Wars of the Future,' seems to think they are, if everybody marched straight up to the mouth of cannons, we Transvaalers and Free-staters would all be killed by now. But people are *not* foolish enough to stand just where this man of six volumes of theory wants them to stand. He says that every shell bursts into something like a thousand pieces. I wish the Russian would send me some like that!

"As to the English missiles, not ten of a hundred burst at all. Those which burst make more noise than wounds. Their lyddite shells, unless they crack your crown by falling right on it, are almost harmless. The day before yesterday [battle of Colenso], 25,000 English, with fifty guns, attacked 13,000 Boers. I have no exact information, as I am already on my way to the West or South, wherever I may be most wanted; but I am pretty certain that we did not lose much more than a hundred men, of which at the most three dozen were killed. A thousand British shells killed about a dozen and wounded thirty or forty! The rest were hurt by the enemies' rifles.

"But neither has our own artillery come up to expectation. Our men shoot beautifully now; yet it is one thing to handle a rifle, and another to handle a gun. The English must have lost heavily; but doubtless I and my artillery are not to be credited with much, tho we fired in the neighborhood of four hundred rounds. I doubt whether we put a hundred men out of action. A week ago [at Magersfontein] we were not even allowed to fire. When the climax came, the sharpshooters put more of the enemy out of action in ten minutes than we artillerymen in ten hours. Artillery on the defensive does not play a brilliant part, and, for the attacking party, its value consists chiefly of the noise it makes. Now, as ever, battles are decided at short range. *Within ten minutes, the battles of Magersfontein and Colenso were won!* In those ten minutes, of course, more men are killed than formerly. All the rest is but preparation. You can shoot with cannon at a distance of 6,000 to 7,000 yards; but it is mere waste of ammunition. No army marches straight toward the enemy, as upon the drill ground. Even the English know better than that. Victory is with the men who are least nervous; that is my firm conviction.

"In a siege, our Krupps and Creuzots are very valuable. One has steady targets and can terrorize the garrison. But even in a beleaguered city the bombardment is not beyond endurance. That is best shown by Mafeking and Kimberley, where the batteries under my command do their best, but so far without success. I am certain that, on the whole, war is less bloody to-day than formerly."—*Translation made for THE LITERARY DIGEST.*

THE STORY OF A MARRIAGE PORTION.

IT is well known that kings and queens and even presidents are sometimes reported ill when it is convenient for diplomatic purposes. But rarely are such little plots more merrily exposed than in the case of Prince Danilo, of Montenegro, and Princess Jutta, of Mecklenburg-Strelitz. We condense an account from the Vienna *Tageblatt*:

The Duchess Jutta, of Mecklenburg-Strelitz, was to marry Prince Danilo, of Montenegro; but on account of a financial difficulty, the match was nearly broken off. According to Montenegrin custom, old Prince Nikita expected to get the marriage portion into his own hands. He was hard up, was old Nikita, and he counted on the \$300,000. On the other hand, the Strelitzers knew a thing or two, and refused to hand over the wherewithal except to the bridegroom. Even he was to get the interest only, the capital remaining safe and sound in the vaults of a Mecklenburg bank. Prince Nikita then gave out that his son Danilo was ill, incurably so, in fact, and that the proposed match would be broken off. Every European paper had this news, except two, the Montenegrin *Government Gazette* and the New-Strelitz *Landes Zeitung*. Prince Danilo does not care

much about newspapers; he only glances at the first-named bi-weekly. Princess Jutta reads the *Landes Zeitung* only, and some ladies' journals. Meanwhile negotiations took place between the two princely houses, and as Prince Nikita insisted upon fingering the Mecklenburg shekels, poor Princess Jutta also became very delicate, too delicate to marry a lord whose home is in the stormy Black Mountains.

All would have gone smoothly if chance had not interfered. It so happened that Prince Danilo, who was delighted with the prospect of his marriage, was preparing the little manor-house of Topolitz near Antivari, the Montenegrinian Nice, for his bride. Here, accidentally, a newspaper with the report of the duchess's illness fell into his hands. He rushed to Cettinge to inform his father that Jutta was ill, and that he would immediately go to see her. Here was a pretty go! Young Danilo never cared about money, and it was impossible to tell him that he, too, was at death's door, and that financial questions caused both illnesses. But while the Montenegrins were still debating on the matter, Danilo became tired of waiting and took the express to Berlin, whence he proceeded immediately to Strelitz. The only thing to do now was to telegraph acceptance of the Mecklenburg terms, for, in order to make the illness more probable, Prince Danilo had been made to undergo a (newspaper) operation only a few days before.—*Translation made for THE LITERARY DIGEST.*

THE TROUBLES OF SPAIN.

SPAIN is still suffering acutely from the effects of the war with the United States. Villaverde, the minister of finance, has suggested new taxes, such as income, spirit, mining, transportation, tobacco, stamp, death and transfer dues; but the country is overtaxed already, and altho it is not easy to see how Spain is to meet her liabilities, all additional taxation is resisted in parliament. The *Vossische Zeitung* correspondent in Madrid writes:

"Tho the Government has threatened rigorous measures, the congress of the United Spanish Trade Chambers in Valladolid has decided to advise refusal to pay taxes throughout Spain. When it is remembered that even the partial refusal to pay taxes in Barcelona made necessary an attitude bordering on the suppression of a rebellion, it is easy to understand that a spreading of the movement throughout Spain must be disastrous. Perhaps it is best for the Silvela cabinet to resign, or to sacrifice at least Villaverde, whose projects meet with such determined opposition."

Altogether an annual deficit of \$60,000,000 must be met. Of this amount, the sum of \$35,000,000 has been obtained by the conversion of the debt, and \$5,000,000 will probably be saved by reduction of expenses and by cutting down pensions. This still leaves \$20,000,000, which can not be obtained without additional taxation. Unfortunately, the agitation against further taxation is combined with sectionalism, and as the Roman Catholic Church in Spain encourages resistance to the central Government, and as the church is very influential, a revolution is not impossible.

The Madrid *Imparcial* says:

"The situation is hardly improved by the attitude of the clergy in Catalonia, who in turn are encouraged by the Bishop of Barcelona. The bishop advises that prayers may be said in the Catalan dialect, that religious instruction be given in it, and that sermons be preached in it. In this way he hopes to procure at least spiritual independence from the 'Castilian yoke.' No wonder that pessimists already think of the disintegration of Spain. Senator Villanueva sees a similarity between the Catalonian troubles and the beginning of the Cuban rebellion."

The *Epoca*, however, thinks that this is rather far-fetched. It argues in the main as follows:

We used to speak of our West Indian possessions as integral parts of Spain. They were called the "transoceanic province," which greatly added to the illusion. But, after all, they were colonies, divided from us not only by enormous distances, but

also by different aims and different problems of administration. No such radical difference exists between any of the provinces of Spain. Nor are we as much divided as Austria. There the empire is composed of sixty-two political sections, of which no less than thirteen claim sovereign power. In Spain, thank God! we have not such racial divisions. The Catalan dialect is not sufficiently different from Castilian to produce such misunderstandings as exist between the Czechs and the Germans. All that the Catalans desire is a greater degree of provincial autonomy, and as Señor Silvela has promised this in his program, they can not well be blamed for their attitude toward him. Still, the pastoral letter issued by the Bishop of Barcelona is likely to produce a bad impression abroad, and it would, perhaps, be better if it had remained unwritten.

The *Journal des Débats* (Paris) fears that undue influence is allowed the commercial and industrial interests of the country since the war. "The Spaniards make the same mistake that the French committed," says the editor. "They seek too much to copy their conquerors. We, knowing that the Prussian schoolmaster was largely responsible for the German victories, made the schoolmaster all-powerful. The Spaniards think that, since a commercial and industrial nation has conquered them, they must needs become a commercial and industrial nation." The *Post* (Berlin) points out that much could be saved if Spain were to part with the rest of her colonies; but of this the Spaniards will not hear.—*Translations made for THE LITERARY DIGEST.*

THE SIBERIAN RAILROAD.

IT is reported that the Siberian railroad, that is to say the transbaikal section of it, has reached the village of Stryeteneuk on the Amur's tributary, the Shilka. This means that the great work of connecting St. Petersburg with Vladivostok over an all-Russian route is completed, altho the time will still further be shortened as the railroad advances. The *Amsterdam Handelsblad* says:

"When in the spring the ice melts on the Amur and Shilka two weeks will be enough time in which to reach Irkutsk from Amsterdam. Three weeks more will enable one to reach Chabarovsk, whence the Ussuri railroad, long since finished, takes the traveler in one day to Vladivostok. From there one reaches Nagasaki in four days, Shanghai in five, as also Kiao-Chow or Peking. The uninterrupted connection between the Atlantic Ocean and the Pacific Ocean, by railroad and river steamer, is now an accomplished fact. Never has a railroad of such enormous political importance been built, as Dr. Paul Rohrbach remarks very justly in the *Preussische Jahrbücher*. On May 31, 1891, the present Czar, then the Czarevitch, inaugurated the work. The plan was truly Russian in its magnitude, and many doubted that it could be carried out. A railroad of 10,358 kilometers [6,500 miles] through desert and mountain wilderness, through the territory of fierce and warlike tribes—could it be accomplished? Would it pay? Was it worth building?"

"Soon the war between China and Japan convinced doubters of the importance of the railroad. It is described nowhere better than in General Krahma's book 'Russia in Asia.' He describes how the Siberian line will be connected with the Manchurian railway. It will branch off where the transbaikal line leaves the Jablonnoi Mountains, and touch the Chinese frontier at Staro-Zurachaitui. At Petuna, on the Sungari River, it will have its central station. For the navigation of the Sungari, already fifteen steamboats and forty large barges have been ordered. These are for the transportation of railroad material and—troops. From Petuna, the line will advance to Kirin, whence it will branch off to Vladivostok and Port Arthur. In 1903, it is expected, the whole line will be open. Its strategical importance is obvious. Already Russia has ten battalions of infantry and three batteries as garrisons in Manchuria. Besides these, there is a mobile army corps of thirty-two battalions, nineteen squadrons of cavalry, and fourteen batteries. In western Siberia is a strong reserve, and the finished railroad can bring up reinforcements as

soon as needed. If necessary, Russia can become mistress of Peking in a very short time.

"Another interesting work on the Siberian railroad is Ladislaus Stodnicki's 'The Truth about Siberia.' The author is a native of Siberia. It will be new to most people that rye and barley are grown in districts like Yakutsk, where the mean temperature is 6°, where the rivers have ice 204 days in the year, and where the ground is always frozen one to one and one-half feet below the surface. Yet the grain ripens between May and August. So far, Russia has purchased the food-stuffs necessary for her far Eastern army from Japan and the United States. This will doubtless remain the cheapest course for a long time to come; but it is not absolutely necessary to do so."

It is therefore very likely that Siberia will become the home of many millions of people at no very distant date. The importance of this fact to the United States is obvious. The Russian is more agricultural than industrial, and if the United States can conclude a reciprocal treaty with Russia, her industrial produce must have a marked advantage over the goods imported from distant European countries. That the Russians will emigrate to Siberia is hardly doubted. The *Kobe Herald* says:

"Without giving implicit faith to Russian official statistical data, it may fairly be assumed that, owing to the particular care the Government has always taken as to further colonization, the eminently agricultural Russian will probably avail himself of the offered facilities and the population in the hitherto empty lands will considerably increase. It may be objected that Russia, the most thinly populated country in Europe, will hardly find a surplus to provide for the newly opened territory, but it must be borne in mind that the Russian peasant is noted for his migratory propensities. And besides, since the emancipation of the serfs in 1861, the agricultural proletariat having steadily grown—the annual amount is computed to be 800,000 men—it is almost certain that it will easily drift in an eastern and southeastern direction, augmenting thereby the total of the population."—*Translations made for THE LITERARY DIGEST.*

BOER WOMEN AND THE WAR.

ACCORDING to the Boer journals, the British have been striving to create dissensions in the ranks of the allied republics. Attempts are made to win the Free State Boers away from their loyalty to their brethren of the Transvaal, and General Roberts, in a proclamation, has also offered financial inducements to the unpaid foreign contingents which fight on the side of the Boers. Among the offers made to the Free State Boers for abandoning their allies are cash for their horses and continued possession of their farms. Just what effect this policy has had does not yet appear; but it is certain that the Free State Boers are not, on the whole, as hardy and resolute as the Transvaalers. The former have lived in peace for a much longer time than the latter, and are loth to leave the comfortable and in many cases rich homes they have built. When the commandeering began, many Free-State men were glad to obtain doctor's certificates showing that they were incapable of service in the field. This fact has called out the following outburst from a Free-State woman, who writes in the *Bloemfontein Express*:

"Shame upon our men! The one complains of a diseased liver, another has a stiff arm or leg, a third has heart disease. They all run around with certificates in their pockets, to hide their cowardice. Yet others will tell you that they have wives, loving, gentle wives, who are so fond of them that they will not allow them to go to war! I do not believe it. But were this true, why, sisters, I am ready to accompany my husband, who is as dear to me as yours to you. I am willing to die by his side, and I know hundreds of women who are willing to fight for independence. We women thought better of you, men of the Free State!"

"Come! Give up your trousers and take our skirts, and we will teach you the duty of a man and a citizen."

Appeals like these are not rare and they seldom fail to have effect among the men. In the Transvaal, the women no doubt play an important part when the country is invaded. The frightful reports of the way in which British soldiers satisfied their lusts at Derdepoort, when the Boer women fell into their hands, have intensified this feeling of animosity. According to the *Volkstem*, women may be used in part to guard the prisoners; but many are already in the field with their husbands, sharing the hardships of the campaign and aiding the wounded.—*Translations made for THE LITERARY DIGEST.*

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul-General Dickinson sends from Constantinople, November 21, 1899, translation of an article which appeared in the French *National Journal of Foreign Commerce* on the 14th instant, describing the conditions affecting the present effort of American manufacturers to secure a part of the business of Turkey and the neighboring countries. The article reads:

CREATION OF A PERMANENT EXPOSITION OF AMERICAN PRODUCTS AT CONSTANTINOPLE.—The Constantinople correspondent of *Sell's Commercial Intelligence*, of London, writes that the consul-general of the United States, who has already succeeded in establishing a direct steamer line between America and Constantinople, is now occupied in accomplishing an enterprise which is followed with lively interest by the commercial world. He has formed a company of sixty manufacturers and American exporters with a view to create at Constantinople a permanent exposition of American merchandise. Thirty or forty cases of goods have already been received, others are on the way, and several of the principal exporters of the United States are expected, in person, to regulate all the details of the working of the institution. At present it has not been decided what the exact nature of the operations will be—sales at wholesale or retail, or only orders taken from the samples exhibited. Whatever may be the decision, it is interesting from a financial point of view to note that the consul has succeeded in concluding with a local banker an arrangement thanks to which the future establishment will be protected from the risks necessarily incurred in granting credit in a foreign place. Without credit, in short, it would scarcely be possible to conduct business.

"It is generally thought that the success of the enterprise will not be complete unless its promoters give it a wider scope than was at first planned. In fact, Constantinople has ceased to be the natural center for supplying Turkey. The inhabitants of the provinces of the empire no longer come there to make their purchases; they make them in the city nearest their home.

"As to the sellers in the interior of the country, they are mostly Armenian merchants who made their purchases directly in Europe or America and would not patronize the proposed depot unless they could find better prices there. It would then be desirable to establish a central depot supplied by a hundred combined houses. This depot should have branches in the principal cities of the interior. To each branch should be attached a good native traveler, and he should have in store a stock of all the usual articles for sale in the region, for the country people, who are the principal customers, are not in the habit of giving their orders in advance. They buy at the time and to the extent of their present needs, and pay cash when they can or ask credit until the next harvest. Each branch store should be in charge of a local merchant, who should pay cash for the goods furnished him or at least should give good security. He should be responsible for credit given by him."

The consul says:

There have been substantial additions within the last thirty days to the number of American exporters under whose auspices an exposition has been opened in this city.

The combination now includes 106 manufacturers and exporters, and negotiations with others are in progress. Among those who have joined the enterprise are the Hecker-Jones-Jewell Milling Company, North Packing and Provision Company, Swift & Co., of Chicago; Van Camp's Packing Company, Cleveland Store Fixture Company, Mosler-Bowen Safe Company, New Home Sewing Machine Company, Goulds Manufacturing Company, Payne Engine Company, Buffalo Forge Company, United States Glass Company, Standard Heating Company, American Cutlery Company, the Fairbanks Scale Company, Ely Hoe and Fork Company, Wright Shovel Company, Sar-

geant Lock Company, Henry Disston & Sons, New Haven Clock Company, C. H. Mulford Company, Cliff Paper Company, Concord Rubber Company, and others equally well known.

The suggestion in the foregoing article that Constantinople is no longer the center for supplying Turkey has been anticipated. This combination of American manufacturers includes, in nearly every instance, exclusive agencies, not only for Turkey, but for Greece, Egypt, the Balkan States, and southern Russia; and it is intended to establish branches in all of the leading cities of this region as rapidly as safe arrangements can be made. Constantinople is still the natural point of distribution for ports of the Black Sea and the regions adjacent therein. The American end of the combination will be in the hands of its agents—W. N. Higelow & Co., of New York—and with direct steamship communication goods can be shipped directly to the Constantinople concern or to branch houses at the Mediterranean ports, as circumstances may require.

Under date of December 3, 1899, Mr. Dickinson sends another extract from a London trade journal speaking of the exposition and containing suggestions as to Turkish trade, as follows:

CAPTURING THE TURKISH MARKET.—"An American business man in Constantinople, in a letter home, credits the energetic American consul-general with being instrumental in introducing American goods into that market, the importation last year aggregating about 90,000 bags, valued at upward of £200,000 (\$320,000). Mr. Dickinson is also credited with having worked hard for months to establish direct steam communication between New York and Constantinople, the result being a direct line sailing about once a month, with the reduction of through rates on all classes of merchandise. The English lines are said not to like it; but, in the opinion of this correspondent, it makes possible the introduction and sale of many lines of goods in competition with English and German manufacturers. Referring more in detail to the introduction of American goods, the writer says:

"The last ship of the 'direct' line brought over something like twenty-five tons of wire nails from America, and more are coming by the next steamer. There seems to be an excellent field here in this line. A great deal of building is going on, almost all wooden buildings, and these are the nails used—called here 'points de Paris.' There is no question of our ability to compete in this line satisfactorily. Bolts and nuts will find a good sale. American locks, padlocks, butts and hinges, sad-irons, hammers, broad knives, lemon-squeezers, ice-breakers, etc., are already introduced, and their sale might easily be increased. Meat-choppers and raisin-seeders are also bought from us. The leading shop here tells me that they tried German articles in these lines for a time, because they were cheaper and because they were enamored, instead of tinned; but their customers had so much trouble with them that they have gone back to American goods.

"Our gas and oil stoves ought to be sold here, and I believe that one or two firms are getting out samples. Birmingham goods now being sold. American iron heating and cooking stoves are just beginning to find their way back into this market. They were formerly sold; but freights operated against them, and the Belgian and French articles cut them out—tiny, cheap affairs of sheet iron, some of them landed here as cheap as 3s, perhaps less. If an American concern would make similar patterns it could undoubtedly do an enormous business. But our own goods in the simple cheap styles will go. Any manufacturer of iron and brass bedsteads who can compete with the Birmingham goods in price will do a big business here; easily, I should say, \$10,000 to \$20,000 a year. There is a great consumption of these goods. Practically no other bedsteads are used. As for general lines of hardware and novelties that might be sold, there is no end of them.

"Some credit is needed here, for the country is not rich, and credit is freely offered by English and German exporters; but American manufacturers are quite right in their suspicions of the trade in general. It is only in the rare cases of unquestioned character and responsibility that any credit ought to be granted. Then, however, our people will undoubtedly find it to their ad-

We have no agents or branch stores.

vantage to back up their agents here in every possible manner."

"But readers will doubtless remember that our correspondent in Constantinople called attention to the American consul's action some time ago. The fruits of his labors are now being gathered, and again we see how well-directed official assistance can assist trade."

PERSONALS.

THE DUKE OF CAMBRIDGE, cousin of Queen Victoria, has received more army pensions than any other member of English royalty. In 1856, on the death of his father, the country voted him an annuity of \$1,000 a year. At eighteen years of age he became a colonel; at twenty-six a major-general; in 1874 a lieutenant-general; two years later a general on full pay; six years later a field-marshal at \$4,000 a year; and in 1884 he was appointed a colonel of the Grenadier Guards at \$10,000 a year. His residence, Gloucester House, he, of course, occupies rent and tax-free—equivalent to about \$10,000 per annum. He holds the rank of St. James's, Green, and Hyde Parks, which increases his annual income by about \$10,000, besides over \$20,000 which he draws yearly as rental of his estate near Wimbledon.

JUDGE GEORGE HAYFORTH, of Salem, Ore., is the most unique convict in the world. He was the former attorney-general of Oregon, and is one of the best known authorities on criminal law in the United States. The reason for this is that his sentence was self-imposed, for contempt of court, and pronounced for the purpose of gaining access to the state prison as a convict for the purpose of studying the penal system of the State and alleged cruelties to which prisoners are subjected. When he entered the prison he did so without his identity being known save to a few. His jailers were purposely kept in the dark as to his purpose, and he was compelled to undergo the same treatment accorded to other prisoners. His work was the same, his fare was the same, in fact every feature of the prisoner's life became his. There were other anomalies practiced in the name of the law and justice and many deficiencies betrayed in the provisions for the prisoners. Many of these can be readily remedied, and he expects to inaugurate elaborate reforms as speedily as his report can reach the authorities.

THE following story is told by the New York Press of the Countess of Collared, the wife of the Ambassador of Rome:

While in Nice she was in the habit of spending an hour every day before dinner on the terrace of the Kursaal. She was seated one evening in an easy chair, with a little pet dog in her lap and with a liveried butler in attendance, when a stout, rather elderly, and faultlessly clad gentleman came up to her and, taking off his hat, said in excellent French, "Madame, I am glad to see you."

The countess stared at him and asked—with an accent on the "you"—"And, pray, who are you, sir?"

"I am afraid I must have changed very much since last I saw you," said the other, a trace of vexation evident in his voice. "You do not know me?"

"No, I do not know you, nor do I wish to know you, monsieur," retorted the lady, and up she got and sailed away majestically.

The eyes of the elderly, stout personage twinkled with malicious fun. "Ah!" he said. "But—"

ation me! I have already been introduced to you, madame. However, allow me to renew the familiarity. I am the Prince of Wales."

The countess fainted into the arms of her footman.

There is a melancholy sequel to this amusing story, for the countess died in her home about six weeks later, and, in the opinion of many of her friends, her death was "superinduced by shock." She never recovered from the blow of having, unintentionally, cut the Prince of Wales.

MASSACHUSETTS enjoys the unique distinction of having elected at Haverhill and Brockton two Socialist mayors. They are the only avowed Socialists who ever occupied such a position in this country, with the exception of "Golden Rule" Jones, the non-partisan mayor of Toledo. Both of the Massachusetts mayors were elected by the working-class vote, and they are themselves workingmen. They are of the same age—twenty-nine years old—and were both born in New England. Mayor John C. Chase, of Haverhill, worked in the shoe factories from earliest boyhood, and was president of the Haverhill Cooperative Store when first elected mayor in 1918. Mayor Charles H. Coulter, of Brockton, was a journeyman plumber, and president of the Central Labor Union in that city.

SYDNEY OLIVER, who has been appointed by Joseph Chamberlain as special commissioner to Jamaica in connection with the recommendations arising out of Sir T. Barbour's report on the finances of the colony, was one of the prize men of his class in his university days at Oxford. He has also been for many years an active Socialist. He was one of the famous "Fabian Essayists," and a prominent member of the London Fabian Society.

MORE OR LESS PUNGENT.

The Explanation.—"Maria, Maria, why puff, puff, can't you (laugh!) let me buy my own Christmas cigars?" "I didn't buy any Christmas cigars for you this time, John. Those are some of the cigars you bought to give to your friends last fall when you thought you were a candidate for office."—*Chicago Tribune.*

She Wouldn't Tell Him.—A story illustrating the reticence of the Scots is credited to Ian MacLaren. A train was at a station, when a porter put his head into a carriage and called out: "Any one for Doun? Change for Doun? Any one for Doun?" No one moved, and in a few minutes the train was speeding along, not to stop again for nearly an hour. Then an old Scotsman turned to a lady sitting near her and said: "I'm for Doun, but I'd like tell that man so."

The Advantage of Polygamy.—"I see," said the old statesman to Anna Cummings, "that you are having a fine time over Brigham H. Roberts of Utah. It reminds me of what happened when old Bill Hooper came to the House as a delegate from Utah Territory. Fairweather of Illinois took a class at him. Among other things he asked him how many wives Brigham Young had. The delegate grimly replied: 'He has enough to let other people's wives alone.'"—*Chicago Journal.*

She Let the Cat Out of the Bag.—A lady who had a servant somewhat given to treachery in-

Successful Fruit Growing.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticultural Society at Lenox, Mass. The address is almost a college education to fruit growers, fruit dealers, and in fact to anybody eating fruit or even having but few fruit trees, or in any way concerned. Had this address been placed on the market in book form it would no doubt have sold at a good price. The full address, profusely illustrated, in pamphlet form, will be sent complimentary to any one enclosing ten cents, for postage, to the Lenox Sprayer Company, 30 West St., Pittsfield, Mass.

75TH THOUSAND. TO HAVE AND TO HOLD

BY MARY JOHNSTON

Author of "Prisoners of Hope."

WITH 8 ILLUSTRATIONS BY HOWARD PYLE AND OTHERS.

CROWN 8VO., \$1.50.

Philadelphia Press:

"One of those fortunate works of fiction that are predestined to extraordinary success. . . . It can be safely said that none of the fiction which has sold by hundreds of thousands in the past two or three years equals in literary merit, in freshness of plot, in the definition of character, in fertility of invention, and in all the qualities that engage and hold the attention, this most pleasing and satisfactory of contemporary romances."

The Brooklyn Eagle, speaking of Miss Johnston's two novels, pronounces them:

"Tales that are wonderful for their sustained strength, wealth of color, beauty of style, originality of conception and poetic atmosphere," and asks, "At what fountain of inspiration has she drunk so deeply that her spirit flies so high and so strong?"

New York Tribune:

"One of the best historical romances we have had from any contemporary writer of fiction on either side of the Atlantic. . . . The action is always interesting, and sometimes it is thrilling. . . . It is all good history and good romance, blended with art and animated by that spontaneous inspiration without which art is useless."

Boston Herald:

"Its most attractive feature to the general reader will be its thrilling interest of narrative. In this respect it surpasses all the novels that have preceded it in acquiring popularity. Its merits, in a more strictly literary point of view, are in its admirable realization of the life of the time in which its scene is laid—that of the early settlement of Virginia."

HOUGHTON, MIFFLIN & CO., - - BOSTON AND NEW YORK.

Play Whist?

Then You Will Be Interested in This Table.

It is intended for Duplicate Whist. In the illustration, the larger cut is the table set up for use. The small disk is the pocket for holding the cards. It is fastened to the bottom of the table and revolves. The slot on the margin shows the spring which controls it. At the side of the table is the pocket which holds sixteen decks of cards. There are sixteen hands, and each player has four leads. After playing a hand, cards are replaced in the pockets, and by touching the spring, a new hand is before each player. The advantages over trays are no lost cards, no errors and a place on which to play. The table is made in oak or mahogany and is a handsome, substantial piece of furniture. Price of each \$5.00, to be sent by Green Bay, Wis.

GEO. H. RICE, - Green Bay, Wis.

READY REFERENCE SCRAP BOOK

For Newspaper Clippings.
CAPACITY 35,000 ACATE LINES.
Size of Book, 4 1/2 x 10 1/2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it protrudes. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file up clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

Fried Onions.

Indirectly Caused the Death of the World's Greatest General.

It is a matter of history that Napoleon was a gourmand, an inordinate lover of the good things of the table, and history further records that his favorite dish was fried onions; his death from cancer of stomach it is claimed also was probably caused from his excessive indulgence of this fondness for the odorous vegetable.

The onion is undoubtedly a wholesome article of food, in fact has many medicinal qualities of value, but it would be difficult to find a more indigestible article than fried onions, and to many people they are simply poison, but the onion does not stand alone in this respect. Any article of food that is not thoroughly digested becomes a source of disease and discomfort, whether it be fried onions or beef steak.

The reason why any wholesome food is not promptly digested is because the stomach lacks some important element of digestion, some stomachs lack pepsin, others are deficient in gastric juice, still others lack Hydrochloric acid.

The one thing necessary to do in any case of poor digestion is to supply those elements of digestion which the stomach lacks, and nothing does this so thoroughly and safely as Stuart's Dyspepsia Tablets.

Dr. Richardson in writing a thesis on treatment of dyspepsia and indigestion, closes his remarks by saying, "for those suffering from acid dyspepsia, shown by sour, watery risings, or for flatulent dyspepsia, shown by gas on stomach, causing heart trouble and difficult breathing, as well as for all other forms of stomach trouble, the safest treatment is to take one or two of Stuart's Dyspepsia Tablets after each meal. I advise them because they contain no harmful drugs, but are composed of valuable digestives, which act promptly upon the food eaten. I never knew a case of indigestion or even chronic dyspepsia which Stuart's Tablets would not reach."

Cheap cathartic medicines claiming to cure dyspepsia and indigestion can have no effect whatever in actively digesting the food, and to call any cathartic medicine a cure for indigestion is a misnomer.

Every druggist in the United States and Canada sells Stuart's Dyspepsia Tablets, and they are not only the safest and most successful but the most scientific of any treatment for indigestion and stomach troubles.

GOUT AND RHEUMATISM...

A prominent physician writes:

DEAR SIR:—Replying to yours on the use of TARTARLITHINE as a remedy in the treatment of gout, I will say that I have used it in the treatment of about a dozen cases with results that are a little less than wonderful. The characteristic feature of its action is the rapidity with which patients improve under its use. An improvement is noticeable within 24 hours. One of the most striking cases was that of a physician suffering from gout, muscular rheumatism and frequent bilious headaches. I prescribed Tartarlithine, and in one week there was absolute disappearance of all of the uric acid manifestations. The nervous irritability disappeared, and he stated that he had done the best week's work which he had accomplished in years.

quired on returning from a visit one afternoon: "Did the postman leave any letters, Mary?" "Nothing but a postcard, ma'am." "Who is it from, Mary?" "And do you think I'd read it, ma'am?" said the girl, with an injured air. "Perhaps not; but any one who sends me messages on postcards is stupid or impertinent." "You'll excuse me, ma'am," returned the girl loftily, "but I must say that's a nice way to be talking about your own mother."—*Sunday Town and Country Journal*.

Oom Paul and the Jews.—It is related of President Kruger that when Jews first began to flock to Pretoria he was unfavorably disposed toward them and used them severely, but after a time relented somewhat, and finally gave them leave to build a synagogue. They were grateful, and when the synagogue was built they asked him to come and open it. The story is—and it assumes to be a true story—that the old man accepted the invitation, and, standing on the platform, duly said: "In the name of the Father, and of the Son, and of the Holy Ghost, I declare this synagogue opened. Now, my friends, I hope you will lose no time in becoming converted."—*Life*.

His Preference.—Frau Hingstermeier, the wife of Herr Hingstermeier, the lion tamer, was what may be termed—to put it mildly—a virago, and held Hingstermeier in absolute subjection. The lion tamer returned to the family caravan one evening in a state of hilarity, which made him feel that he would better postpone an interview with his better half until his condition had worn off. He therefore concluded not to sleep in the family quarters. The next morning his wife called him to account, and he explained that he had been having a little jollification and did not wish to disturb her slumbers on his return. "Where did you sleep?" she demanded. "In the cage with the lions," he replied meekly. "Coward!" hissed Mrs. Hingstermeier, with a look as one robbed of her just dues.—*New York Clipper*.

A Pair of Liars.—A good story is going the round of the clubs, says "The Major," in *The Day*. A certain very smart stock-broker was appointed captain in one of the Irish militia battalions. He was warned that the plausible old soldiers of this new company would get the better of him. He only smiled at the idea. Soon after the regiment was embodied, the color-sergeant came to his captain's room with an old soldier, who wished to speak to the officer. The man was admitted, and explained that he had heard from his wife, who was ill—and "if you please, sor, can I have forty-eight hours' leave?" "You say you have heard from your wife," said the captain, smelling a rat, and beginning to turn up some imaginary correspondence on his table. "I have, sor." "Ah!" replied the officer, "I have heard from her too, and she asks me not to give you leave, for you only go home to get drunk and break the furniture." "She wrote that, sor?" "Yes." "And does that mean, sor, that I can't have my leave?" "It does." The man saluted and went to the door, then turning suddenly round he said, "If you please, sor, may I say something confidential between man and man?" "Well, what is it?" answered the captain. "Why, sor, under this roof are two of the most elegant liars that the Lord ever made—I'm not a married man."

Current Events.

Monday, February 26.

—Lord Roberts presses hard the Boer force under General Cronje, which is entrenched on the banks of the Modder River near Paardeberg.

—The British naval estimates are introduced by Mr. Goschen in the House of Commons.

—In the Senate, Mr. Turley opposes the seat-

WANTED.

Active and energetic men to represent us in Eastern, Western, and Southern States. Weekly salary or commissions paid. Make application by letter, giving reference, age, and previous occupation.
DODD, MEAD & CO., New York—Chicago.

ing of Mr. Quay; there are also debates on the Hawaiian bill and the race question in the South.

—Marcus Daly testifies before the committee of investigation regarding Senator Clark of Montana.

—The lawsuit of the H. C. Frick Coke Company against the Carnegie Steel Company is begun at Pittsburgh.

Tuesday, February 27.

—General Cronje, with his army of about 4,000 men and several guns, surrenders unconditionally to Lord Roberts.

—Mr. Depew speaks in the Senate in defense of the Administration's Philippine policy; the Puerto Rican debate continues in the House.

—Secretary Root appears before the House committee on Military Affairs and makes an argument for his Army Reorganization bill.

—The South Carolina legislature makes an appropriation of \$10,000 for the erection of a monument at Chickamauga.

Wednesday, February 28.

—General Buller captures Pieter's Hill, near the Tugela; General Cronje is sent to Cape Town; great rejoicing prevails in England.

—John O'Donnell, Nationalist, is elected to succeed Michael Davitt as a member of Parliament for South Mayo, Ireland, receiving 3,430 votes to 427 cast for John McBride, leader of the Irish brigade in the Boer army.

—In the Senate, Mr. McLaurin (Dem.) makes an argument for the policy of expansion.

—In the House, the Puerto Rican Tariff bill is passed by a vote of 172 to 161.

—The Third Avenue Railroad Company, of New York, goes into the hands of a receiver, Hugh J. Grant.

Thursday, March 1.

—General Buller's cavalry, under Lord Dunsford, enters Ladysmith; later the Boer army withdraws, and General Buller relieves the beleaguered city.

—In the Senate, the bill providing a territorial form of government for Hawaii is passed.

—A preliminary report from the Industrial Commission recommending legislation for the regulation of trusts is made public.

—An appropriation of \$100,000 is made by the Kentucky legislature to be used in detecting and convicting the assassin of William Goebel.

Friday, March 2.

—Generals Roberts and Kitchener visit Kimberley, as the guests of Cecil Rhodes; General Buller reports that the Boers have entirely withdrawn from Ladysmith district.

—Sixty natives are killed and 2,000 houses burned by a British punitive expedition in Burma.

—In the Senate, Mr. Hoar and Mr. Elkins speak in favor of seating Mr. Quay.

—In the House, a bill is passed providing relief for Puerto Ricans, at special request from the President.

—Secretary Root starts for Cuba, where he will confer with General Wood and personally inspect the Cuban situation.

Saturday, March 3.

—The Boer prisoners captured by Lord Roberts number 4,600 men; General Cronje with his officers arrives at Simonstown, near Cape Town.

—Guerrilla warfare continues in the Philippine Islands.

—The arguments in the Kentucky contest over the governorship are concluded at Louisville, and a decision is expected in a few days.

—President McKinley arrives in New York, and speaks at the annual dinner of the Ohio Society at the Waldorf-Astoria.

Sunday, March 4.

—The Boers retire from Northern Cape Colony across the Orange River into the Free State; President Kruger visits Bloemfontein and has a conference with President Steyn.

—Justice Woodward makes a pro-Boer speech at Buffalo; Miss Maud Gonne speaks at an Irish mass-meeting in Chicago, where resolutions of sympathy with the Boers are passed.

—The Rev. Dr. John Hennessey, Archbishop of Dubuque, Iowa, dies at his home in that city.

—One of the heaviest snow-storms during recent years blocks the traffic between Eastern and Western States.

START right. In painting, the first or priming coat is important. It is the foundation. It is a mistake to think anything is good enough for it. If a mixture of Zinc, Barytes, etc., is used the paint will surely crack and peel. The only safe paint for priming is Pure White Lead. It combines with the oil, forming a tough, elastic coat that penetrates and will adhere to the surface. The brands in the margin are genuine.

FREE For colors use National Lead Company's Pure White Lead Tinting Colors. Any shade desired is readily obtained. Pamphlet giving full information and showing samples of Colors, also pamphlet entitled "Uncle Sam's Experience With Paints" forwarded upon application.

National Lead Co., 100 William Street, New York.

Above is our new 1908 style genuine Square Quaker Cabinet as it actually appears.

WHAT'S THE DIFFERENCE

Our New 1908 Style Square Quaker Folding Turkish Bath Cabinet

is not a cheap, shoddy, flimsy affair, but is GUARANTEED TO BE THE BEST OF ALL CABINETS AT ANY PRICE, OR YOUR MONEY CHEERFULLY REFUNDED.

It has a Real Door—opening wide, on hinges, not a bag to pull on over head, or a hole to crawl through. It has a strong, rigid, galv. steel frame. Covering best, antiseptic, hygiene cloth, rubber lined. Our Cabinet does not rest on the shoulders, nor pull on over head. No woodwork to rot, warp, crack or pull apart. A wooden frame for a Cabinet would be about as valuable as a wooden stove. Our Cabinet is large and roomy, knees, arms and legs do not touch the sides. Plenty of room for hot foot bath and to sponge, towel and cool the body while inside. Has Top Curtains to open for cooling off; in fact, all the latest improvements. Will last twenty years.

TO OPERATE simply open door, step in, sit down. (All done in one minute). Bathe, open top curtains, cool off perfectly, step out. Only perfect Cabinet made. Folds flat in 1 inch space. Weighs but 10 lbs. Easily carried.

RECOMMENDED BY OVER 1,000,000 HAPPY USERS—such eminent people as Alice H. Stockham, M. D.; Chicago, Editor of "Tokology"; Congressman John J. Lewis; Louis Morrison; Mrs. Kendrick, Prin. Vassar College; Rt. Rev. Bishop J. L. Spaulding; Rev. C. M. Keith, Editor "Holliston Advocate"; E. M. S. Marble, M. D.; Pres. Woman's Club, Washington, D. C.; Edward Beachert, M. D. of Univ. of Penna.; Senator S. McArthur and thousands of others.

HOT QUAKER BATHS BENEFIT EVERY MAN, WOMAN AND CHILD.

Open the 2,000,000 pores of the skin, sweat out all the poisons in the blood, which if retained, over-work the heart, lungs, liver and kidneys. Make clear skin, bright eyes. Keeps you strong, vigorous and healthy. Prevents Colds, Grippe, Fevers, consumption, and all diseases.

WE POSITIVELY GUARANTEE RESULTS.

Our medicated bath treatment will cure Nervous Troubles, Debility, Weakness, Sleeplessness, Neuralgia, Aches, Pains, Colds, Grippe, Obesity, and Cures Rheumatism (we offer \$50 reward for a case that cannot be relieved). Cures Headaches, Gout, Sciatica, Piles, Dropsy, Diabetes, Indigestion, all blood, skin, liver, stomach and kidney troubles. Not only cures, but prevents all ailments peculiar to ladies. With the Cabinet, if desired, is a Head and Complexion Steaming Attachment. Beautifies complexion, cures and prevents skin eruptions and diseases, Eczema, Pimples, Blisters, Blackheads, Asthma, Catarrh, Bronchitis, all Throat Troubles.

IF OURS IS NOT THE BEST CABINET MADE WE DON'T WANT YOU TO KEEP IT. but so confident are we that it will please you, that **WE SEND IT ON 30 DAYS TRIAL.**

to be returned at our expense and your money refunded if not just as represented. What could be more fair? We have been making genuine Bath Cabinets for years, are the largest mfrs in the world. Annual sales 300,000 Cabinets. Value \$1,500,000. We're responsible, capital \$100,000.00.

OUR PRICE IS WONDERFULLY LOW. Sent to any address upon receipt of \$5.00, complete with heater, directions, formulas for medicated baths and ailments. Face Steamer \$1.00 extra. Remit by Bank Draft, P. O. or Express Money Order, or certified Check. **ORDER TODAY.** You won't be disappointed. **Money refunded after 30 days use.** If Cabinet is not just as represented.

IF WRITE US ANYWAY for Our "Book on Baths," Testimonials, etc., FREE. Address **THE WORLD MANUFACTURING CO., 1312 World Bldg., Cincinnati, Ohio**

Not Ours. All cheap affairs, pull on over head like this are dangerous.

Not Ours. Cheap, flimsy affair, top separate, pull on over head and is dangerous. Balance or more salt bath is useless.

Not Ours. Why pay \$2.00 or \$3.00 for wooden frame affairs, which rot, warp, split and are unsatisfactory, when a genuine Quaker with steel frame, costs only \$5.00? Lasts 20 years, and is guaranteed superior, or your money refunded.

Not Ours. Why pay \$2.00 or \$3.00 for wooden frame affairs, which rot, warp, split and are unsatisfactory, when a genuine Quaker with steel frame, costs only \$5.00? Lasts 20 years, and is guaranteed superior, or your money refunded.

AGENTS AND SALESMEN WANTED

\$18 to \$50 WEEKLY.

MEN and WOMEN—At Home or Traveling.

Our Agents made over \$47,000 last month. Albert Hill, of N. J., \$234 first month. John Hennibal, R. R. Conductor, \$634. Mr. Muncy, of Texas, \$12.50 first 2 hours. Rev. McDaniel, \$300 while preaching. Lida Kennedy, \$24.00 while teaching. Mrs. Hitchcox, \$222 besides house-keeping.

LET US START YOU—BE A MONEY MAKER.

We are spending \$250,000 in adv. this Cabinet, creating an enormous demand right in your locality. You carry small stock and supply it and appoint agents. Failure impossible. Every energetic man or woman makes \$5.00 to \$10.00 daily. Plenty good territory. Write for our Proposition, New Plan, Terms, etc., (stating age, town or county wanted).

Address **THE WORLD MANUFACTURING CO., 1312 World Bldg., Cincinnati, Ohio**

COLLAR & BUTTON goes with our one-piece collar button.

MAROCZY'S FINE PLAY.

Notes by Emil Kieny in *The Press*, Philadelphia.

French Defense.

MAROCZY, White.	MAROCZY, Black.
1 P-K 4	1 P-K 3
2 P-Q 4	2 P-Q 4
3 P x P	3 P x P
4 Kt-K B 3	4 B-Q 3
5 B-Q 3	5 Kt-K B 3
6 Castles	6 Castles
7 P-B 3	7 P-B 3
8 B-K Kt 5	8 B-K Kt 5
9 Q-Kt-Q 2	9 Q-Kt-Q 2
10 Q-B 2	10 Q-B 2
11 K-R-K sq	11 Q-R-K sq. He might have played K-R-K sq, bringing about the same result.

without disturbing the symmetry of the board, which so far shows an even development.

12 B-R 4 B-R 4
13 B-Kt 3 B x B
14 R P x B B-Kt 3
15 R x R R x R
16 B x B R P x B
17 R-K sq. Once more the forces are evenly placed, yet White, by capturing the Kook and playing R-K sq, lost a move. The outcome should be a drawn game, and as a matter of fact, in a similar contest, Dr. Lachnisch, playing against Walbrodt, at an earlier stage offered a Draw, which was promptly accepted.

17 P-R 3
18 Q-Kt sq K-B sq
19 R x R ch K x B
20 P-R 3 Q-Q sq
21 Q-K sq Q-R 3
22 Q x Q ch R x Q. It is quite noteworthy, that White, by early exchange lost a move. Black thus has his King and K Kt 1-10 placed and is enabled to proceed aggressively. White expected to draw without difficulty, the forces being absolutely even.

23 K-B sq Kt-Q 3
24 K-K 2 P-B 3. Necessary, to prevent White from Kt-K 5; Black ends will be able to make use of his Kt at Q 2.

25 Kt-K sq P-Q Kt 4
26 P-Q Kt 4 Kt-Kt 3
27 P-B 3 Kt-Kt 3 B 3
28 Kt-Kt sq. Better, perhaps, was Kt x Kt. If Black answers Kt x Kt, then Kt-Q 3 and Kt-B 3 may be played, leading to a pretty even position. The move selected is too defensive and gives Black chance to proceed with the attack.

28 Kt-B 4
29 P-Kt 4 Kt-B 4 - R 6, which slightly compromises the White game. Neither Kt can be brought into play without the loss of a Pawn.

30 K-B 2 P-Kt 4
31 K-K 2 P-Kt 3
32 K-B 2 K-Q 3
33 K-B 2 K-B 2
34 K-B 2 K-Kt 3
35 K-B 2 P-B 4. He could not play P x P on account of K x P, K-R 5, and eventually Black wins the Pawn.

36 P-R 5, an important move. White now will be obliged to make extra effort in guarding the Q R P, for otherwise the advanced Black Q R P will decide the game.

37 K-K 2 K-B 2
38 K-B 2 K-Q 3
39 K-K 2 K-K 2
40 K-B 2 K-B 2
41 K-K 2 K-Kt 3
42 K-B 2 K-B 2
43 P-Kt 3 K-R 5
44 K-K 2 P-Kt 4
45 P x P K x P
46 K-B 2 K-R 4
47 K-K 2 P-B 3. An important move, which will enable Black to enter with his King.

48 P x P P x P
49 K-B 2 K-Kt 4. He could not play K-R 5 at once, on account of Kt-Kt 3 ch forcing exchange of Knights, after which the game would be drawn.

50 K-K 2 K-B 2
51 Kt-B 2 K-R 6
52 Kt-Q 3. Had he played Kt-K 2, Black would have answered Kt-K 3 and White would be unable to move any of his Pawns without immediate loss.

53 Kt-B 2. Splendid play. He gives up the K R P in order to gain the more important Q R P. He will subsequently win the K R P.
54 Kt x P ch K-R 5
55 Kt-Q 3. Hastily taken was the Kt-Kt 3 ch, Kt-K 2, and Kt x B. Black wins the Q R P and will be enabled to win by advancing his Q R P.

56 Kt-B 2 x R P
57 Kt x Kt Kt x Kt
58 Kt-B sq Kt-Kt 3
59 Kt-R 2 Kt-K 3
60 K-K 2 Kt-Kt 3
61 P-Kt 4 Kt-Kt 3
62 P-B 3 K x P
63 K-Q 2 K-B 2
64 K-B 2 Kt-B 2 ch
65 K-Q 2 K-B 2
66 K-Q 2 Kt-B 2
67 K-B 2 P-R 6
68 Kt-R 2 Kt-Kt 7
69 Kt-B sq. He could not play Kt-Kt 3 on account of K-Q 2. If then K x P, Black answers K-B 3, and White must move his Kt, which will be captured, Black winning easily.

70 Kt-Q 3. Brilliant play. White can not capture the Kt on account of P-Kt 3. White then must play K-Kt 2, and Black continues K x Kt and K x R P.

71 Kt-Q sq Kt-Kt 3
72 Kt-R sq. A clever trap. If Black answers K-Kt 7, White would continue K-Q 2, and if Black captures the Kt then K-B sq closes in the adverse K, leading to a well-known drawing position. Black, of course, evades this by playing K x Q P.

73 K x Q P
74 Kt-B 2 ch K-B 6
75 K-Q sq P-R 7
76 K-B sq P-Q 5
77 Kt-R sq P-Q 6
78 Kt-B 2. Another trap: if Black plays P x

Kt, then a stalemate comes about and the game is drawn. Black, however, replies P-B 4, giving White a move, and wins.

28 P-B 4
29 Resigns.

Kieny calls special attention to the fact that, "when twenty moves were made most of the pieces were exchanged, and with but six Pawn- and two Kts on the board nothing but a drawn game was anticipated. But the struggle just then commenced, and Maroczy displayed skill, ingenuity, and accuracy in the difficult end-game, as is usually shown by any other exponent of the game except Lasker. Indeed, the game ranks with the Champion's best efforts, and the struggle is somewhat similar to the one in the Lasker-Pillsbury game of the London tourney."

A "Composite Game."

A correspondent suggests that THE LITERARY DIGEST Chess-Association shall play what he calls a Composite Game. The idea is to have 30 or 40 players on a side; each player having a number, representing the number of the move he is to make. "While," he says, "the game would not prove anything as to the merits of the respective sides, it would be a curiosity of Chess." If this meets with the approval of our Chess friends, send in your names as soon as possible, so that we can begin the game in our first issue in April.

The Vienna Chess-Club occupies ten good-sized rooms for play, with restaurants for smokers and non-smokers, billiard-rooms, ladies' saloon, kitchen, cloak, reading and conversation rooms, etc. The club has over 170 members.

FINANCIAL.

DEPOSIT CERTIFICATES

New York City Real Estate Security for Double the Amount.

BEAR 6 PER CENT. INTEREST, PAYABLE QUARTERLY.

Money Can Be Withdrawn Within 30 Days of Notice

It has been decided by the Managers of the Prohibition Park Company to accept additional loans for a limited amount of money in any sums for which 6 per cent. interest-bearing Deposit Certificates will be issued in denominations of \$10 each.

INTEREST will be forwarded to the holders of Certificates quarterly. The principal will be payable at any time on thirty days' notice. The Deposit Certificates are secured by deeds of unencumbered real estate and mortgages to double the amount of the Certificates deposited with I. K. Funk, President of Funk & Wagnalls Co., as collateral. In addition to this security, the Deposit Certificates are a first lien upon all the assets of the Prohibition Park Co.

The security makes the loans absolutely safe. The money will be used in completing the improvements and in beautifying Prohibition Park, (Westleigh), Borough of Richmond, New York City. Address

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

IS BRITISH TRIUMPH IN SIGHT?

THE British press, according to cable despatches, seems to be pretty nearly unanimous in the opinion that the war is about over. The Boers, too, seem to be of similar opinion, if we accept the reported assertion of President Kruger that the war will be ended within a month, either by intervention or negotiations. At this point, however, the similarity between the Boer and British view stops abruptly, for the British are already talking of the two republics as if they were under British rule, while the Boers declare that they will never surrender their independence. Thus, for the first time since hostilities began, Boer independence is sharply defined as the issue of the war. The Pretoria correspondent of the *London Daily Mail* says of the Boer attitude:

"If England is waging a war of conquest the republics will fight to a finish; otherwise they believe that a plain statement of the British intentions will reveal a basis for negotiations, now that England's prestige is repaired. Presidents Kruger and Steyn conferred at Bloemfontein on Monday on the incorporation of the above representations in a telegram to Lord Salisbury. The preservation of the independence of the two republics is a *sine qua non*."

The British Government's prompt refusal to consider the proposal of Presidents Kruger and Steyn for a cessation of hostilities, the main feature of the proposal being a provision for the independence of the Boer republics, is taken to confirm the impression that the British Government intends to turn the two republics into a crown colony. The *London Standard*, which is said to be in close touch with the policy of the British Government, says that it has reason to believe that "an authoritative statement will shortly be made by the Government reaffirming the impossibility of conceding any terms of peace to the Boer republics which would involve a perpetuation of the political and military independence that led to the present costly and san-

guinary conflict." *The Daily Mail* declares that the Kruger and Steyn proposal is a colossal effrontery, and says:

"These people, who a month back were vamping as to how they were going to take Durban and add Kimberley to the Free State, would exact an enormous indemnity, and were doubtful as to whether they should graciously permit us to retain Cape Town, and who, through Dr. Leyds, instigated a vile campaign of insult against our beloved Queen, now, after three sound beatings, whine that Britain is bent upon a war of conquest."

"As independent states, as states of any kind, the Transvaal and the Orange Free State have ceased to exist. They may threaten fighting to the last, but no British Government would dare to yield to such threats."

"The experiment of magnanimity has been tried once and failed. It will not be repeated."

The *London Daily Telegraph* is already outlining plans for the future government of the new British colony. It says:

"When Presidents Kruger and Steyn have made their due submission, Great Britain will take over the administration of the two countries for the time being. Perhaps for two or three years there must be a military government in the Transvaal and Free State. They will be treated as crown colonies, or, what is preferable, as one crown colony."

"When things have settled down, and the burghers have returned to their peaceful, pastoral occupation, there will be every disposition to grant them exactly the same privileges of self-government as are enjoyed in Cape Colony and Natal, but they will remain parts of the Queen's domains, exactly on the same footing as the other British colonies in South Africa."

"On this point imperial opinion—for it is not only Great Britain which is concerned—is so fixed that it is quite unnecessary to labor with the argument."

The *New York Tribune* says of the Boer proposal to leave the two republics independent: "That is to say, they would like to be made better off than they were before they began the war. It is altogether probable that they will be made better off, but it will not be through the granting of independence." The same paper explains the British view of the proposal thus:

"Perhaps we can get pretty close to the British point of view in this matter if we imagine Spain, upon the destruction of Cervera's fleet, to have proposed peace upon the basis of the complete reestablishment of her sovereignty in Cuba, Puerto Rico, and the Philippines, the Cubans to be content with the 'autonomy' given to them under General Blanco. Such a proposition would have been received in this country with mingled derision and execration, and its acceptance or serious consideration by this Government would have aroused a universal storm of protest and of wrath. It is thus that the British nation regards any proposal of peace which would restore the vexatious state of affairs which prevailed before the war."

The *Baltimore Sun*, however, says:

"In dealing with the handful of brave Boers who have made a gallant fight for what they conceive to be their rights the British Government ought not to adopt the same unrelenting attitude which it would present to a foe with equal resources. The sentiment of the world favors a policy of magnanimity, not of ruthless destruction, and Great Britain can not afford to ignore a world-wide sentiment. Whatever preliminary settlement may be made after peace negotiations have actually begun, there should be no question as to the ultimate settlement. Great Britain can surely find a way to protect her own interests in South Africa and preserve the integrity of her dominions without blotting out the Dutch republics. Boer and Briton must hereafter

dwelt side by side in South Africa, and it would be to the advantage of Great Britain to conciliate the Dutch, rather than make them unwilling subjects under a sovereignty which will inevitably provoke resentment, and possibly another revolt in the future."

Harper's Weekly thinks that the time has come for mediation. It says:

"Every day that the Boer war progresses adds to the pity and to the horror of it. Whatever may be the rights of the issues involved—and these have been obscured by those who have written about them—it is a horrible spectacle that is being presented in South Africa, and one which, indeed—as President Kruger himself said it would before the beginning of hostilities—stagger humanly. Such sanguinary strife should be impossible in days that claim to be enlightened, and it would seem to be the supreme duty of some neutral nation to intervene, not in behalf of Britain, not in behalf of the South African republics, but in the name of humanity. In certain ways the laws which govern in-

dividuals should govern nations, and no man of right spirit to-day would stand idly by and complacently watch two other men engaged in deadly strife without doing his utmost to separate the combatants, or, lacking power to do this single-handed, through a combination with others to cause them to be separated. What debt of gratitude is it that we owe to England that would make it improper for the United States Government to offer its friendly mediation in this inhuman quarrel? What duty is it that we should perform toward the young republics of the Dark Continent, now darker than ever before, that rises superior to our manifest duty to the whole of mankind? It is true that England lent us her moral support in our late differences with Spain, and it is undoubtedly the fact that it was her attitude that prevented continental intrigues against our welfare from assuming serious aspects; but ours was not a war of extermination against a well-meaning and possibly mistaken people; it was primarily a war in behalf of a principle, and was waged in behalf of an ideal rather than for material profit. Nor was it in a large sense a murderous war such as the Transvaal conflict has become. It was, in all conscience, bad enough. It was all that General Sherman indicated when he characterized warfare as hell; but it was not such deep, dark, abysmal hell as that which is now presented to our view for the first time in thirty years. Nothing that England has done for us, no duty of sympathy that we owe to a sister republic, transcends the obvious duty which now confronts us. Indeed, the reverse is true. The very flower of two noble peoples is being recklessly sacrificed in a quarrel which

statesmanship on either side might have averted, and against the results of which every proper instinct in the heart of every living man rises up in protest. Our gratitude to England could take no higher, no nobler expression than an offer of mediation; our sympathy for a struggling republic could find no more fitting outlet than a proffer of our good offices to have this slaughter stopped."

IS NEW YORK CITY BEING LOOTED?

FOR a great many years the municipal government of New York City, under Tammany rule, has been held up to view as an embodiment of most that is corrupt in our political life. Recent events have had the effect of reviving charges of this sort, and another newspaper crusade has been inaugurated that is attracting more or less attention in other States.

The plight of the Third Avenue Railroad Company, following close upon the charges in connection with the Ramapo Water Company, furnishes a text for indignant comment. The railroad has just passed into the hands of a receiver, tho less than two years ago its stock sold as high as \$240 per share; and the charge is freely made that the Company was deliberately wrecked in the interest of a clique of stockholders, among whom, it is said, were several men high in the councils of Tammany Hall.

In addition, the New York papers, during the last week or ten days, have been making startling allegations regarding another form of municipal corruption. "More than \$3,095,000," says the *New York Times*, "is paid every year by the gambling-house-keepers of this city for the protection afforded them by the police and the other powers of the city government." It states that there is a "gambling commission," which meets weekly, "composed of a commissioner who is at the head of one of the city departments, two state Senators, and the dictator of the pool-room syndicate in New York City." This commission collects the funds from the gamblers, so the charge runs, and pays it over, not to Tammany Hall alone, but to the Republican "machine" as well. The *New York World* (Ind. Dem.) declares that the city is "in the grip of organized city looters," and that there is "wholesale plundering of the city treasury."

But the most important charges come directly from a high city official—Controller Bird S. Coler. Mr. Coler was elected to office as a representative of the Brooklyn "Reform" Democrats, as a part of the first administration of Greater New York. He has developed into a severe and outspoken critic of the present government. He says that New York City is being plundered by men compared with whom Tweed was an amateur, inasmuch as Tweed's plundering was done without protection of the forms of law, whereas "legalized robbery of the city is now perfectly respectable." He further declares:

"The city has been robbed outrageously in the purchase of supplies, and I am now powerless to prevent it. There is a concerted movement to prevent the finance department from protecting the city treasury. We have held up many bills here, and in some cases the parties have accepted large reductions because their claims were so fraudulent they dared not go into court, altho they could have recovered the full amount under existing laws and rulings. When I find that the city has been charged double the market rate for an article I must prove fraud or there is no defense, and the corporation counsel will confess judgment. To prove fraud and bribery is a very difficult matter."

The New York press is almost unanimous in rallying to the support of Mr. Coler. Says *The Mail and Express* (Rep.):

"It is seldom given to the Republican press of this city to rally to the defense of a local Democratic office-holder against assassination by his own party. The occasion, however, is manifest to-day. . . . The controller has rendered New York good and faithful service by newly directing attention to the crimes against the common welfare which have come under his notice. By so doing he is helping to quicken the public conscience, to arouse

NEWLY ELECTED SENATORS.

New Yorkers to a consciousness of the fact that if they object to being held up, 'themselves must strike the blow.'

The Commercial Advertiser (Rep.) finds in Mr. Coler's statement a severe indictment of the Republican majority in the legislature at Albany, and calls upon these representatives to free themselves from the "shameful charge" of being in collusion with Tammany Hall. *The Evening Post* (Ind.) declares that Controller Coler's speech "ought to be heeded like a trumpet-call in the midst of battle," and that it should be a warning to every citizen of New York, irrespective of party affiliation. The *Brooklyn Eagle* (Ind. Dem.) says: "This magnificently peopled and miserably misgoverned city will not forever tamely consent to its own spoliation, will not forever annually renew the trust of power into feeble, foul, or false hands, and will not forever submit to wrongs which make administration spell loot and piracy and tribute and insult and waste and shame in the name of rule. . . . When bad men combine good men should unite—and speed the day!"

The *New York Evening Journal* (Dem.) says:

"What this city needs is the jailing—not of private gamblers and dive-keepers—but of officials who live on blackmail or permit blackmail because they were put in office for that purpose.

"We need another John W. Goff to get after the thieves and criminals in office.

"We need another such spectacle as that of Tweed, the arch robber, dying in jail. Tweed would be a poor second-rate amateur in these days.

"A big public official in jail, and the bigger the better, is what New York City needs at present.

"And that is just what New York will see, if public indignation is pushed much farther.

"Thieves, criminals, and blackmailers in office, take warning."

Among the comments by papers outside New York, we note the following from the *Kansas City Journal* (Rep.):

"The young controller's charges of bribery, overcharging, and fraudulent practises generally will doubtless cause some consternation in Tammany circles, if for no other reason than that they are made by a Democrat, and at a time when Tammany wants to cut a wide swath in state and national politics. Perhaps Mr. Coler may be the revolutionist that New York has been waiting for."

The *Berlin Tageblatt* and other newspapers on the Continent are publishing a series of articles on New York's wickedness that make the American metropolis appear as about the worst blot on

the globe. The Tammany organization, according to these accounts, not only supports a school for pickpockets and is back of such schemes as the Miller ten-per-cent.-a-week syndicate, but it carries on a rule like that of the Mafia in Sicily or the Camorra in Naples, only worse. "Ex-attaché," writing in the *New York Tribune* in reply to the *Tageblatt's* articles, says that while he is not blind to the fact that New York is not without some dark sides, he still contends, after having lived in Paris, Vienna, Berlin, Madrid, and Tokyo, that "the Empire City has lighter shadows, less crime, a lower, and above all less onerous, tax-rate, and is morally and materially cleaner as well as more law-abiding than most, if not all, the capitals of the Old World."

THREE NEWLY ELECTED SENATORS.

OF the three newly chosen members of the Senate whose portraits appear herewith, the one from California, Thomas R. Bard (Rep.) seems to excite the most general interest. He displaces a Democrat, Stephen M. White, who was regarded seriously four years ago as a candidate for the Presidential nomination at Chicago, and thus adds to the Republican strength in the Senate. The *New York Sun* (Rep.) says that his election "completes the transformation of political conditions on the Pacific coast and establishes the stability of its Republicanism." Mr. Bard's election also breaks the deadlock in the California legislature without necessitating the resort to gubernatorial appointment—a resource of doubtful legality in such a case. The *Philadelphia Evening Bulletin* (Rep.) expresses a wish that Governor Stone, of Pennsylvania, had adopted the California plan of an extra session of the legislature, instead of sending Mr. Quay to Washington with questionable credentials. The *Chicago Public*, Louis F. Post's single-tax paper, takes Mr. Bard's election as an occasion for a few reflections on our senatorial millionaires. It says:

"Another millionaire comes into the United States Senate, this time from California. There would be no objection to millionaires in that body if their millions were only incidental. But most of them are nothing but millionaires. And a mere millionaire is worse than a mere hobo. It costs industrious people so much more to support him. This particular millionaire—his name is Thomas R. Bard—whom the legislature of California has sent to Washington as a Senator, appears to be wholly undistinguished except as a millionaire. There is no indication

that he earns a dollar of his income. Even Rockefeller does better than that. Nor does Bard appear to have any opinions on public questions. Asked his views on expansion, he said it was too big a question to answer off-hand, but he was satisfied the Republican Party would work it out satisfactorily. As to the Philippines, he did not care to discuss that question; and for the present he preferred to say nothing on the subject of trusts. And, while he favored 'the lowest possible freight rates and passenger fares' to and from California, yet he was unwilling to express himself as to the Boer war. He said: 'My opinions on that question are purely personal and private.' Doubtless Senator Bard knows enough to go in when it rains. If he didn't, he wouldn't be a millionaire; and if he were not a millionaire, he wouldn't be a Senator."

Senator McLaurin (Dem.) sat in the Senate in 1894 and 1895, being appointed by the governor of Mississippi to fill out an unexpired term, and in 1896 he was elected governor of his State. Senator Sullivan, also a Democrat, was a member of the House for two years until, in 1895, he was appointed to the Senate to fill the vacancy caused by the death of Senator Walthall. Mr. McLaurin and Mr. Sullivan have both now been elected by the Mississippi legislature.

DEATH OF EX-MINISTER PHELPS.

TRIBUTES to the ability and patriotism of Prof. Edward J. Phelps, of Yale University, who was Minister to England under President Cleveland's first Administration, are by no means confined to the press of his own party. The *New York Tribune* (Rep.) says that "first of all he was an American, whose

EDWARD JOHN PHELPS.

patriotism was never under suspicion and who honored his country not by declaiming, but by exemplifying its highest virtues"; and the *New York Sun* (Rep.) says that "Mr. Phelps was sometimes wrong on great questions of political philosophy and international policy; but he was much oftener right, and on every question as it arose he had a clear, definite, and perfectly fearless and honest opinion." The *Philadelphia*

Ledger (Ind. Rep.) sketches and comments upon his career as follows:

"By the death of ex-Minister Edward J. Phelps, the country loses an accomplished diplomat, and the profession of the law one of its most distinguished members. When he was appointed by President Cleveland, in 1885, to succeed Minister Lowell at the Court of St. James, his advent into official life was a surprise to the general public outside of New England; but when his personality became better known, his peculiar fitness for the place was recognized, and the country felt assured that the succession of eminent Ambassadors representing this country in England would remain unbroken. Years ago, in 1851, he was Second Controller of the Treasury under President Fillmore. He was a member of the Vermont Constitutional Convention of 1870, and the unsuccessful Democratic candidate for governor and Senator in Vermont in 1880. These were his only connections with official life previous to his appointment as Minister; but he

had long been recognized as one of the leading lawyers of the country. His standing in the profession was such that he became in 1880 the President of the American Bar Association, and his lectures before the Law School of Yale University were distinguished for great learning and clear exposition. His legal ability and training were such as to equip him admirably for any post within the gift of the Government, and his career as Ambassador fully justified his appointment to the great office. His last important public service was as counsel for the United States, in 1893, in the Bering Sea tribunal, when his advocacy of the interests of the United States was invaluable. The ex-Minister was a profound student of the Constitution, the laws, and institutions of the country, and his character was spotless. It is regrettable that such men are not found more frequently in our public life."

INDUSTRIAL COMMISSION'S CURE FOR TRUST EVILS.

DISAPPROVAL and disappointment mark the tone of the radical anti-trust press in their remarks on the preliminary report of the Industrial Commission. After taking testimony and conducting investigations for over a year and a half, the Commission recommends—as remedies for the bad features of trusts—more power for the Interstate Commerce Commission and enforced publicity of trust operations. Many papers believe that the Industrial Commission is right in urging that the Interstate Commerce Commission be given power to stop the rate discriminations by which the railroads help the trusts in their work of killing off competition; but the "publicity" cure seems to have few friends. Papers which remember Mr. Havemeyer's strong testimony before the Commission in regard to the tariff are asking why the report does not recommend a removal of this protection from such trusts as are kept alive by tariff favors. "In carefully avoiding the palpable lower-tariff remedy for undue trust extortion in the home market," says the *Springfield Republican* (Ind.), "the Commission lamentably falls short of rising to the reasonable demands of the situation." The *Philadelphia Times* (Ind.) remarks that nobody will "expect the trusts to get frightened or go out of business because of the Commission's findings." If Congress will give the power recommended to the Interstate Commission, continues the same paper, "one just act will be placed to its credit"; but "as to the rest of its recommendations, they will prove of little or no public value." The *Baltimore Herald* (Ind.) casts doubt upon the constitutionality of the proposed publicity remedy. It says: "Whether a statute which demands of the trusts that they shall give full and accurate information relative to their business, but which imposes no such obligation upon the individual engaged in mercantile or manufacturing pursuits, would be sustained by the courts as constitutional may be doubted. To discriminate between firms and companies engaged in identically the same occupation would appear to be class legislation, and as such contrary to the spirit of the organic law." The *New York Journal of Commerce* (Fin.) thinks the report inadequate. It says:

"Until the recommendations are put in more specific form it will be difficult either to adopt them or dissent from them with any degree of confidence. Some degree of publicity is unquestionably desirable. But any business, whether managed by a corporation or an individual, must be assured an ample measure of privacy with reference to its business contracts. The whole question turns, therefore, upon the kind and degree of publicity to be enforced, and upon this aspect of the case this preliminary report is too indefinite to form the basis of argument. . . . No degree of publicity or other device whatever will fully and satisfactorily meet the demands of the situation unless it is accompanied by some provision for preventing the oppression of small producers now practised and tolerated without redress."

The *Buffalo Express* (Ind. Rep.) declares that "the conclusions of the Commission, on account of their general character,

show how impossible it is to make the trust question a political issue of the first importance." The *New York Sun* (Rep.) and *Tribune* (Rep.), two leaders of the pro-trust press, allow the report to pass without remark.

The recommendations regarding publicity are, first, that the organizers of industrial combinations shall be required to furnish all "material information necessary for safe and intelligent investment"; and, second, that while the business is being carried on, the company's officers shall be required to give to the members of the corporation such information as "may prevent the misuse of their property by directors or trustees." Besides providing thus for the safety of investors both before and after they have invested their money, the report makes the following important recommendation:

"The larger corporations—the so-called trusts—should be required to publish annually a properly audited report, showing in reasonable detail their assets and liabilities, with profit or loss; such report and audit under oath to be subject to government inspection. The purpose of such publicity is to encourage competition when profits become excessive, thus protecting consumers against too high prices and to guard the interests of employees by a knowledge of the financial condition of the business in which they are employed."

As to railroad favors to the trusts, and the remedy, the Commission says:

"From the testimony given before the Commission, and here-

with submitted, it has been proved that, before the passage of the interstate commerce act, discriminating freight rates were frequently secured by large shippers. Other evidence herewith submitted, to be supplemented by additional testimony which will be laid before the Congress shortly, seems to show that like discriminating favors are even now granted. Believing that these discriminations clearly tend toward the control of business by large combinations, your Commission further recommends—

"(a) That the Interstate Commerce Commission be given authority not only to prescribe the methods of keeping accounts of the railroads and to demand reports in such details as it may require, but also to inspect and audit said accounts.

"(b) That the interstate commerce law be so amended as to make the decisions of the Commission operative at a day fixed in the decisions and until reversed by the United States courts, on appeal.

"(c) That the Interstate Commerce Commission be authorized to prescribe classifications of freight articles, and to make rules and regulations for freight transportation throughout the United States; and

"(d) The penalties for violations of the interstate commerce act should be appropriate fines against the carrier, and not imprisonment of officials."

The report is signed by James H. Kyle, chairman, and Boies Penrose, J. J. Gardner, William Lorimer, L. F. Livingston, John C. Bell, Theodore Otjen, Lee Mantle, A. L. Harris, Ellison A. Smythe, John M. Farquhar, Eugene D. Conger, Thomas

CARTOON SNAP-SHOTS OF PUERTO RICO.

PROF. BERNARD MOSES.

JUDGE WILLIAM H. TAFT, PRESIDENT.

PROF. DEAN C. WORCESTER.

W. Philips, C. J. Harris, M. D. Ratchford, John L. Kennedy, and Albert Clarke, commissioners.

Mr. Lorimer withholds his approval from the recommendations regarding railroads, at least until the completed report is formulated to be presented to Congress; and Mr. Clarke dissents from paragraph 6, believing that "rates fixed by the Interstate Commerce Commission should not go into effect in case of appeal until affirmed by court, and that trial on appeal should be expedited."

JUDGE HENRY C. IDE.

LUKE E. WRIGHT.

PHILIPPINE COMMISSIONERS.

THE NEW PHILIPPINE COMMISSION.

SOME comment was aroused last week by Judge Taft's speech in Cincinnati during the banquet given in honor of his appointment as head of the new commission to give civil government to the Philippines. He declared, in effect, that he is an anti-expansionist, but believes we must make the best of the situation in which we find ourselves. While he had hopes "that the jurisdiction of our nation would not extend beyond territory between the two oceans," he is prepared to accept accomplished facts. He continued: "Circumstances beyond our control, the sequel of the Spanish war, have thrust on us responsibility for the future government of the Philippines. . . . I have to deal with the situation as it is, and, whatever the cause of it, the question now is, What are we to do to meet the present needs?" The expansionist press quote these words with warm approval. The anti-expansionist papers also find something to commend in Judge Taft's remarks. He said further: "The incidental benefits to the trade of this country arising from the new relation

must be made subservient to the interests of those who have become our wards." The *New York Evening Post* says that this sentiment is "excellent in spirit," and the *Springfield Republican* says that "with such exalted aspirations every one can be in sympathy." The *personnel* of the commission has aroused little or no hostile criticism. The *Chicago Tribune* says:

"President McKinley has not only managed to represent all sections of

the country in the membership of his new Philippine commission, but he has also brought together a body of able men. Three of the five members are college professors of high standing, and the other two are men of legal and political experience. The president of the commission, Judge William H. Taft, of Ohio, has of late years combined the duties of a United States circuit judge with those of dean of the law department of the University of Cincinnati. Prof. Dean C. Worcester, of the University of Michigan, is the only member of the new body who also served on the first commission. He will be an invaluable member, for he has been on the islands thrice before, and he is beyond question the highest American authority on existing conditions in the Philippines. Judge Henry C. Ide, of Vermont, was chief justice Samoa from 1893 to 1897, and is well versed in international law. Mr. Luke E. Wright, of Tennessee, is a Democratic lawyer of marked ability, a believer in expansion, and will fitly represent the South in the work of organizing the new Philippine government. Prof. Bernard Moses, who has held the chair of political economy in the University of California since 1876, is not only one of the ablest scholars on the Pacific coast, but is especially fitted for this kind of work by his authorship of historical and political treatises such as his 'Democracy and Social Growth in America.' The commission seems to be a judicious combination of the practical and the theoretical elements necessary for the solution of the difficult problems that must arise in creating good political and judicial systems for the Filipinos."

NICARAGUA NEUTRALITY IN THE LIGHT OF HISTORY.

JOHN BASSETT MOORE, professor of international law and diplomacy in Columbia University, who was Assistant Secretary of State during the war with Spain, and was secretary and counsel to the United States Peace Commission in Paris, comes to the defense of the Hay-Pauncefote treaty in an article in the *New York Times* that has attracted considerable notice.

JOHN BASSETT MOORE.

The sections of the treaty that have called out the most emphatic denunciation are those providing for the neutrality of the Nicaragua canal in peace and war, and it is in defense of these sections that Professor Moore enlists his pen. They read as follows:

"1. The canal shall be free and open, in time of war as in time of peace, to the vessels of commerce and of war of all nations on terms of entire equality, so that there shall be no discrimination against any nation or its citizens or subjects in re-

spect of the conditions or charges of traffic or otherwise.

"2. The canal shall never be blockaded, nor shall any right of war be exercised nor any acts of hostility be committed within it."

It may surprise many who have been discussing this phase of the treaty to learn that, as Professor Moore contends, "the policy of a neutralized canal is the historic policy of the United States"; yet he quotes a considerable number of state papers to prove that such is really the case. He begins with President John Quincy Adams and his Secretary of State, Henry Clay, of whom he says that "perhaps there are no other American statesmen who are at once so prominently identified with the two doctrines of the freedom of these continents from European domination and the freedom of the seas." Mr. Clay, while in President Adams's Cabinet, declared that the benefits of a transisthmian canal "ought not to be exclusively appropriated to any one nation, but should be extended to all parts of the globe upon the payment of a just compensation or reasonable tolls." The same view seems to have prevailed nine years later, in 1835, when the Senate passed unanimously a resolution favoring a canal, and favoring "the free and equal right of navigating such canal to all such nations [as should conclude treaties] on the payment of such reasonable tolls as may be established to compensate the capitalists who may engage in such undertaking and complete the work." In 1839 the House also adopted a similar resolution by unanimous vote, favoring "securing forever, by suitable treaty stipulations, the free and equal right of navigating such canal by all nations."

A treaty is still in force, Professor Moore points out, with the Republic of Colombia, concluded in 1846, guaranteeing "the perfect neutrality of the before-mentioned isthmus, with the view that the free transit from the one to the other sea may not be interrupted or embarrassed in any future time while this treaty exists," and President Polk, in submitting the treaty to the Senate, explained that its object "is to secure to all nations the free and equal right of passage over the isthmus." Then, in 1850, came the Clayton-Bulwer treaty between the United States and

Great Britain, stipulating that neither Government should "ever obtain or maintain for itself any exclusive control over the said ship canal," or "ever erect or maintain any fortifications commanding the same, or in the vicinity thereof." In the spirit of all these declarations, President Pierce, in 1856, when grave local disturbances threatened the Panama Railway, sent commissioners to New Granada [now the Republic of Colombia] to propose the creation of an independent, neutral district on the isthmus for the security of the transit route, a proposal, however, said Mr. Marcy, then our Secretary of State, "not designed to secure any exclusive advantages to the United States." Two years later, Mr. Cass, President Buchanan's Secretary of State, declared that "what the United States wants in Central America next to the happiness of its people is the security and neutrality of the interoceanic routes which lead through it."

With Nicaragua itself we have a treaty of similar import, concluded in 1858, and still in force. By this treaty the United States "agrees to extend their protection to all such routes of communication as aforesaid, and to guarantee the neutrality and innocent use of the same. They also agree to employ their influence with other nations to induce them to guarantee such neutrality and protection." Professor Moore remarks that "it is evident that those who have charged Mr. Hay with proposing to give away a right of exclusive control of the Nicaragua canal, granted us by Nicaragua itself, with the implied concurrence of Great Britain and other powers under the Dickinson-Ayon treaty, either have not read essential stipulations of that treaty, or else have not seen fit to quote them." Had it not been for the unsatisfactory attitude of Nicaragua in 1877, indeed, we might to-day be bound in a contract with the principal maritime powers by which every power was "at all times, whether in peace or war," to have "the right of transit" through the proposed canal. Mr. Fish, President Grant's Secretary of State, proposed such an agreement. A leaning toward the idea of American control appears, it is true, in a treaty signed by representatives of the United States and Nicaragua in 1854, but the treaty was never ratified. Mr. Frelinghuysen, President Cleveland's Secretary of State, signed the treaty for the United States, but President Cleveland, after sending it to the Senate, recalled it, and said in his next annual message: "Whatever highway may be constructed across the barrier dividing the two greatest maritime areas of the world must be for the world's benefit, a trust for mankind, to be removed from the chance of domination by any single power, nor become a point of invitation for hostilities or a prize for warlike ambition." This brings us down to the present Hay-Pauncefote treaty, which, Professor Moore believes he has shown, is directly in line with our historic American policy.

The idea of American control, however, has not lacked influential advocates, and Professor Moore devotes a column to an outline of their attitude. The idea, he says, "seems to have originated with Senator Douglas," who adopted it for political reasons. Then President Hayes and his Secretary of State, Mr. Evarts, thirty years after Senator Douglas, advocated American control, when the Colombian Government gave some exclusive concessions to the French company. Neither, however, proposed that the canal should be fortified. Such a proposal was put forward by Secretary Blaine, who made a considerable effort to have the Clayton-Bulwer treaty modified so as to admit of American control. Mr. Frelinghuysen also favored American control, and cast doubts on the validity of the Clayton-Bulwer agreement. Professor Moore examines at some length this claim that Great Britain's colony of Belize, or British Honduras, is contrary to the provisions of the Clayton-Bulwer treaty; but he finds that it is not. Mr. Clayton's footnote covering England's claim to that piece of territory, he finds, was called up in the Senate by some who objected to it; but the Senate decided not to take any action in the matter. As the treaty has been recognized from time to

time by our State Department as in force, Professor Moore declares that it is still binding.

Some may forget, too, that Nicaragua also has treaties with other nations. Indeed, Spain, France, and Italy have agreements binding Nicaragua to give them as great privileges in the use of the canal as she gives to any other nation; and Costa Rica, through whose soil part of the canal is expected to pass, has a similar agreement with Spain. Professor Moore thinks, in view of the neutralization of the canal guaranteed by these treaties, that "if the Clayton-Bulwer treaty were abrogated, the situation would not be radically altered."

As the Senate committee on foreign relations has recommended an amendment to the Hay-Pauncefote treaty reserving to this country the right to defend the canal in war time, and as many Senators are known to favor such an amendment, a belief is growing that Professor Moore and the other friends of absolute neutrality will not see their hopes realized.

CRIMINALS RECLAIMED BY PAROLE LAWS.

THE convicts in the New York State prisons are looking anxiously to the present legislature in the hope that it will enact a parole law that will let some of them out into the wide world again; and their paper, *The Star of Hope*, is fairly bristling with articles, short and long, advocating the measure. To aid in the campaign of education, *The Star of Hope* presents a valuable summary of what the parole laws in other States have done for criminals. New York State, with no parole law, sends its criminals to prison for fixed terms, then sets them altogether free—and seventy per cent. of them return to lives of crime. Ten other States, with parole laws, release convicts having good records, keeping them under surveillance until convinced of their reformation. Here are records from different States:

	Percentage of Offenders Redeemed.	Percentage of Offenders Returned to Crime.
Pennsylvania.....	85 per cent.	15 per cent.
Ohio.....	90 "	10 "

The Star of Hope's editor, convict No. 1,500, of Sing Sing prison, gives as his leading article in a recent issue a description of the encouraging success that has attended the workings of the parole law in Indiana. He does not write from any experiences of his own with the law in question, but quotes from a report made by W. H. Whittaker, clerk of the Indiana State prison at Michigan City. Before the parole law was passed, no distinction was made between the prisoners. "The result was," says Mr. Whittaker, "that many a young boy who had committed his first offense was thrown into prison and put into the same cell with an old, experienced offender, and after serving his term of one or two years, with no attention being given him while in prison, he was discharged a graduate in crime." When the new law was passed, however, in 1897, one of the State prisons was set aside as a reformatory, and all convicts under thirty years of age, unless sentenced for life or for treason, are now sent there, and escape the influence of the older and more hardened criminals. In both the State prisons three reforms were instituted at once. For the lash was substituted solitary confinement; instead of the striped uniform three grades were established, stripes for the lowest, a checkered pattern for the better-behaved, and cadet blue for the best; and, finally, the lock-step was abolished. These three reforms, Mr. Whittaker declares,

"have done more to improve the condition of the prisoner and make him feel like a man than anything [else] that has been done."

This law has now been in operation in Indiana for nearly three years. Mr. Whittaker says of its operation during this period:

"We have paroled 132 prisoners, of which number 6 have been returned for violation of their parole and 2 have failed to make their reports, and at this time we do not know where they are. This showing, as compared with other institutions, is remarkably good, only being a fraction over 6 per cent. of the prisoners paroled that have violated the confidence placed in them by the management. We have now eighty men on parole that are making their reports promptly, earning all the way from \$5 to \$20 per month and their board, and in many cases are caring for their families, that would otherwise be a public charge upon the township where they live had the prisoner been kept in confinement."

The New York State Prisons Commission, in its annual report to the legislature, recommends similar reforms in New York State.

LETTERS AND ART.

A NEW REVOLUTIONARY DRAMA.

THE French Government has prohibited the public performances of the revolutionary play just written by Urbain Gohier, the rising young journalist and author who has taken Clemenceau's place on the *Aurore* and who had been one of the leading champions of Dreyfus. Gohier is an ex-soldier, ex-antisemite, and the author of several pamphlets and articles on the abuses of the military system. For one of his pamphlets, "The Country vs. the Army," he was tried shortly after the Zola sensation and acquitted. The municipal government of Paris ordered three hundred copies of the pamphlet circulated at public expense. He is again under indictment for alleged assaults on the army, and his leaders in *L'Aurore* keep him constantly in hot water. His force and talent are admitted by his opponents, but he is criticized for being too extreme. He has been fiercely attacking the present cabinet of "Republican defense" as cowardly and treacherous. His drama was expected to produce a sensation; but the censor's veto compelled him to give a private performance of it before a select audience. It will be published in a magazine.

The name of the play is "Le Ressort" (literally "The Resort," but more properly "The Inspirer"), and its essential motive is the conflict between love and devotion to the cause of the people. The plot is thus summarized in *L'Aurore* by its dramatic critic:

The hero, *Philippe Redan*, is a lawyer by profession and the leader of a secret revolutionary society which is planning an uprising. Unfortunately, he does not give his undivided energies to the organization of the revolt. He is passionately attached to *Suzanne Péricand*, the wife of a bankrupt financier and exile, whose whereabouts she does not know. *Redan* had been too ardent a reformer and dreamer to think of personal joys, and had affected to discard love; but in *Suzanne* he at last found an ideal, a comrade as well as sweetheart, an inspiration. Her nobility and beauty and admiration were the mainsprings of his enthusiasm and energy for his cause.

The time fixed upon for the uprising arrives, and everything is ready. The insurgents hold the last council on the eve of the revolution, appoint committees and chiefs, and issue final orders. This scene is declared to be moving and exciting. *Redan* tests the fidelity of each conspirator, asking each why he is ready to die for freedom. The answers constitute an indictment of the social order. One man had been unable to earn bread and had found it impossible to remain honest; another had had his two sons "stolen" from him by the Government and killed in colonial and predatory wars. A third cries that only the rich can afford to have children; the poor must forego the luxury.

There are two spies and traitors in the assembly. One is discovered, and he is at once sentenced to death. By a fatal accident, the other is chosen to inflict the penalty. He stabs his fellow spy without a qualm, thinking only of his reward for betraying the conspiracy.

But the police, aware of the plot, fear only the leader. He is handed an anonymous letter in which *Suzanne*, his ideal, is charged with infidelity to him. He goes to the place indicated and finds her with another lover, an officer. A duel is at once arranged; but the long-absent husband appears on the scene, kills the officer, and dismisses *Redan* as a mere harmless visionary whose affection for his wife had been purely platonic.

The uprising takes place, but it is doomed to failure and disaster. The leader is apathetic and indifferent. His own personal disappointment is too keen to allow him to do his duty. The cause of the people is abandoned, betrayed, lost once more. The insurgents die in the streets, and *Redan* gladly exposes himself to danger and is killed together with his companions. "The Republic is saved!" cries the spy. "Long live the Emperor!" cries a citizen who is dissatisfied with the Republic. And the "revolution" is over.

The critic of the *Aurore* declares that the play is strong, well-constructed, dramatic, and artistic. Gohier, he says, has stage-

craft, wit, and a mastery of satire and irony. The dialog is terse, swift, and clear, and sympathy with the lesson—how not to make revolutions—is not necessary to the enjoyment of the play.—*Translation made for THE LITERARY DIGEST.*

RECOLLECTIONS OF BROOK FARM AND ITS OCCUPANTS.

SOME fresh reminiscences of that much bewritten social experiment known as Brook Farm have just come from the pen of Mrs. Ora Gannett Sedgwick, a writer who, at the time of its establishment in West Roxbury, Mass., was but a girl of sixteen. Her anecdotes deal with several of the famous men who made the community renowned throughout the world. The writer went thither in June, 1841, and made her home at the Hive, the principal community edifice. Of this building and its inmates, she writes (in *The Atlantic Monthly*, March):

"The Hive was the Ellis farmhouse, one of the lovely old New England houses with a broad hall running through the whole length, and having a door at each end. From the left side of this hall, as you entered, a staircase went straight up to the second floor. The walls of the hall were lined with open bookshelves filled with rare English, French, and German books, belonging to Mr. Ripley, who had, I imagine, one of the finest libraries in Boston at that time, especially in foreign works. After the Eyrie was built the Hive became merely the working headquarters, and this library was removed to the new building; but the books were always free to all, a fact which showed the real generosity of Mr. Ripley.

"There was a comfortable sofa in the hall, under the stairs, on which Nathaniel Hawthorne, who then occupied the front room at the right, used to sit for hours at a time, with a book in his hand, not turning a leaf, but listening with sharp ears to the young people's talk, which he seemed to enjoy immensely, perhaps with the satisfaction of Burns's 'Chiel amang ye takin' notes.' It is, however, but just to Mr. Hawthorne to say that, whatever use he made in 'Blithedale Romance' of the scenery and 'romantic atmosphere' of Brook Farm, he can not be accused of violating the sanctities of the home and holding up to public observation exaggerated likenesses of his associates there. I spent some delightful hours with him the winter he died, when he assured me that Zenobia represented no one person there.

"I remember well that George P. Bradford and Mr. Hawthorne had the care and milking of the cows, but not to the exclusion of other less Arcadian labors, as is evident from 'The American Note-Books.' Mr. Hawthorne seems to have had a rather tender feeling for his charges, expressing forcibly in 'The Blithedale Romance,' chapter xxiv., his indignation at their 'cold reception' of him on his return from an absence of several weeks. I recall distinctly the names of two cows, Daisy and Dolly, from the fact that Messrs. Hawthorne and Bradford were particular always to assign to these cows adjoining stalls in the barn at night, because they were always together in the pasture. I recollect also Mr. Bradford's often begging me to stop at the gate through which the long line of cows came at evening, and watch the varying and interesting expressions on their faces.

"The pigs too came in for their share of Mr. Hawthorne's care. When, in the following winter, the Brook Farmers, as a delicate attention, sent a sparerib to Mrs. George S. Hillard, with whom he was then staying in Boston, thinking to please him, he raised his hands in horror and exclaimed, 'I should as soon think of a sculptor's eating a piece of one of his own statues!'

"As I remember our meals, they were most delightful times for talk, humor, wit, and the interchange of pleasant nonsense. When our one table had grown into three, Charles A. Dana, who must have been a very orderly young man, organized a corps of waiters from among our nicest young people, whose meals were kept hot for them, and they in their turn were waited on by those whom they had served. I have seen Mr. Dana reading a small Greek book between the courses, tho he was a faithful waiter. The table talk was most delightful and profitable to me. Looking back over a long and varied life, I think that I have rarely sat down with so many men and women of culture, so thoroughly unselfish, polite, and kind to one another, as I found at those

plain but attractive tables. All seemed at rest and at their best. There was no man tired with the stock market and his efforts to make or to increase a big fortune, coming home harassed or depressed, too cross or disappointed to talk. There was no woman vying with others in French gowns, laces, and diamonds. The fact that all felt that they were honored for themselves alone brought out more individuality in each, so that I have often said that I have never elsewhere seen a set of people of whom each seemed to possess some peculiar charm."

Mrs. Sedgwick evidently found Hawthorne one of the most interesting figures of that remarkable company, for she returns several times to speak of him:

"I do not recollect Hawthorne's talking much at the table. Indeed, he was a very taciturn man. One day, tired of seeing him sitting immovable on the sofa in the hall, as I was learning some verses to recite at the evening class for recitation formed by Charles A. Dana, I daringly took my book, pushed it into his hands, and said, 'Will you hear my poetry, Mr. Hawthorne?' He gave me a sidelong glance from his very shy eyes, took the book, and most kindly heard me. After that he was on the sofa every week to hear me recite.

"One evening he was alone in the hall, sitting on a chair at the farther end, when my room-mate, Ellen Slade, and myself were going upstairs. She whispered to me, 'Let's throw the sofa pillows at Mr. Hawthorne.' Reaching over the banisters, we each took a cushion and threw it. Quick as a flash he put out his hand, seized a broom that was hanging near him, waved off our cushions, and threw them back with sure aim. As fast as we could throw them at him he returned them with effect, hitting us every time, while we could hit only the broom. He must have been very quick in his movements. Through it all not a word was spoken. We laughed and laughed, and his eyes shone and twinkled like stars. Wonderful eyes they were, and when anything witty was said I always looked quickly at Mr. Hawthorne; for his dark eyes lighted up as if flames were suddenly kindled behind them, and then the smile came down to his lips and over his grave face.

"My memories of Mr. Hawthorne are among the pleasantest of my Brook-Farm recollections. His manners to children were charming and kind. I saw him one day walking, as was his custom, with his hands behind his back, head bent forward, the two little Bancrofts and other children following him with pleased faces, and stooping every now and then with broad smiles, after which they would rise and run on again behind him. Puzzled at these maneuvers, I watched closely, and found that altho he hardly moved a muscle except to walk, yet from time to time he dropped a penny, for which the children scrambled."

Of one unwarranted calumny Mrs. Sedgwick makes explicit denial, and we feel relieved to hear that there really was no such shocking thing as flirtation carried on by the youths and maidens at sober Brook Farm:

"I have been much with young people in my life—a teacher for some years, a mother with several children, and now a grandmother with hosts of grandchildren—and I have never seen more truly gentlemanly and gentlewomanly relations between youths and maidens than at Brook Farm. I am sure not only that no harm was done, either to young men or maidens, by the healthful and simple intercourse that was invariable between them, but that very much good came, especially to the young men. There seemed a desire in each person to make Brook Farm a happy home. There were few of us who had not enough work each day, either manual or intellectual, generally both, to give a keen zest to the pleasures of the evening. It seems to me as I look back upon the happy hours of recreation that we were more amiable and content with ourselves and one another than any circle of people I have ever known. Among our daytime amusements were some charming picnics in the pine-tree grove, one of which is almost exactly described in 'The Blithedale Romance.'

"In the happy Brook-Farm evenings there were games for the young people at the Hive, while once or twice a week, at the same place, the older classes listened to Mr. Bradford's readings of Racine's and Molière's plays—delightful readings they were—or to discussions in Mr. Ripley's moral-philosophy class. At the Eyrie we had charming singing by the two Curtis brothers,

occasional concerts given by people from 'the world,' talks by Margaret Fuller, William H. Channing, and others, sometimes dancing in moderation, and once in a while a fancy-dress party.

"Everybody on the farm knew that he or she was cordially invited to all these various amusements, and would be kindly received. The result was that all sorts and conditions of men mingled freely and without sense of constraint."

Concerning George William Curtis and Charles A. Dana, Mrs. Sedgwick writes:

"The arrival of George William Curtis, then a youth of eighteen, and his brother Burrill, two years his senior, was a noteworthy event in the annals of Brook Farm, at least in the estimation of the younger members. I shall never forget the flutter of excitement caused by Mr. Ripley's announcing their expected coming in these words: 'Now we're going to have two young Greek gods among us.' . . . On a bright morning in May, 1842, soon after Mr. Ripley's announcement, as I was coming down from the Eyrie to the Hive, I saw Charles A. Dana with two strange young men approaching my 'magic gate' from the direction of the Hive. Arriving at the gate before me, Mr. Dana threw it open with the flourish peculiar to his manner, and stood holding it back. His companions stood beside him, and all three waited for me to pass through. I saw at a glance that these must be the 'two young Greek gods.' They stood disclosed, not like Virgil's Venus, by their step, but by their beauty and bearing. Burrill Curtis was at that time the more beautiful. He had a Greek face, of great purity of expression, and curling hair. George too was very handsome—not so remarkably as in later life, but already with a man's virile expression.

"About George William Curtis there was a peculiar personal elegance, and an air of great deference in listening to one whom he admired or looked up to. There was a certain remoteness (at times almost amounting to indifference) about him, but he was always courteous. His friends were all older than himself, and he appeared much older in manners and conversation than he was in years; more like a man of twenty-five than a youth of eighteen."

Brook Farm was more properly an association than a community, and the inmates might either eat at the common table or by payment of a certain sum have their meals served in their apartments. The association might have grown into a genuine co-operative village; but after over six years of successful life, it received a heavy blow in the destruction of the Philanstery on March, 1846; and not long after, Brook Farm closed its existence. Mrs. Sedgwick says that after over a half-century of observation of life in the world since that time, she is more and more convinced that her estimates of the life at Brook Farm are true. There was very much "sweetness and light" there—"a light too bright for most people at that time to bear."

"With the progress of time, as higher moral and scientific developments have improved the internal as well as the external vision, the world is coming to see that living for others is the true living. Certainly, most of the persons whom I knew at Brook Farm lived on a higher plane than their contemporaries, recognizing, as they did, others' needs as of equal moment with their own. I can recall so many unselfish, loving, gentle-mannered people that I am sure that if others did come, they could not have lived contentedly there."

Mrs. Sedgwick believes that the influence of Brook Farm was deep and lasting, and that its illustrious members, later scattered throughout the country and occupying positions of highest influence in various fields of art, letters, and statesmanship, carried the ideal of this unique life engraved deep within their consciousness. She concludes her article with these words from a friend, Mr. George P. Bradford, summing up the value which the Brook-Farm experiment has for the world of our time:

"The opportunity of very varied culture, intellectual, moral, and practical; the broad and humane feelings professed and cherished toward all classes of men; the mutual respect for the character, mind, and feelings of persons brought up in the most dissimilar conditions of living and culture, which grew up from free commingling of the very various elements of our company

the understanding and appreciation of the toils, self-denial, privations, which are the lot to which so many are doomed, and a sympathy with them, left on many a deep and abiding effect. This intercourse or commingling of which I have spoken was very simple and easy. When the artificial and conventional barriers were thrown down, it was felt how petty and poor they are. They were easily forgotten, and the natural attractions asserted themselves. So I can not but think that this brief and imperfect experiment, with the thought and discussion that grew out of it, had no small influence in teaching more impressively the relation of universal brotherhood and the ties that bind all to all, a deeper feeling of the rights and claims of others, and so in diffusing, enlarging, deepening, and giving emphasis to the growing spirit of true democracy."

A PRISON NEWSPAPER.

NOT all the journalistic talent of the country is on the safe side of the prison bars. At Sing Sing, N. Y., is published a bi-weekly paper which suggests the thought that a goodly number of bright newspaper men are within the prison walls. It is called *The Star of Hope*, and represents the three State prisons of Auburn, Sing Sing, and Clinton. All the work of editing, type-setting, and printing is done by the inmates. It has one advantage over other journals in the fact that its circulation, of 4,700, is assured. There are always new readers coming to supply the places of those who have changed their place of residence for one presenting more opportunities of freedom. From the Boston *Transcript* we quote the following account of this journal:

"The matter contained in the paper has a wide range of subjects, including religious discussion, humorous articles and jokes and hits. The editorial page shows a good deal of thought and research. Subjects of national interest and others having a direct bearing upon the lives of the prisoners themselves are treated, all being edited, be it remembered, by inmates of the institutions. The educational and moral value of the publication can not be estimated. The interest felt in it, however, is illustrated by a letter appearing in a recent number, reading: 'This is my first attempt at writing for the paper. Be patient with me, for when I came here I could not write nor read.' Another convict writes: 'What a blessing the paper is to us men. I send you a feeble attempt, and if you can use it, will be glad to try again.' One column is given to a brief review of the important happenings throughout the world, and each number contains a column or two of original poetry, much of it not of the highest order, but some fully as good as appears in some publications not printed behind prison walls, with only convicts for contributors. . . .

"The ubiquitous reporter of the woman's prison at Auburn, Mrs. No. 196, in a recent number, has an animated account of the

caged Patis sang in concord and discord, out of *The Star*, 'Yankee Dewey, how d'you do? Dewey, you're a dandy.'"

"Anything out of the ordinary in the culinary line is received evidently with great rejoicing by the convicts, for the same woman reporter exclaims: 'We had stewed tomatoes on Monday. Can you beat that, you *bon vivants* of the men's retreat for re-

A DEPARTMENT HEADING FROM "THE STAR OF HOPE."

tired bankers.' Along the same line is a paragraph under the head of 'Whisperings,' which reads: 'They do say that the Friday dinner of boiled bluefish, brown bread, and coffee, with milk and sugar in it, was a grand treat.' Under the same caption it is remarked that 'a Bowery girl with a Smith & Wesson 32-caliber gun in her clothes can be safely termed an armed cruiser.'

"In one humorous article, Auburn prison is compared to a university, requirements for admission being as follows:

- "1. Candidates must have graduated from some recognized jail.
- "2. Must give satisfactory evidence of an immoral character.
- "3. And must pass a successful examination in the following branches: Intoxication, dissipation, profanation, depredation, speculation, hyper-recreation, and peripatetic rustication."

"That department of the paper devoted to Clinton prison is usually found to be scintillating with wit. There are finger-marks which point to the editor being Irish. He inquires how far a man drops when he falls asleep, and records that 'One of our ex-gentlemen remarked the other day that association with himself is spoiling his morals.'

"*The Star*, however, is by no means given up to wit and humor. Some of the writers delight to deal with subjects metaphysical. Sing Sing, 126, is the signature attached to the following quotation from some current publication: 'Moral truth needs no aid from moral untruth; falsehood can give truth nothing that it is not better without.'

"In the 'Open Parliament' such subjects are discussed as 'The Bible,' 'Our Individual Responsibility,' and 'The Rights of the Negro.' An educational department is made good use of by the convicts, particular interest being apparently manifested in history. One page is given up to matters of religion, and many of the articles which appear on that page might find a place with equal appropriateness in a religious journal. Altogether *The Star of Hope* is a revelation of the lives, thoughts, and aspirations of the men and the women who go to make up our vast prison population."

CHOPIN AND THE MALADY OF THE CENTURY.

DURING the last half-century, two men have been rulers in the high realm of musical emotion—Richard Wagner and Frédéric François Chopin, the "macrocosm and the microcosm" as a recent writer characterizes them. Wagner and Chopin, continues the same critic (Mr. James Huneker), voiced their age, and therefore we listen eagerly to their mystic musical interpretation of thoughts that lie beyond the reaches of our souls—to "these vibrile prophetic voices, so sweetly corrosive, bardic, appealing." Chopin is nearer the soil, says Mr. Huneker, in his selection of forms, and his style is more naive and original than

A DEPARTMENT HEADING FROM "THE STAR OF HOPE."

doings in the 'ladies' retreat.' She writes: 'Every window on the front of our ladies' boarding-house was handsomely decorated with flags on the two Dewey days; the balcony over the front door was especially remarkable, being completely covered with Old Glory. The girls celebrated on their own hook, and our

Wagner's. Mr. Huneker continues (in *Scribner's Monthly*, February) :

"Chopin has greater melodic and as great harmonic genius as Wagner; he made more themes; he is, as Rubinstein wrote, the last of the original composers; but his scope was not scenic; he preferred the stage of his soul to the windy spaces of the music-drama. His is the interior play, the representation of psychomachy, the eternal conflict between body and soul. . . . He is nature's most exquisite sounding-board, and vibrates to her with an intensity, color, and vivacity that have no parallel. Stained with melancholy, his joy is never that of the strong man rejoicing in his muscles. Yet his very tenderness is tonic and his cry is ever restrained by an Attic sense of proportion. Like Alfred de Vigny, he dwelt in a *'tour d'ivoire'* that faced the West, and for him the sunrise was not, but oh! the miraculous moons he discovered, the sunsets and cloud-shine!"

Chopin is not ethical in his motive, says Mr. Huneker; he may prophesy, "but he never flames into the divers tongues of the upper heaven." Yet he has found the malady of the century and is its chief spokesman:

"After the vague, mad, noble dreams of Byron, Shelley, and Napoleon, the rebound bore a crop of disillusioned souls. Wagner, Nietzsche, and Chopin are the three prime ones. Wagner sought, in the epical rehabilitation of a vanished Valhalla, a surcease from the world-pain. He consciously selected his anodyne, and in *'Die Meistersinger'* touched a consoling earth. Chopin and Nietzsche could not. Temperamentally finer and more sensitive than Wagner—the one musically, the other intellectually—they sang themselves in music and philosophy, because they could not do otherwise. Their nerves rode them to death. Neither found the serenity and repose of Wagner, for neither was as sane, and both suffered mortally from hyperesthesia, the penalty of all sick genius.

"Chopin's music is the esthetic symbol of a personality nurtured on patriotism, pride, and love; that it is better expressed by the piano is because of that instrument's idiosyncrasies of evanescent tone, sensitive touch, and wide range in dynamics. It was Chopin's lyre, 'the orchestra of his heart'; from it he extorted music the most intimate since Sappho. Among lyric moderns Heine more closely resembles the Pole. Both sang because they suffered, sang ineffable and ironic melodies. Both will endure because of their brave sincerity, their surpassing art. The musical, the psychical history of the nineteenth century would be incomplete without the name of Frédéric François Chopin. Wagner externalized its dramatic soul; in Chopin the mad lyricism of the *Zeitgeist* is made eloquent. Into his music modulated the spirit of his age; he is one of its heroes, a hero of whom Swinburne might have sung

O strong-winged soul with prophetic
Lips hot with the blood-beats of song;
With tremor of heart-strings magnetic,
With thoughts as thunder in throng;
With consonant ardor of chords
That pierce men's souls as with swords
And hale them hearing along."

RISE AND FALL OF THE DIME NOVEL.

IN the opening chapters of "Tommy and Grisel," Mr. Barrie gives a delectable description of a writer of "penny-dreadfuls." There will probably always be a demand for "the great Pym" and his sort; but it is doubtful if ever again he can flourish in this country as in the decade from 1860 to 1870. Writing in *The Bookman* (March), Mr. Firmin Dredd describes the genesis, development, and (as a distinct class) extinction of the "dime novel," which has really played a conspicuous part in the literary history of the country. It was taken seriously enough at the time by multitudes of imitative boys and by their irate parents to justify serious consideration now by the critics.

The dime novel, we are told by Mr. Dredd, dates from the year 1860. Shortly before, the firm of Beadle & Adams began a series of cheap publications for the lower middle classes—books on eti-

quette, letter-writing, etc., which informed the gentle reader that he or she should not say "I is" or "he read them papers," if wishful to rank among the choice and elegant spirits of society. Then in the spring of 1860, Mr. Orville J. Victor conceived the idea of the dime novel. The Beadle series was begun, and one of the most popular American writers of the day, Mrs. Ann S. Stephens, contributed the first story, "Malveska, the Indian Wife of the White Hunter." Soon a staff of writers gathered, who combined a knowledge of the popular taste, dexterity in the working out of conventional plots, and an industry that was simply amazing. Among them was Mr. Edward S. Ellis, afterward one of the most popular of juvenile writers. Despite the extravagant plot and crude treatment of these early tales, Mr. Dredd thinks that they were wholesome, and some of them certainly attained to an extraordinary circulation. We quote again:

"Probably none of the writers of these books was more successful in commanding a wide circle of readers than Mrs. M. V. Victor. The fourth of the stories which she contributed to this series attained a sale which makes most of the records of book sales of the present day appear insignificant in comparison. This was 'Uncle Ezekiel,' the story of an alleged typical Yankee and his exploits at home and abroad. In the United States the book within a short time reached a total sale of 270,000. In England the sales reached 211,000, a total of 481,000. This, however, was surpassed by 'The Backwoods Bride,' of which 550,000 were sold, and 'Maum Guinea.' The last named was a story of negro life, which, appearing at the time of the war, actually rivaled in popularity Mrs. Harriet Beecher Stowe's 'Uncle Tom's Cabin.'

"The success of this series in a few years brought many rivals into the field. George Munro, who had been a bookkeeper in the employ of Beadle & Adams, began publishing himself books along the same line about 1865. A few years later the standard orange covers of the original dime novels were replaced by covers of gaudily colored design. The typical dime novel of 1870 . . . is very interesting as showing the crudity of the colored prints of the time. But the cheap novel of the early seventies was only a step in the whole scheme of evolution. With the great competition came a marked decline in the quality of the material. Each year showed advances in outright sensationalism, until the culmination was reached in the typical shocker of recent memory."

GOETHE AND RECENT LITERARY MOVEMENTS IN GERMANY.

GOETHE'S fame, perhaps more than that of any other of the world's celebrated writers, has been subject to successive revisions and judgments. In recent years, Professor Dowden, Sir John Seeley, M. Edouard Rod, the French critic, have in turn declared that Goethe must be reread in the light of the critical canons of to-day; and the recent celebration of the anniversary of Goethe's one hundred and fiftieth birthday makes the present time a particularly appropriate one for such a rereading. A writer in *The Quarterly Review* (January) says:

"The present attitude of the Germans as a nation toward Goethe is an element in the evolution of the new empire which no observant student can afford to overlook. At no time in the history of Germany, not even in the wild years of fermentation when, with such lordly generosity, Goethe flung out masterpieces like 'Goetz' and 'Werther' into 'the seed-field of time,' has the poet been held in such high esteem by his people as he is to-day, at no time has he been hailed as their greatest literary genius with such accord as on the hundred and fiftieth anniversary of his birth, the 28th of August last. This is a fact which demands a little closer attention; it is worth while to inquire what ground the Germans have for thus becoming, in the maturity of their political life, such enthusiastic 'Goetheaner.' Is it merely the vanity of a prosperous nation which seeks an intellectual leader and a spiritual head, and, in default of a Dante or a Shakespeare, has deified Goethe? Or, if other and more solid reasons exist, are they of a sufficiently cosmopolitan nature to justify us in con-

fronting with them the indifference toward Goethe which other nations show?"

After sketching Goethe's connection with the Romantic movement, which the writer regards as the "chief motive force at the bottom of nineteenth-century thought and literature," and showing how Goethe was its chief spirit until it wandered away into what he believed to be an extravagant worship of medievalism as something superior to the ancient world, the writer refers to the rebirth of the old Romanticism in Germany since 1870. The new ideas "filtered into Germany," he says, "with the literature which had sprung up in Scandinavia from the ashes of Hegelianism," and these ideas "met on German soil with another and stronger current, the current of literary naturalism that had set in a little later from France":

"These currents united to form the basis on which the latest literary revival in Germany has arisen. The veteran novelist, Friedrich Spielhagen, was, we think, the first to compare the literature of the last ten years in Germany with the 'Sturm und Drang' of the eighteenth century; but the leaders of the revival had already felt, if not expressed, this affinity, and it created at once a bond of sympathy between them and Goethe. The young Goethe, the Goethe of 'Goetz' and 'Werther,' became the patron saint of the new literary movement. The 'ewige Wiederkehr,' to use Nietzsche's expression, had brought round again another of these periods of fermentation and convulsion in which the German spirit seems to renew its youth.

"As the turbulence gradually subsided, other points of sympathy and congeniality with Goethe were discovered besides those of his youth. Now, at last, in the philosophy of self-assertion, in the insistence on the rights of the individual to the fullest development of which he is capable—this philosophy of which Nietzsche became the spokesman—Goethe's optimism and individualism received full and jubilant recognition. To Nietzsche himself Goethe was 'this veritably great man, for whose sake one is bound to love Germany.' Above all, it was Goethe's magnificent personality, his egotism, his ideals of self-culture, his dreams of a world-literature, which appealed most strongly to modern Germany. It would be difficult to overestimate the boon which Goethe has been to the present generation of German writers and artists; he has been a kind of guiding star to them in their often blind enough gropings after a philosophic and artistic creed; an ever-present example of the higher intellectual life. No century can show so many examples as ours of men of genius to whom are applicable the words in which Goethe summed up the character of one of the most promising of his predecessors—Christian Günther: 'He never contrived to tame himself, and so his life ran to waste, like his poetry.' Goethe, by his wise self-control, by his 'Lebens ernstes Führen,' escaped this fate, and his life stands out as a great example of how it is to be escaped. At thirty he wrote to Lavater the memorable words:

"The desire to raise as high as possible the pyramid of my existence, of which the base is given and laid for me, predominates over all else and hardly allows itself to be forgotten for a moment. I must not lose time; I am no longer in my first youth; my destiny may break me in the middle, and the Tower of Babel will be left blunt and unfinished. At least it shall be said that it was boldly planned. If I live, my strength, God willing, will hold out to the top."

"In one respect Goethe was highly favored by fortune. If he is one of the greatest among men of letters, this is largely because he lived to put the last stone on the summit of 'the pyramid of his existence.' It has often been said that Goethe's life was the grandest of his works, and this is, if we are not mistaken, the thought that is uppermost in the minds of our German contemporaries.

"The fact that Goethe is acknowledged as a leader in the present literary movement in Germany has given the latter a stability and weight which one misses in the contemporary movements of other literatures. . . . The new and newest German literature, with its Sudermanns and Hauptmanns, has hardly yet achieved enough to allow us to speak of it in superlative terms, and, so far, it has added nothing to the masterpieces of the world's literature; but it is, at least, the healthiest of all the new or renewed

literatures of Europe at the close of the century, and it has grown healthy in the shadow of Goethe."

If this is the position which Goethe holds to-day among his own race, his genius must have some special message for us also. Yet we can not, says the writer, return to Carlyle's dictum of "Close thy Byron, open thy Goethe," nor can we accept Carlyle's estimate of Goethe as the last word of criticism for our own age, even tho it embodies many elements of truth:

"We must turn to Goethe himself, and the key to his work is his life. Much of his poetry may in itself seem dull or old-fashioned to us nowadays, much may be without inherent charm; but few are able to escape the spell of that wonderful, many-colored life, without question the most wonderful in the annals of literary men. To appreciate fully Goethe the poet, we must first study Goethe the man. As he himself once said to Eckermann, he is no poet for the mass; his works are written for individual men 'who have set up similar aims before them and are making their way along similar paths'; to study him may not make us better citizens or better patriots, but it will give us, to use an expression of his own, 'a certain inward freedom'; and, after all, 'inward freedom' is one of the most precious things that can be communicated by one mind to another."

The Author of "Cyrano."—Mr. Cleveland Moffett has been interviewing Mr. Edmond Rostand, and gives us some additional facts concerning the famous young playwright's views and methods (*McClure's*, March). The following remarks by M. Rostand, for example, will strike a large section of the American public as an agreeable surprise coming from a maker of French plays:

"I recognize the responsibility of a dramatist, especially one who wields great power by reason of success. Whether he intend it or not, it is certain that his plays do teach and influence many people for good or ill. I hope I shall always keep to the purpose that has so far guided me, of setting forth the fine and worthy in life rather than the despicable, the clean and beautiful rather than the ugly, the noble and inspiring rather than the perverted. In a broad sense, 'Cyrano' was intended as a lesson; that is, a stirring of sympathy for loyalty and chivalry and courage, just as 'L'Aiglon' [the play on which M. Rostand was at this time engaged] will, I hope, bring a national thrill for unsullied patriotism and love of country."

Still more surprising to many will be Mme. Bernhardt's enthusiasm. She says:

"I thank God, monsieur, that He has let me be alive now to interpret a part, at least, of what this great genius will produce. If Rostand were to die, it would be a calamity to mankind, for he is bringing in a new period in the drama—a clean, wholesome period. If Rostand were to die, I think—why, I think I should want to die too."

Of Rostand's new play, "L'Aiglon," the *Courier des Etats Unis* reports Mme. Bernhardt as saying:

"In this play, Rostand displays extraordinary talent, and maintains the best traditions of French dramatic art. 'L'Aiglon' is the history of the son of Napoleon I., who was King of Rome. I will play this rôle. Hamlet has already made me familiar with male parts. The character of the young king is admirably represented. One of the most touching scenes is that in which Napoleon proposes to abdicate in favor of his son."

NOTES.

THE destruction of the Théâtre Français by fire on March 8 is a loss to the world of art. For more than two centuries it has been the home of French comedy, from Molière and Adrienne Leconreux to Coquelin, and Jane Hading. The library of the theater contained everything of interest in dramatic art, and its archives, which went as far back as 1658, formed a daily record of the history of the stage during that long period.

THE dramatization of Mr. Hardy's "Tess of the D'Urbervilles" by H. A. Kennedy was not cordially greeted in London. The *London Times* seems to think that its intellectual qualities will prevent its being a popular success; that it is not emotional enough and, in parts, is unnatural. Mr. Kennedy's version is not so effective dramatically as the one by Lorimer Stoddard, presented by Mrs. Fiske last year at the Fifth Avenue Theater.

SCIENCE AND INVENTION.

IS DISTILLED WATER POISONOUS?

THE recent controversy over the effects of pure distilled water on the human body will be remembered by our readers. A German physiologist maintained that it is actually poisonous on account of its action as a solvent, and that to be wholesome it must contain dissolved salts to such a degree that it can not whet its appetite on the tissues of the body. It can not be said that

A. Wheat Growing in Commercial Distilled Water.
B. Wheat Growing in Water Distilled in a Glass Alembic.

this opinion has received much support; but it was rendered more plausible by the results of experiments in the plant world, it being found that seeds would not grow well in distilled water. Now, however, a French botanist, M. Henri Coupin, announces that this effect is due not to the purity, but to the impurity, of the water used, the distilled water of commerce

always containing traces of poisonous copper salts derived from the still in which it was made. We quote as follows from a descriptive article contributed to *La Nature* by M. Victor de Clèves:

"If the poets were more learned in chemistry, they certainly would not fail to take distilled water for the emblem of purity. In doing this, however, they would be wrong, for this commercial product is really a very complex mixture, even containing noxious substances. This may be proved as follows, without an appeal to chemistry, which would be useless here, for the impurities of distilled water are in such small quantities that they escape analysis.

"Take a grain of wheat, soak it twenty-four hours in water, and then put it between two leaves of moist paper so as to make it sprout. When the roots have become one or two centimeters [half an inch to an inch] long, place the sprouted grain on the surface of a vessel of distilled water, supporting it with a rod of glass. In these conditions, the upper part, that is, the leaves, will grow and unfold. The roots will attempt to grow also, but, after lengthening by a few millimeters, they will cease. As biologists say, they become 'aborted.' If the experiment is made with spring water, the roots grow 30 to 40 centimeters.

"Why are the roots stunted in distilled water? This question, long debated by botanists, has just been solved by M. Henri Coupin. Take the distilled water of commerce and redistill it in a glass still; cause a wheat-grain, as before, to sprout in it, and we shall obtain a fine germination, with five to six roots of more than 40 centimeters [16 inches] in length, and bearing numerous rootlets. We conclude that distilled water is not poisonous in itself, but that the commercial variety contains substances harmful to plants. These substances are evidently, in greater or less part, salts of copper from the still in which the water was distilled. And the large degree of poisonousness need not astonish us, for we know, as M. Coupin has experimentally shown, that wheat roots will not grow in a solution of copper sulfate of 0.00000014 per-cent. strength, and that those of the lupine refuse to grow in a 0.000005 per-cent. solution.

"This result seems simple enough, but it was not easy to reach. The facts need to be stated, were it only to warn experimenters to neglect nothing.

"One of the last botanists to experiment on the toxicity of dis-

tilled water for plants affirms the fact very strongly. He took commercial distilled water and redistilled it six successive times. In the last product of distillation, he placed sprouting seeds and saw that the roots were aborted as in the commercial distilled water. Thus he concluded that distilled water is poisonous in itself. It seemed that the argument could not be gainsaid, for he who would have maintained that water six times distilled was impure would have been indeed courageous.

"Nevertheless, M. Coupin repeated the experiment, removing a bottle of water after each distillation. In each bottle he put a grain of wheat. All sprouted wonderfully and sent out long roots.

"How shall we reconcile these two identical experiments which give such contradictory results? After long reflection, M. Coupin solved the problem. He had used a glass rod to sustain his grain on the surface of the water, while his predecessor had employed a cork and pins. The latter were attacked by the distilled water, which soon contained poisonous copper salts. This hypothesis was experimentally verified by M. Coupin, and gave satisfactory results; the roots were stunted in distilled water in which a pin had been placed.

"The germination obtained was identical with that in the distilled water of commerce, represented at A in our illustration.

"This should teach physiologists to beware of commercial distilled water and—of pins."—*Translation made for THE LITERARY DIGEST.*

M. BLOCH ON THE SOUTH AFRICAN WAR.

THE opinions of the learned Russian economist whose book is said to have impelled the Czar to call the recent Peace Conference are well known. In a recent note in the *Revue Scientifique* (February 10), some applications of his views to the present war in South Africa are given. M. Bloch believes that events have verified his predictions in every particular. The recent British victories, won since this article was written, may modify some of his conclusions regarding the impossibility of success in offensive warfare; but it must be remembered that the final success of the attacking army has not yet been attained. M. Bloch has drawn up a plan for an elaborate scientific investigation of his conclusions, to be based on actual experiment, and he is anxious that it should be carried out by the War Department of some one of the great powers. Incidentally, he is desirous of European intervention in the Transvaal, believing, as he does, that he has scientifically demonstrated the futility of any settlement by warfare under modern conditions. Meanwhile, the fighting goes on, and neither Boer nor Briton pays much heed to the Russian economist's words. Says the author of the note in the *Revue*:

"This is the first war waged with modern engines; that is to say, with field artillery of great power, with magazine rifles, with smokeless powder. Those who have read M. Bloch's work say that he considers that before long, even if it is not already the case, war will become impossible. All troops, he assures us, which, without the power to hide under the smoke of their own artillery, expose themselves to the accurate fire and the flat trajectory of modern cannon and guns, will run the risk of annihilation. Now, even allowing for the exaggeration possible with a man who is carried away with his subject, certainly such a statement must make us reflect.

"In his book, relying on the carefully collected opinions of the most competent military authorities, M. de Bloch has predicted everything that has happened in South Africa. He has declared that because of the use of smokeless powder, long-range cannon, and magazine rifles, it would be impossible:

- "1. To make useful reconnaissances;
 - "2. To make frontal attacks without enormous losses;
 - "3. To cross the zone of fire without shelter;
 - "4. To accomplish surprises—on account of the danger of counter-surprises?"
 - "5. To avoid the loss of artillery, those who serve the guns being picked off at long range;
 - "6. To profit by a success.
- "M. de Bloch has also predicted the relatively large percentage

of officers killed, and he has asserted that the war of the future will be one of sieges and fortified positions. All these predictions have been realized in the course of the South African war.

"This has all been brought out by M. de Bloch himself, who has made, point by point, a comparison between the actual facts and his predictions.

"He gives a *résumé* of the progress of military art in the conduct of war on sea and land, in the arms and military engines used by the troops, in means of offense and defense that these furnish. He deduces as a consequence the decisive superiority of the defense over the attack, and the resulting impossibility of the assailant's overcoming the resistance that opposes him; in other words, the impossibility of conquering.

"It is this impossibility that he wishes to see demonstrated by an experimental investigation, and in conclusion he demands such an investigation, noting the utility it would possess for military men themselves, who are interested more than any one else in knowing the effects of the implements that they use.

"In England they are in the habit of making investigations of this kind, and such a proposal would never meet with disfavor in that country.

"M. Bloch has made out a program for such an investigation, including the shots to be fired and the calculations to be made, to find out whether it is possible or not to make use of our present armaments.

"He advises the English to abandon the offensive and allow themselves in turn to be attacked by the Boers, who would then, in their turn, find it impossible to conquer.

"To sum up, he concludes, any decisive result in such a war is impossible. Arbitration . . . can be the sole issue of the conflict.

"We must all hope to see the investigation demanded by the learned economist. And it is to be desired that the European powers will respond to the appeal that is thus addressed to them in the name of humanity in general and of their own interests in particular."—*Translation made for THE LITERARY DIGEST.*

PROFESSOR ATWATER ON ALCOHOL.

A PAPER opposing the present teachings of text-books regarding the injurious effects of alcohol was read on February 28 before the Department of Superintendence of the National Educational Association in Chicago, by Prof. W. O. Atwater, of Wesleyan University, whose experiments and conclusions on the

action of alcohol on the body have attracted so much attention and excited so much controversy. According to a report printed in the *New York Times* (March 1), Professor Atwater asserted of the text-book statements that they are "not only false, but injurious to good morals." He said:

"The injury of such teachings is twofold. The boy learns late that he has been mistaught, and at once loses faith in the truth as well. Further, it

PROF. W. O. ATWATER.

impresses the pupil with a belief that deception is allowable in a good cause, and the end justifies the means. Thus it undermines the foundation of morality. The great obstacle in the way of temperance reform is the habit of exaggeration."

Speaking of the beneficial effects of alcohol as shown by his own experiments, he said:

"Alcohol supplies fuel, but not food to the body. To test this,

we administered first a diet of ordinary food, of meat, bread, butter, milk, and the like. Then from this we withdrew gradually the starches and sugars and fats, and administered instead an amount of alcohol equivalent in heat-making. This made about two and a half ounces per day, or about as much as is contained in three average drinks of whisky. About one fifth of the fuel food of a man when not working, or one seventh of the fuel food when he worked, was supplied in alcohol.

"This alcohol was entirely consumed in the body. Its energy was transformed as completely as was that of the sugar or the starch. These experiments give no evidence regarding the pathological or toxic effects of the alcohol, and nothing regarding the effect of excessive use. Its nutritive qualities are extremely limited. It yields its energy without digestion, but it can not be stored in the body like the energy of other foods. Taken in large amounts, its effect at once counteracts the nutritive effect."

In closing, Professor Atwater alluded as follows to the opposition that his statements have aroused among the advocates of total abstinence:

"I am not trying to set up a dogma in opposition to scientific temperance instruction. I am protesting against dogmatic teaching of scientific theories which have not been proved and against the teaching of what science showed to be positively erroneous. I ask that science teaching in the schools shall keep pace with progress."

WHAT PHOTOGRAPHY HAS DONE.

A BRIEF account of what photography has done and is doing for the world is contained in an address delivered recently before the Franklin Institute, Philadelphia, by Dr. Charles F. Himes, and printed in the institute's *Journal*. In the first place, says Dr. Himes, photography has revolutionized astronomy:

"Beginning with the moon, with which perhaps least has been accomplished, total eclipses of the sun have yielded up long desired information, otherwise unattainable, so that they, by comparison, approach the character of worked-out fields. Automatic daily observations of the solar surface, with the details of its spots, promise data for determining effects upon terrestrial climate. Nebulae have been discovered, their form, details, and conditions revealed, and fainter extensions, vaster than could be conceived, added. Comets have exhibited wonderful transformations, distortions, and internal movements utterly undiscoverable by the best telescopes alone. Asteroids so numerous leave the record of their existence in trails upon the plates that, as has been said by Professor Barnard, they are turned adrift again unless they show some striking peculiarity of orbit. Meteors record their paths on which rests the expectation of precise determination of the radiant. Combined with the spectroscope, binaries of shortest periods are detected, variable stars not only discovered, but classified. The surmises of mathematicians in regard to Saturn's rings are confirmed. Runaway stars are caught. The Parisian astronomer that could not catch the satellite of Neptune with his telescope could see it fixed on his photographic plate."

Photography and microscopy too, the author reminds us, have gone hand-in-hand. At the discovery of photography, microscopy recognized at once a new ally. With the aid of the modern rapid dry-plate, sensitive to all or any desired colors, photography has become to the microscope only less the observing and recording eye than to the telescope. In chemistry, Dr. Crookes, by aid of photospectroscopy and orthochromatic plates, has added the metal monium to the list of elements. Meteorological science is enriched by photography, as is shown by its contributions to the study of lightning discharges. The kinetoscope has found application in recording the phases of a solar eclipse and of growing plants. In the industries the applications of photography are infinite. Says Dr. Himes:

"It is proposed to furnish cards for the Jacquard loom, and thus make tapestries commonplace. It will furnish water-marks for paper capable of 100,000 impressions. It reproduced the *Encyclopædia Britannica* at one third the cost of type. It preserved the valuable manuscript copy of the *Century Dictionary*, which was

practically uninsurable, in miniature form against loss by fire. It may, in the future, in the same way, find a place to economize shelf-room in our libraries by compressing books that are seldom or never read. Its applications are well known in the copying of inscriptions, even in dark interiors, in the preservation and duplication of valuable documents and papers, in the detection of forgeries, especially by the method of composite photography as developed by Dr. Persifor Frazer, in the furnishing of legal evidence in general, in the detection of criminals, etc. In Canada, 50,000 square miles have been platted by means of the photo-theodolite. In the late war the camera went to the front, and has furnished invaluable records. Apropos of this, it is only necessary to recall Captain Wise making exposures while charging up San Juan Hill. In the present African war it promises to play an important part in reconnaissance through the telephoto apparatus that accompanies the British forces."

In closing, the writer reminds us of the growing commercial importance of photography. Outside of the industries consuming photographic goods there are at least 1,500,000 amateurs in the United States. The published statement of one photographic-supply company announced a dividend of 20 per cent. in December last, with repeated interim dividends, on a capital of \$5,000,000. Dr. Himes tells us, however, that America does not seem able yet to produce photographic paper of the best quality, and he bids our manufacturers remember that "in photography only the best of everything is good enough."

FORTY MILES AN HOUR THROUGH THE WATER.

EVEN on land, forty miles an hour is a high speed. Not many years ago it was the best record of our fastest expresses. That it should be accomplished by a boat seems well-nigh incredible. Yet it has been done by the new British torpedo-boat destroyer *Viper*, equipped with the Parsons steam turbines instead of ordinary engines. The first boat of this type, the *Turbinia*, created a sensation at a naval review two or three years ago by reason of her phenomenal speed; but the *Viper* is more than twice as large as her predecessor, the principal dimensions being: Length, 210 feet; beam, 21 feet; displacement, 350 tons. The indicated horse-power is about 11,000. The writer of a brief notice in *Industries and Iron* (London, February 16) says of the vessel:

R. M. S. "VIPER."

"The most noticeable feature in a boat engined with Parsons's turbines is the entire absence of vibration, which enables guns to be trained much more accurately than when reciprocating engines are used. Other advantages which will appeal more directly to engineers are the facts that turbine engines take up considerably less space, consume less coal per horse-power, require less care and attention when running, and are cheaper in first cost than ordinary engines.

"The turbine engines of the *Viper* are similar to those of the *Turbinia*, but in duplicate, and consist of two distinct sets, one on each side of the vessel. There are four screw shafts in all, entirely independent of one another, the two shafts on one side being driven by one high- and one low-pressure turbine respectively. The two low-pressure turbines drive the inner shafts, and to each of these shafts a small reversing turbine is also permanently coupled and revolves idly with the shaft when going ahead. These reversing turbines provide sufficient power to

drive the vessel astern at a speed of 15 knots. The screw shafts are carried by brackets as usual; and two propellers are placed on each shaft, the foremost in each case having a slightly lesser pitch than the after-one. There are thus eight propellers in all. The thrust from the screw shafts is entirely balanced by the steam acting on the turbine, so that there is extremely little friction.

"The boilers, auxiliary machinery, and condensers are of the type usual in such vessels, but their size is somewhat increased to meet the much larger horse-power to be developed. This compensates for the lesser weight of the main engines, shafting, propellers, as well as the lighter structure of the engine-beds. The boilers are of the Yarrow type, and the hull and all fittings are of the usual design."

Will the steam turbine ever be applied to large vessels? The writer of the notice believes that in this regard the conditions appear to be more favorable in the case of the faster classes of vessels, such as cross-channel boats, fast passenger-vessels, liners, cruisers, and battle-ships. In all such vessels, he says, the reduction in weight of machinery and the increased economy in the consumption of coal per horse-power are important factors, and in some the absence of vibration is of first importance. To passenger-vessels this feature will insure the comfort of passengers, and in the case of ships of war it will permit greater accuracy in sighting the guns. Says the author, in closing:

"Designs have been prepared for a cross-channel boat on the Parsons system suitable for the Dover-Calais or Newhaven and Dieppe routes. Such a boat 270 feet in length, 35 feet beam, and 1,000 tons displacement, and 3 feet 6 inches draft of water, would have spacious accommodations for 600 passengers. Fitted with Parsons's engines of 15,000 horse-power she would have a sea speed of about thirty knots, as compared with the nineteen to twenty-two knots speed of the existing vessels of similar size and accommodation, and would thus cross the Channel in about two thirds of the time at present taken."

Is It Ever "Too Cold to Snow"?—The statement is frequently heard, "It is too cold to snow," or, "It can't snow until it moderates." A correspondent of *Popular Science News*

inquires whether this is superstition, or whether there is fact back of it, and, if so, what the explanation is. To these queries the following answers are given in the columns of that paper (March) by a contributor who signs his communication "Z":

"It snows very heavily, sometimes, even in zero weather; the cold, then, is not directly antagonistic.

We will find in such cases, however, that the snow either stops soon or the weather moderates, showing that the low temperature did not extend far into the region where the snow was formed. Very often the sky becomes threatening, and we feel almost sure it will snow; but there is either no snow or only a flurry. There are at least three causes acting to prevent the snow in such cases.

"1. Snow crystallizations (in fact the chemists are suggesting that all such phenomena) are dependent upon the electric state. During snow we always have a prominent positive electrification. If this be absent there will be little or no snow.

"2. The total amount of vapor which saturated air at zero can hold is only one-half grain in a cubic foot. If all the vapor in a column 8,000 feet high were condensed and the air left perfectly dry, it would make only about one inch of snow. We must consider that while snow is falling the air must remain saturated so

there can be very little moisture to fall. When the temperature at the earth is at zero, at 8,000 feet it would be 25 or 30 degrees lower, or the average temperature of the whole column would be 15, and, under such conditions, the air could contain only half the moisture at zero, so that the chances for snow would be extremely slow.

"3. Our colder weather comes with high-pressure areas, and in these we know the air is abnormally dry, so that, even if snow formed, it would be evaporated before it reached the ground. Some one may ask: How can there be a close threatening sky unless the conditions are favorable for snow? The cloud need not be more than a few hundred thick and may be formed in a warmer stratum, but all snow falling in such a cloud would be evaporated long before striking the earth."

Another explanation given by scientific men is that the popular belief confounds cause and effect, and that it is the snow that causes the weather to moderate and not the moderation that permits the snow to fall. It is well known that so-called latent heat is set free in the process of congelation.

WHEN WILL OUR TRUNK ROADS USE ELECTRICITY?

THE use of electricity as a motive power, altho its strides in the past decade have been almost beyond belief, has been confined almost entirely to street railroads and their extensions. Altho a few large roads have adopted it on branch lines, there are many railroad experts who believe that it will never be used for main-line travel. But the electricians are looking about for new worlds to conquer, and the trunk railroads appear to them in the light of an attractive field for future exploitation. In a leading editorial *The Electrical Review* (February 21) reminds its readers that railroad engineers are extremely conservative, and states its belief that this is the reason that they have been slow in adopting the electric motor for traction on their lines. The writer does not doubt, he says, that this waiting has been wise, but he believes that longer waiting is needless, and that the time is ripe to replace the locomotive on certain lines of railway with the electric motor. Such a change, we are assured, would increase the comfort of travel and the cheapness of operating lines. To quote the editorial further:

"The whole subject can fitly be expressed in an economic equation; the costs of installation and operation of an electric system must be measured against the profits that would accrue from its use, and this must be compared with the existing state of things. It is well known that electric currents can be generated, transmitted, and reconverted into mechanical energy delivered at the rim of the car-wheel at a less cost for horse-power than it is possible to achieve by use of a locomotive carrying its own fuel and water and using them under wasteful conditions. But this difference is not large, nor is the cost of fuel a factor of controlling importance in the operation of railways. The difficulty that has generally met those who argue for the introduction of electric railways has been that of conceiving railway service conducted in other ways than those now in vogue. It can be demonstrated that on a crowded and much traveled section is the place of all others where the superiority of the electric motor will be shown, but it is probable, if the consideration of the relative merits of the two forms of motive power is confined to the operation of trains of several cars for passenger service, that no great advantage will be exhibited by the electric system. It is when the possibility of changing the whole method of operation of passenger service on railways is taken into consideration that the great value of the electric system is at once evident."

To illustrate his point, the writer bids us consider the section of the Pennsylvania Railroad from New York to Philadelphia (ninety miles). This section, he assures us, could be worked economically and successfully from two power stations, possibly from one. It is traversed by fast expresses with a headway of one to two hours, and by a considerable number of slower local

trains. With electrical equipment, instead of a six-car express train every sixty minutes, it would be easy to run a one-car express train every ten minutes, and in the rush hours, instead of five-car local trains every ten minutes, one car could be sent out every two minutes. To quote again:

"It is impossible to give any figures as to the increase in travel that would result from this important betterment of travel conditions, but it is perfectly certain that such a system, closely analogous to the street-car service which has grown to such enormous proportions since street-cars were electrically operated, could not fail to increase travel and to pay. Furthermore and finally, there is nothing whatever of an experimental character about it. It is known in advance not only that such a system would work and work well, but almost exactly what its cost of operation will be."

Dr. Keeley and His Cure.—The death of Dr. Leslie Keeley at Los Angeles, Cal., on February 21, has caused some renewed discussion about the method of treatment for drunkenness that goes by his name. *The Medical News* says of it:

"The career of Dr. Keeley and his remarkable propaganda is one of the peculiar medical anomalies of the closing years of the century. Dr. Keeley, in treating the mania for alcohol as a disease, introduced nothing novel to medicine. On the contrary, he applied to the treatment of these cases a well-recognized method. Unfortunately, he threw about it a cloak of secrecy and tainted it with humbug and quackery, and brought it into prominence as a great financial scheme. Altho at first it was attended with remarkable success, the financial feature proved its undoing. It must be admitted, however, that the Keeley cure has probably served a valuable purpose in disseminating among victims of alcohol a wide recognition of the fact that they are the victims of a disease. It has also indirectly promoted temperance by warning people of the danger of contracting an uncontrollable mania. As the vogue of the cure has gradually passed away, it has been replaced by methods of treatment having a reputable medical standing and supplied by regular practitioners."

Sugar from Watermelons.—A farmer and gardener named Hanz, of Bowling Green, Ky., has recently made an excellent quality of syrup from watermelons, according to *The Irrigation Age*, which states that he will shortly attempt to convert some of the syrup into sugar, and expects to be successful. The same paper gives the following report of an interview with him:

"From 15 melons, weighing from 20 to 25 pounds, we made two gallons and one pint of syrup. We cut the melons in halves, cut out the pulp, ground it in a cider-mill, and pressed out the juice. We boiled the juice in porcelain kettles on the kitchen stove for twelve hours. With a cider-mill and hot air or steam evaporator, two men can make 25 or 30 gallons of syrup per day. At the above figures it would take about 270 melons to make 30 gallons of syrup, worth \$15. Melons would be worth at wholesale about \$5 or \$6, and it would take two or three days to haul and sell them at market. With a mill and an evaporator in the melon patch, a farmer and one or two hands could realize 100 per cent. more by making them into syrup and feeding the refuse to hogs, cattle, horses, and chickens, which eat it greedily."

"THERE is so much electrical apparatus in actual operation to-day in railway, light and power plants, telegraph offices, and telephone exchanges, that unless the exhibit is a new departure, it interests neither the public nor the engineer," says *The Electrical World and Engineer*. "The engineer prefers to see apparatus operated under the conditions it is to serve rather than simply set up for idle, silent demonstration. The public from whom gate receipts are derived prefers to see that which is absolutely new, novel, and interesting. This point applies to the Pan-American Exposition next year. It is a matter of common knowledge that Buffalo and Niagara to-day, without the Pan-American, have about the finest collection of modern electrical apparatus and inventions in use that the world can show, open to any engineer who wants to see it running, and absolutely unintelligible to the public that hardly knows the rudiments of the art. Why should such an exhibit be duplicated, or how could it be for gate money?"

THE RELIGIOUS WORLD.

INCENSE AS AN AID TO DEVOTION.

IN the discussions about questions of ritual which have for the past year disturbed the peace of the Church of England, the subject has been treated almost wholly from the historical and legal side, and very little has been said of the rational foundation which certain adjuncts of worship, including incense, may possess. A recent writer, Prof. Edwin E. Slosson, of the University of Wyoming, deals with the question from the latter standpoint. The origin of most religious rites, he says, is the desire to keep in mind certain events by a species of mnemonic device. The eucharistic words, "This do in remembrance of Me," is true of almost all ceremonies, both of the church and of the secret fraternal rituals. But ritual has also a basis independent of history and theology. Says the writer (in *The Independent*, March 3):

"In reality the foundation of ritualism is not historical or theological, but psychological. Any long-established religion develops unconsciously those particular rites that are best fitted for exciting religious emotion. This is done in two ways—by association and by direct stimulation through the senses. One of the main objects of ecclesiastical forms is the development of a religious life by isolating it from common life. The set days and hours with which no other duty must interfere, the sanctified place or building where nothing profane is allowed to enter, the ecclesiastical architecture and furnishings, the archaic pronunciations and peculiar intonations, the vestments and music, the postures and movements; all these are associated with religious emotions and experiences, and with nothing else, so that they have the power of reviving and instigating devotional feelings. If all one's religious training and experiences from childhood have been connected with certain sights and sounds, these will have an influence over the emotional nature that is astonishing to one who has been otherwise trained. . . .

"Of all the senses, that of smell has the most powerful influence in reviving past emotional states. A face or a building seen once is often forgotten. A tune or a voice heard once remains much longer in the memory, but a peculiar odor is rarely forgotten, altho it can not be described or repeated at will. Tho but once perceived, it will be recognized years later. Probably every one has at some time felt a flood of youthful memories and feelings come over him, suddenly and inexplicably, until he is able to trace it to the unconscious perception of the odor of fruits, flowers, or trees familiar to his childhood. Why it is that a smell is so much more certain and powerful in carrying association than sight or hearing has not been explained. Possibly this sense, not being so hard worked as the others, is able to keep its fewer associations more perfectly, just as St. Gaetano had more time to act as protector to Pompilia's child because he had fewer namesakes. Music comes next to odors in the power of emotional association and reminiscence."

But odors not only affect us through association of ideas; they directly stimulate the emotional nature:

"This also is a matter of common observation, and perfumes have been used in all ages for this purpose, especially in arousing the amatory emotions. These are closely allied to the devotional, and will become more so as the millennium approaches. Love songs and religious songs include the best part of music; and of these the tunes and sometimes the words are used interchangeably for the two purposes. So, too, perfumes have been almost entirely confined to the service of Eros or Ecclesia."

"I do not mean to say that inhaling volatilized gum benzoin directly inspires reverence for any particular saint or belief in a particular creed. It does, however, excite a vague emotion which is plastic to the dogmatic mold. This, too, is the function of music in ritualism. It has been proved by experiment that music does not convey ideas or definite emotions; but that these are supplied by words or suggestion, acting on the emotional nature aroused and made sensitive by the rhythm and harmony."

"Ordinary sights and sounds have for us no emotional content. They are neither agreeable nor disagreeable. But almost all

odors excite at once some emotion; they are decidedly pleasing or displeasing. The emotional nature once aroused, it may be turned in almost any direction. An excited mob may be led to acts of self-sacrifice and generosity, as well as cruelty and malice; and the orator knows that the easiest way to make an audience cry is to get them to laughing first, then skilfully pass from humor to pathos. So the sense of smell, the most powerful in its effect on the emotions, should not be left out of a ritual, the main purpose of which is to arouse the emotional nature and use it as an incentive to right living. Incense is as legitimate an aid to devotion as genuflections, pipe organs, or stained-glass windows. Let the forces of El Shaddai attack the fortress of Mansoul by all its five gates."

After a long reign of barren and unesthetic ideals of worship, says Professor Slosson, the pendulum is swinging in the other direction, and "there is a general tendency in all the churches toward ritualism, or, as it is termed in its mild stages, 'enriching the service.'" Incense is used, not because, as is sometimes said, the early Christians employed it to fumigate the Catacombs; but because it has a real place in worship:

"It has formed a part of almost all elaborate religious ceremonies from the time when the Babylonian Noah offered a sweet savor on the mountain-top and the gods 'gathered like flies' to smell it. It appeals to a sense neglected by Western nations and decaying in this catarrhal climate, but still powerful in its influence on our feelings. If we drop incense because of its vague sensuous influence, we must also abolish music, at least instrumental, for the same reason. Under the power of an eight-foot organ pipe, many a man has mistaken the shaking of his diaphragm for the trembling of his soul; but that is not a bad mistake. The illusion may bring about the reality. If a man does not respond to an appeal to his reason, it is permissible to approach him through his senses. The nerves are easily reached and lead to the brain. If 'religion is morality touched by emotion,' we have a right to use the most efficient means of getting this magic touch that brings the dead to life."

Christianity in the Colleges.—Much has been said of late concerning the alleged decline of Christianity in the rural districts and in the cities, and various opinions prevail both as to the reality of the decline and as to its remedy if existent. An important factor in the religious conditions of the future is the religious life of the colleges, from which probably over fifty per cent of our leaders in public life and the professions are sent out. The Hartford Theological Seminary has recently attempted to throw light upon this subject, and after extensive correspondence with a large number of institutions of learning, it announces that religion is gaining instead of losing ground in our great schools. From the *Philadelphia Public Ledger* we quote the following facts:

"Answers have been received from forty-five institutions in twenty States, and only three of them report a situation at all discouraging. These schools have a total attendance of 30,000 pupils. The universities of Minnesota and Wisconsin report 50 per cent. of their seniors Christians. Fifty per cent. of the total student body is Michigan University's report, and 85 per cent. the remarkable showing of the University of Nebraska. In the University of Illinois 45 per cent. of the seniors are Christians. The University of Chicago does not send figures, but reports gratifying progress. At Northwestern University two thirds of the students are interested in Christian work, and at Johns Hopkins, Baltimore, 65 per cent. of the seniors are identified with religious effort. From Harvard and Princeton reports are less definite. Yale reports 65 per cent. of the academic and scientific students as Christians. The most surprising report comes from Park College, Missouri, where all but nine of the 362 students are Christians."

"It may be said that many of our colleges are denominational institutions, and a high percentage of religiously inclined students should be expected. The showings made by such great nondenominational universities as the universities of Minnesota, Michigan, Wisconsin, Illinois, Nebraska, Yale, and Johns Hop-

kins afford gratifying proof that the religious spirit is abroad among the students of the land, and is by no means confined to the church colleges."

A "CHRISTIAN" PLEA FOR ANTISEMITISM.

THE antisemites of Europe are two distinct classes: one class being anti-Christian, and hating everything Jewish, even the Old Testament; the other composed of professing Christians. Those of the former class base their opposition to the Jews chiefly on economic grounds; those of the latter class appeal to the Scriptures. A characteristic discussion from the pen of one of the latter class is found in the *Neue Kirchenzeitung* (Cottbus, No. 3), from the pen of a noted specialist of ethnology, Dr. Matschoss. In an article entitled "Antisemitism in the Light of the Word of God" ("Der Antisemitismus in der Beleuchtung des Wortes Gottes") he maintains that it is a solemn Christian duty to deny the Jews civil or social equality, and that nations granting such equality call down upon themselves the curse of God. His argument is substantially as follows:

Whether a person love or hate the Jews, the fact remains that they constitute an enigma in the annals of nations that can not be solved according to the ordinary principles of ethnology. Considering them merely according to the national and historical relation to civilization and culture, to science and art, there is no special reason why they should be placed on an equality with other nations; still less why they should be exalted above these. They, merely as a nation, are not able to point to a single thing that would entitle them to a continued existence any more than the Greeks and other peoples of antiquity who have long since passed away. Indeed, the secret of Israel's existence and unique position among the nations lies deeper, namely, in the divine will and council. It was not the intention of the Lord that the Israelites should play any political rôle whatever in the history of mankind. For this they had neither the call nor the gifts. Theirs was to be a higher mission, namely, to be the medium of the pre-Christian revelation and the nation from which should come Christ according to the flesh, and then to be the first of peoples to accept the Messiah of the Lord.

Israel proved to be faithless in this high calling. It aimed not to be a religious but to be a secular and political power. On that Good Friday when it rejected the Lord it broke with its past and with its future. As a nation it has lost its blessing, and one expression of its curse has been its dispersion among the nations of the earth; but this dispersion has also brought to these other nations a test. These nations, especially the Christian, are to show whether they heed this judgment on the people of the old covenant. And in this respect the Christian peoples too have not been true to their mission.

In the Middle Ages, the nations were accustomed to deny the Jews all political rights and to treat them as entire strangers. And herein there was no wrong. In modern times, owing largely to false ideas originating in the French Revolution and from a resultant false humanitarianism, the Christian peoples have begun to disregard the punishment which the Lord had imposed upon Israel, and, in open violation to the divine plan, have admitted the Jews to equal political and social privileges with themselves. And when a Christian people, knowing God's Word, acts in violation to the same, it can not expect to escape fitting punishment. This punishment has made its appearance.

People are nowadays complaining that the Jew abuses the privileges and rights which the generosity of the Christian nations has accorded him. How foolish to utter such complaints! They are only reaping what they have sown. If the Jews were still a blessed nation, the communion with them would result in good alone; but, having incurred a curse, they can bring only harm to those who have given them their political rights. Christian nations have only themselves to thank if the Jew's conduct is such as to have called for the international antisemitic propaganda.

The radical antisemites want to expel the Jews from the country. This would be wrong, because the dispersion of Israel is in accordance with the divine plan; and it would be impossible to

change matters, as God's will can not be thwarted. This class of antisemites reject also the God and the Scriptures of Israel, and therefore the Christian can have nothing to do with them. Then, too, the national antisemites, who lament the great evils resulting from the growing influence of the Jews, are in error, in so far as they do not recognize the fact that placing the Jews on an equality with others is itself contrary to the will of God, for which the Christian nations should do proper penance. Unfortunately, the signs are not promising that this penance will be done, and we can only believe that on the last day the final adjustment will come.

Every Christian must be an antisemite in this sense, that he abstains as much as possible from connection with the Jews, whom St. John already calls "the synagog of Satan." He will, however, pray for the Jews as one prays for a man who has been excommunicated; namely, that he may repent, so that God's judgment may be removed.

The editor of the *Kirchenzeitung* adds comments of considerable length to this unique exposition of Christian antisemitism, in which he expresses his substantial agreement with his correspondent, but emphasizes the fact that this withdrawal from association with Israel must not include any relaxation of the efforts put forth to bring the lost sheep of the house of Israel under the influence of the Gospel. He concludes with these words: "Possibly the antisemitism of our times will in the providence of God be the means through which Israel will learn to return to the true Zion, i.e., to the Messiah."—*Translation made for THE LITERARY DIGEST.*

MISSIONARY POLICY OF THE BUDDHISTS.

MR. TEITARO SUZUKI, a Japanese champion of Buddhism, lauds the spirit of tolerance which, he claims, has been exhibited by his religion in all ages. This spirit seems, according to him, to be the guiding principle of its policy wherever it comes in contact with other religions, and to this he attributes its missionizing successes in China, Japan, and elsewhere. In an article in *The Open Court* (January), in which he makes for Buddhism the usual claims of superiority which all religious devotees make for their own faith, he thus outlines the policy of Buddhist missionaries:

"Buddhism thus calmly and patiently found its way from the East to the West, but never assumed a hostile attitude toward those religions and ethical systems which were already established. It adapted itself to new conditions and assimilated at the same time other views, so that the people could understand the new truths without experiencing any feeling of repugnance. Every nation has its peculiar needs, inclinations, and traditions, which, however superstitious they may appear at first glance, contain some germs of truth and should for that reason be respected. Buddhism always endeavors to point out those germs of truth, to nourish them, and to give them a new and better interpretation."

"In Japan we have a singular instance which characteristically illustrates the rather overtolerant spirit of Buddhism, if such a term be allowable. The Japanese are a people in whose minds the idea of ancestor-worship is deeply imbedded, partly I think because they were islanders secluded from intercourse with the world, and partly because there was not much intermixture of races in Japan. When a statue of Buddha and a few Sûtras were first presented to the Japanese court by a Korean king 552 A.D., some of the ministers declared that they had no need of worshipping a foreign god as they had their own divine ancestors. Buddhists, however, did not disparage the sacred traditions of the Japanese by proclaiming that they revered false gods, but at once made a practical application of one of their fundamental doctrines, to wit, the Jâtaka theory. All Japanese ancestor-gods were then transformed into Bodhisatvas, or Avatâras (= incarnations) of the primordial Buddha, who, divining the natural inclinations of the nation, assumed the forms of their gods. And thus Buddhism and Shintoism, which strictly speaking is not a religion, were reconciled, and cherished no enmity toward each

other. How ingeniously they interpreted Shinto doctrines! And in doing this they were perfectly consistent and sincere."

The Buddhist leaders in Japan, we are told, are in a similar way friendly to Christianity, looking upon Christ also as an Avatāra, or Incarnation, of the Dharamakāya, such as Buddha was.

PHILADELPHIA'S RELIGIOUS CENSUS.

THE results of the novel census lately taken by the Sunday-school forces of Philadelphia, in a house-to-house visitation of the whole city, covering the ground in a single day, have been such as to encourage the church people. All the religious bodies cooperated heartily, and the work accomplished was an indication of what may be done when the churches agree to work together for a common object. From *The Independent* (March 8) we take the following account of the event:

"The organization of the city was a gigantic task; in addition to the eighteen districts there were one hundred and thirty-seven sub-districts, and these in turn were divided into sections, each section being in charge of a single visitor. The advertising of the census was extensive; the daily newspapers all gave many columns of space to announcing the canvass from day to day. The people were thoroughly prepared for the visitors by the public press.

"The visitors met with remarkable courtesy everywhere. Only one home out of every seventy-two visited refused to give the information desired. The questions asked by the visitors were, the name of the family, the number of persons in the family, the number attending Sunday-school, the number who were communicant church-members, and the number of children under sixteen years of age. The one additional question asked was the denominational preference of the family, if any. More than a million persons were reached by the census. This is on the basis of four persons to each record made, for in most cases every record represents a family. The number of records handed in up to date is 253,169."

Altogether, 4,609 persons were at work upon the census. The figures are of not a little value as being probably, to a considerable degree, representative of the religious make-up of the average large American city of the North Atlantic States. So far as they have yet been tabulated, they are as follows:

Advent.....	94	Universalist.....	369
Baptist.....	25,187	Unitarian.....	342
Christian.....	787	Christian Scientists.....	60
Church of the Brethren.....	197	German Reformed.....	382
Church of God.....	194	Polish Catholic.....	175
Congregational.....	1,042	Moravian.....	151
Cumberland Presbyterian.....	162	Salvation Army.....	97
Dunkards.....	169	Spiritualist.....	93
Episcopal.....	25,951	Reformed Episcopal.....	437
Evangelical Association.....	459	Swedish.....	33
Friends.....	1,814	Undenominational Mission.....	437
Jews.....	5,728	Atheists and Agnostics.....	22
Lutheran.....	17,827	Latter-Day Saints.....	8
Mennonite.....	342	United Greek Catholic.....	8
Methodist Episcopal.....	38,451	Christian Catholic.....	18
Methodist Protestant.....	9,476	Miscellaneous Unclassified.....	936
New Jerusalem Church.....	250	Schwenkfeldian.....	36
Presbyterian.....	25,593	Wesleyan Methodist.....	28
Reformed Presbyterian.....	1,182	Vacant houses.....	6,076
Reformed Church.....	3,485	Not at home.....	6,460
Roman Catholic.....	67,045	Refused information.....	3,903
United Brethren.....	265	No preference.....	15,411
United Evangelical.....	227	Total records taken.....	253,169
United Presbyterian.....	7,080		

The Independent thinks that the atheists and agnostics must be in hiding, and that even latitudinarians, like Br'er Fox, are "layin' low":

"Up to date there have been received 239,631 reports of families visited, representing an average of four to a family. Of these all but 19,332 reported themselves as associated by preference with some evangelical Christian body, Catholic or Protestant. There were just 22 cases in which the parties reported themselves as atheists or agnostics, 3 as followers of ethical culture, and 3 of a Liberal Lyceum; the rest of the 19,332 either refused to answer

or had no preference. But if we count all these as non-religious, they make only about eight per cent. of the whole; and we presume that Philadelphia does not differ much from other places. We are really surprised at the pitiful showing of the atheists and agnostics."

The census brought out many instances of fraternal human feeling triumphing over the barriers erected by denominational prejudice. Roman Catholics, Jews, and Protestants freely co-operated, and from the altars of many Roman Catholic churches instructions were given to the people to assist the census-takers.

PERSONAL IMPRESSIONS OF DR. MARTINEAU.

THE side of Dr. James Martineau least known to the public was the one which, according to his friends, most truly proved his greatness. Two of these friends, Frances Power Cobbe and Philip H. Wicksteed, tell of this personal side of his character in one of the current reviews. "His soul was as a star, and dwelt apart," says Mr. Wicksteed; and indeed the whole of Wordsworth's great sonnet to Milton seems to be applicable to Dr. Martineau's character, and is described by Mr. Wicksteed (*The Contemporary Review*, February). He writes:

"There was no air of condescension about him, and he shone beautifully and tenderly; but we [the students] felt that he moved in a higher sphere than ours; tho he did not look down to us, we were always conscious of looking up to him. So far intimacy did but deepen the impression which would be derived from his public speech. But what, perhaps, would not so surely be inferred was the unsparing self-devotion with which he threw himself into the drudgery of all the practical work connected with anything he had undertaken. For many years he superintended his Sunday-school every afternoon, going through the roll-call, conducting the simple service at the opening and closing of school, and taking down the numbers of attendants at each class. He took his place at committee meetings with scrupulous regularity, and would enter into discussions as to the proper method of taking averages or determining prizes with as much gravity as tho he had been discussing the constitution of England. Nothing was hurried. Nothing was treated as insignificant. A love of administrative detail seemed to manifest itself on these occasions, which was but one side of the extraordinary practical sagacity which has so often been noted in philosophers or mystics. It was amazing to find the extent, variety, and minuteness of his acquaintance with practical things. Some of his fellow workers, when first associated with him, would take for granted that his strength lay rather in the intellectual than the practical direction. But they soon learned that his opinion as to the probable causes of dampness in the vaults under the room in which they sat must be treated with quite as much respect as his views concerning the religious aims of Sunday-school teaching. I think this minute attention to detail was connected with his extreme love of order, even of tidiness, both in material and mental things. He could not bear anything sordid or any unraveled edge. Slovenliness of work in his students seemed to try him more than anything else. He could never learn (in spite, alas! of the experience of many years) either to expect it or to acquiesce in it, tho his impatience was very seldom expressed otherwise than by an involuntary gesture or half-suppressed exclamation of pained surprise. He required neatness in all his surroundings. The chaos that a scholar's study usually presents would have been unendurable to him. In his own workroom all was perfect order.

"In social life it is impossible to conceive a more gracious and delightful host, or a more unassuming and easily satisfied guest. Moreover, he was devoted to children. He once came across a little child of six years old when he was calling on her father, and played with her so delightfully that she connected him with the theater, and asked whether he would come to the pantomime with her, whereto he at once assented, and engaged a big box at Drury Lane and took the child with her little brother, together with some elders, to the great show, where he witnessed the wonderful doings of the Vokes family with the heartiest enjoyment, and, of course, enshrined himself as a saint in the minds

of the children forever. It was his first (and last) visit to the Pantomime."

Miss Cobb, in the same review, speaking from a friendship that lasted more than half a century, has much to tell of Dr. Martineau both as a preacher and man. His sermons, she says, were truly his "word," a part of himself, "sprays from the fountain of his own soul and mind." Never was there a man who was so much the same all through. Indeed, his preaching was to him his life, and the mandate of his physician that he must give up his church was a deep grief to him and to his friends, who received it as almost a sentence of death.

THE SEASON OF ABSTINENCE, AND ITS VALUE.

THE Lenten season, which began on February 25 with Ash Wednesday, is every year becoming more distinctly recognized by the leading Christian churches as a period especially set apart for religious thought and endeavor. The Anglican and Roman Catholic papers are not the only ones which devote space to the great Christian fast. Says *The Outlook* (undenom., March 3):

"It is true that the spiritual life is independent of times and seasons, as it is of places; the man who serves God at all serves Him as well on Wednesday as on Sunday, and worships Him as truly in a crowded square as in the silence of a church; but the spirit is immensely aided by the association of spiritual ideas and experiences with definite periods of time. The importance of Sunday in the higher civilization of the world can not be overstated. The fact that on one day in seven, for a great many centuries, and with a very large part of the human race, the associations of the mind and of the hands have been entirely changed, has been perhaps the greatest single educational influence exerted upon men. Whether one keeps Sunday as it ought to be kept or not, the day is now so freighted with associations that it is almost impossible for a man in a Christian community not to receive some higher influence from it. It is as valuable to the spiritual as to the unspiritual; for while a man may not need the silence and the associations of a venerable cathedral in order to evoke the spirit of worship, he can hardly fail, if he have any sensitiveness, to be benefited by its atmosphere. Men are fast becoming magicians, with magical command over the sources of prosperity; it remains to be seen whether they will be the masters or the servants of this immense capital of comfort, ease, and pleasure which they are beginning to accumulate. Society will not go back into barbarism, but it may revert to paganism in its higher forms; that is to say, it may lose touch with the spiritual realities in its passionate devotion to mere pleasure. . . . Society needs to cherish the Lenten season, because that season brings it face to face each year with the fundamental facts of human experience, those deeper facts which are not in the least modified by prosperity or adversity, which come to men as men and not as masters of industry; those great experiences which search and try the soul, and in the right use of which a man's spiritual fortunes are bound up. He who cares for the growth of his own life will not treat the Lenten season as a mere formality or religious convention; he will welcome it as a fruitful opportunity of growth; finding in it not only stated times and places of worship, but a constant reminder that the things of the body perish, but the things of the spirit endure; that no man is safe who has not in him the spirit of self-sacrifice and self-surrender; that the life of the soul is always more than the life of the body; and that the true values of every form of possession are to be measured by a spiritual and not by a material scale."

Christian Work (Evangelical, March 1) says that the idea of the penitential season is an ennobling one, full of practical benefit to many people:

"Assuredly the jaded child of fashion needs precisely the lessons taught and the opportunity presented by the church in this ordinance; and so every Christian, whether Roman Catholic, Episcopalian, Presbyterian, Methodist, or Congregationalist,

would do well to yield a measure of observance of the season in spirit and life; and this, we are glad to know, not a few do. Certainly our thoughts and influences, our desires and aspirations, go on so unceasingly to things of this world that we shall be made better and happier by directing for a specific period our aspirations heavenward in imitation of the Master, until we rise to a fuller appreciation at Easter of His resurrection. And it is significant of a marked change that so many not within the Episcopal communion are glad to avail themselves of the services of that church during this period, while in this city and elsewhere non-Episcopal churches gladly take advantage of the opportunity to hold Lenten services.

"In all this the Apostolic injunction holds—Let every one be persuaded in his own mind, while no man judges his neighbor 'in meat or in drink or in respect of an holy day.' With fullest liberty of all to observe the season or not, it is yet gratifying to notice the marked favor with which the season of Lent is now regarded by those of the non-Episcopal churches. Gradually but surely the advantages of a period of devotion and abstinence come home to many hearts that once did not care for these things, but who now delight to take refuge from the demands of a life in which festivity claims more honors than are its due, and seek comfort in the services of the sanctuary, in meditation and abstinence. Assuredly these will have nothing to regret that they have thus broken in upon a life where Mammon and Pleasure too often dispute a supremacy which belongs to God alone."

English Methodism and the Boer War.—The recent invitation extended to Mr. Joseph Chamberlain to preside at a luncheon in Wesley's Chapel, London, awakened an outburst of indignation among English Wesleyans who do not agree with Mr. Chamberlain's politics. It was claimed, however, that the outburst was moral and religious rather than political. Several columns of the *Manchester Guardian* were devoted daily to letters from Methodists, most of them denouncing in strong, even fiery, terms the invitation to the Colonial Secretary. As a result, the luncheon was abandoned, for the ostensible reason that the church-deeds forbade any political meeting. The following letters may serve as samples of the scores that were published:

"I am a Methodist of sixty-years' standing, and would like to join in the protest against the arrangement made with Mr. Joseph Chamberlain to preside at a luncheon at Wesley's Chapel. I think the authorities in London are little aware of the strong feeling existing in the provinces on this matter. . . . And now Methodism is to be represented as being on the side of the jingo-ues, which to thousands and tens of thousands is detestable."

"Allow me also to enter my most earnest protest against Mr. Joseph Chamberlain presiding over any meeting to be held either at City Road or in any other Methodist chapel at this most critical juncture of our nation's history. Notwithstanding the jingoism of the Methodist press, a very large percentage of leading laymen of the Methodist body believe that we are engaged in the most unnecessary and therefore cruel war that ever darkened the pages of any Christian nation's history. . . . Methodist people, raise your voices in loud protest; do not allow any one to mislead you; protest with all your might against the Colonial Secretary presiding over any meeting in our dear old City Road Chapel."

THE printed syllabus of the forthcoming great Ecumenical Conference on Foreign Missions, which is to be in session in New York from April 21 to May 1, shows an interesting and varied program. The conference opens on Saturday afternoon with addresses of welcome by the chairman, former President Harrison, and by the Rev. Judson Smith, chairman of the General Committee. Responses are to follow from the British, German, and Australian delegations. The remaining days are to be devoted to a general survey of the mission-field, a review of the century, and addresses upon mission problems and methods by such speakers as Augustus H. Strong, Arthur T. Pierson, J. M. Thoburn, Canon Edmonds, William T. Harris, James B. Angell, Bishop Ridley, C. Cuthbert Hall, George F. Pentecost, and Bishop Doane. There are also to be interesting conferences of the Educational, Industrial, Medical, Library, Women's, and Home Work sections. The conference is the most important missionary event of the decade, and it is expected that the cause of missions and of interdenominational cooperation in the coming century will be greatly furthered by the meetings, in which almost every evangelical church will be represented by prominent delegates.

FOREIGN TOPICS.

THE WAR IN SOUTH AFRICA.

KIMBERLEY had been relieved prior to the issue of the European papers that were arriving as this number of THE LITERARY DIGEST goes to press. The surrender of General Cronje had not, however, been foreseen, tho it was confidentially assumed by most English papers that he would be

WAR IN EARNEST.

"The Boers'll cop it now!" "Woe's up!" "Porter's gone to Soul Africa, an' taken 'is strap!"—Punch.

defeated and that General Roberts would march rapidly upon Bloemfontein. The stock exchange would certainly have been grievously disappointed had the event proved otherwise, as the tone of the financial journals shows. *Money* (London) says:

"It was hardly to be expected that the Boers would be content to remain in force before Ladysmith or to pursue a policy of inactivity in the trenches of Magersfontein when a British army was ranging the Free State and threatening the capital of the Republic. At the moment of writing no official news of the relief of Ladysmith is to hand, but the raising of the siege can only be a matter of days, and may be regarded as fairly well assured. Nor is there any news of a decisive action by the forces under Roberts and Kitchener. But it is assumed—and probably safely assumed—that Cronje has been outmaneuvered, and his surrender should be only a question of time."

Many papers already see the end of the war in the near future, chiefly because they are confident that the people of the Orange Free State will submit more readily than the Transvaalers. *The Standard* (London) says:

"The Free Staters must now be mournfully reflecting that, so far as they are concerned, the sacrifices and sufferings of four months have had no other result but that of planting an almost irresistible invading army upon their soil. With the main Western army shattered or captured, the road to their capital lies only a few marches distant from the commander-in-chief's outposts. . . . For we have at length a powerful British army concentrated at a point where it can act effectually, and engaged in following out a definite strategic scheme, which, if it succeeds, must strike at the heart of the defense. For their own sakes, it may be hoped that our valiant adversaries will soon begin to recognize that they are overmatched, and that all their valor and tenacity can not avert the defeat which in the end is inevitable."

The Daily Mail hopes that much good will result from Lord Roberts's promise to the Free Staters to pay cash for their horses if they surrender, and that many of the Europeans will avail themselves of the offer of a free passage home if they desert the Boer cause. Still, prudent people realize that the Boers have much staying power, and the advocates of an attack *via* Delagoa Bay are redoubling their efforts. *The St. James's Gazette* says:

"The Portuguese are, it is said, becoming somewhat anxious about Delagoa Bay. The moral of this is the foolishness of a small country which clings to useless territorial claims when it

has already more colonial land than it can use. Delagoa Bay has done Portugal no good, and it is now undoubtedly being used for the same purpose as our own island of Nassau in the Bahamas during the American Civil War. That is to say, it is a depot for contraband. But England was a great power which the federal Government could not afford to offend. Portugal is a small one, and in international affairs, as in most fields of human activity, the maxim holds, 'Duo si faciunt idem non est idem.' The quality of the person makes the quality of the act. Portugal runs a heavy risk in doing what Great Britain might do with impunity. Would it not be better for her to get rid of Delagoa Bay? Meanwhile nobody comments on the probabilities that contraband of war can get to the Boers through Demaraland. Yet why is that impossible? The silence of commentators on this point bears us out. Demaraland belongs to Germany, and it would be most unbusinesslike to talk to Germany as one can to Portugal."

The Canadians are very jubilant, as their contingent played a prominent part in the last fighting with Cronje. *The Toronto World* says:

"The loss of so many men and guns must of itself prove an almost irreparable loss to the Boers. But the moral effect that the victory will exercise in favor of the British is even of greater moment than the putting out of action of three or four thousand men. British prestige will now resume its normal standard, not only in Africa, but throughout the world. . . . One thing that stands out prominently in this war is the bravery of the British soldiers. This, in fact, is the great feature of the war. Their willingness to face any situation, however deadly, has been the most inspiring and hopeful sign in the campaign. This unflinching bravery, coupled with the able generalship of the empire's greatest soldier, has eventuated in the momentous victory of yesterday. . . . The effect of the war started by the Boers will not only be a regeneration of South Africa; it will be a regeneration of the British empire as well. And in this regeneration, the Dominion of Canada will play no unimportant rôle. Canada will never regret its voluntary participation in the South African war. It will prove a turning-point in our history."

Perhaps the only prominent man in Canada who is willing to admit that the sympathies of the world are with the Boers because of the justice of their cause rather than jealousy of England is Goldwin Smith. He says in the *Toronto Sun*:

"Who can resist the appeal of the gray-haired man and the child of fourteen standing side by side against the lyddite shells of the invader? The only considerable exception to the general feeling is the party in the United States which, having made the war with Spain, is doing in the Philippines what we are doing in South Africa, and at the core of which is the Europeanized plutocracy of New York. If this is 'splendid isolation,' it must be owned that, unless the general sentiment of the world is of no value, the isolation is more evident than the splendor."

With some persistence, it has been argued in the English press that, whatever England may do, the world will smile upon her if she is successful in this war, and that a few victories over the Boer forces will restore her military prestige. But the correspondents of the *London Times*, tho eagerly on the watch, discover as yet no change. De Blowitz, the Paris correspondent of the *London Times*, accuses the whole French press of having been bought up by Dr. Leyds. "Their articles might be written in the Transvaal," he says. Saunders, who is *The Times* correspondent in Berlin, calls the Berlin papers "malicious" for their references to outrages said to be committed by British soldiers upon Boer women as samples of what the Boers have to expect. *The St. Petersburg Zeitung* remarks that the charge of Boer corruption, made by papers which are themselves not only supposed, but absolutely proven, to be corrupt, can be treated with contempt by the European journalist, as all the wealth of the Rand would hardly be enough to bribe the men whose enthusiasm in the Boer cause has been expressed in prose and poetry. The same paper quotes a letter from a German in the Transvaal, who says:

"The end of the century is poor in ideals. Thrice happy there-

fore is the man who in the spirit can join the united effort of a small people against a brutal world-power about to rob them of an ideal possession—liberty. How they rush to arms! No fine, no punishment, need be threatened. The law calls upon men between sixteen and seventy; but much younger boys and older men have taken the field. At Elandslaagte a child of twelve was found, still grasping his rifle, with a bullet in his forehead. From Potchefstroom went a father and eleven sons. No people ever equaled this enthusiasm. In 1813, the Prussians in their fight against Napoleon had one out of every eighteen inhabitants in the field. The Boers have one out of every five."

The *Zürcher Zeitung*, referring to a threat that Switzerland will be boycotted by English tourists unless the Swiss cease to sympathize with the Boers, says: "Are we to be influenced by considerations worthy only of a nation of shopkeepers and waiters?" The Amsterdam *Handelsblad* points out that the Boers long since took into consideration the possibility of an invasion; hence the British found the farms deserted.

The *Nation* (Berlin) thinks that England can only lose by continuing the war. It says:

"England no longer fights for her prestige in the world. That prestige is already hopelessly gone, and it will not be restored if the united strength of the empire after all is great enough to crush the small foe. England continues the war in order to deceive herself. If she can beat the Boers, she will not *feel* altogether helpless. No doubt the restoration of self-confidence is worth fighting for, but it may be bought too dearly. England's best citizens are they who advise her to make peace while honorable terms may be obtained. And we Germans can not wish the British empire to crumble at the first touch."—*Translations made for THE LITERARY DIGEST.*

IS A KULTURKAMPF THREATENING FRANCE?

THE French cabinet has proposed a law to suppress ecclesiastical interference with secular authority. This is directed against the Roman Catholic Church, which appears to have increased its influence very much of late, especially among the monarchists, who are still far from giving up all hope of overthrowing the present form of government. As in most European countries, ministers of various kinds of religion are government stipendiaries, and there is already a law depriving them of their salaries if they oppose the Government. There is even an obsolete decree threatening banishment. But the newly proposed law would authorize the imprisonment of the offender, and goes therefore as far as Bismarck's famous May Laws. Those who remember that the Iron Chancellor was glad to come to terms with the church await with interest the outcome of this struggle against Rome in a country where the church is even more powerful than in Germany. *The Speaker* (London) says:

"If the cabinet of M. Waldeck-Rousseau means this proposal seriously, it has at least more courage than Napoleon. Has it forgotten the Kulturkampf and hopes to be more successful than Bismarck? And is such a blow against an elementary civic right—even when it is designed to coerce powerful, active, often mutinous, and illiberal forces—an achievement of which French liberalism can be proud?"

The *Welt Blatt* (Vienna) remarks that the French Government is indeed going too far, and adds:

"France is entirely in the hands of cosmopolitan speculators, who will not allow a strong party to arise. As long as the people are divided among themselves, these gentry can rule. Hence their bitter enmity against all faith and especially against the church. Against this rule of the money-bags has now arisen a powerful organization, which informs the people of the danger to their faith, and which has worked chiefly through the Dominicans and Assumptionists. That the monks have already felt the heavy hand of the Government is well known. It is now proposed to muzzle prelates. . . . The new law could be applied

even in the case of private letters written by a bishop, and thus the clergy would be robbed of the most elementary of their citizen rights. Imprisonment, from three months to two years, could be inflicted upon the unfortunate bishop who has an opinion of his own. An atheistic government and a legislature which shows no intention to defend its dignity will rule the country until the people awoken to the danger of their position and overthrow the present *regime*."

Very different is the view of M. Gustave Lauson. In reply to a Jesuit priest, who praises Britain's freedom and censures French tyranny, M. Lauson expresses himself to the following effect in the *Revue Bleue* (Paris):

Good Father Burnichon forgets that neither Great Britain nor the United States can well serve for comparison. As to the latter country, the few who adhere to Rome can hardly disturb it, while with us the church is a powerful factor which must be reckoned with. The reference to Great Britain surely is anything but wise, for it leads us to examine how England arrived at a point where she could afford to grant freedom from restraint to the Catholic clergy. We recall the deeds of Henry VIII., Edward IV., and Elizabeth—the scaffolds, the fires, the imprisonings, the spoliation of convents, the compulsory abjurations, the laws defining what faith is permissible. We remember that under James I. Catholics were excluded from London and the court; that they were forbidden to leave their domicile without the written permit of a magistrate; that Catholics could become neither physicians, lawyers, nor judges; that they were forced to let their children become Protestants, and that an oath rejecting the temporal power of the Pope was required of them. Under Charles II., the test bill obliged all officials to deny the doctrine of transubstantiation, and the priests were forbidden from coming to England, *on pain of death*, and thousands were imprisoned as suspects. James II. was driven from the throne for being a Catholic, and the act of 1688 excluded Catholics, tho the most peculiar sects were tolerated. Before 1829 there was not a single Catholic lord. To this day the *No Popery* cry can rouse a mob, and Catholics are given liberty only because the population is hopelessly prejudiced against Catholicism.

Here, then, is the foundation upon which British toleration rests. Do you wish us to copy it in France, reverend sir, to begin three centuries of persecution and humiliating servitude in order to obtain equality? We who oppose the pretensions of the church have no wish to tyrannize over her. We do not wish to repeat the "horse cure" which at last, in 1829, led to the emancipation of the English Catholics. Even so, a Catholic member of Parliament must make oath that he will do nothing against the Anglican Church, against the Protestant religion, or against the Protestant government as such. Suppose we were to impose similar restrictions upon a candidate *here*, it would be called tyranny. What is freedom in England is tyranny in France. We French are too tolerant to wish for an experiment with the crude, tho efficacious, methods which gave security to England; but it is imprudent on the part of the church to remind us of them.

This threatening struggle between church and state will be nowhere watched with greater interest than in Spain, where the power of a predominant religious influence, directed from abroad, is well appreciated. The *Epoca* (Madrid), a paper loyal to Catholicism, tho at times a little restive under the demands of the priesthood, fears that France has troublesome times ahead. It says:

"At present the Exposition engages every one's attention, uniting all social and political factions; but there is certainly much material for combustion. Militarism has raised its head in a manner hardly expected a short time ago. The Monarchists reveal an activity of which they were not thought capable, and the agitation of the Socialists and Anarchists tends to produce disturbances in another direction. If to all this is added a struggle with the church, the French Government may well fear the end of the Exposition."

The Roman correspondent of the *Vossische Zeitung* (Berlin) thinks there is much probability of a serious quarrel between the Vatican and the French Government. The Pope, he says, ad-

mits that the Assumptionists, on whose behalf the bishops have begun to oppose the French Government, are not free from blame; but he thinks the French Ministry have been unnecessarily rigorous. — *Translations made for THE LITERARY DIGEST.*

FOREIGN COMMENT ON THE PHILIPPINES.

THE South African war absorbs the attention of the newspapers of the world to such an extent that little attention is paid to our operations in the far East. Some European papers point out, however, that the Filipinos have not yet shown themselves willing to surrender. The *Tagblatt* (Berlin) doubts that a mere official declaration issued from Washington, to the effect that there is no longer any war, will overawe the Tagales sufficiently to stop their fighting. Similar views are entertained in quarters much nearer the seat of war. The *Kobe Herald* (Japan) says:

"Manila papers continue to report the annihilation of the rebels, the complete desertion of Aguinaldo, and other excitements. . . . It will amount to this, that when Aguinaldo is taken—if he ever is—and when the Philippine army has been smashed people will not believe it. Most people will wink the other eye and say the Americans must be getting badly cornered again."

According to the *Calcutta Englishman*, "nothing is permitted to pass the censors in Manila that does not reflect undimmed glory on American arms." The same paper reports that the mails are no safer than the wires, and that no accounts likely to be unpleasant to "imperialist" ears are permitted to pass through the American post-offices. Letters containing such matter must be sent to Hongkong by special messenger. Reports received by European papers do not always tally with those received by our own. The *Paris Temps*, not a sensational paper, receives *via* Hongkong an account of an engagement near San Mateo in which 146 Americans are said to have been killed and wounded. Similar reports, often with elaborate detail, find their way into other European papers. Many English papers, however, report that the insurrection is over. The *Spectator* (London) says:

"For the past three months the British public has been too deeply interested in the war in South Africa to watch the progress of the war in the Philippines, but the Americans have been steadily 'pegging away' in their manner, breaking up each force of insurgents as it appeared, and improving communications. . . . Complete liberty of trade, cultivation, and locomotion will be secured to the people of all races, just courts will be set up, a police will be organized, probably on the Irish plan, and the main difficulty will be to raise taxes for local administration. The islands, however, are rich, and with a judicious system of grants-in-aid this obstacle should be surmounted without provoking local insurrections. If the general in command will punish any instances of corruption or oppression pretty sharply there ought in three years to be profound peace in the Philippines, a trustworthy body of native auxiliaries, and as much profitable business as is good for the morality of any Asiatic people."

The *Ost-Asiatische Lloyd* (Shanghai) is informed that the Americans proceed with much energy against Filipinos who are unwilling to become their subjects. At Ilo Ilo, twenty-five prominent citizens were shot in one day, being suspected of disaffection. The paper believes that, when the civilized portion of the population have been reduced to insignificant numbers in this way, it will be easy to manage the savages. The same paper further says:

"It is to be expected that sooner or later the Tagales will find open resistance useless. But their hatred for the Americans is likely to last, and the latter will find it dangerous to move beyond the confines of garrisoned towns for a long time to come. Hence they will not soon have any material advantages. Among the less civilized tribes it will be easier to make headway, and their territory may soon become a field for American enterprise. An immediate danger is the plague, which is said to have been

imported by the Americans from Honolulu. If it makes headway, its ravages will be serious."

The *Celestial Empire* (Shanghai) admits that something may be said on the Filipino side, but argues that as long as the English-speaking nations desire to make conquests, it is useless for other nations to oppose them. The paper says:

"Dewey destroyed some anchored ships, Kitchener wiped out the Khalifa's hordes. It was not for that that they received the homage of their countrymen. They became ideals; men to be down before them, and worshiped—not the men, but the idea. It may have been overdone a little, it may remain incomprehensible in part, but whatever be said of it, it was a spontaneous exhibition of one of the traits of our race, that which looks for dominion, for worldly power, and world possession."

The *Overland China Mail* (Hongkong) believes that the Philippines may well be made profitable to American capitalists, but only if Chinese are imported in large numbers into the islands. It says:

"We know that the Filipinos are against the Chinese, and would gladly see the continuation of General Otis's policy of exclusion; but we say unhesitatingly that without Chinese labor the development of the Philippine Islands is impossible. As the repatriated American volunteers used to express it, the Philippines are not 'a white man's country' in the sense that he can labor for hours in the open fields; and as the natives of the islands have not yet experienced the pinch of overpopulation, and the necessity for continuous labor to maintain existence, they are not likely to supply the labor needs of the American capitalists who will seek to work and develop the naturally rich resources of the soil. The Americans are far too practical to lose sight of the advantages that must follow the admission of the Chinese to the island; and this can be done without disturbing the restrictions that govern Chinese immigration into the States." — *Translations made for THE LITERARY DIGEST.*

CHINESE COURT ETIQUETTE.

THE warlike ability of the Boers is attributed by the *Lancet* to the simple life they lead. Perhaps the hyper-refinement of the Chinese, which culminates in the etiquette of the Emperor's existence, has something to do with the very different warlike character of the Celestials. We take the following from an account in the *Matin* (Paris):

The imperial court comprises some 8,000 persons, whose movements, speech, and gestures are continually controlled according to strict ceremonial rules. The Emperor rarely leaves his room, which all have very queer names. In the room of "The Relations of Heaven and Earth" he gives audience; in the apartment of "Celestial Purity" he receives his officials; in the hall of "Brotherly Love and Peace" he passes his leisure hours. Etiquette forbids him to visit the harem, with its two hundred wives. If he wishes to meet one of them, he turns down the stone bearing her name in a casket containing two hundred small stones. The wife thus honored is then carried in on the back of a eunuch.

The whole life of the Emperor is ruled by the same petty ceremonial, which sometimes reveals a touch of Oriental imagination, sometimes is merely barbarous. Would he eat fruit or vegetables, his guardians must first consult the calendar, for it is ordained on what days of the moon he may partake of them. If he shows a healthy appetite, the doctors determine the amount of food he may take. Nothing is more curious and comical than a state dinner. Long tables are laid in an enormous pavilion decorated with lapis lazuli, marble, and bronze. When the gong sounds, the Emperor enters with his guard and proceeds to the low, golden throne. The favored courtiers who are present throw themselves on the ground to worship the "Son of Heaven." The chief of the imperial eunuchs thrice cracks his whip, music begins, and the officials who are to serve the Emperor enter, throw themselves down nine times, and bending their knees five times they serve him on a little table edged with jewels. If he desires to drink, the cup-bearer kneels before him, and the guests look toward the West. Only his nearest relatives are allowed to touch food; the other guests are sufficiently honored by seeing the Emperor eat, and the thousand and one Chinese delicacies are not for them on such occasions. Many dishes, in fact, appear only as *papier mâché* imitations, such as are used in European theaters. — *Translation made for THE LITERARY DIGEST.*

PERSONALS.

PAUL LAURENCE DUNBAR is the youngest of the three negroes who had recently mounted the ladder of literary fame, the other two being Booker T. Washington and W. E. B. Du Bois. To rise inside of a few years from an elevator boy in the city of Dayton to the foremost ranks of American literature at the age of twenty-seven is an intellectual feat that any man, whether he be black or white, should be proud of. As far back as he can remember he had a love of rhythm and rhyme. There is no doubt that in his school life, although attending a mixed school, he had to combat with race prejudices. Still he had a father whose escape from slavery and subsequent sojourn in Canada awakened in him an appreciation for an education, and a mother who learned to read that she might read and think about what her son was writing. Both of them gave encouragement to the young poet and strengthened his determination to rise to the highest ranks among American writers. His first piece, "An Easter Hymn," was written when he was a very small boy on the leaf of a spelling-book. The piece caught the eye of James Whitcomb Riley, and not so very long ago, William Dean Howells called the public's attention in an autograph letter to Mr. Dunbar, and it

New Easter Suits, \$5

The costumes and skirts which we make are exclusive in style and distinctly different from the ready-made garments. When wearing one of our styles you do not run the risk of meeting other ladies wearing garments which look exactly like yours. There are hundreds of firms selling ready-made suits and skirts such as you see everywhere, but we are the only house making fashionable goods to order at moderate prices.

Our Catalogue illustrates an exclusive line of suits and skirts. We will mail it FREE, together with a choice line of samples to select from, to the lady who wishes to dress well at moderate cost. Our Catalogue illustrates:

New Skirts in the latest Paris cut, \$4 up.
Tailor-made Suits, \$5 up. Wash Suits, \$4 up. Wash Skirts, \$3 up.
Raley-day Suits and Skirts made of double-face materials.
Bicycle Suits, \$5 up. Bicycle Skirts, \$3.50 up.

We also make finer garments and send samples of all grades. We pay express charges everywhere. If, when writing, you will mention any particular kind or color of samples that you prefer, we shall be glad to send you an assortment of the kind you wish. Write to-day for Catalogue and Samples—we will send them to you FREE by return mail.

THE R L BOOTH CO.

No. 30 AVENUE J, ITHACA, N. Y.

was from that time that the young colored poet was bounding along on the crest of the waves of popularity. He has been in England and was well received there.

THE greatest of American clowns—greatest, if you measure him by the thousands he has pleased, and the fame he achieved—passed away recently at his home in New Jersey, says the *Cleveland Plain Dealer*. The middle-aged men and women of to-day know that Dan Rice was a name to conjure the most pleasing anticipations in the juvenile breast. There were other scintillating names of that epoch; Van Amborg, Sands and Lent, Yankee Robinson, but the greatest of these was dear old Dan's. He flourished at a time when the circus enjoyed—in the minds of all wise folk—its palmiest days. True, it boasted but one ring, and its lamps sadly smoked, and its free-for-all seats were painfully hard, and it knew no dives for life nor Roman chariots, nor destructions of Pompeii. It was just the plain old circus with one ring and one price, and one clown. But, oh, the magic of the ring! And, oh, the sacrifices that accumulated the price! And, oh, the shriek-compelling antics of the clown! Sawdust can never smell like that again. There will never more be beauty like to that of the fleecy-skirted houri who capered so gracefully on the awaying pad. No, it has all passed away, and now the great clown has passed, too. The king of that magic circle has yielded to the whip-crack of the grim ringmaster, Death. There was a Dan Rice who lingered in the arena after the meridian years of his greatness, but the Dan we love to remember was that virile, rollicking, impudent, always amusing prince of jesters, whose like neither we nor our children shall see again.

MISS KLUMPKE, the noted American astronomer, and one of the talented Klumpke sisters, has added new laurels to her fame by making the observations on the Leonids for the Paris Observatory. Paris was enveloped in a fog, and so, on the third night, Miss Klumpke bravely embarked in a balloon and mounted above the clouds, to ask its secrets of the sky. She was furnished with a little tray suspended from her neck and lighted with an electric jet, on which were placed the charts on which to map her observations, and she was accompanied by a secretary and the persons who managed the balloon. They started from St. Denis at a little past midnight, and at eight o'clock in the morning they anchored at four miles from the sea. It is said that her report is of very great interest, furnishing a proof to the calculations made thirty years ago concerning this star-shower.

For Loss of Appetite
Take Horsford's Acid Phosphate.

Dr. W. H. HOLCOMB, New Orleans, La., says: "It is particularly serviceable in treatment of women and children, for debility and loss of appetite."

Sewing Machines of the Present

are very different from those of the past. Very few users of sewing machines know the *technical differences*; patents have expired on generic features, but "the world moves," and radical improvements have been made in sewing machines, so that the one of to-day shows a tremendous improvement on its predecessor. Women who have used both kinds quickly realize the difference between a cheaply made imitation of some ancient type and the modern light-running machine which is easily adjusted, does all kinds of work, and is always ready to go. The Silent Singer of to-day is the latest result of constant improvement in mechanical excellence. For practical use it compares with the old-time sewing machines sold at department stores much as a modern railway train surpasses a stage-coach of the last century.

Get a Singer. You can try one free. Old machines taken in exchange.

SOLD ONLY BY

The Singer Manufacturing Co.
Salesrooms in every city in the world.

THERE isn't a Tooth Brush made except the **Prophylactic** that really does what it is designed for. The

Prophylactic Tooth Brush

gets the teeth clean. Other brushes get them pretty near clean. "Pretty near" causes decay. Teeth always decay from without.

SEND ONLY IN A YELLOW BOX—for your protection. Curved handle and face to fit the mouth. Bristles in irregular tufts—cleans between the teeth. Hold in handle and look to hold it. Three times a week to cleaning persons—the only ones who like our brush. Adults' No. Children's 12 at 50c. By mail or at dealers'. Send for our free booklet "Tooth Truths."

Racine Cabinet For Turkish Baths

THE RACINE CABINET is a strong double-walled room, rubber-coated inside and outside and fitted with a door. When ready for use, the walls are rigid, yet by merely tipping the cabinet you fold it in a second into a 6-inch space.

A patent alcohol stove heats the cabinet to 150 degrees in three minutes. For a vapor bath, pour a pint of water into the vaporizer. For medicated baths, put the proper drugs in the water. We send 35 formulas with the cabinet.

The Racine cabinet places in your home all the benefits of the best Turkish bath rooms. Not an essential feature is lacking. You save breathing hot air, save the risk of exposure afterward, save time and expense. The cost is but 3 cents per bath.

For the cure of rheumatism, kidney and blood diseases, no other treatment can approach it. The hot-air bath forces the impurities that cause the disease out from five million pores at once. In all sanitariums the Turkish bath is the most important treatment. All who value cleanliness, complexion and health will eventually own one of these cabinets. The quieting, refreshing, invigorating effects of the bath are the pleasantest sensations possible. One bath will always stop a cold.

The Racine Cabinet is guaranteed to be the best one on the market. Not in any way similar to the worthless affairs now advertised for this purpose. We sell on approval, to be returned at our expense if not satisfactory. Sold direct to users at from \$5 to \$12, express or freight prepaid; alcohol stove, vaporizer and face steaming attachment included. Send today for handsome illustrated catalogue, and order from that.

What Other Inducements?—MRS. J. BRASKEY PUSHE: "I confess I'm dying to get my daughter married."

THE BRUTE: "Er—what other inducements do you offer?"—*Life.*

A New Disease.—DR. SQUILLS: "What was the matter with that cab driver you were called to see last night?"

DR. KALLIMELI: "As nearly as I can describe what ails him it is automobiliousness."—*Chicago Tribune.*

His Definition.—"What's the difference between news and fakes?" asked the unsophisticated young woman. The editor of the *Bugle* looked at her pityingly. "News," he explained, "is what you see in the *Bugle*. Fakes are what you see in any of the other local papers."—*Chicago Post.*

Transposition Necessary.—"Grandpop," he began, turning the leaves of his book, "did your history used to say that the Spaniards settled this country?" "I believe it did, my boy." "Well, the new ones won't say that." "What will they say, Ostend?" "This country settled the Spaniards."—*Exchange.*

An Ingenious Explanation.—MRS. HENRICKS: "See here, Dinah, I gave you four flannel undershirts in the wash this week, and you have brought back only three. How is that?"

DINAH: "'Deed, I dunno, ma'am, 'less'n dey shranked. Flannel does shrink somethin' awful ma'am."—*Exchange.*

Justifiable Curiosity.—G. R. Glenn, superintendent of public instruction of the State of Georgia, one day explained the powers of the X-ray machine to a gathering of dorkies at the school commencement. After the meeting was over a negro called him aside and wanted to know if he was in earnest about the machine. Mr. Glenn assured him that he was. "Boss, I wants ter ax you ef er nigger ef chicken kin you look in him an' see chicken?" "Why, yes, Ephraim," said Mr. Glenn. "Well, boss, I wants ter ax you one mo' question. Kin you look in dat nigger an' tell whar dat chicken come from?"—*Argonaut.*

Successful Fruit Growing.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticultural Society at Lenox, Mass. The address is almost a college education to fruit growers, fruit dealers, and in fact to anybody eating fruit or even having but few fruit trees, or in any way concerned. Had this address been placed on the market in book form it would no doubt have sold at a good price. The full address, profusely illustrated, in pamphlet form, will be sent complimentary to any one enclosing ten cents, for postage, to the Lenox Sprayer Company, 30 West St., Pittsfield, Mass.

A Handsome Book Sent FREE

Do not hesitate to send for it just because you cannot buy from us now. We want you to see the book anyway, even if it does cost us 25c. to answer every request. We shall be pleased if you will simply glance at it and learn a little about

The Ostermoor Patent Elastic Felt Mattress, \$15.

Express Charges
Prepaid to Your Door

The guarantee we have been publishing in THE LITERARY DIGEST for years still holds good. Tens of thousands have sent for our book; thousands have purchased and not ten mattresses have been returned.

SLEEP ON IT 30 NIGHTS

And if it is not even all you have hoped for, if you don't believe it to be the equal in cleanliness, durability and comfort of any \$50 hair mattress ever made, you can return the mattress at our expense and get your money back by return mail—"no questions asked." There will be no unpleasantness about it at all.

TRADE MARK.

Comprising the felt, padding and covering the tick by hand.

2 ft. 6 in. wide, 25 lbs.	\$8.35	All 6 feet Long.
3 ft. wide, 30 lbs.	10.00	
3 ft. 6 in. wide, 35 lbs.	11.70

Current Events.

Monday, March 5.

—The House of Commons passes the budget to meet expenses of war.

—Sir Redvers Buller sends a heavy list of casualties for fighting between February 14 and February 27.

—**Martial law is declared** in portions of Cape Colony by Sir Alfred Milner.

—Mr. Davis offers a free-trade amendment to the Puerto Rican bill.

—Secretary Hay denies reports that Nicaragua and Costa Rica have protested against the Hay-Pauncefote treaty.

Tuesday, March 6.

—British and Boer armies near Bloemfontein are about four miles apart.

—Rear-Admiral John C. Watson is relieved from command of American fleet at Manila; Rear-Admiral George C. Remey succeeds him.

—Lord Pauncefote's term as British Ambassador is extended.

—Prof. Bernard Moses of California is appointed on new Philippine commission.

—Convention of the Social Democratic Party meets in Indianapolis. It is expected that Eugene V. Debs will be nominated for President.

Wednesday, March 7.

—General Roberts turns the flank of the Boer army on Modder River, causing the Dutch forces to retreat.

—It is announced that the Queen will visit Ireland next month.

—There is an increase of mortality from plague in Calcutta.

—Secretary Root arrives in Havana on the United States transport *Sedgwick*.

—Senator Lodge speaks on the Philippine question, defending the Administration.

Thursday, March 8.

—General Roberts advances nearer Bloemfontein by ten miles.

—The Queen is greeted in the streets of London with extraordinary demonstrations of loyalty.

—An amendment is to be made to the Hay-Pauncefote treaty providing that the United States shall have the right to defend the isthmian canal in time of war.

—General Wheeler expresses the opinion that territorial government should be provided for the Philippines.

—The Théâtre Français is burned.

Friday, March 9.

—Reports in London are afloat that President Kruger is suing for peace.

—Death of ex-Minister E. J. Phelps.

—The Senate committee on foreign relations amends the Hay-Pauncefote treaty so as to give the United States the right to defend a canal in time of war.

—At the meeting of the Cabinet, Secretary Gage outlines his plan for refunding the public debt under the new currency bill.

—It has been decided to rebuild the Théâtre Français of Paris.

Saturday, March 10.

—Fighting is reported at Hepmakaat, north-east of Ladysmith, between the troops of Sir Redvers Buller and the Boers.

—Trouble occurs between American officers and Cubans over the recovery of the Furor's safe.

—The amendment to the Hay-Pauncefote treaty is not approved by the Administration.

—President Lincoln's body is removed from the base of the monument at Springfield, Ill., which is to be rebuilt.

—The Social Democratic Party convention at Indianapolis adjourns, after nominating Eugene V. Debs for President, and Job Harriman for Vice-President.

Sunday, March 11.

—Lord Roberts reports to the British War Office that he has attacked the Boer army near Driefontein, the burgher forces being defeated.

—General Kitchener arrives at Victoria West, Cape Colony, to organize columns for suppressing rebellion.

—President Kruger returns to Pretoria from Bloemfontein.

—Funeral services are held for ex-Minister Phelps in Battle Chapel, at Yale, ex-President Dwight delivering the address.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

A HOT BATH IN FIVE MINUTES

AUTOGRAPH LETTERS

of famous persons Bought & Sold

WALTER H. BENJAMIN,
1125 Broadway, New York
SEND FOR PRICE LIST.

WOULD you rather buy lamp-chimneys, one a week the year round, or one that lasts till some accident breaks it?

Tough glass, Macbeth's "pearl top" or "pearl glass," almost never break from heat, not one in a hundred.

Where can you get it? and what does it cost?

Your dealer knows where and how much. It costs more than common glass; and may be, he thinks tough glass isn't good for his business.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address MACBETH, Pittsburgh, Pa.

The New Gymnastics.

To double your muscle, to gain enormous power in hand, fingers, wrist, arm, shoulders and back, to steady your nerves, to cure sleeplessness, you need only a **Hendrickson Grip Machine**. A revolution in exercising, which produces marvellously rapid results. It will double your skill at tennis, baseball, pitching, bowling, golf, billiards, piano playing, drawing, because it gives perfect control over arm and wrist muscles. Invaluable to bookkeepers (it cures writers' cramp and cold or trembling hands), stenographers, telegraphers, boxers, all who use their hands.

FREE TRIAL. A gift sent to any address on receipt of 10c. to pay postage and your promise either to send us the regular price, \$1.00, at once or to return them by mail within 10 days of receipt. Three strengths—'athletic,' 'man's,' 'lady's.' Grip, grip, grip! metal. A simple, splendidly illustrated instruction with every pair.

GET the opinion of the man behind the brush. Ask the experienced, practical painter, the man who served an apprenticeship and has thoroughly mastered his trade, what is the best and most durable paint. He will tell you pure "old Dutch process" White Lead.

The brands in margin are genuine and may be relied upon.

FREE For colors use National Lead Company's Pure White Lead Tinting Colors. Any shade desired is readily obtained. Pamphlet giving full information and showing samples of colors, also pamphlet entitled "Uncle Sam's Experience With Paints" forwarded upon application.

National Lead Co., 100 William Street, New York.

Built to order for George P. Jones, Findlay, Ohio.

McCray Refrigerators

Built to Order

For Residences, Clubs,
Hotels, Public Institutions,
Markets, Grocers, etc.

The illustration shows a refrigerator built to order for George P. Jones, Findlay, Ohio. One department is arranged with meat racks, one with bottle racks, and the remaining three compartments with shelves for fruits, vegetables, butter and milk. It has an ice door in the rear to be iced from outside of house.

McCRAY REFRIGERATORS ARE NOT LINED WITH ZINC, AS REFRIGERATORS LINED WITH ZINC ARE DANGEROUS.

The corroding zinc and imperfect circulation of air generates poisons which are absorbed by the foods and cause disease. Milk and Butter are especially susceptible to odors and poisonous gases.

The McCray Tile Lined Perfect Ventilating Refrigerators are made to order in all sizes, from the smallest to the largest, and for any purpose required. A complete line of stock size Refrigerators also.

ALL WORK GUARANTEED ABSOLUTELY SATISFACTORY.

Send for Catalogues and Estimates.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

"of one hundred and thirty-one games played by professionals against amateurs, whose names are kindly not given." *The British Chess Magazine*, in noticing this book, says: "In 1884, Mr. Ruskin, in a letter to *The Daily Telegraph*, gave expression to a half-formed inclination to publish a selection of short and lively games, designed to instruct a perverse generation of players as to the way Chess ought to be played. The idea, long abandoned by the great critic, has been realized by Mr. Mason in 'Social Chess.' The following game, with 'remarks' by Reicheim, is an example of how a master plays the Evans Gambit:

CHAROUSEK. White.	OTHER MAN. Black.
1 P-K 4	P-K 4
2 K-Kt-B 3	Q-Kt-B 3
3 B-B 4	B-B 4
4 P-Q Kt 4	B x Kt P
5 P-B 3	B-R 4
6 Castles.	P-Q 3
7 P-Q 4	B-Kt 3
Should play P x P.	Kt-R 4
8 P-Q R 4	P x P
9 B-R 2	B-K 3
10 P x P	B x B
11 Kt-B 3	Kt-K 2
12 R x B	Castles.
13 K-R sq	
Now for a grand push.	Kt-Kt 3
14 P-Kt 4	R-K sq
15 P-R 4	Kt-B sq
Observe if Kt x P, B-Kt 5 follows.	Q-Q 2
16 P-R 5	Kt-K 3
17 B-Kt 5	Kt-Q B 5
18 Kt-R 4	Kt x B
19 B-K 3	P-Q B 3
20 Kt-B 5	B-Q sq
21 P x Kt	
22 P-Kt 5	
If Kt x P, then Q-Kt 4, menacing Kt and also Kt-R	
6 ch to win the Queen.	P-Q 4
23 Q-Kt 4	B P x P
24 P-Kt 6	P-K R 3
25 R P x P	
Now for Charousek's grand stroke!	
26 Kt x Kt P	B-Kt 4
If Q x Kt then B-K B 7, followed by doubling of	
Rooks.	Q-B sq
27 R-B 7	Kt-Q sq
28 Kt-B 5	
29 Q x B and wins, for if Black takes Queen he is	
mated in two.	

By Way of Explanation.

A number of solvers have acquired the habit of condemning problems that they can not solve. This is especially the fact concerning two-movers. We give only the key-move of the solution, in order to save space. It often occurs that after the key-move is given, solvers are unable to follow out the variations, and hence they write as that the problem is unsound. We do not recall any problem published in *THE LITERARY DIGEST* that was unsolvable. Several were unsound in that they had more than one solution; but we have always noticed this fact, and tried to find the error.

A Muzio Gambit.

From *Wiener Schachzeitung*.

(Remove White's Q Kt.)

C. DARASIL. White.	DR. WOLFF. Black.	C. DARASIL. White.	DR. WOLFF. Black.
1 P-K 4	P-K 4	7 P-Q 4	Q-B 3
2 P-Kt 4	P x P	8 P-R 5	Q-Q Kt 3
3 Kt-K B 3	P-K Kt 4	9 P-B 3	P-Q 4
4 B-B 4	P-Kt 5	10 B x Q P	Kt-Q B 3
5 Castles	P x Kt	11 B x P ch	K x B
6 Q x P	B-R 3	12 B x P	B x B

And White announced mate in nine moves.

EAT

Quaker Oats

AND KEEP YOUR STOMACH SWEET

"Man has been misled by the stimulating properties of animal tissues and their extracts (as concentrated beef) in their food value. Beef tea is nearly as pure a stimulant as a glass of wine!"
—Dr. Hagen "Food and Diet."

Quaker Oats PUDDINGS

Put in a bowl the yolks of two eggs, two tablespoons full sugar, half a teaspoon salt, some grated lemon or other flavoring, and finally the well-beaten whites of the eggs. Bake for fifteen minutes in a hot oven, or, if preferred, steam over hot water. Serve hot with sauce, cream and sugar, or raspberry or strawberry syrup.

A most delicious pudding can be made by adding prunes, apples, or raisins to the above mixture.

EAT MORE Quaker Oats LESS MEAT

At all Grocers in 5-pound Packages

QUAKER OATS make not only the best breakfast in the world, but also delicious and wholesome bread, muffins, cakes, soups and puddings. Write for Quaker Cook Book, edited by Mrs. Brown, THE AMERICAN CEREAL CO., Scranton, Pa., or Chicago, Ill.

THE INGERSOLL

FOR A DOLLAR!

It is not a "cheap" watch; it is awarded \$2000.00 by bankers for accuracy, because it "keeps good enough time for all practical purposes" and "what more does anyone want?"

In 1894, 1895, 1896, 1897, 1898, 1899, 1900, the watch was awarded the gold medal for accuracy by the London Convention of Watchmakers. It is the fact & common-sense of the watch, performing accurately, at a price which will be found guaranteed.

Its durability is attested by hundreds of testimonials, which have been coming in ever since the first year, and the fact that we have doubled our year to '00 when we sold over one million watches.

At 100,000 dealers, or post paid on receipt of price.

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$1.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

EFFORTS IN BEHALF OF PEACE IN SOUTH AFRICA.

LORD SALISBURY'S refusal to accept this nation's offer of mediation, together with the almost simultaneous refusal to listen to the Boer proposal of peace on the terms of independence, leads the press to believe that England will not brook any further attempt to save the South African republics from absorption into the British empire. In his reply to our offer the British premier said that Great Britain does not propose to "accept intervention from any power in South African affairs"—a reply that leads the *New York Times* to remark that "this official notice to all the world should have the effect, not only of intermitting the arduous labors of the American pro-Boers, who have been 'egging on' the President to do things that the present condition and occupations of our land and sea forces make it inadvisable for us to attempt, but also of drying up those welling springs of lies in continental cities whence have come so many reports of intervention by powers unfriendly to England." What the "furious pro-Boer orators" want, says the *New York Evening Post*, "is not mediation, but fulmination. They want the President to thunder in Salisbury's ear: 'This war must stop!' He will not do it. If he did, the war would not stop. Another one would begin." The best service we can render the Boers now, thinks the *Philadelphia Inquirer*, "is to advise them to abandon a hopeless struggle," for the war "can only have one result, and continued resistance on the part of the Boers is little less than suicidal."

Other papers, among them the *Chicago Tribune*, resent the "arrogant language" of Lord Salisbury's reply to the Boer peace proposal, in which he spoke of "the penalty Great Britain has suffered for having of recent years acquiesced in the existence of the two republics." This declaration, says *The Tribune*, "embodies his deep conviction, which is shared by many another Englishman, that to the grace alone of England are the weaker powers of the earth indebted for the enjoyment of independence,

and that were it to cease 'to acquiesce in their existence' they would sink from independency into dependency." Lord Salisbury's reply does not sound, adds the same paper, as if Britain intended to give the new colony a government like that enjoyed by Canada or Australia; but it "sounds as if it was the purpose of Her Majesty's Government to reduce the South African Republic and the Orange Free State to the status of the semi-civilized dependencies of Great Britain, like India and Sierra Leone, or, worse than that even, subject them to the rule of major-generals and military law. If the Boers believe that fate is in store for them they will fight on."

The evident intention of Great Britain to absorb the two republics divides the press along practically the same line of cleavage as was seen at the beginning of the war. The *Baltimore Sun* says: "The purposes of the British Government are plainly revealed in the answer of Lord Salisbury to Presidents Kruger and Steyn. Great Britain is waging a war of conquest and aggression; the lion's appetite is whetted, and he intends to devour the two little republics. It is a sad spectacle and one which arouses indignation as well as pity." The *Philadelphia North American* says:

"The pretense that England's suppression of the republics is for the purpose of conferring better government upon the people, Boers and Uitlanders alike, adds hypocrisy to the crime of brigandage. It was the argument by which slave-traders excused their seizure of negroes in Africa to sell them in America. It is an argument that can be advanced for the enslaving of white workmen—an improvement in their material condition consequent upon their loss of freedom and the substitution of the care of able masters for their own less intelligent care. All the Tories in our own Revolutionary days thought government by England was better than government by the mob, the uninstructed common people of the colonies. And for a time events seemed to prove them correct. But, in the long run, blundering liberty is better than the most benevolent despotism. Who would want the United States to become again a British colony? Not many even of the poor-spirited and English-worshipping Americans who want to see the gallant Boers crushed.

"England's triumph will not be a gain for civilization, but a victory of might over right, of monarchy over republicanism. No matter what the faults of the Boers may be—no matter if their public servants are as corrupt as if they were part of the Quay machine in Pennsylvania or of Tammany in New York—it would be a loss to real civilization to have Queen Victoria take the place of Presidents Kruger and Steyn. The theory of government in the republics is as much ahead of the English theory as is that of the United States itself. Men under free institutions can be trusted to work out of their faults and mistakes. Either that is true or monarchy is better than republicanism, and the Declaration of Independence is a mistake. Our American forefathers and more immediate predecessors were not perfect. Washington and Jefferson owned slaves. The negroes in the South to-day, tho citizens in the eye of the law, practically have no political rights. They are as badly off in that respect, and worse off in most others, than were the Uitlanders in South Africa. What then? Shall England suppress the United States in the name of civilization and send a viceroy to take possession of the White House?

"The crime of the Transvaal Republic is the possession of gold-mines. England would not trouble herself about affairs there if the Boers did not have that which is worth stealing."

On the other side are such opinions as that of the *Brooklyn Eagle*, which says that the Boer leaders are "face to face with

facts which the rest of the world has seen since the war was declared. One of those facts is so elemental that it is incredible that Kruger and Steyn should not appreciate it, altho their joint note ignores it altogether. It is that he who submits his cause to the gage of battle must abide by the result." The *New York Commercial Advertiser* says:

"Conditions of peace are imposed upon Great Britain as imperatively as upon the two republics themselves by the irresistible forces of civilization. This is the surest guaranty against any error of sentimental impulse, like the convention after Majuba, and is even a stronger safeguard than the sea power of Britain against European attempt to dictate a settlement that will not be conclusive and enduring. No settlement will be conclusive and enduring that does not permit free play of industry and natural political development in South Africa. World forces of finance and commerce make for these as much as British interests of trade and industry. They are potent with political governments on the Continent, and their secret influence must be felt on the side of a lasting peace and the unrestricted play of the forces of civilization in South Africa. . . .

"It is needful not only to prevent possible recurrence of war, but to remove the causes of a prolonged status of irritation, uncertainty and alarm only less intolerable than war itself. These were race inequality, political subservience, and industrial impotence and the menace to peace, order, and civilization of a powerful military medieval state, entrenched in the midst of modern life and progress, like a baronial stronghold oppressing with force and tribute a free commercial city. Great Britain endured the sacrifices of war to remove these; she can not make peace and leave them standing. The rational morality and common sense of the world do not expect it, whatever the aberrations of mawkish sentiment at home and political malevolence abroad. Whatever generosity may be shown in personal treatment of conquered foes and in assumption of all the pecuniary burdens of the war, these vital objects must be secured.

"Hard experience has taught that these vital objects are inconsistent with political and military independence of the two republics, tho they are not inconsistent with large local autonomy and perfect civil freedom under British rule."

Lord Roberts's occupation of the Free State capital has been considered inevitable ever since Cronje's surrender, and most of the comments look upon it merely as a stopping-place on the way to the more important objective, Pretoria. The *New York Journal* says:

"Bloemfontein has fallen, but the war is not over. President Kruger has cabled *The Journal* that 'the British will never

reach Pretoria.' He declares that 'the burghers will only cease fighting with death,' and adds: 'Our forces are returning in good order to our first line of defense on our own soil. The Natal campaign was longer in our favor than we expected.' This is not mere idle boasting. If the Boers are thoroughly determined to hold out, the advance on Pretoria will be a very different thing from the advance on Bloemfontein. The Free State capital is in an open country, and no attempt was ever made to prepare it for defense. Pretoria is protected by a maze of mountain ranges, and fortifications have been growing up around it for five years. If the Boers have been able to stock it betimes with sufficient supplies of food and ammunition, and if their lines of defense take in a sufficient area to enable good sanitary conditions to be maintained, there is no reason why they should not give Roberts many a hard month's work before the Union Jack goes up over the Raadshuis."

PROBABLE EFFECTS OF THE GOLD-STANDARD LAW.

NOW that the President has signed the bill passed by Congress establishing the gold standard, the newspapers are trying to forecast its effect on the political and financial situation. Not a few papers are looking in Mr. Bryan's direction, and some of them, like the *Chicago Evening Post* (Ind. Rep.), think that "by this action Bryan is made a 'back number,' " because he "pinned his political fortunes to the white metal and it has been conceded that he must rise or fall with that." Other papers, like the *New York Journal* (Dem.), think that the establishment of the gold standard really strengthens Mr. Bryan's position by depriving the Republican Party of one of its "spooks." Says *The Journal*: "By signing the new gold-standard bill, President McKinley has made it impossible to repeat the scare by which he was elected in 1896. He has eliminated the free-silver terror from the list of spooks in the Republican graveyard. The Government is so bound and handcuffed by this law that Mr. Bryan as President could do no more for silver than Grover Cleveland. The Republican Party will have to fight this year's campaign on this year's issues—such issues as it is now struggling with, in helpless imbecility, in the Senate." *The American Wool and Cotton Reporter* (Boston) also thinks this a serious result of the new enactment. It says:

"Every person who has viewed with alarm the possibility of the gold standard being displaced has been obliged to adhere

OOM PAUL: "Hold up a minute, I've got a proposition to make."

J. BULL: "What is it?"

OOM PAUL: "I'll take the purse and we'll call it off."

PEACE PROPOSITION IN CARTOON.

WARM RECEPTION FOR THE DOVE.

—The Detroit Journal.

only to the Republican Party, notwithstanding any repugnance which he might have for its policy in general. And all who have believed that the great desideratum was the free coinage of silver have been equally firm in their allegiance to the party of Mr. Bryan. Now one of the most important consequences of the enactment of the gold-standard law is likely to be the releasing of such enforced captivity of a countless number of voters, with a consequent political realignment.

Will such an outcome be favorable, or otherwise, to the party in power? This is an important question. For even with the fear of free silver eliminated, the shifting of the administration from one political party to another is an event to be awaited with anxiety; and especially so, when the opposition party aims to put in the Presidential chair a man of such mediocre attainments and unbalanced mind as Mr. Bryan. Nevertheless, it looks very much as if, as a result of the enactment of the gold-standard law, a much greater effort would be required to return the present administration than a short time ago was considered necessary. It is useless to attempt to hide the fact that Mr. McKinley has, rightfully or wrongly, incurred a great deal of odium. It is not necessary for us to enumerate the features of his Administration which have been the means of exciting bitter animosity. Probably the great majority of those who have become incensed over his general policy would, however, feel obliged to cast their ballots for him once more if the currency issue was at stake again. The gold-standard measure releases them from this obligation, and there is, in our opinion, a very great likelihood of a revolt of no mean proportions from the party in power at the coming election."

More papers, however, are discussing the "refunding" feature of the measure, by which the government bonds which would have been paid in a few years are to be replaced by new bonds which will run thirty years. National banks depositing the new bonds in the United States Treasury can issue more currency than was allowed upon the deposit of the old bonds, and the law gives an opportunity for the establishment of many new national banks with small capital, which can also issue bank-notes, so that fear has arisen in some quarters that there is danger of a great inflation of the currency by the addition of all these new notes. The *New York Sun* (Rep.) thinks that the function of issuing money belongs to the Government, and declares that the policy of delegating this function to private banks would "in a normal state of partizan division, inevitably drive out of office the party responsible for it." *Bradstreet's* says that "the signs are that, in spite of some conservatism and hesitation on the part of many bankers as to encouraging these developments, there is likely to be within the next few months a very large increase in the national-bank circulation." The president of the Bank of North America in New York, too, believes that within a year all the New York banks will take out circulation to the full amount of their capital. "If all the banks in the country should act likewise," says the *Springfield Republican* (Ind.), "we should witness an inflation of the currency such as the nation has not experienced since the Civil War. It would be an inflation to compare with which the possibilities of free-silver coinage would strive in vain during a like period of time. We are still inclined to think that the expansion of the currency under the pending bill will not be as extensive as the bank opinion above quoted would indicate; but if it is anything like to this extent, the effect upon the financial and commercial affairs of the country must be profound, resulting unquestionably in a heavy expulsion of gold." The *New York Journal of Commerce*, while believing that "there is little reason to anticipate an alarming degree of inflation from the new law, in view of the heavy demand for currency which has prevailed during the last two years," declares, however, that—

"the principle of the bond-secured circulation is a bad one and might lead to the expulsion of gold if the demand for money were less active. The flurry about possible inflation which is now taking place as the result of a refunding operation is only a hint of the possibilities of danger involved in the bond-secured note system if the Government were called upon to put afloat on simi-

lar terms a large quantity of new bonds. The gold-standard law affords an admirable basis for future reforms in the currency laws, but our money system can not rest upon a scientific basis until the issue of bank-notes is governed by business conditions rather than the fluctuating volume of the public debt."

PROTESTS AGAINST THE PUERTO RICO TARIFF.

THE most remarkable sight now visible in the field of American politics is the uprising of Republican journals against the proposed tariff on articles entering the United States from Puerto Rico, or entering Puerto Rico from the United States. Papers like the *New York Sun*, the *Chicago Inter Ocean*, and the *Chicago Times-Herald*, which have supported the party's measures with marked loyalty heretofore, even in the face of severe criticism, frankly declare that the party leaders in Washington have made a mistake this time, and ought to retreat. The loud and long protests of the Republican press, and the equally strong words of such Republicans as ex-President Harrison and Thomas B. Reed, seem to have taken effect, and the Puerto Rico tariff bill, which passed the House by a narrow majority, is still before the Senate

SENATOR CUSHMAN K. DAVIS,
of Minnesota.

with little prospect of passage in its present form. Several fruitless conferences have been held, and the whole matter has been referred to a committee of conciliation which will try to formulate some more acceptable measure.

The proposition most favorably received by the press is the amendment proposed by Senator Cushman K. Davis, of Minnesota. To relieve the Puerto Ricans and meet the demands of public opinion, he would provide for free trade between Puerto Rico and the United States; and to satisfy those who want a test case for decision as to whether the Constitution follows the flag or not, he would have the bill extend certain parts of the Constitution to the island, thus implying that the rest of the Constitution is not extended. The islanders would not be compelled, in that case, to bear their present privations while waiting for a decision of the Supreme Court.

All accounts seem to agree that the island's present condition is deplorable. Nearly all the tobacco and sugar crops of two years are, it is said, rotting in the warehouses, farmers and merchants are being ruined, and the unemployed masses are kept from rioting and starvation only by the government rations given out by General Davis. A despatch to the *New York Herald* from Puerto Rico, last week, said that "nearly every order for goods has been cancelled because of the uncertainty as to what action Congress finally will take."

The *San Juan Diario* remarks that the United States is making a poor impression on the Puerto Ricans. It says:

"This is an impressionable country, highly impressionable, and the enthusiasm with which in the beginning the American

army was received has been rapidly chilled since Congress met. The United States, the people who took up arms against unjust taxation, are denying Puerto Rico free trade! They are denying liberty and impairing personal rights when it comes to dealing with people outside of their own Continent! Now force, oppression, exploitation, can keep a race in servitude, but can never create happy and contented citizens, unless their sense of dignity and of justice is totally extinguished."

The San Juan *Correspondencia* says in a similar strain:

"Our disillusionment has been cruel. We trusted in a wise and just government, and we see it conquered by trusts. And the nation which bases law upon the consent of the governed has a million souls under its sovereignty, yet does not consult their wishes, against which it imposes burdensome fiscal laws. . . . Our only comfort is in knowing that, against a blundering government, a people like the American will surely rise, always just and generous and magnanimous, and even without knowing us will become our champions, saying, 'Our flag floats over free peoples only; and if Puerto Rico is to be held in the condition of a subject colony, let that flag first be hauled down.'"

A petition has been sent to Congress by a number of Puerto Rican planters, merchants, and manufacturers, in which they deny the assertion put forward by some of the friends of the tariff bill in the House, to the effect that such a tariff is necessary to provide revenue for the island. Internal-revenue taxes, they declare, would raise three times as much revenue as the island needs for the current expenses of administration, and a bond issue of \$2,000,000 would provide funds for permanent internal improvements. They say: "Puerto Rico has no bonded or other debts. Therefore \$2,000,000 of bonds to be issued for internal improvements would be conservative. We call your attention to the fact that it has been the custom for all countries to make internal improvements by the system of bonded indebtedness, which divides the expenses among succeeding generations."

President Jacob Gould Schurman, of the Philippine Commission, in a letter published in the *New York Evening Post*, after strongly denouncing the proposed tariff for Puerto Rico, calls attention to some spectators in the far East who are watching our dealings with the Puerto Ricans with deep concern. He says:

"Let me add, too, that this Puerto Rican legislation is testing us before the eyes of the Filipinos, who keep well informed of all our doings. They will judge by this legislation of the value of American promises. When the ablest and most statesmanlike of Aguinaldo's emissaries to the Philippine Commission once ex-

pressed the fear that the American Government might not keep the promises it was making—for Spain (said he) made promises, and broke them—I silenced him with the reply: 'Señor ———, the United States is not Spain.' Is he now to learn, are all the Filipinos now to learn, that in the first legislation for our new dependencies we prove faithless to our pledges and recreant to our obligations? Such an exhibition of ourselves will strengthen the hands of Aguinaldo and the insurgents, because unhappily it can be used to support their persistent statement that the Americans are no more trustworthy than the Spaniards.

"At the very moment when we need to inspire confidence in the minds of the conquered Filipinos, shall we commit an act which will confirm their distrust of us, quicken their suspicions, and breed new and, perhaps, ineradicable antipathies? God forbid!"

The Philadelphia *Press*, Postmaster-General Smith's paper, which is believed to voice often the sentiment of the Administration, suggests that the United States follow the example of some other countries and place Puerto Rico in the hands of the executive. It says:

"England leaves dependencies to the executive under general laws, principles, and precedents. Her colonies are well governed. France gives and Spain gave her colonies representation in the national legislature. These colonies are ill-governed. Party and personal politics interfere with their prosperity. Their tariffs lead to endless wrangles. Their legislation blocks national reforms. Both the nation and the dependency are worse off.

"Cuba gives no trouble. It is in the hands of the President. It is peaceful. Prosperity is returning. The pending resolution turning the Philippines over to the President, subject to the general supervision of the national legislature, is the English plan and leads to efficient administration in the dependency and to freedom from dissension at home.

"Look at Puerto Rico. It is half the size of New Jersey. It has a smaller population than Brooklyn. Nine tenths are illiterate peasants living on twenty-five cents a day. The territory needs to be raised by education, commerce, and industrial development to the American level. On the English plan, Congress would have turned the island over to the executive authority, with the provision that the acts of the President should have the force of law unless within six months after being laid on the table of both chambers objection were made.

"With this authority the island would have been organized, a governor, appointed council, and elected lower chamber provided, and a tariff would have been arranged for Puerto Rico with reference to the needs of Puerto Rico, and Puerto Rico alone. Whatever measure of reciprocity were required with this country, complete or partial, would be negotiated with the island govern-

TRUSTS: "Oh, you must get used to this hold-up. You have been annexed."—*The St. Louis Republic*.

PUERTO RICO OFFICE-HOLDER: "Well, if you stop your bawling, I'll give you the core."—*The St. Paul News*.

PUERTO RICO'S EXPERIENCES IN CARTOON.

ment and sanctioned or rejected by Congress. Exactly as Navassa, a guano island, has the benefits of appeal to federal courts, so Puerto Rico would have one. Under this appeal contracts would be safe and justice secure.

"This would have been the English plan. It would have kept the island clean out of 'politics.' Unless charges of blunders, mismanagement, or corruption could be made, Puerto Rico would never have been heard of in the next Presidential campaign. See what has been done. Congress has got into a mess over the tariff. Free trade with Puerto Rico has become a national issue. Party feeling is aroused all over the country, the worst of conditions for impartial, equitable treatment. The island suffers. Its tariff is delayed. Its government is unorganized. A blight rests on the industries of the island. All else is blocked in Congress. The two chambers are wrangling. No one can predict the end, and all can see the injury to an island which is a national ward.

"Experience," said Benjamin Franklin, "is a dear school, but fools will learn in no other." Why not accept English experience for a century, keep our new dependencies out of the constitutional limits and political system of the United States, and turn their Administration over to the chief executive, with a general supervision by Congress to prevent abuse?"

Some of the prominent Republican papers which are opposing the proposed tariff for Puerto Rico are the following:

The New York Sun.	The Baltimore American.
The Chicago Inter Ocean.	The Cleveland Leader.
The Chicago Times-Herald.	The Indianapolis Journal.
The Chicago Evening Post.	The Cincinnati Commercial.
The Washington Star.	The Minneapolis Journal.
The Boston Advertiser.	The St. Paul Pioneer Press.
The Boston Journal.	The Milwaukee Sentinel.
The Hartford Courant.	The Portland Oregonian.
The Worcester Spy.	

The New York Tribune and Press and several other strong protection journals continue to advocate the tariff measure.

EUGENE V. DEBS FOR PRESIDENT.

THE convention of the Social Democratic Party met recently at Indianapolis and nominated for President the famous labor agitator, Eugene V. Debs. The candidate for Vice-President on this ticket is Job Harriman, of California, a member of the Socialist Party which has now amalgamated with the Social Democratic Party.

The press recognize that this nomination is likely to prove an important political factor in the coming Presidential campaign. Neither Debs nor Wharton Barker, nominee of the Populists, says the Nashville Banner (Ind.), is "likely to capture any electoral votes; but each will draw away a radical element that voted for Bryan in 1896." "Like the Unitarian and Universalist movements in theology," says the Providence Journal (Ind.), "Socialism is bound to have an influence on other political movements, accomplishing, it may be, some of its aims at last through the older organizations." The attitude of the majority of Republican and Democratic papers is one of bitter hostility to the doctrines espoused by Mr. Debs and his followers.

The platform of the Social Democratic Party in its preamble declares that the "private ownership of the means of production and distribution of wealth," which is "responsible for poverty, misery, and degradation," is dividing society into two hostile classes—capitalists and wage-workers. It states that this class struggle will finally culminate in "the establishment of a system of cooperative production and distribution through the restoration to the people of all the means of production and distribution." As steps toward this final goal, the Social Democrats make the following demands:

Revision of our antiquated Federal Constitution, in order to remove the obstacles to full and complete control of government by all the people, irrespective of sex.

The public ownership of all industries controlled by monopolies, trusts, and combines.

The public ownership of all railroads, telegraph, and telephone compa-

nies; all means of transportation, communication, water-works, gas, and electric plants and other public utilities.

The public ownership of all gold, silver, copper, lead, iron, coal, and all mines; also all oil and gas wells.

Reduction of the hours of labor in proportion to the increasing facilities of production.

The inauguration of a system of public works and improvements for the employment of a large number of the unemployed; the public credit to be utilized for that purpose.

All useful inventions to be free to all; the inventor to be remunerated by the public.

Labor legislation to be made national instead of local, and international where possible.

National insurance of working people against accidents, lack of employment, and want in old age.

Equal civil and political rights for men and women, and the abolition of all laws discriminating against women.

The adoption of the initiative and referendum and the right to the recall of representatives by the voters.

Abolition of war so far as the United States are concerned, and the introduction of international arbitration instead.

Says the Philadelphia Evening Telegraph (Rep.):

"The platform of the Social Democratic Party bears a close resemblance to the famous proclamation of Jack Cade, in which it was provided that the Government should take care of all poor people; that the three-hooped pot should hold a quart, and the threepenny loaf should be sold for a halfpenny. The Social Democrats virtually demand that ours shall be a government of the poor, by the poor, and for the poor, and that the destitute and depressed shall only be required to touch a button and the Government will do the rest. Carried to a logical conclusion, they ought to demand that all property shall be equally divided among all persons, and then, after a time, when the spendthrifts have squandered their share, the Government shall step in and make another equal division. How these crude, childish fancies can occupy the attention of adult minds is something of a mystery, but as the Social Democrats claim a following of 4,500 voters, there must be at least that many people in the country of mature years given to methods of thinking usually ascribed to childhood."

Copyrighted by Faley Bros., New York.

EUGENE V. DEBS.

The Hartford Post (Rep.) adds:

"When one stops to analyze the Social-Democratic position and the Regular or Unsocial Democratic demands—to distinguish the Bryan democracy from the Debs democracy—there is really no very essential difference between them. Both are strongly Socialistic, more or less anarchistic, and chiefly made up of protests against what is. . . Debs is really the more logical representative of the uneasy, dissatisfied, all-on-a-level class, and as such is more entitled to support than Bryan. He is, moreover, frank, outspoken, and consistent, and has been preaching his theories because he believes them and not simply for the purpose of running for President."

The Florida Times-Union and Citizen (Dem.) says:

"During the next campaign, reference to 'the Indianapolis platform' will have a meaning new to our ears—henceforth we must forget the Palmer and Buckner movement to look after the deliverance in the same city and passing under the same name, but manipulated by Mr. Debs, and attacking all that is or was Democratic. These men were with us four years ago; they now appear in their true colors, and for this let us be thankful—their presence robbed us of ten votes where they gave us two. They

call themselves the 'Social Democracy,' but they prove that Hamilton was a prophet when he said extremists would attack the foundations of the nation under shelter of the doctrines proclaimed by Jefferson—it is for us to show that Jefferson was right when he answered the charge, by saying that such a creed could not grow out of his preaching."

The platform of the Social Democratic Party is described by the Rochester *Post-Express* (Rep.) as "the most extraordinary declaration of political principles ever put before the American people." On the other hand, the Detroit *Evening News* (Ind.) declares: "The Social Democracy is not a party, but a church. Its ideals will never be realized this side of heaven."

Mr. Debs is as much loved by his friends as he is hated by his enemies. *The Social Democratic Herald* (Chicago) says:

"Eugene V. Debs is the ideal standard-bearer for American Socialism. His nomination marks the beginning of a real working-class movement in this country. For twenty-five years his life has been consecrated to the cause of labor. He himself was a workingman, a wage-earner. He led one of the most heroic strikes in modern history, a strike which was the quintessence of unselfishness, because the men asked not only that their own rate of wages should be maintained, but that the standard of living of their fellow men should also be maintained. He jeopardized his life, and finally gave himself to imprisonment in the cause of humanity. . . ."

"Eugene V. Debs is the man that we love, the peerless champion of labor, the knight errant of the new chivalry which will mean the emancipation of our land."

The Haverhill *Social Democrat* says:

"Job Harriman will be a fit companion for Eugene Debs. Both are irreproachable in character, both are able, fearless, eloquent, and faithful to the cause. They reflect absolutely the spirit that animates the Socialist movement, and in their life histories is portrayed the struggle upward of the working class. . . . With such as these as the standard-bearers of Socialism the Socialists of the United States will be able to work this year with an energy, enthusiasm, and self-sacrifice that will immortalize the last campaign of a dying century."

WICKEDNESS IN NEW YORK.

MORALIZATIONS on the depth of corruption and vice in New York City, and the extent to which the Tammany administration is responsible for it, continue to hold a prominent place on the editorial pages even of journals outside New York State. The Hartford *Courant* says that the New Yorkers have

"quite as good a government as they deserve," for they had a chance to make Seth Low mayor, but handed the whole city government over to Tammany. "We are not wasting any sympathy on them," says *The Courant*. The Chicago *Tribune*, too, thinks that the New Yorkers need a lesson, and says that the sooner the looting of the city treasury ends in a financial crash, "the better it will be for that misgoverned city; it may set good citizens to thinking."

The press seem to regard last week's police raids on gambling-houses and other illegal resorts as a "spasm of virtue" brought on by the outcry of the press, noticed in these columns last week. Says the New York *Times*:

"Everybody knows that, when the present excitement has blown over, the resorts will reopen in all their repulsiveness, and that the ward man will resume his visits with his former regularity. . . . This raiding business is the first refuge of a corrupt police when its corruption arouses public indignation. It has been practised some hundreds of times within the last generation in New York, and one would imagine that the very staleness of the trick would increase the indignation. Yet the police seem to retain an unflinching faith in its efficacy, tho in fact it is an aggravation of their offense. If they can find vicious resorts when these are pointed out to them by the district attorney, they ought to be at once called to account for not having pointed them out to the district attorney."

The New York *Herald* adds a word about the chief of police under whose command last week's raids were made. It says:

"If the work is to be done effectively, however, it must not be put in charge of the man who above all others is responsible for the state of things which we all deplore. Radical reform requires heroic methods, and if Chief Devery, either by his neglect or his incompetence, has furnished criminals with impunity and allowed them to snap their fingers at his authority, he is not the proper official to be entrusted with the task at hand."

"We have no criticism to offer of Mr. Devery as a private citizen, but as chief of our police force it is only fair to the great body of our citizens to say frankly that he is a dismal failure. His continuance in office will be a positive detriment to the welfare of the city, for he has had his opportunity and has shown that he is not able to make use of it. His resignation in this juncture would be regarded as a boon everywhere. The law-breakers alone would regard it as a misfortune. . . . What is needed for that office is a chief who is neither near-sighted nor ignorant, a chief who knows that crime lurks in dark places and knows where the dark places are, a chief who knows what his duty is and has the backbone to do it. Devery is not that kind

BRYAN AND McKINLEY IN CARICATURE.

of a chief. There is no reason why New York should not be a fairly clean city. We grant the resort-keepers all the rights to which they are entitled, but we have an impression that the rest of our citizens also have rights. Chief Devery can't understand that statement, and hence the trouble which has come upon us. His retirement would make real reform possible, but nothing else will."

Controller Coler, whose strong stand against municipal corruption is attracting wide attention, said in an article in last week's *Independent*:

"The situation is serious enough to compel the attention of every honest business man and every public-spirited citizen. No man ever yet quit stealing because he thought he had taken enough. The wrecking of private property and the looting of the city treasury will go on in New York just as long as it can be done with impunity and without fear or danger of the strong hand of the law. So long as fraud is legal there will be fraud. Municipal corruption will not be confined to one administration, one party or faction while it remains a legalized undertaking, any more than the robbery of private corporations will stop while it can be done without hindrance or detection.

"There is but one safe and permanent remedy for public or private corruption: an aroused public opinion that will compel proper laws and the honest and fearless enforcement of them. No public or private interest can long thrive on fraud. Corruption in private business destroys confidence and saps the vitality of the commercial body. In public affairs fraud discredits a municipality, degrades its employees, and debases its citizenship."

The suggestion has been freely made that Mr. Coler would make a splendid mayor, but he declares emphatically that he will not become a candidate for any office. "I have said this right straight along," he said to a representative of the *New York Commercial Advertiser* a few days ago, "I shall endeavor to get out of this office with a good, straight, clean record and back to Wall Street, where I can deal with honest, straightforward men." The *Brooklyn Times* says of his attitude:

"Mr. Coler's position is creditable alike to his patriotism and

to his sagacity, but he is mistaken if he supposes that the people are going to lose sight of him. He has fought and is fighting a good fight; he has shown and is showing the example of stubborn, aggressive, and self-sacrificing rectitude which above all other things are needed in public life, and especially in municipal administration. The politicians may distrust and hate him, but the people have confidence in him, and they will see to it that Tammany treachery is powerless to hurt him if, for instance, he should be, even against his will, a candidate for the office of mayor of New York next year."

TOPICS IN BRIEF.

CENTRAL AMERICA might be annexed to keep Kentucky company.—*The Detroit Tribune*.

THERE is considerable political Tugela River crossing in progress.—*The Washington Post*.

SOME men are born rich, while others have the good fortune to engage in a Montana senatorial contest.—*The Tacoma Ledger*.

IF Mr. McKinley doesn't soon take another wave-the-old-flag trip the delay may prove dangerous.—*The Detroit Tribune*.

SOME of these nights old man Buller will get to walking in his sleep and will cross the Tugela just from habit.—*The Memphis Commercial-Appeal*.

IF Congress thinks there has been a real row about Puerto Rico let it try to pass the ship subsidy bill.—*The Chicago Journal*.

GENERAL DEWET is now in command of the Boers, to the intense satisfaction of the professional punster.—*The Chicago Record*.

PRESIDENT KRUGER's plans for peace conditions indicate an entire willingness on his part to overlook the fact that there has ever been any fighting.—*The Washington Star*.

WITH Richard Harding Davis superintending Buller, and Rudyard Kipling directing the entire war from Cape Town, it must be admitted that things look very dark for the Dutch.—*The Memphis Commercial-Appeal*.

O. K.—Recent events justify those who had prophesied all through that everything would be what is called "O. K." in the end. So soon as the Lords of Kandahar and Khartoum got to work, with the help of Kelly, Kenny, Kekewick at Kimberley was relieved. To this end Kipling's gentleman in khaki contributed.—*The London Globe*.

PRONUNCIATION OF WORDS IN CURRENT HISTORY.

THE following list may be regarded as a brief Boer dictionary. Besides a number of the common nouns most frequently used in the war reports and newspapers, it includes a few geographical names made prominent during the past fortnight.

Aasvogel Kop	ās'-fōu'gl kop.
Afriander (White South African or Boer)	af'-ri-ān'der (English). af'-ri-ān'der (Dutch).
Boer	būr.
berg (mountain)	bōrn.
buitenlander (foreigner)	boi'ten-lānt'gr.
burgher (citizen)	bōrn'gr.
burgerregt (citizenship)	bōrn'gr-rem't.
burgerwacht (militia)	bōrn'gr-wānt.
commandant (commanding general)	cō'man-dant'.
commandeer (mobilize, impress into service)	cō'man-dēr'.
commando (a military force, a raid)	cō-man'dō.
dam (an artificial lake)	dām.
disselboom (pole of ox-wagon)	dis'el-bōm.
donga (water hole or deep ditch)	dōng'a.
dop (Boer brandy)	dop.
dopper (a Puritanical Boer)	dop'gr.
dorp (village)	dorp.
drift (ford of river)	drift.
Durban	dūr-ben'.
Etahowe	ech'-au-g.
fontein (spring of water)	fōn-tein'.
Griqualand	grīk'-a-land.
jonkherr (member of Volksraad, gentleman)	yōn'hēr.
Kaal Spruit	cdi' sproit'.
klip (stone)	clip.
kloof (ravine)	clōf.
kopje (hill)	cōp'yū.
kraal (collection of huts, cattle yard)	crāl.
krantz (cleft between hills)	crantz.
Kroonstadt	crōn'stāt.
mealies (maize, Indian corn)	mī'liz.
nek (ridge connecting two hills)	nek.
oom (uncle)	ōm.
oorlog (war)	ōr'log.
pan (sheet of water)	pān.

Petrusberg	pē'trus bērn'.
pont (ferry)	pōnt.
poort (mountain pass)	pōrt.
Raad (senate)	rād.
raadsberr (senator)	rād'shēr.
raadhuys (senate house)	rād'hōis.
rand (margin of stream)	rānt.
Rooinek (red-coat, British soldier)	rōi'nek.
sluit (dry ditch)	slōit.
spruit (brook, rivulet)	sproit.
stadt (city)	stāt.
staat (state)	stāt.
staatkunde (politics)	stāt'kun-tū.
staatsraad (council of state)	stāt'srād'.
stemmer (voter)	stēm'gr.
Taal (Boer low-Dutch language)	tāl.
trek (a journey or march by ox-wagon)	trec.
uit (out of)	ōit.
Uitlander (foreigner)	ōit'lānt'gr.
vaal (valley)	fāl.
vaderlandslede (patriotism)	fā'tēr-lānts-lēf'tū.
veldt (South African prairie)	fēlt.
veldt-cornet (military magistrate)	fēlt'cor-net.
veldtheer (general commandant)	fēlt'hēr.
veldtwagter (rural guard)	fēlt'wān-tēr.
vereeniging (custom house)	fēr-ēn'ū-ing.
vierkleur (four-colored Boer flag)	fīr'clūr.
Venter's Vlei	fēnt'grz flai'.
vlei (a small lake)	flai.
volksraad (house of representatives)	fōlks'rād.
voortlooper (the driver of the first ox-team)	fōr'lōp-ēr.
voortregt (franchise, concession)	fōr'trēt.
voortrekker (a pioneer Boer)	fōr'trēc-ēr.
vreemdeling (stranger)	frem'dē-ling.
Zarp (Boer policeman)	zarp.

a (as in sofa), ā (arm), a (at), ā (far), an (angry), b (bed), c (cat), ch (church), n=ch (loch), d (did), dh=th (then), dz (adze), e (net), ē (over), ē (fate), f (fun), g (go), h (hat), i (it), j (machine), ō (aisle), j (jest), k (kink), l (lad), l or lye=ll (brilliant), m (man), n (unt), ōny (unten), ō (hon) F., ō (ink), ō (obey), ō (no), o (not), ō (nor), ō (oil), an (house), p (pay), ps (lapse), cw=qu (queer), r (roll), s (hiss), sh (she), t (tell), th (thin), ts (lasts), u (full), ū (rule), ū (mute), ū (dine) Ger., ū (up), ū (burn), v (van), wā (waf), wī=w= (weal), x (wax), y (yet), yō (yard), z (zone), zh=z (azure).

LETTERS AND ART.

ANOTHER THEORY OF THE SHAKESPEARIAN SONNETS.

DID Shakespeare write the plays that bear his name? Was Hamlet crazy? Who was "W. H.," to whom the Sonnets were addressed? On these questions, the presses are still pouring out books, pamphlets, and magazine articles. Yet in spite of all efforts, we seem to get "no forwarder" in coming to a settled conclusion. So far, indeed, are we from such a conclusion on the last of the three questions that a writer in *The New Century Review* (March)—Mr. F. A. White—comes forward with a brand-new theory, the chief points of which are that the "Mr. W. H." of the dedication stands for William Hathaway, brother to Shakespeare's wife; that both of the young Williams, after being fast friends, fell in love with the same fair maid, Susannah Hamnet; that the wily Hathaway used his own sister as a decoy to catch the Swan of Avon in what he himself, in "Much Ado About Nothing," calls "the beforehand sin"; and that thereupon the fair Susannah, in righteous wrath, spurned the youthful Shakespeare from her and became Hathaway's wife; while the future dramatist, as we all know, made the best of a delicate situation—through a dispensation of the Bishop of Worcester and one reading of the banns—and became the brother-in-law of his quondam friend.

After some arguments from the plays to show how deeply this alleged "beforehand sin" was impressed on Shakespeare's mind, and how it must therefore have been connected with his own prenuptial episode, Mr. White says:

"The theme of the Sonnets, then, must obviously have been a youth of Stratford, obviously 'Mr. W. H.,' obviously William Hathaway, junior, from whom during these three years his business in town drew him ever away, to his exceeding sorrow, even as he says in Sonnet L:

How heavy do I journey on my way,

from Stratford to London after his happy Christmas week's holiday at the former place.

"That Shakespeare was connected with 'W. H.' by the inalienable domestic ties of affinity plainly appears from Sonnet XXV.:

Oh, happy I that love and am beloved,
Where I may not remove nor be removed!

"On coming down to Stratford one Christmas our poet finds in young Hathaway, his nephew, godchild, namesake, besom friend's child, old sweetheart's child, and might-be issue of his own proper loins, 'the very image of her that he had loved so fondly more than twenty years ago—

Thou art thy mother's glass, and she in thee
Calls back the lovely April of her prime.
(Sonnets III.)

"Three years later he comes down to Stratford again and finds young Hathaway handsomer and liker his mother than ever. When he sees the ever dear mother restored to all the beauty that charmed him some twenty years ago, when he compares the lad now before him with her picture at seventeen or eighteen, and finds the resemblance exact, the plot of the Sonnets is formed within his brain. And tho Shakespeare must have had hurried glances of the boy during his many flying visits, these were both special occasions. The first time, the boy had just left school (before, he had been forever at school or play or evening 'prep,' and his uncle could have seen but little of him), and now he is godfather to his cousin's first child, the mother and her sister Judith being godmothers. Hence most naturally followed the Sonnets enjoining him to marry at the very age that his own godfather had done (eighteen), and have children of his own (shall I presume to guess by his gossip Judith S——) with which the work concludes."

All this, says Mr. White, "is as pleasingly natural as the theory that 'W. H.' is William Herbert, the great patron of literature in Shakespeare's time, is displeasing and unnatural." "As

addressed to him [Herbert], nothing can be more utterly incongruous and absurd, and in more execrable taste. A poem in glorification of the beauty of *any* boy, considered *as* a boy, is bad enough, but combined with the most servile groveling fawning upon a patron, it is sickening, and the poet is utterly degraded by it."

"DISAPPEARING" AUTHORS.

MR. JUSTIN McCARTHY, in attempting to explain some of the phenomena of literary popularity, has included in his list of "disappearing" authors some names that will arouse protest, at least in America. By disappearing authors he does not mean those who, like Macaulay and George Eliot, have their periods of depression after great popularity, and then reascend with undimmed luster; but those who strut their little hour upon the literary stage and then disappear forever. And among, not those who have disappeared, but those who are disappearing, he includes the author of "Hypatia," "Westward Ho," and "Water-Babies"—books still very much alive in this country. Says Mr. McCarthy:

"The disappearing authors whom I have in my mind do not, any of them, represent any set school of literature. If they did, their disappearance might be easily explained. It might be said that the public grow tired of the ways, the fashions, the tricks of a school, and are glad to be rid of them once for all. But some of the authors whose disappearance, gradual tho it be, I can not help observing, and whose disappearance I personally regret, were not followers of any particular school, had no set mannerisms or fads, and were indeed in their way thoroughly original. Take, for instance, such a man as Charles Kingsley. Kingsley did not attach himself to any school, so far as novel-writing was concerned. In such a book as 'Alton Locke,' he drew directly from the life he saw around him. There was nothing in a school of literature which flourished at or before his time that could have taught him anything about the scenes he had to picture in his romance. But I wonder what proportion of English-speaking novel-readers take much interest just now in 'Alton Locke.' The same question may be asked about any other of his novels. Yet there has been no reaction against Kingsley that I could see. No sets of new critics have gone to work to disparage him and to teach us that we were all wrong when we consented to admire him. I am afraid there can be no doubt that he is one of the disappearing authors."

So also, we are told, are Anthony Trollope, Charles Reade, and Charles Lever to be reckoned with this submerged class. There is another class, however, who, while unread except by scholars or the select few, always maintain their hold upon public reverence—such writers as Richardson, Smollett, Mrs. Inchbald, and, in a sense, Fielding, Dr. Johnson, Miss Austen, and Miss Edgeworth, who may be regarded as a species of literary demigods, secure as the constellations of their enduring place above the eyes of men.

England and America are more loath to part with their pseudogods than are the French, who, after raising a mortal to the heights of literary deification, manifest a positive eagerness to speed him in his career into the ranks of disappearing authors, and to fill his place with some one new:

"In the present anxiety for novelty, which prevails, I am told, in France, the next thing that happens, after a man has obtained a settled reputation, is that the critics pronounce him to belong already to the old school, and say that he had better cease to lag superfluous on the stage. There would seem to be three stages in the career of a French literary man, according to this account—first, the striving after a reputation; second, the reputation achieved; and, third, the intimation that he has done his work and that the world wants no more of him. Of course, I do not suppose, for a moment, that this impatience of the older school and tumultuous welcome of any newer school applies to the really great minds in any department of letters. Balzac and Victor Hugo, I presume, do not grow old. The growing intoler-

ance of authors who belong to an older epoch asserts itself, I take it for granted, only against the class I have been venturing to describe as disappearing authors. . . .

"But I do not think that such is the feeling with which in England and America we regard our disappearing authors. We do not want them to disappear, we are not always conscious that they are disappearing, we might perhaps entreat some of them to stay with us if we knew that they were taking their departure: but we do not notice their going at the time, and after a while we become conscious that they are gone."

SOME POETS OF THE NEW YORK GHETTO.

A SIDE of literary New York not often seen by the visitor or recognized by the critic is the life which gathers in the little Canal Street cafés in the heart of the East Side, where Russian Jewish exiles—musicians, Socialists, actors, journalists, and poets—gather each afternoon and evening to discuss poetry and ethics, politics and society, over their coffee, and where the café-keepers themselves—serious, often somber of mind—frequently join in the discussion. There are many poets to be found in these gatherings, but, of them all, four men stand out as really men of uncommon talent—Morris Rosenfeld, Eliakim Zunker, Menahem Dolitzki, and Abraham Wald. Mr. Hutchins Hapgood, in *The Critic* (March), gives an account of these Yiddish *littérateurs*. He writes:

"One of the four, Morris Rosenfeld, is already well known to the English-speaking world through a translation of some of his poems. Two of the other three are equally well known, but only to the Jewish people. One is famous throughout Jewish Russia. The other is very young and known only to the New York Ghetto. All four are not only poets but men of interesting personality.

"The oldest of the four poets is Eliakim Zunker. It is he that is known to millions of people in Russia and to the whole New York Ghetto. He is the poet of the common people, the beloved of all, the poet of the housewife, of the Jew who is so ignorant that he does not even know his own family name. To still more ignorant people, if such are possible, he is known by what after all is his distinctive title, Eliakim the *Badchen*, or the Wedding Bard. He writes in Yiddish, the universal language of the Jew, dubbed 'jargon' by the Hebrew aristocrat. Zunker is now a printer in Rutgers' Square, and has largely given up his duties as *Badchen*, but at one time he was so famous in that capacity that he went to a wedding once or twice every day, and made in that way a large income. His part at the ceremony was to address the bride and bridegroom in verse so solemn that it would bring tears to their eyes, and then entertain the guests with burlesque lines. He composed the music as well as the verses, and did both extempore. When he left his home to attend the wedding there was no idea in his head as to what he would say. He left that to the result of a hurried talk before the ceremony with the wedding guests and the relatives of the couple. Zunker's wedding verses died as soon as they were born, but there are sixty-five collections of his poems, hundreds of which are sung every day to young and old throughout Russia. Many others have never been published, for Zunker is a poet who composes as he breathes, whose every feeling and idea quivers into poetic expression, and who preserves only an accidental part of what he does.

"He is a man of about seventy years of age, with kind little eyes, a gray beard, and spare, short figure. As he sits in his printing-office in the far East Side he wears a small black cap on his head. Adjoining the office is another room, in which he lives with his wife and several children. The stove, the dining-table, the beds, are all in the same room, which is bare and chill. . . . More than any of the three poets whom we are to mention, with the possible exception of Morris Rosenfeld, Zunker has a fresh lyric quality which has gone far to endear him to the people. Yet in spite of his sweet bird-like speed of expression, Zunker's is a poetry of ideas, altho the ideas are simple, fragmentary, and fanciful, and are seldom sustained beyond what is admissible to the lyric touch. The pale cast of thought, less marked in Zunker's work than in that of the other three poets, is also a common characteristic of Jewish poetry. Melancholy, patriotic, and

thoughtful, what is lacking in Zunker is what all modern Jewish poetry lacks and what forms a sweet part of Anglo-Saxon literature—the distinctively sensuous element. A Keats is a Hebrew impossibility. The poetry of simple presentation, of the qualities of mere physical nature, is strikingly absent in the imaginative work of this serious and moral people. The intellectual element is always noticeable, even in simple Zunker, the poet of the people."

Of Morris Rosenfeld, poet and former tailor, Mr. Hapgood writes:

"Full of tears are the man and his song. Zunker, Dolitzki, and Wald, altho in their verse runs the eternal melancholy of poetry and of the Jews, have yet physical buoyancy and a robust spirit. But Rosenfeld, small, dark, and fragile in body, with fine eyes and drooping eyelashes, and a plaintive, childlike voice, is weary and sick—a simple poet, a sensitive child, a bearer of burdens, an East Side tailor. Zunker and Dolitzki have shown themselves able to cope with their hard conditions; but the sad little Rosenfeld, unpractical and incapable in all but his songs, has had the hardest time of all. His life has been typical of that of many a delicate poet—a life of privation, of struggle borne by weak shoulders, and a spirit and temperament not fitted to meet the world. . . .

"Next to Zunker, Rosenfeld is the most popular of the four Jewish poets. Zunker is most popular in Russia, Rosenfeld in this country. Both write in the universal Yiddish or 'jargon,' both are simple and spontaneous, musical and untutored. But, unlike Zunker, Rosenfeld is a thorough representative, one might say victim, of the modern spirit. Zunker sings to an older and more buoyant Jewish world, to the Russian Hebrew village, and the country at large. Rosenfeld in weary accents sings to the maimed spirit of the Jewish slums. It is a fresh, naive note, the pathetic cry of the bright spirit crushed in the poisonous air of the Ghetto. The only song that Rosenfeld has printed in English is this:

I lift mine eyes against the sky,
The clouds are weeping, so am I;
I lift mine eyes again on high,
The sun is smiling, so am I.
Why do I smile? Why do I weep?
I do not know; it lies too deep.

I hear the winds of autumn sigh,
They break my heart, they make me cry;
I hear the birds of lovely spring,
My hopes revive, I help them sing.
Why do I sing? Why do I cry?
It lies so deep, I know not why."

Abraham Wald, who is but twenty-eight years old, and the least known of the poets mentioned, is in several respects the most interesting. Mr. Hapgood says of him:

"He is the only one who is on a level with the intellectual alertness of the day. His education is broad and in some respects thorough. . . . He is an imaginative critic, a violent Socialist, and an excitable lover of nature. One of his friends called the poet on one occasion an intellectual *débauché*. It was in a Canal Street café, where Wald was talking in an excited tone to several other intellectuals. He is a short, stocky man, with a suggestion of physical power. His eyes are brilliant, and there seems to be going on in him a sort of intellectual consumption. He is restlessly intense in manner, speaks in images, and is always passionately convinced of the truth which he sees so clearly but seldom expresses in cold logic. His fevered idealism meets you in his frank, quick gaze and impulsive and rapid speech.

"Lacking in repose, balance, and sobriety of thought, Wald is well described by his friend's phrase. Equally well he may be called the Jewish bohemian. He is not dissipated in the ordinary sense. Coffee and tea are the drinks he finds in his little cafés. But in these places he practically lives, disputing, arguing, expanding, with whomsoever he may find. He has no fixed home, but sleeps wherever inevitable weariness finds him. He prefers to sleep not at all. Like all his talented tribe he is poor, and makes an occasional dollar by writing a poem or an article for an East Side newspaper. When he has collected three or four dollars he quits the newspaper office and seeks again his beloved café, violently to impart his quick-coming thoughts and impulses. Only after his money is gone—and it lasts him many days—does

he return to his work on the paper, the editor of which must be an uncommonly good-natured fellow.

"Wald's is the poetry of Socialism, and one form is as turbulent as the other."

WHITMAN AND BROWNING AS POETS OF BARBARISM.

PROF. GEORGE SANTAYANA, of Harvard University, is the author of a volume of criticism, entitled "Interpretations of Poetry and Religion," in which the idea is advanced that poetry and religion are identical in essence, and differ merely in the way in which they are attached to practical affairs. Poetry is called religion when it intervenes in life; and religion, when it merely supervenes upon life, is seen to be nothing but poetry.

The professor elaborates this idea in a philosophical way. His first chapter is devoted to tracing the relations and differences between the understanding, the imagination, and mysticism. The imagination is the common ground on which all minds meet and understand one another; therefore the great necessity for its highest product, poetry.

The chapter that will probably attract the most attention is that on the "Poetry of Barbarism," which title is applied to the most original of the poetical product of modern times. Whitman and Browning, about whom critics have differed more than about any other two poets, are, he declares, the chief exponents of this poetry of barbarism. All modern poetry is more or less deficient, we are told, in the power of idealization. The poetry of the Homeric times was the sweetest and the sanest the world has ever seen, the most faultless in taste, and the most even and lofty in inspiration. Homer was the first and greatest of poets, notwithstanding his age of suffering and ignorance. Dante had not his sanity, breadth, and vigor, and Shakespeare falls short of Homer in taste, in sustained inspiration, in consecration, and in rationality.

Coming down to our own day, Professor Santayana thinks that with all the accumulated experience of the ages, with the vast complexity of life, and with the new views of the universe given to men by modern science, our poets have proved themselves incapable of any high wisdom, incapable of any imaginative rendering of human life and its meaning. They give us episodes and studies, a sketch of this curiosity, a glimpse of that romance; they have no total vision, no grasp of the whole reality, and consequently no capacity for a sane and steady idealization.

"The comparatively barbarous ages," he writes, "had a poetry of the ideal; they had visions of beauty, order, and perfection. This age of material elaboration has no sense for these things. Its fancy is retrospective, whimsical, and flickering; its ideals, when it has any, are negative and partial; its moral strength is a blind and miscellaneous vehemence. Its poetry, in a word, is the poetry of barbarism."

The professor gives a double reason for considering modern poetry barbarous. The imagination of the race has been formed partly in the school of classic literature and polity, and partly in the school of Christian piety.

"This duality of inspiration, this contradiction between the two accepted methods of rationalizing the world, has been a chief source of that incoherence, that romantic indistinctness and imperfection, which largely characterizes the products of the modern arts. A man can not serve two masters; yet the conditions have not been such as to allow him wholly to despise the one, or wholly to obey the other."

To be either wholly pagan or Christian is now impossible. The civilization of the one has perished, and the illusion of the other has vanished. So there has grown up a man feeling independent of either of them and confident of his absolute power. This man has no memory for the past, and his ignorance of it

has bred in his mind contempt for its teachings. The past is now a ruin, not an authority. Art as well as man must have its ancestry; but the modern artist does not copy and remember. He therefore writes as a barbarian, without any past to assist him. His imagination is undisciplined. The defects of his art are lack of distinction, absence of beauty, confusion of ideas, and incapacity permanently to please.

Walt Whitman and Browning, on two different planes, Professor Santayana considers the best illustrations of barbarous poets.

"They are both analytic poets—poets who seek to reveal and express the elemental as opposed to the conventional; but the dissolution has progressed much further in Whitman than in Browning, doubtless because Whitman began at a much lower stage of moral and intellectual organization; for the good will to be radical was present in both. The elements to which Browning reduces experience are still passions, characters, persons; Whitman carries the disintegration further and knows nothing but moods and particular images."

Considering these two poets separately, the professor grants Whitman the possession of a profound inspiration and a splendid courage; but he presents his swarm of men and objects as they might strike the retina in a sort of waking dream. It is the most sincere possible confession of the lowest—the most primitive—type of perception. All ancient poets are sophisticated in comparison, and give proof of longer intellectual and moral training. Walt Whitman has gone back to the innocent style of Adam, when the animals filed before him one by one, and he called each of them by its name. We quote again:

"The absence of any principle of solution or of a sustained style enables him to render aspects of things and of emotions which would have eluded a trained writer. He is therefore interesting even where he is grotesque or perverse. He has accomplished by the sacrifice of almost every other good quality, something never so well done before. He has approached common life without bringing in his mind any higher standard by which to criticize it. He has seen it not in contrast with an ideal, but as the expression of forces more indeterminate and elementary than itself; and the vulgar in this cosmic setting has appeared to him sublime."

Professor Santayana further points out that in Whitman's poetry there is not a single story or character. His only hero is *Myself*, the "single separate person." The critic thinks Walt Whitman's dream of the American man and woman is unrealized and unrealizable in America as elsewhere. Whitman's insight into man did not go beyond a sensuous sympathy. He did not know men's hearts, and could never realize his dearest ambition—to become the poet of the people. For the people, like the early races whose poetry was ideal, are natural believers in perfection. They have no doubts about the absolute desirability of wealth and learning and power, none about the worth of pure goodness and pure love. Nothing is further from the common people than the corrupt desire to be primitive. Whitman's music and philosophy are those of a barbarian, nay almost a savage.

Of Browning the author says:

"Apart from a certain superficial grotesqueness to which we are soon accustomed, he easily arouses and engages the reader by the pithiness of his phrase, the volume of his passion, the vigor of his moral judgment, the liveliness of his historical fancy. It is obvious that we are in the presence of a great writer, of a great imaginative force, of a master in the expression of emotion. What is perhaps not so obvious, but no less true, is that we are in the presence of a barbaric genius, of a truncated imagination, of a thought and an art inchoate and ill digested, of a volcanic eruption that tosses itself quite blindly and ineffectually into the sky."

Browning's greatest failures, declares the professor, are a lack of rationality and the indifference to perfection. A sign of these is his turgid style, weighty without nobility, pointed without naturalness or precision. Another sign is the "realism" of the

personages, who, quite like men and women in actual life, are always displaying traits of character and never attaining character as a whole. Browning should have kept within the sphere of drama and analysis, where he was strong. Instead, he allowed his own temperament and opinion to vitiate his representations of life, so that he sometimes turned the expression of a violent passion into the last word of what he thought a religion. He had a didactic vein, a habit of judging the spectacle he evoked and of loading the passions he depicted with his visible sympathy or scorn.

Browning's treatment of the passion of love, a passion to which he gives great prominence and in which he finds the highest significance, best illustrates his defects as a poet. The love he depicted was always of the same quality—the quality of passion. It never sinks into sensuality, it is always a passion of Browning's imagination. On the other hand, it never rises into contemplation: mingled as it may be with friendship, with religion, or with various forms of natural tenderness, it always remains a passion, a hypnotization with another person for its object or cause.

Browning, like Whitman, and indeed in keeping with his age, has tried to ignore all the lessons of the past. He would subject his emotions and his imagination neither to pagan nor Christian discipline. The soul which he trusted is the barbarous soul, the "spontaneous Me" of his half-brother Whitman. Whitman is the poet of sense perception. Browning rose above that level. His favorite subject-matter is the stream of thought and feeling in his mind; he is the poet of soliloquy.

Professor Santayana concludes that, tho Browning's sphere was more subtle than Whitman's, it was still elementary. It lay far below the social and historical reality in which Shakespeare moved; far below the comprehension and cosmic sphere of every great epic poet. Browning did not even reach the intellectual plane of such contemporary poets as Tennyson and Mathew Arnold, who, whatever may be thought of their powers, did not study consciousness for itself, but for the sake of its meaning and of the objects which it revealed.

MR. CHOATE'S LIST OF IMMORTAL BOOKS.

IN a recent speech before the Authors' Club in London, Mr. Choate named four books which, in his judgment, have established their claims to immortality. The books are: "Don Quixote," "The Pilgrim's Progress," "Robinson Crusoe," and Isaac Walton's "Compleat Angler." The London *Spectator* explains that Mr. Choate was not thinking of the bright and shining stars of the intellectual firmament such as Homer, Dante, Vergil, Shakespeare, nor of the Bible; but solely of "those specific self-contained books which are most widely read by English-speaking people and which presumably have most influenced them." The *Spectator* thinks the list not a bad one; but it proceeds to amend it by eliminating two of the four books and substituting three others. Of "Robinson Crusoe" and "Pilgrim's Progress" there can be no doubt; they must be given a place in any such list. The *Spectator* says:

"It is probable that, next to the Bible, no works have ever been more widely read than these, for hundreds of editions of each have been published, not only in English, but in every civilized and some uncivilized languages. If we had to select one self-contained English work which stood out by its glorious imagination, its spiritual import, its profound wisdom and yet its charming simplicity, its pure style, and universal appeal, we should unhesitatingly choose 'The Pilgrim's Progress.' But what of Mr. Choate's other two books—'Don Quixote' and 'The Compleat Angler'? The former is probably the greatest romance ever composed, the glory of Spanish literature, unrivaled in its kind, brimful of humor, satire, imagination, and knowledge of human nature. It has been frequently translated into English,

and the translation of Jarvis in particular is not only faithful but is in itself a very good piece of English literature. But is 'Don Quixote' really universally read in England? Or is it one of those numerous works more talked of than read? . . . Now, it seems to us essential to the universality and permanence of a book in Mr. Choate's sense of the word that both sexes and all ages beyond immature youth should read and delight in it. The best judges of literature have delighted and will always delight in 'Don Quixote,' but does the average English person delight in that great romance? We doubt it."

Moreover Walton's book is not at all a universal book, altho rare and excellent of its kind. Bacon's "Essays" should have been included; so also should "Gulliver's Travels" and "The Vicar of Wakefield." "Putting on one side any single poem, such as 'Paradise Lost' or 'The Ancient Mariner,' masterpieces of human genius," *The Spectator* thinks that the three works named stand at least as good a chance of immortality as the two named by Mr. Choate to which it has excepted. The writer concludes thus: "But we must add that, 'The Pilgrim's Progress' apart, the most permanent glories of English literature are to be found in her greatest poems. It is these which mark the abiding spiritual and intellectual power of England among the nations."

LE GALLIENNE'S TRIBUTE TO SIDNEY LANIER.

ABOUT two years ago, a well-known French critic, M. Th. Bentzon (Mme. Blanc), brought to the attention of France the noble verse and still more noble life of Sidney Lanier, whom she described as "an exceptional being, penetrated with the worship of the beautiful, whose every act was an utterance of the music of his soul." Now comes Mr. Richard Le Gallienne with an equally enthusiastic appeal to British readers to make Lanier's acquaintance. Says Le Gallienne (in the London *Academy*):

"Seven years ago Messrs. Gay & Bird published an edition of his poems in this country, yet he remains virtually unknown—and hundreds of poetry lovers are the poorer for it. I had been fortunate enough to know him two or three years before, through an article by Mr. Stedman in an American magazine. Some of the extracts then made had never forsaken my memory. With the publication of Messrs. Gay & Bird's edition I took the opportunity of knowing the whole poems; and two of my friends, not inglorious as poets themselves, will, I know, recall a night of poetical debauch—I mean a debauch of poetry!—in which I passed on my new-found treasure to them. They thought him no less wonderful than I did; and his strenuous, romantic, pitiful history moved them as it moved me."

Mr. Le Gallienne quotes at considerable length from "Marshes of Glynn," and, referring to that poem and to "Sunrise," he comments as follows:

"Had he written all his other poems, and missed writing these (striking, suggestive, and fine-lined as those other poems often are), he could hardly have been said to succeed in his high poetic ambition—as by these two poems I think he must be allowed to succeed. In the other poems you see many of the qualities, perhaps all the qualities, which strike you in the 'Hymns'—the impassioned observation of nature, the Donne-like 'metaphysical' fancy, the religious and somewhat mystic elevation of feeling expressed often in terms of a deep imaginative understanding of modern scientific conceptions; in fact, you find all save the important quality of that ecstasy which in the 'Hymns' fuses all into one splendid flame of adoration upon the altar of the visible universe. The ecstasy of modern man as he stands and beholds the sunrise, or the coming of the stars, or any such superb, elemental glory, has perhaps never been so keenly translated into verse. Those who heard Lanier play remarked upon 'the strange violin effects which he conquered from the flute.' Is it fanciful to feel that in these long, sweeping, and heart-breaking sensitive lines, Lanier equally cheated his father, who, as we have seen, 'feared for him the fascination of the violin'?"

Of the circumstances under which "Sunrise" was written, Mr. Le Gallienne says: "Only nine months before his death we read that 'when too feeble to raise his food to his mouth, with a fever temperature of 104,' he penciled his finest poem, called 'Sunrise.' Such, indeed, is what Mr. William Watson calls 'the imperative breath of song.'"

SCIENCE AND INVENTION.

LAUGHTER IN HEALTH AND DISEASE.

STUDIES of laughter from a scientific point of view are numerous. The best known, perhaps, is that made by Darwin in his "Expression of Emotion in Men and Animals." The latest has just been published (Paris, 1900) by Dr. J. M. Raulin, who calls his book an "anatomical, psycho-physiological, and pathological study." To show what has already been written on the

subject, it may suffice to say that the author gives a bibliography that fills eight closely printed pages. Dr. Raulin's book is reviewed in the *Revue Encyclopédique* by Dr. Jean Philippe. The reviewer notes that a complete study of laughter must include the anatomy and physiology of the organs involved, an examination of its mental and physical causes, and finally its pathology, which is important in the case of morbid or hysterical laughter. Of its anatomy, after enumerating the several muscles concerned in the movement, Dr. Philippe says:

"Long ago, Aristotle said that laughter is peculiar to man because our skin is more delicate than that of other animals. This explanation has caused considerable merriment, but I believe that we shall have to go back to it. To-day we prefer to say that man alone can laugh, because he alone has the complete apparatus for laughter. Some anatomists even say that the negro can laugh only in such degree as he attains to higher civilization. However this may be, the muscles of laughter do not appear in animals lower than the highest of the primates; in others they are but rudiments, so that even most of the monkeys do not laugh."

"But muscular action is not all that there is to laughter; respiration and circulation also take part in it, and their rôle, tho less apparent, is not less important. The afflux of the blood in the arteries . . . undergoes in laughter great modification. The blood is quickened, and at the same time the vasomotor nerves dilate the arteries and increase its volume, so that the eyes shine, etc. As for respiration, laughter

prevents the closure of the glottis and profoundly changes the rhythm of breathing; the vocal chords are contracted, and the expired air causes them to vibrate. . . . The emission of air even takes on, at certain moments, the sound of the vowels; women and children laugh on *i* and *e* [English *e* and *a*], with men *a* [as in father] and *u* prevail."

Regarding the psychology of laughter, Dr. Philippe notes that its scale runs from the sad smile of melancholy, near to tears, to the mad fit of laughter which is also productive of tears. Between these limits he distinguishes four

REAL LAUGH.

FEIGNED LAUGH.

LAUGHTER WITH TEARS
(MASK BY CARRIÈS).

principal forms: the simple smile; the smile with parted lips, extending to the whole face; the stage where the throat and larynx take part; and the fit of laughter that extends to the

whole body. The earlier stages can be simulated; not so the latter, according to Dr. Philippe. Of morbid laughter, the writer tells us that it is a symptom of disease, and he goes on to say about it:

"The clinician should know these symptomatic laughs; they are valuable to him because they appear especially in nervous or mental diseases, . . . when attentive observation of the patient's laughter may often aid in diagnosis. Thus we have the laugh of sclerosis, that of paralysis, of chorea, hysteria, epilepsy, mania, delirium, idiocy. Each has its permanent symptoms for the one who is able to decipher them, for they have to do with a group of determinate muscles, always the same in the same cases. . . . The study of morbid laughter enables us to determine which cerebral or medullary centers correspond to each of the muscles involved and to mark their places on a chart of the brain. For if a lesion in a certain part of the brain corresponds to paralysis or contraction of a given organ, it is evidently the motor center of that organ. Thus the study of these morbid types of laughter enables pathological anatomists to disentangle the net of nerve-fibers and to follow their course from brain to muscle."—*Translation made for THE LITERARY DIGEST.*

THE MUSCLES OF LAUGHTER.

FOOD PRESERVATIVES, HARMFUL AND OTHERWISE.

IT has recently been asserted that the addition of chemical preservatives to various food-products is on the increase, and that, owing to the demand for this purpose, the sale of borax alone has increased 1,000 per cent. If this be true, says Dr. Thorne Smith, of the University of Idaho, in an article in *The American Kitchen Magazine*, disorders of the digestive organs have probably increased correspondingly. Dr. Smith goes on to say:

"It is customary to divide antiseptics used as preservatives into two classes: those considered harmful and those not so, or at least not harmful to the majority of people. In the latter class we should probably place vinegar, alcohol, sugar, salt, spices, and a number of other common products of like nature. There never seems to have been any question but that these are without bad effect on a sound organism. They are easily recognized by the taste or smell. But the other class contains the dangerous elements. They can be used in such small quantities that by the ordinary means they are not detected. It is only in recent years that this class of poisons has come into use on a large scale, and now the wholesale grocery or packing-house that is not using them is indeed rare. Has the reader ever stopped to think what this means? No matter how carelessly an article has been prepared for the market, how unclean the article or the establishment may be in which it is prepared, a liberal dose of 'preservative' in one of its various forms acts as a cure-all, and the consumer receives the benefit. And the benefit is what—indigestion and its consequent disorders."

Dr. Smith next proceeds to enumerate the chief chemical preservatives. First among them as a destroyer of good digestion stands salicylic acid, which, he says, "has posed under more names than the alphabet has letters." To quote again:

"Under the name of 'preservalin' it has posed as the best friend of canned fruit. Advertised in the leading journals as a most wonderful and at the same time harmless agent, it has found sale at ten times its market value and has gained access to many kitchens. What is the effect of this drug? All condemn it as unfit for food in the minutest quantity, and more than a minute quantity is required to produce the result desired. There seems to be no division of opinion unless it be that of the dealers on the one hand and science, backed up by hundreds of observa-

tions, on the other. . . . Salicylic acid is a near relative of carbolic acid, and the supply comes chiefly from coal-tar. It is largely used in catsups, wines, and various canned goods. . . .

"The next most used preservative is boracic acid, or this acid combined with soda, then known as borax. While not so commonly known or offered to the housekeeper, it is none the less bad in its effects. The results are much the same as in the use of salicylic acid. It is not so easily detected by the taste, hence it can be used more indiscriminately without fear of spoiling the article offered. . . . It can be used in milk, sausage, and various smoked products, without fear of detection by the ordinary means of smell or taste. Its use in milk especially is objectionable owing to the fact that this food is so largely consumed by children, where small amounts of deleterious additions produce more evident results than in adults. How many deaths ascribed to other causes might be traced to this preservative? Next to its use in milk it is probably most used in attempting to keep meat in a fresh condition. To do this it is necessary to use large amounts and to a person with a weak digestive ability it becomes unbearable. . . .

"Formic aldehyd is probably third in importance as a preserving agent, and as such is coming rapidly into use. It is also known to the trade as formalin and is so advertised. It can be sold only in the liquid, and as such is not often advertised to the housekeeper. It is, however, becoming more generally used by the manufacturers and canners."

That the use of these and other "embalming" substances has increased of late, there is little reason to doubt, and it seems quite possible that he who wishes to avoid them will have to "put up" his fruits, meats, and jellies at home, as was generally done in the days of our grandmothers.

A Novel Application of Magnetism.—Magnetic attraction is now applied to connect the running parts of machines in place of the usual "clutches" used for coupling. The so-called "magnetic clutch," invented by B. J. Arnold, a Chicago engineer, has, it is said, proved very successful and is noteworthy as an attempt to utilize electromagnetic attraction in a new way. The device is thus described in *The Railway Gazette*:

MAGNETIC CLUTCH (DIAMETER 100 IN.) FOR TRANSMITTING 3,000 HORSE POWER.

turned on, to magnetize these disks, which are thus drawn into very close contact and held there as long as current flows through the coils. Magnetic action alone, however, is not relied upon to keep the surfaces from sliding the one on the other; the contact surfaces being rough, the pressure caused by the attraction between the two plates prevents any slipping, and it is only a question of making the disks large enough to transmit the desired amount of power.

"The energizing circuit is controlled by a switch put at any convenient place. It thus becomes possible in throwing a generator in or out of service to control it entirely from the switch-board, where all the regulating devices and measuring instruments are within the reach of one attendant. These clutches are neat in appearance and compact in design."

The largest of these "clutches," which is shown in the illustra-

tion, is one of three now in use in a large electric-lighting station in St. Louis, Mo. It is over eight feet in diameter, makes 150 turns a minute, and transmits 3,000 horse-power, yet can be released in an instant by pressing a button.

A GOLDEN PLANET.

AN account of some interesting observations on the planet Venus, made in the Peruvian Mountains, is contained in the new volume of the "Annals of Harvard Observatory," just published. Garret P. Serviss, writing from New York to *The North American* (Philadelphia, March 5), notes that these contradict the views that have been generally entertained concerning the planet, which, being the only one that closely resembles the earth in size, has been assumed to be the abode of creatures more or less like ourselves, if it is inhabited at all. The huge outer planets, Jupiter, Saturn, and the others, have been regarded as the youthful worlds of the solar system, while Venus has been looked upon as perhaps even further advanced in development than the earth. But if the Harvard observations are to be relied upon, Professor Serviss tells us, we may, on the contrary, regard Venus as in a stage corresponding to our earth's early days. He says:

"The new astronomical annals, above referred to, describe the studies made with the Harvard telescope in the serene air of the Peruvian Mountains and at Arequipa. There it has been found that Venus's atmosphere exercises a very powerful refraction upon the rays of light passing through it. This refraction indicates that the atmosphere to which it is due is exceedingly dense. But only that part of Venus's atmosphere which lies above the level of her clouds is subject to observation, so that it must be inferred that the deeper or lower portion of her air, lying in contact with the actual surface of the planet, is many times more dense than the atmosphere of the earth at sea level. This is the conclusion of Prof. W. H. Pickering, and he suggests an analogy with the condition of the air that enwrapped our globe untold millions of years ago.

"According to the Laplace theory of the origin of the earth and other planets from a series of rings successively squared off from the contracting solar nebula, Venus, being nearer to the sun than the earth is, should have been born later. This would correspond with the view, now advocated, that Venus is less advanced as a world in a double sense—new to our eyes and new with regard to its age and state of development. . . .

"A very interesting suggestion from these discoveries is the probability that Venus contains proportionately more of the denser elements, such as gold, lead, mercury, and other heavy metals, than the earth does. If the size of Venus is measured by the exterior diameter of her atmospheric shell, then her mean density comes out less than that of the earth; but adopting the view which the Arequipa observations make much more probable, that the real surface of the planet lies deep beneath its cloudy envelope, the result is different, and Venus exceeds the earth in comparative density. This, again, is what should be expected from the nebular theory of the formation of the solar system, for the heavier elements would fall and condense toward the center, and the planetary rings last left off would include a greater proportion of them. So Venus may be emphatically a golden world, and it would be, perhaps, a fair inference that when she is ready for inhabitants of our kind the metal of crime will exert its baleful influence even more fatally there than it has done here, altho, on the other hand, there might prove to be enough, and even too much, gold for all.

"If it is a world of gold, it is also a world of sunshine, which is developing in the evening star. Venus has about twice as much sunlight to the square mile as the earth has, and she gets it with remarkable uniformity. In her orbit, she does not alternately approach and recede from the sun to any extent as our globe does, and, her axis being upright to the plane of her orbit, she is neither blessed nor troubled with changes of season."

These views, Professor Serviss goes on to say, are far more pleasing than the older ones, which represented Venus as a desert

planet, stuck fast upon her axis and blasted with heat on one side and cold on the other. The Arequipa observations, he tells us, show none of those markings whose motionlessness was supposed to warrant these conclusions. They also fail to show the gigantic polar mountains capped with eternal ice, and the great expanses of snow reported by some previous observers. Professor Serviss says, in conclusion:

"Evidently Venus is pursuing the course of planetary evolution in its regular order, but with the promise of ultimately reaching a stage which may be more attractive than any phase of the earth's development. Those who choose to speculate on the possibility that spiritual creatures may be able to travel through space when relieved of their mortal fetters and may acquire new bodies in other worlds, can turn with satisfaction to the contemplation of Venus as a future home, when the earth has ceased to be a desirable or possible place of abode."

PROPULSION OF VESSELS BY WATER JETS.

A PROPOSAL to drive a boat at phenomenal speed by the reaction of a jet of water pumped from the stern crops up every now and then. According to John A. Grening, who writes on the subject in *Science and Industry* (Scranton, Pa., March),

FIG. 1.

this plan is to be classed with a thousand other startling schemes that aim at revolutionizing marine traffic and never materialize.

All vessels that use paddle-wheels or propellers, he says, are really driven by the reaction of a stream of

water, caused to flow in a direction opposite to that of the vessel's course. The proposal to use a jet of water at the stern simply aims to substitute a pump for the wheel or screw. Says Mr. Grening:

"While this is an entirely feasible method of propulsion, it is in its application that the greatest and costliest mistakes have been made by amateur designers—mistakes due solely to lack of elementary knowledge. Two of the favorite claims of inventors of new systems of jet propulsion are as follows:

"1. That a stream of water, issuing from a nozzle under water, reacts on the surrounding water, and tends to drive the nozzle in the opposite direction in the same way that a solid rod issuing from the same nozzle would react on a stone wall.

"2. That projecting a small stream at a high velocity is exactly the same thing as projecting a large stream at a low velocity, and, consequently, they can use small, fast-running machinery of light weight, besides getting rid of what is claimed to be complicated machinery used in screw and paddle-wheel propulsion.

"Both of these claims are fallacious, and any system of jet propulsion based on either or both must prove a disappointing failure, as the claims are not in accordance with the laws of nature. Taking up the first claim, it is an indisputable fact that it is entirely immaterial whether a stream of water is projected into the water surrounding it, against a solid object, or into the

air; if the stream and its velocity are equal in all cases, the reactions will be equal."

Failure to understand this proposition, says the writer, caused the costly failure of a recently designed vessel, because it was based on the hypothesis that the reaction of the projected stream would be much greater under water than it was in air. The apparatus shown in the illustrations was devised to show the falsity of this idea. It consists of a suspended hose whose nozzle is fastened to a spring balance. When water issues from the hose, the reaction pulls on the balance, which registers the tension. This is found to be the same when the jet issues into the air (Fig. 1) as when it is under water (Fig. 2). The result was also the same when the hose and balance were removed from the box and the jet was allowed to disperse in the free air.

The second claim, Mr. Grening goes on to say, is equally fallacious. The work done is proportional to the square of the velocity, and hence much more must be expended to project a small jet at high velocity than a large one at a low velocity, while the propulsive power, being proportional simply to the momentum, is not correspondingly great. For maximum efficiency, the projected jet should be very large and have a low velocity. Hence a large pump is required, which is expensive. Mr. Grening admits that jet propulsion is feasible and, under certain circumstances, suitable. He states that in England several life-boats having jet propellers are in use, and are giving satisfaction. But for large vessels jet propulsion is about the most uneconomical method that could be devised.

FUTURE OF WIRELESS TELEGRAPHY?

WILL wireless telegraphy become part of the world's system of communication, or will it be looked upon as a mere scientific toy? It is not to be denied that it is still in an evolutionary stage, and that its final form has not yet appeared. In this respect it resembles the development of our present telegraph system. *Electricity*, in a leading editorial (February 14), reminds us that the first constructions by Morse were limited in practical working distances. The present elementary experiments in wireless telegraphy are likewise limited and to about the same extent. Marconi, we are reminded, has lately operated over longer distances than in his former trials; but he and his friends despair of effective service, from present constructions, over a distance of one hundred miles. He can not concentrate the electric undulations into a bundle of rays having a definite direction, or concentrate or focus them on the distant receiver. They diverge in all directions from the common center of the transmitter, and are weakened by dissipation in space. The writer goes on to say:

"Some of our electrical authorities very much doubt the practicability of wireless systems of communication to distances beyond an unobstructed line of vision, on account of the earth's curvature, and for this reason we see some experimenters climbing mountains to increase the electrical horizon of vision, while others are dreaming of balloons and Eiffel towers.

"Professor Bell's telephonic toy became a commercial success when the microphonic transmitter came to his assistance, and Professor Morse secured undying fame as a public benefactor when the automatic relay was used to take up his messages and, so to speak, reinforce the enfeebled electric current, and thus enable the telegraph to be used as an instantaneous messenger from one side of a great continent to the other.

"Wireless telegraphy, and later on a wireless telephony, must soon pass through a similar development to secure a wide commercial utilization.

"At present investigators are doubtful of their ability to send the undulations from the wireless transmitter along a well-defined path of parallel rays."

The writer of the editorial goes on to suggest that all funda-

FIG. 2.

mental inventions may arise from a consideration of analogies, and that we may find the solution of this problem in the analogy offered by the X-ray generating apparatus, whose vibrations quite closely resemble those produced by the wireless-telegraph transmitter. X rays may be focused as well as made parallel in the line of their propagation, and may be projected in almost any path with little dissipation of energy. To quote again:

"The next perplexing problem is to keep one set of wireless telegraph instruments from interfering with any other set, and to preserve the secrecy of messages; the analogous solution of this problem may be found in the harmonic telegraph, as well as in the various multiplex systems; thus it appears from well-known and practical commercial analogies that the wireless telegraph will undergo a process of evolution, fitting it for widely extended utility that will greatly lessen the cost of thought transmission, by lessening the cost of installations, by cutting out the heavy expenses of copper wire, insulations, poles, armor, conduits, and the cost of their repairs.

"Buoy relay stations may possibly some day give us a system of transoceanic communication that will prove to be a formidable rival to our present feeble cable system.

"The rapid appreciation in price of gutta-percha is fast limiting oceanic cable construction, and a wireless substitute can not come too soon.

"With routes well defined, steamships may be kept in constant communication with the world, and travelers on these miniature floating cities may yet read their daily morning papers after breakfast the same as tho they were at home."

AN AUTOMOBILE SLEIGH.

THE accompanying picture represents an automobile sleigh made by Dr. E. Casgrain, of Quebec, by altering a motor-carriage of a type common in France. It is said to work satisfactorily, and there seems to be no reason why motor-sleighs should not come into extended use in climates where there is enough snow during the winter to warrant the expense. The

AN AUTOMOBILE SLEIGH.

picture is from *La Science Illustrée*, which also gives a description of the sleigh. The automobile used is of the Bollée gasoline type, adapted for use on ice and hard snow by replacing its front wheels with steel runners, and fitting the motor-wheel with a wooden rim bearing conical points. Says the author of the description, M. S. Geffrey:

"The common Bollée carriage has a well-merited reputation in France, being widely used there and very well known. It is a machine of the tricycle type with two steering-wheels in front and a motor wheel behind.

"In Dr. Casgrain's modification, as may be seen from the illustration, two steel runners are substituted for the forward wheels.

The carriage is very low, which gives it great stability. This is a great advantage in winter, when the roads are more uneven than in summer. There are two seats. The motor and the gasoline reservoir are behind, the motor being placed on both sides of the motor-wheel.

"The body of the carriage is made wholly of hollow tubing. The gasoline reservoir will hold enough for a run of 75 kilometers [46½ miles]. . . . The motor develops 2 horse-power, and its speed is regulated by an apparatus that acts on the valve. When the motor works normally, the valve is directly controlled by means of levers. . . . The vehicle can be driven at will at a speed of 8, 14, or 22 kilometers [5 to 14 miles] an hour.

"As will be seen from our illustration, the person sitting in front does not steer. The driver sits in the rear and operates with his foot a powerful brake that acts tangentially on the motor-wheel. With his right hand he operates a steering-wheel, which by a simple motion turns the sleigh to right or left."—*Translation made for THE LITERARY DIGEST.*

Distribution of Disease by Speech.—It has been shown by a German experimenter, Professor Flügge, that a man in the act of speaking distributes germs throughout a considerable space about him. Says *The British Medical Journal*, in noting this discovery:

"He has shown that from the mouth of a person who is speaking come bacteria contained in little bubbles of saliva, which after remaining suspended some time in the air are scattered through the surrounding atmosphere. Hubener has made experiments on the subject. Placing a man at a distance of 50 centimeters [1 foot 8 inches] from four agar plates representing a total surface of 200 square centimeters [31 square inches], he made him to count aloud for ten minutes. During that time from 100 to 1,500 germs, expelled from the mouth of the speaker, were deposited on the plates. Hubener draws from this fact the practical inference that a surgeon explaining the steps of the procedure during an operation might infect the wound by means of the germs expelled from his mouth in the act of speaking. To guard against this source of sepsis he has constructed a sort of filter consisting of a metal cage covered with gauze. This apparatus, which covers the mouth and nose, is fixed to the ears like spectacles. Not long ago Hubener raised his voice in warning as to the infective possibilities of the surgeon's beard, and recommended that ornamental appendage to be enclosed in what may be called a bacterium net. One may conjure up a prophetic vision of the twentieth-century surgeon with antiseptic mask, beard-bag, gloves, and sterilized robe, operating within a glass sanctuary into which no one is admitted except after the fullest disinfectant lustration. But Flügge's doctrine has a much wider application than he has indicated. If speech has these hitherto undreamt-of dangers for the audience, parliamentary and pulpit orators will have to wear germ-catching muzzles; this, besides protecting their hearers, will doubtless have the further advantage of making their eloquence less copious as well as more sanitary. Society would find in the same sanitary appliance an effective safeguard against bores."

"The *modus operandi* of the influenza microbe is peculiar," says the *Manchester Guardian*, quoting a recent article by a French authority. "It is not the microbe itself that does the harm, but a poisonous liquid it excretes. A measure of consolation is afforded by the fact that this poison is even more deleterious to the microbe than to the human being in whom it is deposited, for the microbes end by being destroyed by their own horrible exhalations, whereas their victim, of course, has many chances of recovery. The microbe is an egg-shaped thing, but gifted, in spite of its roundness and smoothness, with an extraordinary capacity both for adhering to any conceivable surface and for passing from one resting-place to another. Its goal is a human nose or mouth, and once in the vicinity of these organs its future is assured, for the mere act of breathing is sufficient to draw it into the system. Arrived there it propagates itself with amazing rapidity. It lengthens out, and, after twenty minutes of this process, it breaks in twain, and there are two fully fledged microbes in the place of one. In twenty-four hours the original invader will, in this way, be surrounded by a progeny of over sixteen millions of his poison-producing kindred. In short, the doctors know almost everything about the influenza microbe except an effective method of exterminating it."

THE RELIGIOUS WORLD.

MR. SHELDON'S EXPERIMENT IN CHRISTIAN JOURNALISM.

THE experiment in religious daily journalism made by the Rev. C. M. Sheldon last week was to all appearances a great financial success, owing to the unprecedented amount of advertising it received. It was reported that the circulation of the paper (the *Topeka Capital*) during this trial week ran up very nearly to half a million copies daily. In his opening editorial (March 12), Mr. Sheldon defined the policy of the newspaper during his incumbency. He said, in part:

"First, it will be a newspaper. The word 'news' will be defined as anything in the way of daily events that the public ought to know for its development and power in a life of righteousness. Of necessity the editor of this paper or of any other with this definition of 'news' will determine not only the kind but the quantity of any particular event that ought to be published. The importance of one kind of 'news' compared with another kind will also determine the place in the paper in which the matter will be printed. If it seems to the editor that certain subjects representing great causes that belong to the profoundest principles of human life are the most important, they will be given the first page of the paper, whether they are telegraphic items or not. It might easily become the settled policy of a permanent paper similar to this one to consider the detailed accounts of an unusual battle as of less importance to the reader than an account of the usual daily destruction being caused by liquor. The first page of *The Capital* this week will contain what seems to the editor to be the most vital issues that affect humanity as a whole.

"Second, the paper will be non-partizan, not only in municipal and state politics, but also in national politics. I do not mean to say that a Christian daily can not be partizan. This is simply my interpretation of 'Christian' as applied to this part of the paper's life.

"Third, on the liquor question the paper will advocate the prohibition of the whole liquor business from Maine to California and all around the globe. By prohibition I mean the total extinction of the curse of making, selling, buying, and drinking intoxicating liquors; its extinction by legal enactment, by personal total abstinence, and by every form of state, home, church, and school education that Christians can devise.

"Fourth, the great social questions of the age will be given prominence. The selfishness of mankind in every form of greed, commercially or politically, will be considered as of more serious consequences to us as a people than many other matters which too often engage the time and attention of mankind.

"Fifth, the paper will declare its abhorrence of war as it is being waged to-day not only in Africa, but in the Philippines and everywhere else.

"Sixth, on the matters of 'finance' or 'tariff' or 'expansion' or matters of public concern which have to do with measures of this character, the editor has personal opinions which may or may not be voiced in this paper. If he gives expression to them it will be in no dogmatic or positive manner, as if he knew what the whole Christian truth was concerning them. In regard to many of these questions, I do not know what is the Christian answer to them. In regard to others, my study of them has not yet resulted in convictions that are strong enough to print. I do not wish to declare through this paper a policy concerning certain political measures which are not clear in my own mind.

"Seventh, the main purpose of the paper will be to influence its readers to seek first the kingdom of God. A nation seeking the kingdom of God first of all, will in time find right answers to all disputed questions and become a powerful and useful nation.

"Eighth, editorial and other articles written by reporters will be signed by the writers. The exceptions will be small items and such local and telegraphic news as in its nature does not require signature. There will be no Sunday paper, but instead a Saturday evening edition suitable for Sunday reading."

Every variety of opinion is represented in the newspaper com-

ment on the experiment. The *Topeka Capital* (March 6) before Mr. Sheldon assumed temporary control, said:

"Shortly after announcing the Sheldon edition, *The Capital* remarked that, if nothing else were accomplished by the experiment, the discussion it would provoke regarding the daily newspaper would be of great public interest. The result is fully verifying this prediction. Comment on the Sheldon edition has settled down into a broad general discussion of the functions of the daily press, the place the newspaper ought to fill, the aim of the publisher in issuing it, and the object sought by the subscriber in buying it. This discussion by the great newspapers of the land as it appears in the articles reprinted from day to day in another column of *The Capital*, has proved to be one of the most interesting symposiums, we believe, ever published in an American newspaper. A wide variety of opinions is expressed on the theories of Mr. Sheldon, but in defining the functions of newspapers there is a general uniformity of sentiment on the part of the best newspapers of the country. . . .

"The province of the modern newspaper is to give the news; but it is also to help all these agencies for good and to do its part in forming public sentiment on all great public issues. There are hundreds, possibly thousands, of American newspapers that are the highest credit to twentieth-century civilization, monuments of intelligence, courageous energy, devoted to building up everything that is good, and which may be, and are, counted on for constant and gratuitous support of every organized reformatory movement of society."

The *Philadelphia Press* (March 12) said:

"It is an impressive tribute to the influence the newspaper can and does exert. The 300,000 copies of *The Capital* which will go out from Topeka each day this week, or an aggregate of over 2,000,000 copies, and find their way all over the North American continent and across the Atlantic and Pacific oceans into Europe and Asia, will be convincing proofs of the power of the printed word. The fact that the subscription list is so large is also evidence that the popular taste has not become vitiated and that there is a demand for a newspaper edited on the most elevated lines. There is much said in a flippant way these days about the decline in the influence of journalism. The majority of the 1,000,000 readers of Mr. Sheldon's newspaper will, however, testify that that influence is now greater than ever."

The *Chicago Times-Herald* has regarded the whole enterprise as a "great advertisement for Editor Sheldon and the *Topeka Capital*." It said:

"Of course the thinking public is not going to be flimflammed into any foolish notions regarding the cause of this brisk demand for copies of the Sheldon daily. They know that the \$60,000 or more already received for subscriptions are the fruits of a public curiosity, whetted by clever and judicious advertising. It goes without saying that the Christian people of the land attach no special interest, from a religious point of view, to Mr. Sheldon's experiment. It is true that the Christian Endeavor societies and other religious organizations have contributed the bulk of the \$60,000 through a very laudable desire to give the country an object-lesson in Christian zeal and loyalty. But the principal motive behind the swelling subscription list is curiosity to learn what kind of a daily paper Mr. Sheldon thinks that Jesus would run if He were on earth."

The *Springfield Republican* (March 11), under the caption "A Reverend Pharisee," said:

"When a man has the colossal egotism to make himself Christ's mouthpiece on subjects concerning which Christ was silent, there is no limit to the absurdities involved. The spectacle is both ridiculous and repulsive. To prostitute the great truths of Christianity to a week's flamboyant self-advertising is a degradation of religion."

What degree of success Mr. Sheldon has met with in his enterprise is a subject on which a similar diversity of opinion prevails. On the whole, the dominant note is one of disappointment. At the top of the first page of the initial number appeared a "Morning Prayer and Resolve," by Bishop Vincent, and the rest of the page was devoted wholly to articles of a general nature—"tracts," as some papers unkindly dubbed them—upon such subjects as

"Starving India," "The War Spirit," "The Cry for Work," and "Prohibition Tested." The news was relegated to an inner page, while the advertising columns were strictly censored and were guiltless of such things as cuts of patent undergarments or proprietary medicines. The succeeding issues of the paper followed the same general plan, altho some news items were given place on the first page later on.

The New York *Times* remarked: "We do not find in the whole paper a single article or item that might not, without creating the slightest surprise, find a place in dozens and dozens of ordinary newspapers; and as for the opinions expressed, they are just about what the resident of the Middle West is accustomed to get, with a good deal else, from the reputable papers in that part of the country." The New York *Tribune* says that under Mr. Sheldon's management *The Capital* "has been simply an ill-conducted secular paper, combined with an ill-conducted religious paper," and that he has "forced every one of *The Capital's* old subscribers to buy another paper to get the important and legitimate news of the day." The Philadelphia *Times* says that Mr. Sheldon's first issue "shows that he knows nothing about the qualities of the newspaper the people would read."

The Boston *Journal* thinks that it is "hopeless to look for any direct, tangible good effect" from this experiment, but that "indirectly his project may achieve some good purpose if it whets public interest in the general topic of newspaper-making." The Chicago *Tribune* is of the opinion that "Mr. Sheldon's daily paper does not differ materially from the religious weeklies already published in abundance, except that it is more primitive and crude in its editorial methods," while the Chicago *Evening Post* is of opinion that Mr. Sheldon "is not doing harm, and there is reason to believe his week of editing will do good in a moral way."

DECLINING MEMBERSHIP IN THE METHODIST EPISCOPAL CHURCH.

THE call issued by the Board of Bishops of the Methodist Episcopal Church for a week of fasting and prayer beginning on March 25, in view of the recent decline of membership in the church, has attracted much attention outside the rank and file of Methodism. The bishops, among other things, say:

"We, the bishops of the Methodist Episcopal Church, after careful review of the work and prayerful self-examination, ask the church to unite with us in a week of fasting or abstinence and prayer, that the spiritual life of our members may be renewed and deepened; that the Holy Spirit may be poured out upon us as a church and as individuals so abundantly that every member may have the witness of the Spirit to adoption and to fulness and completeness of redemption in Christ Jesus, and that the unsaved members of our families and our unsaved neighbors may be converted and brought into the church; and that all our ministers may have such a baptism of power that God's Word spoken by their mouths may have such success that it may never be spoken in vain, but be followed by results bringing glory to God's name and spiritual power to His church; and that wisdom and a sound mind may be given to the General Conference for all its deliberations, and that its decisions may insure the enlargement of Christ's spiritual kingdom.

"To-day our Methodism confronts a serious situation. Our statistics for the last year show a decrease in the number of our members. Year before last our advance was checked. Last year our advance column has been forced back a little. The lost ground is paved with the dead. We are surrounded by powerful enemies. The attack is on every side. It is high time for every Methodist to take himself or herself to prayer, to call mightily on God for help, that each one may know for himself that he is accepted of God, that in this testing time each one may hear the Lord say, 'Be of good cheer; thy sins are forgiven thee.'

"We ask you to assemble yourselves in your accustomed places of worship at least once each day, humble yourselves before God, worship Him, personally lay aside every weight and the easily

besetting sin, and make earnest supplication to Him. We ask, also, that in your private and family prayers you will daily implore God's mercy for the revival of His work of grace in each heart and throughout all our borders. Let us implore God for help that a family altar may be established in each Methodist home, where the Scriptures may be daily read and His blessings secured in rearing our children on His word for Him, and also that in the time of our thank-offering we may bring to His altars at least two million penitent seekers who shall find peace and security in His church."

The Presbyterian (March 7) thinks that these words are of great importance to all Christians at this time, when symptoms of a general decline of church influence are beginning to manifest themselves. It says:

"Here is great plainness of speech, and coming as it does from men in the highest places in the Methodist Church, should make a deep impression on that, and also on every other denomination in our country. What is true of one, is true in a great measure of every branch of the church. A general call to humiliation and prayer is now in order. A great awakening is needed all over this land, and those who feel the least desire for it perhaps stand most in need of it. The tide of worldliness and false doctrine is coming in like a flood, and the only hope is that the Spirit of the Lord will lift up a standard against it. The revival that is needed is one that must reach into hearts, into homes, into churches, into business, into schools and colleges, and theological seminaries, and into the highest seats of power and authority in this nation.

"We believe the day for it is drawing very near, for there are indications that it is approaching rapidly. The good news comes, of times of refreshing in many quarters, even now. This call that goes forth in these burning words indicates the feeling that precedes a revival. It is indeed a revival already begun. Other branches of the church are beginning to feel and express themselves and act in the same way. As Christians turn back unto God, He will come and bless them."

The Catholic News (New York) sees in the Methodist decline the approaching downfall of Protestantism:

"Two things are demonstrated by this appeal to the members of the Methodist Church—first, that the Catholic practise of fasting and prayer is copied, and, second, that American Methodism, the strongest sect of Protestantism, is beginning to go down. The so-called evangelical Protestants have in the past not only criticized the Catholic habit of observing the Lenten season, but even practically denounced it. These Protestants, in their desire to be free from every possible taint of 'Romish superstition,' have made a religion that does not appeal to the higher nature of man. They have even refused to sanction the cross, the emblem of salvation. The result has been that their cold and un-devotional churches have been steadily losing ground. Another reason for the decay that has set in is to be found in the surrender of Protestantism to the so-called 'higher critics.' One leading Methodist, Bishop Andrews, in an interview with a reporter last week, practically admitted this. 'It is true,' said he, 'that there has been a diminution in the Methodist Episcopal Church during the last year, but I do not believe that it is peculiar to our denomination. Other sects as well have been affected in the same way. It is difficult to say what was the cause of this diminution, but I think that the pressing affairs of state during the last year and the war with Spain are accountable for it in a great measure. The Christian Church—in the broadest sense of the term—is passing through an era of change, characterized by a spirit of research known commonly as 'higher criticism.' I have no doubt that to many minds that method appeals, and perchance because some minute point in the Bible seems untrue to them after scientific investigation, they are willing to reject the holy book entirely. This may also be an element in the cause which has produced the unsatisfactory state which we have been discussing. Personally, I believe we shall pass through this state of doubt and arrive at a reaffirmation of the old truths which have made Christianity the unity of history."

A secular view is represented in the following editorial comment from *The Commercial Appeal* (Memphis, March 6):

"A newspaper is supposed to have no religion; but there are

certain impressions made upon the ordinary observer which might well be considered by the lords of the church. When the board of bishops speaks of 'the neglect of the submerged tenth,' it has, in our humble judgment, hit upon one of the powerful reasons for declining membership. When Jesus Christ appeared upon the earth, it was almost exclusively to the poor that He preached. He was able to lift them up above their surroundings and their sufferings, to give them a happiness which was denied the revelers in the palace. Christianity obtained root among the poor because it made them forget material things. The submerged tenth is to-day living in darkness, and Christianity along practical lines has, it seems to us, a great mission to perform.

"But it would be, we think, a mistake to imagine that people can be won back into the churches by making them more somber. It is this very condemnation of harmless and often healthful amusements that drives people away from the houses of prayer. It is not more gloom but more joy that is wanted. Intolerance is emptying the pews, and the magnifying of small things into great sins is exiling people from the church; while the lack of brotherly sympathy is responsible for keeping the submerged tenth groping in darkness."

The Christian Advocate (Meth. Episc., March 15) refers to the appeal as a "trumpet call," and believes that the observance of the bishops' recommendations will result in a great quickening of the life of the church.

RELATIVE STRENGTH OF THE HIGH-, LOW-, AND BROAD-CHURCH PARTIES.

DIFFERENCES of theological interpretation exist in all the Christian churches; but probably in no church are there such marked demarcations in matters of doctrine and worship as in the Anglican body, both here and in England. The difference in dogmatic belief and in ritual practise between such a church as All Souls' Episcopal Church in New York (Broad Church) and the Episcopal Church of St. Mary the Virgin (High Church or "Catholic") is far more marked than the differences between almost any two of the Evangelical Protestant denominations. Some interesting statistics are given in *The Catholic Citizen* (Rom. Cath., Milwaukee) concerning the relative strength of the High-, Low-, and Broad-Church parties. The writer says:

"In the first place, it should be explained that High Church does not refer to elaborate ritual alone, tho the two generally go together, but to Bible construction, the importance of the sacraments as such, and the place of the church as preceding the Bible, not founded upon it. Low-Church people attach less importance to the sacraments and to the church, are generally evangelical in method, sometimes employ extempore prayers; in short, are nearer to the great 'reform' bodies. The Broad-Church folk are the liberal constructionists, sometimes of the Bible, oftener of church practises. They are not of necessity high critics. Broad people are the extreme Protestants, and class the Protestant Episcopal body as Protestant. The High-Church party repudiates the Protestant position.

"There are four dioceses in which bishop and laity, generally standing together, almost always show pronounced High-Church tendencies. They are Fond du Lac, Milwaukee, Chicago, and Springfield. There are nine dioceses in which the bishop stands for more advanced ideas than do the clergy and laity under him. These are Albany, Vermont, Central New York, Washington, Georgia, Michigan, Pittsburg, Arkansas, and Nebraska. There are three dioceses in which the type of churchmanship is of the stanch sort; not high, and yet most decidedly not Low. These are Georgia, Connecticut, and North Carolina. Virginia and Alabama are the strongholds of the Low-Church folk. West Virginia follows the older State, and South Carolina follows Virginia and Alabama.

"It must be remembered that the majority of dioceses show merely an average type of churchmanship; they are just plain prayer-book Christians.

"The Broad-Church strength, which is just now the point of attack, is confined to Massachusetts, Rhode Island, and New York as dioceses, but has, of course, followers in all dioceses."

The High Church, or more properly the "Catholic" party, which first became prominent in the Church of England at the time of the Tractarian movement in Oxford early in the nineteenth century, is generally admitted to be growing in America, altho perhaps not so rapidly as in England. One of the evidences of this fact given by *The Catholic Citizen* is the growth of ritual, evident to any one whose memory of Anglican churches extends back twenty-five years. To be sure, ritual and "advanced" doctrine do not always go hand in hand; but generally this is the case. Twenty-five years ago, one of the first ritual tendencies to develop was that in favor of vested choirs. Eight or ten years later came altar lights, and a few years later still, incense and colored vestments for the clergy. *The Catholic Citizen* gives the following statistics of ritual observances in the Episcopal churches in some of the chief cities:

City.	Leading churches.	Vested choirs.	Altar lights.	Incense.	Col. vest.
Atlanta.....	8	3	11	11	11
Baltimore.....	26	6	9	1	4
Boston.....	25	16	7	4	5

THE "NEW CHRISTIANITY" AND THE AGNOSTICS.

MOST of the controversy which the champions of the "new theology" have been called upon to engage in has been with those who uphold "traditional" or "positive" Christianity. In that controversy, the new theology has been on the aggressive, the traditional theology necessarily on the defensive. The "higher critics" are now, in turn, called upon to repel attack, their assailants being the agnostics, who insist that many of the doctrines still preserved in the new theology rest on no better basis than the traditional views that have been discarded.

Mrs. Humphry Ward holds views concerning the Scriptures that are much more radical than those held by Dr. Briggs or Dr. Abbott in this country; yet she loves the services and rites of the Established Church of England, and in a recent number of *The Nineteenth Century* makes an impassioned appeal for the right of freethinkers to remain within that church without having to subscribe to any formal creed. It is proposed to give the "Catholic" or High-Church party increased latitude, she remarks, therefore it is but fair to give wider freedom of belief to people who are at the other extreme of the national church. As a premise to her argument, Mrs. Ward makes some sweeping statements to the effect that the whole traditional view of Christianity is riddled from top to bottom by the results of modern criticism. It is frequently claimed of late years, she says, that the latest results of German scholarship have been to sustain the credibility of the New-Testament statements as to supernatural events. She denies this, and cites in support of her denial statements made by M. Goyau, a French Roman Catholic, as to theological conditions in Germany. "M. Goyau tells us that out of seventeen faculties of theology in the German Protestant universities only four—Rostock, Erlangen, Greifswald, and perhaps Leipsic—can be reckoned as orthodox. The remaining thirteen, including names of the highest eminence and distinction, with Dr. Harnack of Berlin at their head, have gone over to the Liberals, for the most part of the school of Ritschl—in other words, to that

alternative view of the historical basis of Christianity for which the plea of my letter was put forward."

Some of the deductions of the Tübingen school, indeed, have been revised, says Mrs. Ward; but the main conclusions have been retained and strengthened by further research. The tendency of recent criticism has been, it is true, to assign an earlier date to most of the New-Testament documents, and the good faith of the writers is more and more admitted; but, as shown in Dr. E. A. Abbott's great article upon "The Gospels" in "The Encyclopedia Britannica," the earlier date leaves ample room to account for the gradual growth of legend and fiction. Mrs. Ward quotes Dr. Harnack as follows: "Why should not thirty to forty years have been sufficient to produce the historical deposit with regard to the words and deeds of Jesus that we find in the Synoptic Gospels? Why should we require sixty to seventy?" She continues:

"The fact is that the argument against the traditional view was never so strong as it is to-day, because history was never before able to present so cogent and convincing an alternative. 'A point of view,' said Amiel, 'is never overcome till it has been supplanted.' And that is what is happening with the orthodox theory, the traditional explanations of the Christian faith. We now know that Christianity as a system of ideas was more than half in existence before the Lord lived and taught—that its distinctive doctrines of the kingdom, the Son of Man, heaven and hell, angels and devils, resurrection, soul and spirit, were the familiar furniture of the minds amid which it arose. The interest of the problem has really very much shifted from the two hundred years after the crucifixion to the two hundred years before it. The doctrine of a preexistent Messiah, the elements for the doctrine of a suffering Messiah, the 'heavenly man' of St. Paul, the whole rich and varied conception of the after-life and its conditions, with its attendant ideas of angels and devils—to say nothing of that whole 'theosophy trembling on the verge of becoming a religion,' as it has been called, which the thought of Philo produced on Hellenistic ground—all these were already in existence either long before the Galilean ministry or before the First Epistle to the Thessalonians. What is popular speculation, the adaptation of Babylonian and Persian ideas, or theosophic philosophizing, from a Greek or Palestinian basis, in the generations preceding Christianity, 'can not immediately become inspiration in the Apostles'—as Dr. Hausrath says. The more competent editing of such a series of books belonging to Jewish apocalyptic, as Professor Charles has lately carried through, has thrown a flood of light on the conditions under which the earliest Christian ideas were formed. The mere final confirmation of the pre-Christian date of the 'Similitudes' in the Book of Enoch is more illuminating than the whole tendency-theory of Baur."

Since, then, says Mrs. Ward, modern scholarship shows the legendary origin of the doctrines of the virgin birth of Christ, the literal resurrection of Christ's body, and other statements of the New Testament, why should these myths any longer be embodied in creeds and imposed upon followers of Christ's teachings?

Mr. W. H. Mallock, himself an Agnostic, writing in *The Fortnightly Review* (February), assails Mrs. Ward's position with energy, and takes the ground that the views she discards are the very ones that give power and vitality to Christianity. Nor does he think that her position is logically sound. He writes:

"Mrs. Ward denies the reality both of the resurrection and the ascension; and yet it appears to be part of her reconstructed and non-marvelous creed that Christ hereafter will personally receive 'the humble account' of every Christian, and presumably of every human being, 'after the darkness and storm of the great change.' Why is it more reasonable, less dogmatic, and less marvelous to say that all the human race will be judged by an ordinary human being, than to say that it will be judged by the Word, who was with God from the beginning? Is there any more evidence for the former assertion than for the latter?"

"If the new Christianity be really as Mrs. Ward describes it, it is not non-dogmatic, and not non-miraculous at all, but is encumbered with as much dogma and miracle as Roman Catholicism itself, the only differences being that the dogma and miracle of Roman Catholicism form a coherent system consistent with

Roman Catholic principles; while the dogma and miracle of Mrs. Ward's Christianity, with its baptismal sacrament, its confirmation, its Third Person of the Trinity, its 'food for mystical union,' and its purely human founder, who never rose from the dead, but to whom all men after death will render 'humble account' of their lives, is a mere ragged patchwork of the old dogmas and miracles, which the first principle of the new Christianity rejects."

If Mrs. Ward be asked, says Mr. Mallock, why Christ's moral teaching should be accepted as truer than Buddha's, all she could say would be, "It appeals more to my personal moral sense." But a Buddhist would reply, "To mine the teaching that appeals most is Buddha's." Why should her moral sense be accredited more than the Buddhist's? Mr. Mallock continues:

"But it is even more pertinent to ask how Mrs. Ward could convince a man who, having once been attracted, like herself, by the Christian ideal, and having lived according to it, is subsequently attracted by another of a less severe, but not of a debased kind, and lives according to this, that he has abandoned an ideal which is in harmony with the 'central prevailing world-force' for an ideal which is not? If Mrs. Ward and her back-sliding friend still believed that Christ was God she would have solid ground on which to argue. She would be able to appeal to his knowledge that Christ's teaching was authoritative, even tho his emotion for the time might fail to respond to it, for Christ and 'the central prevailing world-force' would, in that case, be identical. But if they both start with the assumption that He was a mere mortal man, with no faculty for understanding the world-force generically different from the faculties possessed by themselves, the moment Christ's teaching failed to satisfy her friend's moral taste, the only ground on which she could urge him to continue to submit himself to it would be gone. The truth is that Christianity, as a restraining and guiding force, is at once most operative and most requisite, precisely on those occasions when the individual ceases to *feel* that Christ's teaching is true, and retains only an intellectual *knowledge* that it is true; and the sole logical fulcrum of this intellectual lever is a conviction that Christ Himself had some knowledge of things different in kind from any knowledge that is accessible to mere men; and that He consequently speaks with an absolutely unique authority. But as soon as we deny to Christ any miraculous and superhuman character, the only ground on which we attribute to Him this unique authority disappears."

Dr. McGiffert to Face His Accusers.—A new phase in the McGiffert heresy case developed last week. Announcement had been made that Professor McGiffert, after consulting with his friends, had decided to save the church the misfortune of a heresy trial by a voluntary withdrawal from its membership, with the expectation that this announcement would be followed by the immediate abandonment of all proceedings against him. Dr. Birch, however, who preferred the charges, was not willing to allow the matter to be thus dropped, holding that as his appeal was against a decision of the New York presbytery refusing to take up the charges against Dr. McGiffert, the matter must be passed upon at the forthcoming meeting of the General Assembly. Dr. McGiffert's reversal of his decision to withdraw from the church is believed to be due to this announcement from Dr. Birch, and since the case against him is to be pressed, he will, it is said, remain to meet his accusers. In connection with this new development, an important document in the case is now first made public. It is Dr. McGiffert's reply to the committee of the New York presbytery, made last summer, which constitutes the only answer the accused clergyman has thus far made since the case has been in the hands of the local church authorities. In the course of this reply, Professor McGiffert said:

"Permit me to say that I believe, as I believed at the time of my ordination, that the Bible is 'the Word of God, the only infallible rule of faith and practise.' The fact that there are errors in the Bible, which I am compelled as an honest student to recognize, does not in the least affect my estimate of it as God's Word."

"I desire to say most emphatically that I believe in the deity of Christ, and I am not aware that my book contains anything inconsistent with that belief. For the deity of Christ, unless it is to be interpreted as excluding His real humanity, can not be held to involve necessarily the possession of unlimited knowledge, or absolute freedom from all liability to error, during His earthly existence."

"The sacrament of the Lord's Supper I believe in with all my heart; but the question as to the exact way in which it was instituted seems to me a purely historical question which does not affect the nature of the sacrament."

consideration the resistance offered by Cronje, it may be inferred that 10,000 Boers in a better position are likely to be a match for Lord Roberts's whole army."

The *Swift* (St. Petersburg) still believes that Lord Roberts and his staff will need all their prudence to escape a catastrophe farther on, and predicts that the English will find their Moscow in Pretoria. The *Kölnische Zeitung*, the only important German paper that is pro-British, believes that Lord Roberts is not likely to spoil his chances by undue haste. The *Journal des Débats* (Paris) says:

"The road to Bloemfontein is practically open to the British, and with the capital they obtain possession of part of the Free State. But it is not likely that the loss of Cronje's force will dishearten President Kruger. He knows well enough that peace can only come at the cost of independence. He will hold out to the last, and there is every likelihood that the Boers will stand by him."

The *Presse* (Paris) says that, if a grain of chivalry is left in Europe, intervention should come now. The *Indépendance Belge* (Brussels) remarks that England would do well to make peace, as her state would be worse than ever were Lord Roberts and Lord Kitchener to suffer serious reverses.

The *Militär Wochenblatt* (Berlin), even before the relief of Kimberley, predicted that the Boers will ultimately be crushed, owing to their inability to take the offensive. The article has influenced many German and German-American papers, and we condense it here:

Whether it be because the Boers are anxious to save lives, or because their organization does not suffice for a decisive attack, they do not seem to be able to inflict a crushing defeat upon the enemy. They can not hold White and Methuen in check with forces so small that a large army remains for decisive engagements. Yet a decisive battle, tho bloody and dearly won, would have changed entirely the aspect of affairs. The Cape Boers would have risen, and the question whether South Africa is to be Dutch or English would be placed in the foreground. At present, the Boers must hope that international complications will turn out to be in their favor, or that England is tired out by her efforts. In that case, peace would really be only an armistice, and the struggle would soon break out again. But things may turn out worse than that for the Boers. If England is given time to use her inexhaustible resources for the increase and proper training of her forces, then the heroic resistance of the Boers must gradually collapse. The lesson to be learned from this war is that the offensive is still necessary to make strategical defense effective. In the future as in the past, we Germans must be ready to strike quick, decisive blows. If we are attacked by a combination of powers, we must crush the most dangerous enemy ere others can develop their resources.

The public opinion in Greece is, according to the *London Times*, pro-English, and some of the French journals criticize the Greeks for this attitude. *Asty* (Athens) replies to this criticism to the effect that the sympathy for England that has been manifested must not be taken as an approval of England's course in attempting to subjugate a people for whose struggle for "freedom and honor" all Greece "cherishes the deepest admiration."—*Translations made for THE LITERARY DIGEST.*

SPAIN'S REMAINING POSSESSIONS.

THERE is no likelihood that the Spanish Government will of its own accord part with the rest of its possessions outside the Peninsula. The Island of Fernando Po, remarks the *Madrid Herald*, tho not very healthy now, might easily be made so, and the development of the neighboring Portuguese colonies shows that it could be made profitable to the mother country. The strongholds on the coast of Morocco will also be tenaciously retained, according to the *Epoca*; but it does not believe that these strongholds are in danger, or that it is necessary to increase the garrisons there. It says:

"Morocco is in much the same position as Turkey. The 'sick man' of the West shows no signs of a speedy demise, and, for the same reasons for which Turkey is preserved, Morocco will not soon meet with a violent end. The commercial and political interests of Germany, England, France, and Italy counterbalance each other so well that a sudden attack upon Morocco by any of these powers is unlikely. Neither will Spain attack her ancient enemy, as that would merely mean that we are to become the cat's-paw of a stronger power. We will be ready to defend our interests on the coast of Africa when the time comes, and the reorganization of our army will suffice for all practical purposes."

This unwillingness on Spain's part to enter into international complications is not pleasing to England. Since the rumors of Russian designs upon Tangier, some of the English see reasons to deplore their Government's anti-Spanish attitude during our late war with Spain. Mr. Cunningham Graham says in *The Saturday Review* (London):

"That our conduct was base is, I think, amply proved by the fact that we sided with the stronger power against the weaker. True, we did so with many platitudes about 'progress,' 'civilization,' and 'Pan-Anglianism.' . . . I now come to the impolicy of our action. We threw over and insulted Spain in her necessity, thus securing one more enemy in Europe, when we had already not a single friend but herself. Moreover, we deliberately sacrificed the help of a nation which, tho fallen upon evil times, must always be taken into account in all settlements of naval and military questions on the Mediterranean coasts; a nation also which in the event of a war between France and England could materially help either power. What have we gained by all our squirmings and grovelings before the United States?"

Nevertheless, Spanish dislike of England is based upon more material considerations than Great Britain's attitude during the war. It is feared that England will endeavor to pocket the most valuable of Spain's remaining possessions, the Canary Islands. The *Madrid correspondent of the Berlin Post* says:

"The Canary Islands became a province, not a colony, of Spain before the discovery of America, and since then the islands have always been treated as such, sending their representatives and sharing the weal and wo of the mother country. But they are very rich, distant from Spain, and in an advantageous position. Hence influential Spanish papers like the *Heraldo*, *Imparcial*, etc., urge the Government to defend them against a sudden attack, as the Spanish fleet is no longer in a condition to undertake that defense, especially as England, in case of an international conflict, would be certain to attack them, in order to possess another invaluable base for naval warfare. It must be admitted that, financially, the islands are already in English hands.

A GERMAN SUGGESTION.

After reading that Gatacre's defeat was due to its being falsely conducted, the *Lustige Blätter* recommends the employment of Mr. Cook in future.

Nearly all the capital invested there is English, and the inhabitants are well disposed toward England. Under these circumstances it seems very doubtful that a serious attack could be resisted, even if a few more guns are sent and the batteries are put in order. The worst is that the inhabitants, like those of Cataluña and Vizcaya, are imbued with autonomous tendencies. This feeling is not lessened by the project to put a tariff upon goods from the Canary Islands. The Canary representatives in the Cortes resist this project to the utmost, and if it is carried out against their opposition, the loyalty of the islanders will be reduced to a minimum."—*Translation made for THE LITERARY DIGEST.*

FRANCE, ITALY, AND THE TRIPLE ALLIANCE.

IT is a well-known fact that the relations between France and Italy have not been the most friendly during the latter half of the nineteenth century. France obtained predominating influence in the Peninsula, and Frenchmen aroused the antagonism of the budding national spirit in Italy by treating the Italian as a kind of vassal. The situation was aggravated by the support which republican as well as imperial France granted to the Pope's attitude regarding temporal power. Of late, however, there are indications that Italy and France have become much more friendly. France, on the one hand, has begun to recognize united Italy as a power that has come to stay. In Italy it is thought by some that the friendship of France may in future be more valuable than that of the Triple Alliance. Signor Vidary, in his work on the political and social condition of modern Italy, expresses himself to the following effect:

Nothing hindered so much the progress of Italy as adherence to Bismarck's diabolic policy, which has forced her into an unnatural alliance with Germany. This alliance has instilled a dangerous megalomania in the people, and has caused our economical weakness. It imposes upon us the most ruinous armaments, and prevents the healthy development of our trade and industry by estranging us from France.

Many German papers have taken the ground, however, that enmity between France and Italy is not an essential feature of the Triple Alliance. It is claimed that the Triple Alliance is more a protection to Italy than an advantage to Germany. In Austria, however, the possibility of Italy's defection, with a corresponding rise of Iridentist aspirations regarding the Italian provinces of Austria, is viewed with alarm. The *Neue Freie Presse* (Vienna) warns Italy against the dangers of a *rapprochement* with France. The *Journal des Débats* (Paris) in a long article replies to the Austrian arguments as follows:

"One of the chief arguments brought forward by M. Kraus is that we are the sworn enemies of Italian unity. Our pretensions to the hegemony of the Mediterranean Sea and Asia Minor are supposed to be checked by the existence of a strong and united Italy. Hence we must destroy Italy. It would seem to us, however, that there is plenty of room for more than one power in the Mediterranean, nor can we perceive that our 'pretensions' are more dangerous to Italy than those of England or even of Austria herself, who has naval ambitions of her own. Another bugbear is the support France is said to give to the Pope's pretensions, and it is even asserted that we intrigued for the admission of a Vatican delegate to The Hague Conference. The truth is that France is strictly neutral in the struggle between Vatican and Quirinal.

"Had a German paper expressed such views, some weight might attach to them; but when Austrians describe France as 'the sworn enemy of Italian unity,' the same Austrians who were vanquished by France in order to establish that unity; when Vienna is audacious enough to talk of our sympathy with the restoration of temporal power, while Emperor Francis Joseph, out of pure deference to the Pope, refuses to visit King Humbert at Rome, then only a smile will be the answer from Venice to Messina. For what was the real reason of Italy's entrance into the

Triple Alliance? To defend united Italy against Austria, according to a formal declaration by Marquis Capelli, the confidant of Count Robilant."—*Translations made for THE LITERARY DIGEST.*

ELEMENTS OF WEAKNESS IN MODERN GERMANY.

THE growing strength of Germany, since the establishment of the empire in 1870-71, has been the cause of so much satisfaction among the Germans themselves that the recent sharp criticism of that country by the venerable Professor Beyschlag, of the University of Halle, has come like a rude shock. An address was delivered by him, at the invitation of the university senate on the public celebration of the entrance upon the new century (according to the notion of the Emperor) on the subject of "Germany in the Course of the Nineteenth Century." His criticisms, coming from a scholar of the highest rank, have commanded the attention of practically every journal in the Fatherland. The elements of weakness in modern Germany, Beyschlag describes substantially as follows.

In the great year of 1871, that witnessed the consummation of the highest ambitions of the German people by the establishment of the empire, the germs of decay and disintegration of the highest ideals of public life were also developed. First of all, came with the five milliards paid by France the era of wild speculation, that ruined German business for years, and which, when finally the panic subsided, left as a bitter and permanent deposit a sense of greed and a love of money hitherto unknown. The age of practical materialism was established and began to eat at the moral and intellectual vitals of the people. Then came social democracy as a potent factor in public life, that managed, by its pictures of material prosperity and the promise of the good things of this world, to seduce hosts of Germans away from their high moral, political, and religious ideals. That such a radical change in the ideas and aims that control the actions and thoughts of men should result in a widely spread deterioration and corruption of public morals is only a matter of course. But the upper ten thousand have no right to condemn social democracy as the arch enemy of modern society, as long as the same worship of Mammon, excluding as it does all devotion to really high principles, rules their section of society, altho in other forms, and develops in the higher circles a type of wickedness more refined but equally as bad as the brutality which greed of material gain has awakened in the lower. There have been other periods in the history of Germany when a lower type of morality prevailed; but there has been none other that has been so characterized by a "spurning of all the sacred possessions of the inner man." Denial of the existence of God and mockery of His word are not now, as in former generations, the timid confession of a few shipwrecked souls. It has now become the cold-blooded conviction of hundreds of thousands throughout the empire, and is, in many circles, considered the acme of culture and education. There can be no more terrible sign of the times than that a man like Nietzsche, that man of depravity, who used, or rather abused, his fine mental abilities only to mock at everything that gave man stability, until he finally passed over from an ethical to a physical lunacy—that such a man could be glorified as the protagonist of the highest type of culture in the "land of thinkers and authors." Only take a glance at the *belles-lettres* of our times and you will see how thoroughly, in popular estimation, has there been a break with the very essentials of a high morality, and how the very existence of the moral law is denied. As the moths constantly circle around a candle, thus all our half-poets, in their productions, circle around one center—namely, the transgression of the commandment: "Thou shalt not commit adultery." Their productions, as a rule, are but constant variations on this theme and the glorification of its transgression. The only rank in German society in which there still exists a noteworthy resistance to this leaven of moral rottenness is in the middle classes; but it is a question if these can for any length of time resist the deluge.

Beyschlag does not ignore the elements of strength in Ger-

many; but he is probably the first among the leading thinkers of the country ruthlessly to exhibit the canker of moral decay that he thinks is eating at the vitals of the people. All the leading papers of the country comment on this remarkable address, and very few deny that these changes, tho exaggerated, have some foundation. Only conservative religious journals indorse Bey-schlag's arraignment *in toto*.—*Translation made for THE LITERARY DIGEST.*

A PHYSICAL COMPARISON OF BOER AND BRITON.

IT is an interesting comment on the steadiness and serenity of the trained scientific spirit to find that even in the midst of the enthusiastic exhibitions of patriotism in London in the last few weeks, *The Lancet*, of that city (the well-known medical paper), can proceed to a calm and passionless comparison of the Boer and Briton, man for man, and can announce that the former's superiority, both physical and moral, is beyond question. We may have good and weighty reasons, it says, for wishing that lead may be lighter than snow; but these reasons will avail us nothing if the facts are against us. The true patriot will look the facts in the face. We condense its further remarks as follows:

The physical and psychological fitness of the Boers confirms everything that has been said by the most eminent authorities regarding the preservation of national health. What is needed is above all pure air, exercise in the open, warm clothing, freedom from worry for one's daily bread, and temperance in the use of alcoholic stimulants. Now compare the Boer and the Briton. With few exceptions, the Boers live in the open, the Boer's ambition being to have so much land that he can not see the roof of his neighbor. His work is all in the open air, and he has to go enormous distances to reach a doctor or get to church. His food he obtains at least in part by hunting, which again strengthens his body and gives him the necessary practise with the rifle. Above all, he is free from the temptations which ruin the health of rich and poor alike in other countries. The sight of a luxurious life does not tempt him; but neither is he pinched by want. His life is truly one of moderation. His mind is neither filled with the chase after riches, nor does he fear bankruptcy. He need not fear that a syndicate or "trust" will ruin his business. He knows nothing of the dissipation of our rich, nor of the squalor of the crowded tenements inhabited by our poor. Hence he is not subject to nervous ailments.

The Boers of to-day are taller and stronger people than the English. All who know them well are unanimous in acknowledging the physical superiority of the Boer. Were he to be subjected to the temptations of city life, he might be reduced by vice as quickly as other people; but that happens rarely, and President Kruger is himself a proof of the fact that even in cities the Boers often preserve their simple habits. The President still goes to bed at eight and rises at five.

Besides this fine physical development, the Boer has the advantage of freedom from diseases caused by drunkenness and

other vices. The Boers are not Prohibitionists; but drunkenness is rare among them. What is of the greatest importance is the fact that the Boers are on the whole a very moral people; but, even if they were not, their life on the farm would prevent them from acquiring diseases caused by vice.

How frequently, on the other hand, are British soldiers incapacitated by sexual disease, and punished for drunkenness. No wonder that nearly every Boer is not only able to serve in war, but is healthier and stronger than the men picked for the army by our doctors. If all our male population between the ages of fourteen and sixty were called out, what a sorry spectacle it would be compared with a similar Boer force! The British army is an infinitesimal minority of selected men especially fitted to be soldiers. It is easy to imagine what would happen if all our men were called to arms. Victory in modern war is with the people who have the best sharpshooters. Psychologically, that means the people with the strongest nerves. To remain cool, quiet, and capable in battle is the main requirement. To this must be added the ability to stand exhausting marches, for which doubtless the countryman is better fitted than the townsman.

International Neutral Cables.—The control of so many cable lines by Great Britain, and the regulation of despatches from South Africa by the British censor, have led several Russian newspapers to protest against any monopoly of international cables and to advocate the neutralization, by a convention or otherwise, of all oceanic lines of telegraphic communication. The principle applied to canals, it is urged, in the interest of the general good and contrary to the selfish wishes of certain powers, might be applied to the cable systems, and for similar reasons. In war and in peace, communication ought to be untrammelled. The *St. Petersburg Novosti* says editorially:

"It has become imperative to terminate the practical monopoly of the British cable companies and to make the transmission of messages a neutral affair—that is, to put it under the actual control of all the great powers. Last year, it was learned, one of these powers made an emphatic protest against British tyranny in this sphere. Of course such single protests are of no avail, and nothing has come of the representation. Collective diplomatic protests are inexpedient for various reasons, and, besides, they might not achieve their object.

"What, then, is to be done to get rid of the oppressive and injurious British monopoly? There are two alternatives, and two only. Either each government must construct and operate its own telegraphic cables, or all the leading governments must join one international combination for the erection and operation of a system of oceanic cables. The first alternative is possible only for the rich and powerful governments, and would entail needless expense. The second is of course open to all and for the benefit of all."

Accordingly, *Novosti* advocates diplomatic negotiations for the elaboration of some feasible plan, and, thereafter, an international conference of statesmen and experts to prepare a scheme of neutral control and define the privileges and obligations of all the powers that are to have the use of the system of cables.

The *Novoye Vremya* approves the demand for neutralization, but doubts the success of diplomatic negotiations. It believes that Russia ought to depend on her own resources and establish independent lines to Constantinople, Seoul, and Teheran without delay.—*Translations made for THE LITERARY DIGEST.*

TWO "DYING NATIONS."—Kladderadatsch, Berlin.

MISCELLANEOUS.

THE DEATH OF GENERAL WAUCHOPE.

A VIVID description of the disaster that overtook the Highland Brigade and their commander, in the night attack ordered by General Methuen, is given by the Magersfontein correspondent of the London *Daily News*. It runs as follows:

"The brigade marched in line of quarter-column (he writes), each man stepping cautiously and slowly, for they knew that any sound meant death. Every order was given in a hoarse whisper, and in whispers it was passed along the ranks from man to man; nothing was heard as they moved toward the gloomy, steel-fronted heights but the brushing of their feet in the veldt grass and the deep-drawn breaths of the marching men. So, onward, until three of the clock on the morning of Monday. Then out of the darkness a rifle rang, sharp and clear, a herald of disaster—a soldier had tripped in the dark over the hidden wires laid down by the enemy. In a second, in the twinkling of an eye, the searchlights of the Boers fell broad and clear as the noonday sun on the ranks of the doomed Highlanders, tho it left the enemy concealed in the shadows of the frowning mass of hills behind them. For one brief moment the Scots seemed paralyzed by the suddenness of their discovery, for they knew that they were huddled together like sheep within fifty yards of the trenches of the foe. Then, clear above the confusion, rolled the voice of the general—'Steady, men, steady'—and, like an echo to the veterans, out came the crash of nearly a thousand rifles not fifty paces from them. The Highlanders reeled before the shock like trees before the tempest. Their best, their bravest fell in that wild hail of lead. General Wauchope was down, riddled with bullets; yet gasping, dying, bleeding from every vein, the Highland chieftain raised himself on his hands and knees, and cheered his men forward. Men and officers fell in heaps together. The Black Watch charged, and the Gordons and the Seaforths, with a yell that stirred the British camp below, rushed onward—onward to death or disaster. The accursed wires caught them round the legs until they floundered, like trapped wolves, and all the time the rifles of the foe sang the song of death in their ears. Then they fell back, broken and beaten, leaving nearly 1,500 dead and wounded just where the broad breast of the grassy veldt melts into the embrace of the rugged African hills, and an hour later the dawning came of the dreariest day that Scotland has known for a generation past."

SALARIES OF SCHOOL TEACHERS.

THE following statistics regarding the salaries paid to teachers in various parts of the world have been gathered by the *Nuovo Educatore* (Rome): In New York City, principals receive about \$1,500, assistants \$1,080; in Massachusetts, masters (on an average all over the State), \$50 a month and mistresses \$23 per month; in California, \$100 a month to masters; in Pennsylvania, masters receive \$500 a year and mistresses \$410; in Arizona, \$107.35, and mistresses \$95 per month; in Brazil, primary teachers receive \$400 to \$750 a year and from \$700 to \$900 in the higher grades. In addition to this they have a beautiful garden and house, and the annual salary is increased about one fourth after twenty-five years of faithful service. In Colombia, South America, teachers receive about \$30 a month. In Holland, besides the annual salary, elementary teachers have a house and a garden. In Berlin the salary varies from \$563 to \$810 a year. In Hamburg, the lowest salary is \$550; Frankfort-on-the-Main pays \$524 to \$700 for ten years of service and allots a considerable pension for old age. In Leipzig, Chemnitz, and Dresden, they receive from \$330 to \$540; in Freiburg, from \$484 to \$694; Monaco, \$458 to \$626, to which the state adds a sum varying from \$24 to \$425; in Württemberg, from \$300 to \$500; Vienna varies from \$500 to \$625; Trieste from \$422 to \$512, besides a lodging. In Belgium the minimum is \$175 and the maximum \$600, with a house, light, and fires. In Neuchâtel, teachers receive \$301 to \$525, besides a lodging, garden, wood from the forest, and an increase of \$25 for every five years. In France, elementary teachers have \$850 and an increase of one tenth every three years. The same journal states that the pension of teachers in Rome is allotted at its lowest after twenty-five years of service, at the age of forty-two, and at its highest, after forty-seven years of service, at the age of seventy-seven. The amount received is based on an average of salaries received after fifteen years of service. In the Grand Duchy of Baden the teacher obliged to rest between the fifth and tenth years of teaching receives four tenths of his salary, which is increased each succeeding year by two per cent.—*Translation made for THE LITERARY DIGEST.*

CORRESPONDENTS' CORNER.

Is the Earth Alive?

Editor of THE LITERARY DIGEST: Apropos to the question, "Is the Earth Alive?" I would call attention to the fact that *Plato* refers to the sun, moon, and stars as animals; the earth also is an animal truly intellectual and created through the province of the Deity; it is endowed with powers that apprehend all things and are the guardians of all things; it requires no hands, for there is nothing for it to receive; nor feet, for it moves in a circle. The soul permeates and circumscribes the whole body of the universe, etc.

ALBANY, N. Y.

Editor of THE LITERARY DIGEST: Would you mind telling Dr. F. E. Daniel that in his article, "Is the earth alive?" he misquotes both author and lines? It was *Pope*, not Wordsworth, who did the epitomizing, and the lines read:

"All are but parts of one stupendous whole,
Whose body Nature is, and God the soul."

PHILADELPHIA, PA.

AMORA C. LAWS.

Shut-Ins and The Literary Digest.

Editor of THE LITERARY DIGEST: Last year you kindly inserted the appeal of the "Yankee Christmas Club" in the interest of invalids who would appreciate discarded current copies of THE LITERARY DIGEST. Twenty-two subscribers answered the appeal and now regularly have the pleasure of mailing their copy to an appreciative "Shut-In" somewhere. We know scores of "Shut-Ins" from Maine to India to whom THE DIGEST would be a weekly feast, if other subscribers would be pleased, during 1900, to regularly "pass on" their copy. By sending an addressed and stamped envelope, I will soon place them in possession of an address which will enable them, at a sacrifice of one minute and one cent, to make happy hours for some one each week.

WILLIAM T. TOTTEN,
100 GREEN ST., PHILADELPHIA. Secretary of Yankee Christmas Club.

Marconi's Ancestry.

Editor of THE LITERARY DIGEST: I read THE LITERARY DIGEST regularly with much interest. In the number of December 13, I notice a history of William Marconi which is entirely wrong. It must be eighty years since C. Bianconi came to Ireland, for I knew him forty-eight years since as a retired country gentleman living on his estate when railways had invaded the south of Ireland; also as a magistrate, having given up nearly all, if not all, his mail contracts. He has many cousins living in this neighborhood called Davis. He had a niece called Jamieson, who married a Mr. Marconi, and was the mother of the wireless telegraph man. The Davises are an old Quaker family, tho they support the Church of Ireland now.

BALLYCOURDY, KENNEDY, IRELAND.

C. G. GREY.

Fungus Pictures.

Editor of THE LITERARY DIGEST: The conviction on my part of your honest desire to do justice leads me to call your attention to an error which your publication has tended to perpetuate. You mention the claim of Miss Ida Musselman as the inventor and originator of the method of bringing out pictures on fungus growth. While not desiring to discredit in the least the value of Miss Musselman's work, she is not entitled to the credit of being the inventor or originator of this method.

While a student at the University of Virginia, during the sessions of 1890-91, I saw a specimen of this kind of work, which was done artistically and was pronounced by critics to have artistic value. It had been done by Mr. Ashby Slaven, at that time of Monterey, Highland County, Va., and now of Marlinton, Pocahontas County, W. Va.

Mr. Slaven believes himself to be the originator of the method. At any rate, he did this kind of work ten years ago and has continued to do it since.

HOT SPRINGS, VA.

F. T. McALLISTER.

The First Communion and the Lutheran Church.

Editor of THE LITERARY DIGEST: Please permit me to correct a mistake in Miss Wiggins's article quoted by you from *The Outlook* February 17. She states: "The First Communion has been relinquished by all Protestant churches." Let me inform you that confirmation and first communion are practised in the Lutheran Church. By reading Longfellow's translation of Tegner's beautiful poem, "The Children of the Lord's Supper," one gets a fair idea in what esteem these sacred rites are held in the Lutheran Church.

MCNOMISSE, WIS.

T. H. H.

Origin of Gender in Language.

Editor of THE LITERARY DIGEST: In your issue of February 10, I notice that you refer to Mr. J. G. Frazer's article in *The Fortnightly Review* on "A Suggestion as to the Origin of Gender in Language" as one which sets forth "an entirely new" theory to account for the existence of gender forms. I beg leave to call your attention and that of your readers to the fact that one of our American scholars, Prof. C. W. Hutson, who now holds the chairs of English and history in a college in Texas, anticipated Mr. Frazer by many years. For in his "Beginnings of Civilization" (1887), he suggested this theory of the relation of exogamy to grammatical variations. This little volume is long since out of print; but in a more recent work, "The Story of Language" (1897), Professor Hutson elaborates the same idea (pp. 65-67). The passage is rather long to quote, but a reference to it will show quite clearly that the idea which Mr. Frazer so ably supports with an array of evidence carefully collated from many sources is the same which Professor Hutson advances in these books.

BROOKLYN, N. Y.

ETHEL HUTSON.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Goodnow, of Shanghai, sends the following comparative returns of the import of cotton goods into Shanghai for the quarters ended September 30, 1895-1899, as reported by the imperial maritime customs:

Consul Ruffin, of Asuncion, writes October 2, 1897:

The importation of cotton socks and stockings last year was 5,266 kilograms, the duty being 25 per cent. per kilogram (\$1.50 gold value per kilogram), and the value of the importation \$7,900 gold. In Lisle hosiery, the trade is almost nothing, only 188 kilograms being imported last year, to the value of \$1,088 gold, the duty being 25 per cent. on each kilogram (a kilogram being valued at \$6). Cotton socks and stockings come mostly from Germany and are of very ordinary quality. They are packed in cases of 100, 150, and 200 dozens, each dozen being put in a paper box. They sell here for 60, 75, and 90 cents, \$1, and \$1.25 Argentine gold (the value of the Argentine dollar is 96.5 cents), per dozen f. o. b. Buenos Ayres, on six and eight months' drafts. The colors preferred are cream, black, and stripes. White shows dirt too easily; a few of this color, however, find purchasers. The usual sizes are Nos. 9, 9½, and 10½. Many shawls are used in this country, especially in hot weather, because most of the women of the ordinary class go with their arms and necks bare and throw this

**A WONDERFUL
LIGHT.**

Costs for service one-fiftieth as much as electricity, one-thirtieth as much as acetylene, one-eleventh as much as gas, yet a pleasanter, brighter light than these. Fine prior to 10 feet away, no candle-glower twenty hours costs 3 cents. No odor, noise, or smoke. Never out of order. Lasts a lifetime. Ornamental; portable. Chandeliers, pendants, wall and bracket lamps. Best for country or city, home or office. **Guaranteed as represented or money refunded.** Write for catalogue. Agents wanted.

IF YOU OWN A HOUSE

and are thinking of painting it, we ask you to look into the merits and advantages of

Cabot's Creosote Shingle Stains

You may prefer paint for the clapboards, but for the shingle roof or any shingle work our Creosote Stains are much more artistic. Beside this, they cost only half as much as paint and are cheaper to apply. The Creosote is a preservative of the wood against decay and, unlike paint, these stains can not crack or peel off.

 We will gladly send, free of expense, to any Digest reader, one of our colored lithographic charts, so arranged that sixteen different combinations may be made, showing a roof of any desired shade in combination with side walls of any corresponding or contrasting shade. We also send free a swivel of small shingle strips, stained in twenty-three shades, showing the effect on the wood. Write for these samples.

SAMUEL CABOT, 70 Kilby Street, BOSTON, MASS.

shawls around them on going out. The shawls are mostly of a dark color, and the more expensive ones have silky black fringe. They are also used as mantillas. The importation of shawls amounted last year to \$73,552 gold, the quantity in kilograms being 5,760. The duty is 25 per cent. per kilogram, each kilogram being valued at \$1.30 gold. The shawls come from Germany, the price being \$2 and \$4.40 Argentine gold each f. o. b. Buenos Ayres. They are packed in cases containing 4 or 6 dozen.

Handkerchiefs are widely used here, being frequently employed instead of shirts and collars. A large handkerchief—usually white or of cream color—is tied around the neck, the bow covering the breast. The importation of handkerchiefs last year amounted to \$12,400 gold, the number of kilograms being 8,327; the duty is 25 per cent. per kilogram, and each kilogram is valued at \$5.30 gold. They appear to be of Scotch and Lancashire make. They are packed or shipped in cases of 200 and 300 dozens. Handkerchiefs with borders printed in flowers and dots sell well. This trade could be made profitable.

Much of the above information was furnished me by Mr. Enrique Plate, who represents some of our largest American houses.

Congal Haughey, of Berlin, writes, November 28, 1890:

At a convention of the ladies and children's cloak manufacturers at Berlin, which convened on the 14th of November, the commercial counselor, Mr. Mannheimer, one of the largest wholesale clothing manufacturers of Germany, delivered an expert opinion on the clothing trade, this subject having been assigned him for report. He said:

¹¹ The clothing industry of Berlin was, since 1890, assumed to improve proportionally as a factor of the German export trade. Its dominating position in the world market is universally recognized. This industry is the pioneer and main feeder for varied branches of the textile industry, such as women and workman's stuffs, silk goods, linings of all kinds, faces, broads, worsted and braided trimmings, suitings, embroideries, and numerous other lines of manufacture.

But it is a deplorable fact that while the present boom has so favorably affected nearly all other industries of our country, the clothing-export trade has not only not increased, but has suffered a diminution during the last three years. Germany's total export of textiles and ready-made clothing in 1917 were 37,000,000 marks (\$57,000,000); in 1918, 34,000,000 marks (\$51,000,000); decrease in value of exports, 8,000,000 marks (\$12,000,000). But this decline is by far greater when compared with the figures of the year 1916, when exports in this line were to the value of 44,000,000 marks (\$66,000,000). If we take the special line of ready-made clothing alone, we find the exports were, for 1917, 22,000,000 marks (\$33,000,000) in value; 1918, 19,000,000 marks (\$28,500,000); and, 1916, 20,000 marks (\$30,000,000). The year 1918, as compared with 1917, shows a shrinkage of 3,000,000 marks (\$4,500,000) in this single line. Taking the exports of clothing by countries, the shrinkage amounts in the exports of clothing to England, 1,000,000 marks (\$1,500,000); Holland, 1,000,000 marks (\$1,500,000); Switzerland, 1,000,000 marks (\$1,500,000); United States, 1,000,000 marks (\$1,500,000); Canada, 500,000 marks (\$750,000); Belgium, 500,000 marks (\$750,000).

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

"This retrograde movement is alarming. The explanation lies in the exorbitant customs tariffs of foreign countries. In the United States, the import duties on clothing amount to 70 to 80 per cent. of their value; in Russia, 40 to 50 per cent.; in Spain, 25 to 30 per cent.; in Italy, 25 per cent.; in Canada, 25 per cent. more is asked than on clothing imported from England; in many other countries similar tariff rates exist. In consequence of this, many thousands of operatives who were fully employed a few years ago have their existence endangered, and employers are in a critical position. It is self-evident that our clothing and textile manufacturing classes are not satisfied with a continuation of the present trade treaties with foreign nations. What we need above all things is a change by which the almost prohibitive tariff rates of these countries should be reduced by at least one half. Most important for our line is a rectification of our trade relations with the United States. Little concessions here are of no value; the present United States duties on textiles and clothing must be lowered if we are to become enabled to continue our exports."

It is strange that our manufacturers in the clothing and cloak trade have not as yet made efforts to gain foreign markets for their productions. They are in this respect far behind other branches of manufacture. Our clothing trade, if energetically managed, could soon show as good results as our cotton textiles, iron and steel machinery, office furniture, etc.

Consul Dickson writes from Gaspé Basin, under date of December 4, 1899:

A company named the Canadian Petroleum Company has commenced business on a very large scale in Montreal. The managers have laid a pipe line for a distance of about twelve miles and have had landed all the material for building and equipping an oil refinery, which they intend putting up in the spring. They are now engaged in building several large oil-tanks, some of iron and some of wood. This company has four wells under way, and it intends to drill ten or fifteen more during the coming year. Notwithstanding all this outlay of money, there are no more signs of oil

than there were five years ago. The Petroleum Oil Trust Company commenced boring for oil here in October, 1884, and since that time has dug thirty-three wells, varying in depth from 2,900 to 3,800 feet. In all but one oil has been found, but it seems to be soon exhausted. I have conversed with several oil experts during the past five years, and they inform me that the sand and gravel here are not suited to oil, and that the dip of the rock is altogether wrong. This, they say, should be about 50 feet to the mile, and it is about 1,000 feet to the mile in most places where wells have been put down in this vicinity.

Minister Finch, of Montevideo, under date of September 26, 1899, sends the following statement (as printed in a local paper) of the exportation of sheep, frozen and live, from Argentina to Brazil, Europe, United Kingdom, and South Africa from January 1, 1899, to August 31, 1899:

Month	Sheep.	
	Frozen.	Live.
January	445,564	47,491
February	115,760	34,989
March	457,363	74,679
April	285,078	77,995
May	207,337	86,651
June	306,258	44,057
July	197,797	90,934
August	209,171	57,439
Total	1,335,920	472,976
Same months of 1898	1,381,412	428,472

Consul Nelson of Bergen writes, December 5, 1899:

The projected telegraphic communication with Iceland is a question of interest to all northern Europe. Especially will it be valuable in assisting meteorological observations, the various observatories thus being able to obtain daily telegrams concerning the state of weather in Iceland. It often happens that storms from the north sweep over Europe without previous atmospheric indications of their approach. The main question at issue, however, is laying the cable. It will be 650 kilometers (403 1/2 miles) in length, extending between Iceland and the Shetlands. The Northern Telegraph Company, of Copenhagen, Denmark, has offered to lay this cable under the following peculiar contract: The Icelanders shall pay to the company a yearly subsidy of \$2,350 for twenty years; Denmark is also to pay a yearly subsidy of \$11,000, and the neighboring countries are requested to contribute an aggregate sum of \$91,400; thus, together, the interest included, an amount of \$1,007,000 is desired by the company. Undoubtedly this business would yield a fair profit, as the usual price of laying a submarine cable is not higher than \$1,000 a sea mile, and, according to this figure, the cost of laying the proposed line would not exceed \$650,000.

Another telegraphic company has offered to lay the cable between Iceland and the Orkney Islands (a greater distance than the proposed line) for about \$350,000, thus showing that the amount asked for by the Danish company exceeds by more than 50 per cent. the expenses involved in laying the cable. Not only, however, is the price asked exorbitant, but the manner of the payment itself is strange. The inhabitants of Iceland (75,000 or 73,000 peasants and fishermen), who for centuries have lived in no affluence, are asked to pay more than \$187,600 for a cable for which they have almost no use, while it will bring other nations extraordinary advantage.

Apart from the already mentioned benefits to meteorology, the cable will also be of particular service to American, English, French, and Norwegian fishermen, who carry on their trade on a large scale in the neighborhood of Iceland.

Consul Thompson writes from Progreso, November 26, 1899:

By reason of the present high price of Sisal hemp, the principal product and article of export for this district, Yucatan is enjoying a season of great prosperity. There is a plethora of money,

Don't Lose Your Grip.

Gray hairs often stand in the way of advancement for both men and women, socially and in business.

Many men are failing to secure good positions just because they look "too old" and no one knows how many women have been disappointed in life because they have failed to preserve that attractiveness which so largely depends on the hair. **HAY'S**

Hair-Health

has been a blessing to thousands. It is a hair food, nourishing the roots, forcing new growth, restoring freshness and life, and positively brings back gray hair to its youthful beauty and color. **Hay's Hair-Health** is not a dye, and its use cannot be detected.

Many commercial and other schemes are being projected, particularly in railroad and kindred enterprises. Every one of the present railroad companies is commencing to purchase large quantities of rolling stock, rails, etc. Several new railroads are planned, with every prospect of success. I have helped divert many orders to the United States, and if our manufacturers interested in this class of supplies care to enter the field here, there will never be a better chance. That they may be placed in immediate communication with their possible future customers, I give below a list of the various companies that are purchasing or intend to purchase heavily of materials in their respective lines: Merida & Peto Ferrocarril, Rodolfo Canton, president; Merida & Progreso Via Ancha, Joaquin Peon, president; Merida & Tamal, Joaquin Peon, president; Merida & Valladolid Via Angosta, Gen. Francisco Canton, president; Sud Oriental de Yucatan, Rafael Peon y Losa, president; Electric Light Company of Merida (Compañia de Luz Eléctrica de Merida), Rafael Peon, president. Other companies and projects are in process of formation, and as they become of interest to our merchants and manufacturers, I will give the Department due information.

PERSONALS.

THE recent death of John Ruskin has brought into print a flood of "recollections" and "appreciations" of England's great art critic and reformer. Mr. George Allen, his publisher and friend for three-and-forty years, saw Ruskin as a great man in the highest sense; "a grand man in heart as in intellect." "I find it difficult," he says, "to tell you how grand he was in everything he did. He never did a mean action, and his goodness to others was measureless. I remember being with him in Savoy on Easter Sunday in the year 1863. His human sympathy went out to a Savoy peasant kneeling in prayer at the roadside, and he knelt and prayed with him. He thought this would do the poor fellow good, would console and strengthen him. It was ever thus with Ruskin—the one touch of nature in him was as deep and sincere as it was simple. 'When I reach the Alps,' he had said to me, 'I always pray.' He would betake himself to some quiet corner among that grand scenery and fall on his knees. Tho he came of a certain strict Calvinism, there was nothing narrow in the religious outlook of Ruskin—it was expansive as it was bright. His kindness to dumb animals was a characteristic which the veriest stranger might notice. Truly, Ruskin's heart was as large as his genius." . . . He must have known what he had achieved, and that was the thought in my mind when I asked him, not later than last autumn, 'Are you not glad your books are doing so well?' His answer was, 'The public think so much more of my books than I do myself.' This gentle modesty was part of his charm, but then he was a wholly charming personality. I have never met anybody in the least like him."

The following is an account by an eye-witness of Ruskin's Oxford lectures:

"Ruskin lectured in the theater of the New Museum; in the afternoons, of course, so as not to interfere with the regular business of the place; and before an audience consisting largely of young ladies. He would pace up and down restlessly as he talked, get the photographs he had brought as illustrations into a hopeless muddle, and finally do without them. That did not matter in the least, for he never by any chance dealt with his announced subject. The theme of the course I attended was supposed to be 'Early Florentine Art'; and the lecturer certainly did make one or two casual remarks about Cimabue and Giotto. But his diversions were the real thing. With sweeping gestures (he had graceful rhetorical gestures) he declaimed whole passages from the Psalms which were understood to explain, in some way, how the bad weather we were then experiencing was a punishment for the industrial abominations of modern England. Then he would launch into a tirade against our ideals of Gentleman and Lady as illustrated by the latest Mudie novel. And I remember that a Christ-

mas card, popular at the time, representing a buxom young woman in her nightgown clinging to a cross, came in for some particularly violent denunciations. It was all extremely good fun, full of whimsical, almost feminine, exaggerations and antipathies, in the style that we all know; but saved by the kindly half-quizzical smile which those who take the perversities of his books solemnly have failed to divine."

Ruskin's remarkable friendship for Sir John Millais is known to all the world. Perhaps, with a single exception, it had no finer exemplification than in the candor with which he criticized a portrait of Charles Reade, which Sir John had submitted to the inspection of the great critic. "It is not a failure," declared Ruskin, "it is a fiasco"—and he proceeded to kick a hole in the canvas. This was certainly a vigorous method of criticism, but Millais did not protest seriously. It was different with Whistler. Of the latter's "A Nocturne in Black and Gold" Ruskin wrote: "The ill-educated conceit of the artist nearly approaches the aspect of wilful imposture," and again: "I have seen and heard much of cockney impudence, but I never expected to hear a cockney ask two hundred guineas for flinging a pot of paint in the public's face." Whistler, stung to the quick, sued for £1,000 damages, and was awarded a single farthing by the jury. This coin he attached to his watch-chain and carried it for a charm.

A FORMER officer of volunteers, who was in the Santiago province for half a year after the occu-

Fried Onions.

Indirectly Caused the Death of the World's Greatest General.

It is a matter of history that Napoleon was a gourmand, an inordinate lover of the good things of the table, and history further records that his favorite dish was fried onions; his death from cancer of stomach it is claimed also was probably caused from his excessive indulgence of this fondness for the odorous vegetable.

The onion is undoubtedly a wholesome article of food, in fact has many medicinal qualities of value, but it would be difficult to find a more indigestible article than fried onions, and to many people they are simply poison, but the onion does not stand alone in this respect. Any article of food that is not thoroughly digested becomes a source of disease and discomfort, whether it be fried onions or beef steak.

The reason why any wholesome food is not promptly digested is because the stomach lacks some important element of digestion, some stomachs lack pepsin, others are deficient in gastric juice, still others lack Hydrochloric acid.

The one thing necessary to do in any case of poor digestion is to supply those elements of digestion which the stomach lacks, and nothing does this so thoroughly and safely as Stuart's Dyspepsia Tablets.

Dr. Richardson in writing a thesis on treatment of dyspepsia and indigestion, closes his remarks by saying, "for those suffering from acid dyspepsia, shown by sour, watery risings, or for flatulent dyspepsia, shown by gas on stomach, causing heart trouble and difficult breathing, as well as for all other forms of stomach trouble, the safest treatment is to take one or two of Stuart's Dyspepsia Tablets after each meal. I advise them because they contain no harmful drugs, but are composed of valuable digestives, which act promptly upon the food eaten. I never knew a case of indigestion or even chronic dyspepsia which Stuart's Tablets would not reach."

Cheap cathartic medicines claiming to cure dyspepsia and indigestion can have no effect whatever in actively digesting the food, and to call any cathartic medicine a cure for indigestion is a misnomer.

Every druggist in the United States and Canada sells Stuart's Dyspepsia Tablets, and they are not only the safest and most successful but the most scientific of any treatment for indigestion and stomach troubles.

ALOIS P. SWOBODA, CHICAGO, ILLS.

pation, told a little story the other day illustrative of the remarkable fact of General Wood, says the New Orleans Times-Democrat. "One of the chief difficulties encountered in reestablishing governments down there," he said, "was the disinclination of the better classes of Cubans to lend a hand. The wealthy and well-educated natives could have been of the greatest assistance, but they refused to accept civil offices and hung back and sulked, complaining that too many of the minor positions had been given to Spaniards. One of the places where those conditions prevailed was a small town not far from Santiago, where General Wood was particularly anxious to secure a good Cuban mayor, but he had been warned in advance that none of the men considered available would dream of taking the post. One day the principal storekeeper of the town came to the palace to see about a small contract for fodder. He was a typical native of the commercial class, fat, garrulous, and conceited, and it was evident that he was the chief gossip of his neighborhood. After concluding the business matter the general pretended to consult a letter. 'By the way, señor,' he said, 'you are an old resident of this country, and I would like you to give me a little advice.' 'I am at your excellency's service,' said the storekeeper, swelling with pride. 'Is it true, then, as is stated to me,' continued the general, 'that the Cuban gentlemen are very indifferently educated and fear to accept civil offices lest they appear to disadvantage compared with Spanish employees?' 'No, your excellency!' roared the Cuban, indignantly, 'that's all Spanish lies! Some scoundrel Spaniard wrote you that just to make you prejudiced! Our Cuban gentlemen—' and he poured forth his wrath and patriotism for nearly half an hour. 'Ah, well,' said Wood quietly, 'I merely wanted your opinion and am sure I'm very much obliged. You'll consider this conversation private, of course.' 'Certainly,' said the storekeeper, and, as the general anticipated, he hurried home and told it to everybody in town. A few days later one of the leading Cuban citizens was appointed mayor, and at once accepted. He is still administering the office with great success."

Few men worked harder than the late James Martineau. Altho a voluminous writer, his published works form but a small part of what he composed. It was always his habit to write at first freely and diffusely, and then to condense by successive processes. He possessed a vigorous frame and did not spare it. He worked early and late, almost to the end of his useful career. Even when close upon ninety years of age, he rose at six in the morning and worked three or four hours before a one o'clock lunch. Then came a rest, a constitutional, and the newspapers, in which he took the keenest delight. After dinner and a cup of tea, he wrote and read until midnight.

Few men have had more romantic careers than Arthur Henry Savage Landor, and few possess a personality more interesting. He was born in Florence, educated largely in Paris, and has lived

To Relieve Lassitude

Take Horsford's Acid Phosphate.

A few drops added to a half a glass of water, relieves the feeling of lassitude so common in mid-summer. A pleasant and wholesome tonic.

RELIEF FROM RHEUMATICS..

Mr. W. H. Jenkins writes from Topeka, Kan., under date of August 5th, 1898:

GENTS: Several years ago I was crippled with rheumatism, and for 162 weeks I was unable to do business of any kind, and in that time I have expended nearly \$3,000. I had given up all hope.

My mother in looking over the CHRISTIAN ADVOCATE saw your advertisement, and we ordered one bottle of your Tartaric Acid, which gave me immediate relief.

I have recommended your medicine to a number of parties in this city, who have had chronic rheumatism for years. One of them, a lady 68 years of age, is now doing her own work. So far your medicine has not failed to make a cure.

In conclusion your medicine is just as represented, and has entirely eliminated the disease from my body. My mother is enthusiastic over the benefits that I have derived from the use of your medicine.

and worked almost everywhere. His fame as a painter is hardly surpassed by his reputation as a traveler and explorer, while his essays into the field of literature have been extremely successful. Naturally, he is a linguist. It is said that he reads, writes, and speaks sixteen languages, and has a smattering of many others. He lectures in German, English, and Italian. His horrible experiences during his last visit to Tibet are known to everybody. When asked the other day how he could bear again to tempt fate by revisiting last summer the scenes of his horrible torture, he replied: "One gets tired of afternoon teas and artificial men and women with their artificial manners, clothes, and conversation, and longs for the companionship of man in his primitive state. I hate people that live in houses, anyhow."

M. ZOLA has recently received a gift which he greatly values because of its intrinsic worth as well as for the sentiments of which it is the embodiment, says the *Newark Evening News*. It came from a group of Antwerp journalists and consists of a copy of the famous letter "J'accuse," and of the decree of the Court of Cassation revision, printed by the Plantin Press, so named from the Frenchman, Claude Plantin, who settled in Antwerp toward the middle of the sixteenth century. The album or book consists of forty-eight pages, and the printing was carefully superintended by M. Buchmann, of Antwerp, the type being known as "gros canon," which was employed by Plantin in 1584 for his "Commune Sanctorum." The letters are in black and red, the borders of the pages being engraved with the Lobel rose, so called from a naturalist of that name. It is magnificently bound, the antique ornamentation being blended with the national colors of France, the portrait of Zola, the lion of Belgium, and the arms of the city of Antwerp.

LIEUT. WARD CHENEY, killed by the Filipinos on the 7th inst., near Imus, was one of four sons of Col. F. W. Cheney, a prominent manufacturer of silk goods at South Manchester, Conn., all of whom enlisted in the ranks at the beginning of the war with Spain. Three were graduates of Yale and the fourth was a student of the same university. Ward Cheney received his commission before he began his service in the Philippines. When he enlisted he was employed in the *Hartford Courant* office, and his suggestion, laughingly made, that he ought to write an obituary notice of himself, was accepted by his associates, at whose request he did write his biography in a few modest lines, which are now published.

SENATOR GEORGE FRISBIE HOAR, of Massachusetts, who has been much in the public eye of late, is, in many respects, a remarkable man. Altho nearly seventy-five years of age, he is still one of

National Lead Co., 100 William Street, New York.

the most vigorous speakers in the Senate. He was born in Concord, Mass., in 1824, and studied during his early years at Concord Academy. He inherited his forensic talents from his father, Samuel Hoar, who was one of Massachusetts's greatest lawyers, and after graduating in the study of law at Harvard University, he went to Worcester, where he practiced. He rose very rapidly, and in 1857 was elected to the Forty-first Congress. He also represented his State in the Forty-second, Forty-third, and Forty-fourth Congresses, but declined the nomination for the Forty-fifth. March 5, 1877, he was elected to the United States Senate to succeed George S. Boutwell, and was reelected in 1883, 1889, and 1895. His term of service will expire March 3, 1901.

MORE OR LESS PUNGENT.

Realistic.—"Any new features at the musical?" "Oh, yes; Mr. Brienne sang 'Old Kentucky Home' with a pistol obligato."—*The Indianapolis Journal*.

A Transferable Tale.—"And what did he say when he heard that story?" "Oh, he laughed heartily." "What, at himself?" "No. You see, I put you in his place."—*Boston Courier*.

He Sympathized.—SON-IN-LAW: "I married your daughter, sir, and I must say I have never ceased to regret it."

FATHER-IN-LAW: "I sympathize with you, my boy; I married her mother."—*Tit-Bits*.

Those Newspaper Hints.—FOREMAN: "We need a few lines to fill up a column."

SOCIETY EDITOR (wearily): "Well, say 'The Prince of Wales has begun wearing old clothes, because they are more comfortable.' Perhaps it will start a fashion that you and I can follow."—*Cutler's Weekly*.

An Epitome of a Century's Progress.—PROFESSOR: "Miss Flavilla, mention a few of the most wonderful scientific inventions of the nineteenth century."

MISS FLAVILLA: "Yes, sir; the telephone, photograph buttons, golf capes, and ice-cream soda."—*Chicago Record*.

An Unfortunate Expression.—WIFE OF PATIENT: "I'm so sorry, doctor, to bring you all the way to Hampstead to see my husband."

DOCTOR (from Mayfair): "Pray, don't mention

PRACTICAL painters say that when they come to repaint a house which has been painted with ready-mixed paint or combination White Lead (so-called), it costs more to prepare the surface than to apply the paint.

The moral is to use only **Pure White Lead**, because it is not only more durable, but is always in good condition for repainting. These brands are genuine.

FREE For colors use National Lead Company's Pure White Lead Tinting Colors. Any shade desired is readily obtained. Pamphlet giving full information and showing samples of Colors, also pamphlet entitled "Uncle Sam's Experience With Paints" forwarded upon application.

OVER 15 YEARS' EXPERIENCE.

Contrast

The difference between hard northern grown wheat and that grown elsewhere, is that one is nearly all gluten and the other nearly all starch. This is the difference between

Cream of Wheat

and other cereal foods. Cream of Wheat retains every element essential to the highest nutrition. Other foods are mostly starch, of little food value, and many so mixed with waste matter as to be definitely detrimental with prolonged use.

Ask your grocer to show you the beautiful Cream of Wheat pictures.

Cream of Wheat Co., Minneapolis, Minn.

it, my dear madam. I have another patient in this neighborhood, so I'm killing two birds with one stone!"—*Punch*.

How He Came to Do It.—Her head rested on his shoulder, and her little hand lay confidently in his. "Tell me now, Alfred," said the happy maiden, "how you ever came to pick me out as the girl you wanted to marry?" "Well, Dora," replied the ecstatic young man, in a gush of confidence, "it was maw that put me up to it."—*Chicago Tribune*.

Saving Him Money.—MR. WHEATPIT: "My failure is the talk of the street! At the meeting of my creditors, to-day, I arranged to pay ten cents on the dollar!"

MRS. WHEATPIT (after a moment's figuring): "Oh, Henry, isn't that lovely! then the fifty-dollar hat I had sent home to-day will only cost you five dollars!"—*Life*.

Kipling gave the Speaker a Point.—At a dinner in Rottingdean lately, a Royal Academician stated to the company the curious fact that sugar and sumac are the only two words in English where *sa* is pronounced as *shan*. There was much interest shown in the discovery, when Rudyard Kipling was heard from the other end of the table: "But are you quite sure?"—*Argonaut*.

He Tries To Make It Up.—HE: "Won't you 'low me to escort yo' home, Miss Black? I 'ink yo' am too good a chu'ch membah to keep up a quarrel."

SHE: "Hub! I don't 'ink yo' am much ob a chu'ch membah. I done sot yo' sleepin' 't'roo de sermon."

"HE: "Wa-al, I was dreaming ob yo'."—*Pack*.

Getting Him Warmed Up.—An East Indian prince, on his first visit to this country, suffered

so continuously from cold that he contracted pneumonia and died. He was cremated, and, after being some ten minutes in the crematory, an attendant opened a small slide in the side of furnace to note the result. The prince was sitting bolt upright on the slab and shouted: "Shut that door!"—*Life*.

Horses and Poets.—Senator Blackburne of Kentucky, and Colonel Pepper, of whisky-making fame, were discussing horses, when Representative Crain, of Texas, entered. "What are you talking about?" asked Crain. "Horses," said Blackburne. "Oh," remarked Crain, "why don't you talk about something worth while? Why don't you discuss literature or something to improve your minds?" "Literature?" said Blackburne, "what kind of literature do you recommend?" "I like poets," answered Crain; "I am particularly fond of Tennyson and Longfellow." "Longfellow?" interrupted Colonel Pepper, suddenly taking an interest in the conversation. "Oh, yes, I know Longfellow. He was the greatest horse ever bred in Kentucky."—*Argonaut*.

The Comedian, the Contusion, and the Compress.—A comedian in a Paris theater recently made a great hit out of a painful incident. While indulging in a bit of horseplay on the stage he struck his head accidentally against one of the pillars of the scene upon the stage. The thing caused a flutter of sympathy to pass through the audience. "No great harm done," said the comedian. "Just hand me a napkin, a glass of water, and a salt-cellar." These were brought, and he sat down, folded the napkin in the form of a bandage, dipped it in the glass, and emptied the salt-cellar on the wet part. Having thus prepared a compress according to prescription, and when every one expected he would apply it to his forehead, he gravely rose and tied it round the pillar. —*Collier's Weekly*.

Best Story Croker Ever Heard.—"I have heard a good many stories in my time," said Mr. Croker recently, "but the trouble is to remember them. I enjoy them when I hear them, but they go in one ear and out the other. The best one I can now recall is about Sheriff Dunn. Perhaps you know that there is a Thomas Dunn Association, named after the Sheriff. It is a social organization and gives a ball every year. Last year the ball was given soon after Mr. Dunn was elected, and there was a big attendance. One man, an old friend of the sheriff, got himself up in great shape for the occasion, appearing for the first time in his life in evening-dress."

"Hello, Tom," he said; "how do I look in a dress-suit?"

"First-rate," said the sheriff; "why don't you get one?"—*Life*.

proposition of independence were made public in the House of Commons.

—The Premier rejects the tentative offer of the United States to be of any assistance possible in bringing about peace.

—The conference report on the financial bill is adopted by the House of Representatives.

—Brigadier-General William A. Kohbe has been appointed military governor of the province of Albay, Luzon, and temporarily of the islands of Samar and Leyte.

—The first issue of Dr. Sheldon's paper, the Topeka Capital, appears.

Wednesday, March 12.

—General Roberts's army entered Bloemfontein on Tuesday, and the British flag was run up over the Presidency of the Orange Free State.

—Great disappointment is shown in Pretoria over Lord Salisbury's reply to President Kruger and Steyn.

—A trial of the Holland submarine boat takes place on the Potomac River.

—The gold standard currency bill becomes a law by the signature of President McKinley.

—The Fallows anti-Ramapo bill passes the Assembly.

—Judge Taft, president of the new Philippine Commission, has notified his fellow commissioners, that the commission will convene in Washington on March 27.

Thursday, March 13.

—Lord Roberts is directing his movement toward crushing the Boer forces on the Orange River.

—In the French Parliament, Minister Delcasse says intervention by the powers in South Africa is impossible.

—Secretary Root talks of his reasons for visiting Cuba and the result of his observations in the island.

—In the Senate, consideration of the Puerto Rican relief bill is begun.

—The House committee on naval affairs decides to recommend insertion of a provision in the naval appropriation bill for two battle-ships, three armored cruisers, and three protected cruisers.

—Heavy snow-storm in New York City.

Friday, March 14.

—General Roberts reports railway communications between Bloemfontein and Cape Town practically open.

—Sir Frederic William Burton, formerly director of the National Gallery, dies in London.

—In the Senate, the Puerto Rican relief appropriation bill is passed without division.

—Secretary Long appoints a board to be known as the Naval General Staff, with Admiral Dewey at the head.

—Secretary Hay and Lord Pauncefoot sign a protocol, extending the time for ratification of reciprocity treaties with the British West Indian Islands.

—General Joseph Wheeler arrives in Washington.

—Hugh J. Grant is appointed permanent receiver of the Third Avenue Railroad, New York City.

Saturday, March 15.

—The Free State forces are rapidly disintegrating; over four hundred burghers having surrendered to Lord Roberts, at Bloemfontein.

—St. Patrick's Day is celebrated with great enthusiasm in London and New York.

—Merchants of San Juan will demand immediate action by Congress on the tariff question.

—Captain Leary, governor of Guam, issues a proclamation abolishing slavery on the island.

—Plans are prepared for the establishment of an American school in Palestine.

Sunday, March 16.

—Several hundred Free State burghers lay down their arms to General Buller, and several heavy guns are brought in to British commanders by Boers in Cape Colony.

—Manila, as a center of insurgent plotting, is the most troublesome spot in the Philippines.

—Socialists and Radicals in Berlin celebrate the anniversary of the Berlin insurrection of 1848.

—General Sir William Stephen Alexander Lockhart, commander-in-chief of the British forces in India, dies in Calcutta.

—Russia has rejected a proposed compromise by Turkey in the matter of the railway concessions demanded in Asia Minor.

—Experiments are made at Newport News to test the stability of the new war-ship *Neosartor*.

Successful Fruit Growing.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticultural Society at Lenox, Mass. The address is almost a college education to fruit growers, fruit dealers, and in fact to anybody eating fruit or even having but few fruit trees, or in any way concerned. Had this address been placed on the market in book form it would no doubt have sold at a good price. The full address, profusely illustrated, in pamphlet form, will be sent complimentary to any one enclosing ten cents, for postage, to the Lenox Sprayer Company, 30 West St., Pittsfield, Mass.

Problem 461.

BY R. H. BRIDGWATER,

First Prize, *Hampstead and Highgate Express* Tourney.

Black—Nine Pieces.

White—Eleven Pieces.

White mates in two moves.

Problem 462.

BY K. ERLIN AND O. NEMO.

Black—Eight Pieces.

White—Ten Pieces.

White mates in three moves.

Solution of Problems.

No. 458.

Key-move, B-R 3.

No. 459.

Key-move, Q-R 5.

Both problems solved by M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; C. R. Oldham, Moundsville, W. Va.; the Rev. F. H. Johnston, Elizabeth City, N. C.; F. S. Ferguson, Birmingham, Ala.; M. Marble, Worcester, Mass.; the Rev. S. M. Morton, D.D., Eppingham, Ill.; Dr. R. H. Morey, Old Chatham, N. Y.; A. Knight, Bastrop, Tex.; the Rev. A. P. Gray, Amherst, Va.; the Rev. A. J. Dysterheft, St. Clair, Minn.; W. J. Lachner, Baker City, Ore.; Dr. C. B. Clapp, Moberly, Mo.; W. R. Crounse, Lakeland, Fla.; H. H. Ballard, Pittsfield, Mass.; S. Cramer, Belpre, O.; Dr. H. W. Fannin, Hackett, Ark.; M. F. Mullan, Pomeroy, Ind.; C. J. Hopkins, Manchester, N. H.; P. L. Hitchcock, Scranton, Pa.; Prof. C. D. Schmitt, University of Tennessee; J. T. Graves, Chicago, Ill.; B. J. Richmond, Cumberland, Md.; Prof. R. Moser, Malvern, Ia.; T. R. Denison, Asheville, N. C.; C. L. Fitch, Grand Rapids, Mich.; W. H. Cobb, Newton Centre, Mass.; J. T. Turnbull, New York City; L. J. J. Franklin, Ky.; W. W., Cambridge, Mass.; Dr. B. Hesse, Saginaw, Mich.; J. H. London, Bloomington, Ind.; Mrs. S. H. Wright, Tate, Ga.; F. R. Osgood, North Conway, N. H.; G. Patterson, Winnipeg, Can.; H. P. Van Wagner, Atlanta, Ga.; W. B.

Müller, Calmar, Ia.; the Rev. J. G. Law, Ocala, Fla.; "A Poet," Franklin Chess-Club, Philadelphia; Dr. E. G. Sprague, Romney Depot, N. H.; A. T. Weithrec, Denver.

457 (only): L. Hirsch, Brooklyn; V. Abraham, Cincinnati; the Rev. A. C. Haverstick, Frostburg, Md.; H. Meyer, Milwaukee; M. A. Gruber, Washington, D. C.; O. R. H. Thompson, Philadelphia; Dr. F. Black, Port Colborne, Can.; E. C. Routh, San Saba, Tex.; C. B. Tilton, Quincy, Mass.; Prof. L. L. Norwood, Elroy, Tex.; S. the S., Auburndale, Mass.

455 (only): The Rev. F. W. Reeder, Depauville, N. Y.; E. C. Dahl, Granite Falls, Minn.; W. Brulotte, Quebec, Can.; F. C. Mulkey, Los Angeles, Cal.; S. H. D., St. Thomas, N. D.; C. C. Marshall, Battle Creek, Mich.; "Merope," Cincinnati.

The E. G. S. got 455 and 456; A. D. W., 454 and 455; T. R. D., F. C. M., J. H. L., 455; "Merope," 456, 457; H. S., 456, 457.

It is a somewhat notable fact that twenty-nine States and Canada are represented by the solvers of these problems.

THE PRIZE-WINNER.

Mr. Pulitzer, in awarding the prize, says that he had to confine himself to a consideration of essays on 457 only, "since the majority of your gifted solver-poets ignored the companion problem entirely."

"The preliminary task of weeding, and the final one of selecting, were difficult and delicate. Among about six poems of almost average excellence, it was a battle royal for first place; but long and exhaustive analyses, in due time, brought forth the winner: the poem of A Knight, which, being technically correct from both a Chess and literary point of view, is forceful, dramatic and subtly worked out."

"The other five poems all possess individual points of interest, that by Leon Hirsch being the most perfect. Arthur Gray's conceit is quaint and humorous, tho' not technical enough; conversely, Victor Abraham's is too technical. 'The Help-mate' by Jones, a pretty mixture of Love and Chess, is commendable; while Mr. Gruber's poem is well-written but rather turgid. Several excellent contributions suffered from congestion of words."

"After all, what an *embarrassing richness*! What delight is mine to have inspired so much good verse!"

Mr. Pulitzer informs us that he intends to adorn his study-walls with these "precious effusions," thereby "commemorating an historic event."

In justice to very many solvers it should be stated that the majority of those who solved these problems did not compete for the prize.

The Prize Poem.

PROBLEM 461—A SOLUTION IN "RIME,"

By A KNIGHT.

To the solvers—

Survey the field, and make a battle-chart;
Nite well the Veldts, Kops, Kloods before you start;
About the scene the steady Warriors stand
And eagerly await the King's command
But little space divides the Royal Lords,
While in the sunlight gleam their thirsty swords.
The Fair King stands in confidence serene;
Held in one place the Sable King is seen,
But should he move, the Bishop's Maxim-gun
Would make White King defend himself, or run.
The Whites move twice and, moving, surely hem
The Blacks by finest, perfect strategem.
The Key—The Bishop moves to Castle's Thro',
And halts to rear and left of Queen, to see
What route or course the Enemy will take,
What feat or ruse, to save their King, they'll make.
The Knight then sallies forth to try his hand
At saving both his Lord and native land.
He lights upon an open Veldt, and halts
To look where he can make the best assaults.
Then, like an eagle from some mountain height,
Flies from a Kop an unexpected Knight;
And there, alas! is death—a dreadful thing.
Both of the Horseman and his hapless King.
The Horseman tries three other open fields;
The Knight again his awful sabre wields.
Then Pawn takes Pawn; 'twill not avert the fate;

The White Queen takes that Pawn, announcing mate.
The Foot-force moves along the Royal Way;
Queen to her Sixth shuts out the light of day.
Pawn goes to Fifth, the Fair Dame to her Four;
That ends the war—the Black King is no more.
To Bishop's Fifth the Black King moves, in ire,
And leaves White King exposed to Bishop's fire.
White's Pawn moves to King's Sixth—an artful thing—
And checks that fire, while Queen does smash the King.
The Prelate, foiled thus in his well planned fight,
Moves to another point, or kills a Knight.
In either case, the Rook the Foot force slays
At Bishop's Fourth, and ends the Monarch's days.
The other Bishop, of the dusky hue,
To his Lord loyal, always brave and true,
Makes an attack, subdues the hostile Priest,
Then loasts, while not suspecting, in the least.
The Queen's design upon the Horseman's Eight
To charge, and thus effect the deadly mate.
Again: The Pawn removes he from the field;
Pawn captures Bishop—the King's doom is sealed.
Again: The Bishop then is bid to go
To three clear, open fields above, below.
The Queen no reason sees to change her plan,
Repeats her march and slays the Sable Man.

The "Composite Game."

Send in your names, brethren, that we may have the full complement of players, and begin the game as soon as possible. Only twenty persons have, thus far, responded. We want at least forty.

"Pollock Memories."

Mrs. P. F. Rowland, of Dublin, has edited and published a short sketch of the life of W. H. K. Pollock and a selection of his games. The London *Illustrated News*, in noticing the book, says: "Together they form a not unworthy memorial of one of the most brilliant players of our time, who, if occasionally uncertain, was never dull, and from whom the very foremost champion was seldom safe. His game with Weiss, at New York, ranks as the classical masterpiece of this generation, and his defeat of Tarrasch at Hastings was little inferior in its surprising effects."

The Female Morphy.

Mrs. Gilbert, who died recently, was the most famous woman Chess-player in the world. Her *life* was for far-reaching, exhaustive, accurate analysis. But it was her Chess by correspondence which won the enthusiastic applause of the Chess-world; and never, we think, were games of the kind so widely copied and commented upon. The Chess-world was carried by storm as it contemplated her accuracy and power, crowned by that wonderful series of announced mates running from six or eight to thirty-five moves. G. H. D. Gossip, the well-known Chess-author, was her most conspicuous victim. This triumph, which it is no figure of speech to say astonished the Chess world, was achieved in the famous correspondence-match, United States vs. Great Britain, each pair playing four times, Mrs. G. making a clean score.—*New York Clipper*.

As an example of Mrs. Gilbert's wonderful Chess-genius, *The Clipper* publishes two positions, one of which we reproduce:

BLACK (MRS. G.): K on K Kt 5; B on Q B 3; P on K R 3, K Kt 3, Q B 2, Q Kt 6, Q R 5.

WHITE (GOSSIP): K on Q Kt 4; B on K R 6; P on K R 4, K 4, Q B 5, Q Kt 2.

Black announced mate in thirty-five moves!

Brilliant Play.

The following position actually occurred:

WHITE (16 pieces): K on K R sq; Q on Q B 1; B on K R 6 and Q 3; Kt on K B 5; R on K R 2; P on K Kt 3, K R 2, Q Kt 4, Q R 2.

BLACK (12 pieces): K on Q B sq; Q on K Kt 4; B on Q 4; R on K sq; P on K B 2 and 6, K Kt 3, K R 3, Q 3, Q B 2, Q Kt 2, Q R 3.

It is noticeable that Black's Q seems to be badly placed. She has only three squares at her disposal, any of which gets her out of play, or worse. It was Black's move, and the game proceeded in this fashion:

1 Q x R, Q—B sq; 2 Q—Kt 7; Q—K B sq; 3 Q x R; 4 R—K 8 ch, Q x R; 5 P—B 7 ch, and mates in two moves.

The Literary Digest

VOL. XX., No. 13

NEW YORK, MARCH 31, 1900.

WHOLE NUMBER, 519

Published Weekly by
PUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

WHAT IS THE MILITARY SITUATION IN THE PHILIPPINES?

WIDELY dissimilar reports are coming from Manila as to the military situation in the Philippine Islands. General Otis has frequently reported that the war is over, yet every week he sends a list of killed and wounded, and the war correspondents in Luzon seem to agree that the end of fighting and bloodshed is still far off. More than a month ago the War Department in Washington, as reported in a press despatch, said that "actual warfare will end with the present expedition of General Bates into the two provinces at the extreme southern part of the island of Luzon, after which military operations in the Philippines will close. Afterward there is nothing to do but to undertake to maintain order through a police system." Gen. Joseph Wheeler, too, who has just returned from active service in Luzon, said in last week's *Independent*: "The rebellion in the Philippine Islands is crushed, and I do not believe that the American troops will meet with armed resistance during the coming rainy season, tho there may be some resistance from armed bands of guerrillas." This seems to be the official view. The war correspondents at the front are far from sharing it, however, to judge from their reports. For example, the Manila correspondent of the *Philadelphia Times* (Ind.), an expansionist paper, says:

"Officers in the field now unite in saying that the pacification of the Philippines is impossible between the present time and the beginning of the rainy season. They set the time for this result (viz., the pacification of the Philippines) at from two to six years. No one who has been at the front and studied the situation with honest eyes believes that the insurgents can be subdued under two years. A majority are more inclined to six. The reports of casualties and prisoners taken by the enemy in attacks upon patrols and provision trains are suppressed as far as possible by Otis's special orders."

Mr. A. G. Robinson, the Philippine correspondent of the *New York Evening Post*, thinks that peace has not yet come. Altho

The Evening Post is an anti-expansionist paper, its Manila correspondent favors American control of the islands, for the present at least, and his fairness is vouched for by the *Philadelphia Press* (Rep.), a strong expansionist paper, which calls him "a most accurate Philippine correspondent." Mr. Robinson says:

"With the exception of the southern half of the eastern coast and the central strip of the southeastern peninsula, the island of Luzon is now nominally occupied by the American forces. I say 'nominally occupied,' because a considerable area, particularly the northern, is but thinly garrisoned, and, so far as I can learn, American influence extends only about as far as a Krag will throw a bullet. The occupation is unquestionably a forceful one. The stories of cordial welcome to the troops, of festivities and entertainments, have some foundation in fact, but they are generally misleading.

"The Filipino organization is disintegrated and, to some extent, disbanded. But the greater number of those who constituted that army, tho many have returned to their homes and taken up some part of their normal life habits, still retain their guns, and the best information available leads me to an assurance that they keep in very general touch with each other throughout the island. I should say that the *war* may be over, but a more or less active and persistent *hostility* continues. Many of the islanders are subdued, but it is not at all established that they are pacified."

The Manila correspondent of the *Associated Press* has recently been sending some despatches telling of considerable resistance to the American arms. General Otis considers Manila itself, according to this correspondent, "the most troublesome center in the situation to-day." There is an insurgent junta in Manila, it appears, that cooperates with the one in Hongkong, inciting the Filipinos to continued revolt, and not long ago there was held in Manila a conference of representative insurgent leaders from different parts of Luzon. The correspondent says: "Some have been placed under arrest, but the others thus far have not been interfered with." Insurgent reorganization and activity are reported to be on foot in the provinces of Morong, Zambales, and Nueva Ecija. The province of Albay is becoming more quiet, but, he continues:

"Evidence accumulates of the treason and perfidy of the municipal presidents in the provinces of General MacArthur's district. The presidents of several towns in Lepanto and Union provinces have declined to continue in their positions, saying that they do not desire any further identification with the Americans. Travel between the towns garrisoned by the Americans is becoming more dangerous. All wagon trains must be escorted by heavy guards in order to insure their safety. Two ambushes were narrowly averted recently; small traveling parties are attacked; single travelers frequently disappear or are found dead."

A few weeks ago the same correspondent reported that Generals Young and Hood, operating about Aparri, had been compelled to ask for reinforcements; and that two bodies of Filipinos, 1,200 and 2,000 strong, were operating about Albay and New Caceres. The *New York Sun's* Manila correspondent told, about the same time, of a small American force surrounded by the insurgents in the town of Gubat, fifty-two miles from Albay. "Troops will be despatched to Gubat with all possible speed," said the correspondent in conclusion. The result has not yet been reported.

Another view of the Philippine military situation, giving both its favorable and unfavorable aspects, appears in the following

paragraphs quoted in several papers in this country from an uncensored letter, dated February 13, from the Manila correspondent of a Hongkong paper:

"It is a strange state of affairs that exists in the Philippines to-day. Improvement is visible in nearly every quarter. Civil governments are rapidly being established in every town of importance, and garrisons and patrols are in process of extension wherever Americans hold the railway, and yet it is an undeniable fact that since January 1 the insurgent forces have captured a number of rifles and quantities of ammunition from the Americans almost equaling the sum total of American captures from the insurgents. Besides this, the casualty rate for the last two weeks will come very close to being heavier than at any other period of the insurrection, with the exception of the time of the outbreak and the fortnight beginning with March 25, 1899.

"The threatened guerilla warfare seems to be a reality, and parties of fifty or smaller numbers are ambushed and 'jumped' day after day. Supply trains, small escorts, and scouting parties are the special objects of attack, and the country is said to be full of small roving bands waiting at every convenient cover until the prey is caught. In one or two instances heavy patrols or strong scouting parties have quickly avenged these raids by setting out immediately and hunting down and killing as many of the marauders as possible. These lessons have not been forgotten, and in the immediate districts there have been no repetitions of the trouble. The authorities are giving the question considerable attention, and every effort will be made to insure the public safety, for on this depends the future of the country."

The Washington correspondent of the *Boston Globe* (Ind.), thinks that the unsettled condition of affairs in the Philippines will tell against the Republican Party in the coming campaign. He says:

"It looks to the unprejudiced as if the Republicans would have to go into the campaign and be forced to admit that all their calculations have failed, and that, after two years of continuous warfare with a very large force in the field, the end is no nearer in sight than it was a year or more ago. This will be an awkward confession to make, but it can hardly be avoided, and altho there will be excuses offered, that they will be regarded as satisfactory to the country at large is another question."

The Philadelphia *North American* (Rep.) says: "The prospect of an early peace in the Philippines is not bright. . . . It is evident that it is only by force that we shall be able to hold what we take by force. The islands will have to be thickly dotted with garrisons, and each garrison charged with the duty of maintaining order by the sword. Forceful annexation of the Philippines has brought with it responsibilities of a kind that were not anticipated a year ago." The Atlanta *Journal* (Rep.) thinks that "whether the war which we are carrying on in the Philippines be right or wrong, there can be no excuse for the misinformation concerning it which has been sent out from official sources ever since the beginning of hostilities," and the New York *Evening Post* (Ind.) remarks that one might say that the present condition of the islands is anarchy, "did he not remember that the wise and good men who took the islands did it precisely to prevent anarchy. Therefore it can not be anarchy, but what it is we wish some good imperialist authority would explain." The Baltimore *Herald* (Ind.), however, says that "even if the existing conditions have been correctly represented it does not follow that the hostile attitude of the Filipinos deserves to be designated as warfare. General Wheeler's estimate is unquestionably quite correct, and only brigandage and guerilla fighting remain to be suppressed." The Omaha *World-Herald* (Dem.), too, admits that the war "may be over in what one might call a military sense." But, it adds—

"there is an army of 60,000 men; there are garrisons; there are little expeditions; hospitals are full, and from time to time a ship returns loaded with dead. The people of Europe when their nations are said to be at peace are accustomed to these things. There are large standing armies; frequently considerable expeditions abroad in some part of the world afar off; the dead keep

coming home. But is this the sort of peace, then, that we have, since the war is over, and that we are to have for an indefinite time—a garrison peace, the peace that exists while one man holds his revolver at the head of another?"

All these reports lead the Minneapolis *Tribune* (Rep.) to reiterate its demand that General Otis be recalled. It says:

"What is evidently needed in the Philippines is a more vigorous military commander. It is claimed in some quarters that Otis is worn down by hard work and that he is really unfit for arduous duty. At any rate, he is not producing the hoped-for results. . . . The proper remedy, in our opinion, is to send a commander like General Miles to the Philippines, and let him do, on a proportionate scale, what General Roberts has done for the British in South Africa. How quickly the situation there was reversed when a master put his hand to the helm!"

"AMERICAN MISGOVERNMENT IN CUBA."

MAJOR JAMES D. RUNCIE'S article in *The North American Review* for February, describing the first year of American rule in Cuba as "a record of error and neglect, of folly, ending necessarily in failure, and, possibly, in shame and disgrace," is now attracting more attention than when it appeared, because of the news that the republication of the article in the Havana press has resulted in Major Runcie's resignation from the Cuban finance, laws, and election commissions. His associates on these commissions practically forced his resignation by declaring that they would resign if he did not. Major Runcie is the legal adviser of Gen. Leonard Wood, and for more than a year he has given valuable service to the American administration in Cuba and to Cuban litigants, for no other compensation than his pay as a retired officer of the regular army. His article was written before General Wood's appointment as military governor.

Major Runcie ascribes the American failure in Cuba, as he sees it, to three principal blunders. The first blunder was made at Washington when a military garrison was sent to Havana, without, as Major Runcie thinks, any prearranged plan for the island's government, everything being left to the discretion of a military governor "who had no qualifications for the position." The second mistake was the military governor's restoration of the Spanish law in its entirety. This system of Spanish law, with "its defects and its enormities," is described as "scandalous." The third mistake was made when the military governor entrusted the administration of this evil system to the four Cuban secretaries who composed his cabinet. Major Runcie sums up the situation as it appears to him as follows:

"The folly of the military governor in proclaiming the complete reestablishment of the Spanish laws had the effect of preserving, in working order, every weapon and device for the purposes of fraud, corruption, and oppression that Spain had perfected after four centuries of misrule, and the use and control of this arsenal and magazine of iniquities was weakly handed over to men who, tho they had rebelled against the system when Spaniards were the oppressors and they themselves were the victims, have shown since they came into power not only their desire to preserve the same system with no material modifications, but their willingness to employ it for the oppression of their own countrymen. After almost a year of American supremacy, Cuba is governed by Spanish methods. The only change has been in the substitution of Cubans for Spaniards as the administrators of the machinery of government."

The Cuban secretaries, declares Major Runcie, "carefully preserved the entire iniquitous system, showing every desire to make it permanent, merely substituting themselves for the Spaniards who were formerly masters of the same powers for evil." Their first move was to fill all the offices in Cuba, "from the highest judicial and administrative posts down to the third and fourth assistant mayors of little hamlets in the remote wilder-

ness," with men who had served in the Cuban army. Major Runcie continues: "That force never represented ten per cent. of the Cuban people, and its general character was such that high rank or long service in it might better be regarded as disqualifications for office, rather than as claims to consideration." The result, he continues, "is a political machine which covers the entire island, which has been constructed under cover of American authority, but is bitterly hostile to every American influence, and the aim of which is to obstruct and to defeat, if possible, the very purposes for which the Americans intervened and expelled Spain from Cuba."

Two departments of administration only, the department of customs revenue and the department of sanitation, have been satisfactorily administered; and Major Runcie thinks that their good showing is due to the fact that they have been under the complete control of American administrators. As to the other branches of the government he says:

"It may be stated, in brief, that wherever Cubans, under nominal American control, have been trusted to exercise the functions of government, the result has been worse than failure. The courts are corrupt and incompetent; the police forces are hopelessly inefficient; the public schools are unorganized; the municipalities are all bankrupt dependents on a political machine; the offices of government, high and low, are filled, very largely, with unworthy and incompetent officials; the laws, the courts, and the methods of procedure are unreformed; and, finally, almost every abuse against which Cubans rebelled and to remedy which the United States intervened, is in operation to-day under American authority. There exists throughout the island a condition of tame anarchy, which awaits only the withdrawal of the American forces to burst out into anarchy of another type. . . .

"Where Americans have been allowed to work, with American methods, the result has been distinguished success. On the other hand, wherever Cubans have been allowed to proceed, by any methods of their own choice, they have invariably clung to the methods of Spain, which they have employed for their own ends, not for the public good; and the result is disastrous failure, for which Americans are responsible. Not one step has been taken toward a realization of the purposes of the intervention. The problem has become, by reason of neglect and incompetency, more difficult to-day than it was a year ago. The house was swept and garnished, but the door was left open and the seven other devils seem to have taken advantage of the opportunity. If no change occurs soon the last state of Cuba bids fair to be far worse than the first."

A change did occur, soon after Major Runcie wrote his article, in the appointment of General Wood as military governor of the island. Secretary Root has just returned from a tour of investigation of Cuban conditions, and a congressional committee is also visiting the island to take a look at things and report to Congress.

The *New York Evening Post*, commenting upon Major Runcie's article, says:

"With the arrival of General Wood in Havana a vigorous reformation of the imperfections in the machinery of government was begun. Commissions were appointed to revise the barbarities of Spanish legal procedure and the antiquated codes; to reorganize the judiciary; to adopt a modern charter for the cities of the island, with the especial purpose of returning to the municipalities some of the powers now centralized in Havana; to arrange for municipal elections; to reorganize the systems of finance and taxation—perhaps the most difficult and vital problem of all; and to regulate and expedite the transfer of real estate. It has even been found necessary to go so far into social details as to prescribe the methods under which brokers shall conduct their business, and meanwhile the great humanitarian work of cleansing the cities and making their public institutions habitable has gone on unceasingly. . . .

"Secretary Root can not fail to see that General Wood, and not his cabinet, is the real ruler of Cuba to-day, and that he has made an excellent beginning along the right lines."

GOOD AND BAD FORTUNE FOR THE STANDARD OIL COMPANY.

PUBLIC interest has been drawn to the Standard Oil Company twice in the past few days; first by the company's distribution of a dividend of \$20,000,000, and then by a decision of the United States Supreme Court barring the company from doing business in Texas in violation of that State's anti-trust law. The distribution of the \$20,000,000 (three per cent. quarterly dividend and seventeen per cent. extra dividend on capital stock of \$100,000,000) is, says the *Louisville Courier-Journal*, "probably without parallel in the annals of manufacturing," and it "will have the effect of strengthening the popular antagonism against the general system of which it is the most conspicuous representative. . . . It seems that Mr. Rockefeller is providing an object-lesson as to the profits of trusts—a rather risky proceed-

"NOW, JOHN D., LET ME INTRODUCE MY FRIEND,"
The Rocky Mountain News, Denver.

ing at this juncture." The *Chicago Tribune* notes that while there are now about three thousand Standard Oil stockholders, eighty per cent. of the stock is owned by less than a dozen persons, "who have received, therefore, over \$16,000,000 of the \$20,000,000 just distributed"; and the *Springfield Republican*, recalling a recent increase of thirty per cent. or more in the price of oil, says that "it would appear that this was the source of the money for the extra dividend." The *St. Louis Republic* says:

"A corporation which can pay such dividends can exercise a power in the government of a nation which can not be ignored in any calculation concerning that nation. By immense contributions to the campaign fund of a party and in other ways it can place a party under obligations that with weak or corrupt officials can change the whole trend of the Government. This vast power, it goes without saying, is used for the benefit of the corporation and of its chief owners and operators. Such a giant corporation exists in violation of public policy. It grows through the suppression of competition by any means at its disposal, fair or unfair, and it uses the same means to keep down competition."

The *New York Journal* remarks that "emperors and kings used to be considered the most expensive luxuries in which any society could indulge, but American capitalists could afford to keep them on their pay-rolls like coachmen. As to the President of the United States, with his little \$50,000 a year, he is too small change to think about."

A good word is spoken for the company, however, by the *Chicago Evening Post*, which says:

"So far as the Standard Oil Company is concerned, however, the public may take to itself the solace that the people have shared somewhat in the profits, for the company is serving to the consumer cheaper and better oil than he could get before. The methods of developing the oil-fields have cheapened the product as well as added to the wealth of the men interested in the corporation. Huge capital has enabled them to do the work on a larger scale, and consequently at a less expense for each gallon produced, and they have both lowered the price and improved the quality. However, that fact is likely to be forgotten in contemplating the vast wealth thus distributed, altho it surely is

worthy of some consideration. The figures hold the eye and dwarf all else by comparison."

So much for the profit side of the company's account. An item for the loss column is seen in the Supreme Court's decision against the Waters-Pierce Oil Company, one of the constituent companies of the Standard Oil Company. According to Mr. Justice McKenna, who handed down the decision of the court, "the transactions of local commerce which were held by the state courts to be violations of the statutes consisted in contracts with certain merchants by which the plaintiff in error required them to buy of it exclusively, from it and from no other source, or buy exclusively from plaintiff in error, and not to sell to any person handling competing oils, or to buy exclusively from plaintiff in error and to sell at a price fixed by it." Such contracts were forbidden by the state laws, and the Texas courts forbade the Waters-Pierce Company to transact business in Texas, a decision which is now upheld by the United States Supreme Court. This decision, says the *Chicago Tribune*, "is based on the unquestioned right of a State to prescribe the terms on which foreign corporations may do business within its limits. . . . A foreign corporation must obey the laws of the State in which it does business. If it does not it can be expelled. To that extent at least the States have power over trusts."

The *New Orleans Times-Democrat* says of the oil company's contracts with the merchants:

"If these contracts were not 'in restraint of trade,' it would be difficult to say what contracts or conditions of business could be in restraint of trade. The contracting merchants were tied hand and foot by the oil company—they could not buy oil from any other company; they could not sell oil to persons handling competing oils; and they had not a word to say about the price at which they sold the oil—they must sell it at a figure fixed by the company. If this was not trade-slavery, as far as oils were concerned, then the expression 'trade-slavery' can have no meaning."

As to the importance of the decision the same paper says:

"It is to be noticed, in regarding the final decision, that the Supreme Court did not have before it the question of the legality or illegality of trusts, and therefore the decision did not touch that question. What the court had before it, and what it did decide, was that a corporation is not allowed to come into a State and do business in violation of the State's laws, those laws being fair and constitutional. And the subdivision of the Standard Oil trust will from this time, very properly and very deservedly, forfeit its right to do business in the State of Texas, unless it mend its ways and conform to the State's regulations. It is no longer omnipotent."

"The decision, even tho it has not touched the question of the legality of trusts, is bound to be of far-reaching importance. For any State which chooses to pass a law declaring combinations that are 'in restraint of trade' to be illegal, can straightway rid themselves of the combinations by appealing to its own laws. The States have, as a sequel to this decision, the matter of tolerating or suppressing trusts in their own hands."

More trouble for the Standard Oil Company seems to be brewing in another quarter. The railway committee of the Canadian Privy Council is taking testimony in Ottawa in regard to freight rate discrimination, and last week, according to the despatches, the Canadian Pacific and Grand Trunk railways admitted that they had been giving rebates to the Standard Oil Company. A special despatch from Ottawa to the *New York Times* said:

"The railways charge generally 35 cents a hundred from Buffalo, Suspension Bridge, and Black Rock to Montreal, while they only charge the Standard Oil Company and its affiliations 25 cents from Sarnia to Montreal, a longer distance. Not only was this the case, but they gave a reduction of one sixth off the twenty-five-cent rate from Sarnia to Standard Oil. It was a private arrangement."

"When this was being done they increased the rates from Detroit and Buffalo, thereby aiding to keep the field to the Stand-

ard Company in Canada. The minister of railways expressed the opinion that the discrimination was proved, but additional evidence will be taken."

STORIES OF THE HUMANITY AND INHUMANITY OF THE BOERS.

THE Boers had been so little known to the world at large prior to the outbreak of the present war, and so many conflicting reports were current concerning them, that their conduct under the supreme test of war has been watched with unusual interest. Were they indeed, as some charged, but a step higher than the savage, or was their character, as others claimed, essentially religious and humane? To judge from the expressions of opinion made from time to time, during the progress of the war, in the British and American press, the Boer has thus far come out of the ordeal of war with an improved reputation. Charges of inhuman conduct have been made, but on the whole the infrequency of any well-substantiated charges of that sort, and the abundance of the testimony of an opposite sort, has brought forth many tokens of surprise and gratification even from their enemies. We have collected reports of the more noteworthy instances of both kinds of conduct, as these reports have gained currency during the four months and more of the present war.

The Boers have been accused of firing upon ambulances, hospitals, women's camps, and flags of truce, and of using the flag of truce as a decoy. As to the first two charges the *London Chronicle* tries to explain them by saying that "when long-range fire is sweeping a battle-field, stretcher parties and field hospitals are always liable to be hit"; but no attempt has been made to explain the charges of abuse of the white flag. "S. B.," writing in *Harper's Weekly*, says:

"I suppose there never was a war in which one side did not accuse the other of breaking some of the rules of the game. War is pandemonium, and the regulations of war are microscopic and unemotional, and it is not always possible to guide such a confusion of human passions in accordance with paper maxims."

But, he continues:

"There is, however, one accusation which rises above the level of these stock charges, and is being brought again and again by the British against the Boers. It is an imputation not less serious than the charge—happily proved false—that the Spaniards were mutilating American soldiers. It is to the effect that the Boers are in the habit of hoisting the white flag as tho about to surrender, and then, when the British have ceased firing and are advancing to take possession of them, of pouring a murderous volley into their ranks. The charge does not come from British sources alone. It has been confirmed by American correspondents on the spot, and it has found its way into the official reports. Lord Methuen, after the battle of Belmont, had to send in a strong remonstrance on the subject to the Boer commander. 'To place a white handkerchief on a rifle,' he wrote, 'and so take advantage of your enemy, is a cowardly action, which neither you nor I can countenance.' On November 23 Lieutenant Willoughby was killed by a party which had raised the white flag. On the same day Lieutenant Blundell was shot by a wounded Boer whose wants he was attending to. On November 9 the Boers sent into Ladysmith a number of Transvaal refugees under a flag of truce. A party of British soldiers advanced beyond the picket-line to receive them, and was fired upon before it had time to regain the British lines. At Dundee, Glencoe, and Elands-laagte every engagement was marked by similar occurrences, and the loss to British regiments through these tactics, especially to the Gordon Highlanders, who were twice taken in by the same trick, was severe enough to arouse a very general feeling that no quarter should be given to such unsportsmanlike opponents."

Another serious charge is that the Boers have been using dum-dum bullets. One British medical officer, indeed, reports that while within the Boer lines, attending the British wounded, he found that some of the Boers had their bandoliers filled with soft-

posed bullets. Similar bullets have been found, it is reported, upon some of the Boer dead and wounded on the field. The Boers explain that the soft-nosed bullets are not issued by the Transvaal Government, but are brought by the Boer farmers, who use them in hunting big game. The medical officer said to one of the Boers, "You ought not to bring such things to fire at us"; and the Boer replied, "We must use whatever we can get."

Instances of Boer humanity, however, are not wanting. Several letters quoted in the British and American press seem to indicate that the prisoners at Pretoria fare tolerably well. Major Nugent, one of the English officers captured at Dundee and now at Pretoria, says in a letter to his wife (quoted in the *London Daily Mail*):

"I must say, and I don't say it because the Boers may read it, that nothing in the world can exceed the kindness they have shown toward us. They have done everything they can for us. We have been moved out of camp into the town of Dundee into houses. I have a little room to myself and a comfortable bed, sheets, etc., and the Boer magistrate in charge of the town since they captured it has told the senior medical officer that anything he asks for will be provided, as far as practicable. We are all right, and I am all right, but alas! I have no cigarettes."

The *Manchester Guardian* prints an extract from a letter written by John Wallace, a sergeant in the Seaforth Highlanders, to his father, a schoolmaster in the Isle of Man, under date Modder River, December 15, giving an account of the battles on the 10th and 11th of that month. He writes:

"Our regiment has suffered two hundred casualties, and the remainder of the brigade something the same. We were fifteen hours under the hottest fire known in modern warfare. We left most of our wounded on the field that night, and every one of them speaks in the highest manner of the kindness of the Boers. It seems that after our guns stopped fire, and when it got dark, the Boers came out of their trenches to our wounded, brought them water, food, and blankets, lighted their pipes for them, and did everything that was possible for them. It is only the scum of the Rand that fires on our sick and ambulance wagons. Woolf, the brewer's son, of Douglas and Crewe, has got wounded in the foot. I saw him this morning."

Captain Longhurst of the British Medical Corps in South Africa, told an Associated Press correspondent that he has been much impressed by the Boers' considerate treatment of the British wounded. A correspondent of the *London Daily Telegraph*, who was with General French's command in Cape Colony about Colesberg writes:

"Our burying party sent out was received by the Boers sympathetically. They rendered assistance also to our men. Over the grave they sang a hymn and some of the leaders made impressive speeches, expressing abhorrence of the war, regretting the heavy losses on both sides, and declaring the hope that the war would soon be ended. One wonders if ever before in the history of war the victors in such an engagement stood round the graves of the men they had just shot, sang a hymn, and, amid these solemn surroundings, impressively bewailed the strife of blood, which they fervently hoped would soon be ended. Mystery of earthly affairs, that we must shoot such men."

The *Manchester Courier* tells of an instance of Boer chivalry related in a private letter from a British officer. At Magersfontein, he says, "the Boers were so moved by the heroic indifference to death displayed by a party of two officers and twelve privates who charged up to the very muzzles of their opponents that, casting aside their weapons, they rushed in an overwhelming number on these men, seized the whole of them, and dragged them into their trenches. Then, when they had been disarmed, the Boer commandant said: 'There, you are free to go, and we will not reopen fire until you are within your lines.'"

Second Lieut. C. E. Kinahan, of the Royal Irish Fusiliers, who

were surrounded and captured in the first battle at Ladysmith, says in a letter to his father (quoted in the *London Chronicle*):

"We were all then taken prisoners, except two officers killed and eight wounded, and marched to the Boer laager, and sent off that night to a station twenty miles distant in wagons. While we were in their laager they treated us extremely well and gave us food and tobacco. All you read about the Boers in England is absolutely untrue; they are most kind to the wounded and prisoners, looking after them as well as their own wounded, and anything they've got they will give you if you ask them, even if they deprive themselves. We came up to Pretoria in first-class sleeping-carriages, and the way they treated us was most considerate, feeding us and giving us coffee every time we stopped. The day we arrived we took up quarters on the race-course, but we have been moved into a fine brick building, with baths, electric light, etc. They provide us with everything, from clothes down to tooth-brushes. They also feed us, and we are constantly getting presents of vegetables and cigars from private people. In fact, we can have everything we like except our liberty; for some reason or other they won't at present give us parole, and we are surrounded by sentries. There are close upon fifty officers in this building, and they have got any number of wounded ones in different places. They say they won't exchange the officers at any price."

GUAM'S NEW GOVERNOR.

THE interest with which the islet of Guam has been favored since the Spanish war has appeared to be due rather to Captain Leary, its picturesque naval governor, than to any claim that the bit of land itself has been able to make to fame. Now the despatches tell us that the natives are to be entrusted to a new governor, Commander Seaton Schroeder, whose portrait appears herewith. Captain Leary is coming home at his own request, and it is said to be due to his energy in putting the island's affairs into good condition that the Navy Department now entrusts the post to an officer of lower rank. The Washington correspondent of the Associated Press says:

"The Navy Department expects a great future for Guam in a commercial way. Besides being a naval station, all the Pacific army transports are expected hereafter to touch at the island on the voyage to and from Manila, the projected Pacific cable will have a station there, a mercantile coaling-station will, it is thought, soon be established, and this will attract merchant vessels, so that Guam will become a regular port of call for the shipping in the Eastern seas. Commander Schroeder expects to sail on the *Salace* from San Francisco for Guam about the middle of May, and will relieve Captain Leary before July."

During the war with Spain, Commander Schroeder was executive officer of the battle-ship *Massachusetts*. He was appointed to Annapolis by President Lincoln in 1864, at the age of fifteen, entering at the same time as Commander Wainwright, the present superintendent of the Academy, who was also one of President Lincoln's appointees. Wainwright and Schroeder were close

COMMANDER SCHROEDER.

friends, and soon after graduation Schroeder married Wainwright's sister. Commander Schroeder will take his wife and children to Guam with him, it is said, and they expect to remain there at least two years.

IS A TARIFF WAR WITH GERMANY IN SIGHT?

UNLESS a satisfactory commercial treaty can be arranged between Germany and the United States, a tariff war is likely to begin in 1904. As usual, the Germans give warning by attacking the innocent American pig. Since our war with Spain, the "embalmed-beef" cry has been added, and restrictions, that may become almost prohibitive, will be placed upon the importation of American beef. The *Westliche Post* (St. Louis) sketches the situation to the following effect:

With great majorities, the German Reichstag has passed the paragraphs of the *Fleischbeschau* bill in the second reading. The third reading is not likely to end differently. The bill provides for so rigorous an inspection of foreign meat that it can be made prohibitive of all imports, if its stipulations are closely carried out. This has been brought about by the Agrarians and the Center Party, both of whom are chiefly dependent upon the agricultural vote. They hope to enforce the passage of the bill by threatening to withdraw their support from the naval bill unless their protectionist aims are furthered. On the other hand, the population of the cities, being mostly engaged in trade and industry, fear a tariff war with the United States. The Government is inclined to side with the industrials, and may possibly risk a general election to prove its confidence in the people.

Many German-Americans, especially those who have always maintained that the United States can enforce its own terms in any economic struggle, predict that Germany will suffer irreparable loss unless she surrenders unconditionally to her exporters. The Cincinnati *Volksblatt* says:

"The loss of her remaining trade with the United States would not be the only one Germany would suffer. The enormous increase in the price of foodstuffs, which must necessarily follow an exclusion of American produce, would react upon industry, and render it less able to compete with the industry of other countries. This would weaken the empire financially, and in turn influence the military budget. Moreover, emigration will once more increase, robbing the army of its living material. . . . Everywhere the people protest against this iniquitous bill. . . . It remains to be seen whether the Government will pay attention to these demonstrations. We believe that Germany is approaching a crisis, and only the firmness of the Administration can avert the threatening danger."

The New York *Staats-Zeitung* fears that Germany is drifting more and more into a pernicious policy of protection. The Chicago *Staats-Zeitung* warns the Germans that their representatives have made remarks about American beef which have left a sting. The Pittsburg *Volksblatt* complains that the aristocratic members of the Agrarian Party are too short-sighted to grasp the power of the United States, and adds:

"The German people have incomparably much more to lose by a tariff war than the people of America. The latter are insulted by the German *Junkers*, whose impotent rage knows no bounds. Yet any American day-laborer is a king compared with the degenerate rabble of which the German Agrarians are composed."

The Cleveland *Wächter und Anzeiger* wishes that our own protected trust magnates would regard themselves in the light of the German Agrarians; but doubts that they have sense enough to do so. Many German-American papers admit that, broadly speaking, it does not pay Germany to do business with the United States under existing circumstances. In 1895 our exports to Germany were valued at \$156,272,177, our imports from the same country only \$24,225,777, and since then the balance in our favor has been still larger. The New York *Morgen Journal*

points out that the Germans count on obtaining all the meat, grain, oil, etc., that they need from other countries. "The United States must examine," adds the paper, "whether our export to Germany is really so unimportant that it does not pay us to do something on our part for the prevention of a tariff war. This much is certain: a tariff war would not hurt Germany alone." The *Freie Presse*, in an exhaustive series of articles, expresses itself to the following effect:

It has been pointed out that our packing-houses did not scruple to provide rotten meat for our own soldiers, and it is not likely that they will deal more honorably by the foreigner. A strict inspection of American meat is not at all out of place, and honest firms can only profit by it. The importation of tinned meats and sausages can be stopped altogether by the Germans if the new law is to be enforced. But we doubt that this would lead to a tariff war. Germany imported in 1898 meat to the value of \$35,461,500. But this money does not all come to us, as other countries, especially Austria and Russia, are purveyors of live cattle. The export to Germany of "provisions," such as canned meats, sausages, butter, and cheese, amounts to less than \$500,000. That is not enough to offend a customer who buys nearly twice as much of us as we buy of him. The outcry against the Agrarians is unjust. The German farmers have undoubtedly been neglected by the Government, and it is not to be wondered at that they make a combined stand. Bismarck knew how to further the interests of all classes, and the present German Government must endeavor to follow in his footsteps. The row which is kicked up by the press ruled by international usurers whenever an attempt is made to protect honest labor is no reason for a refusal to grant that protection against the great capitalists.—*Translations made for THE LITERARY DIGEST.*

MR. BRYAN'S NEBRASKA PLATFORM.

THE importance of the platform adopted by the Democratic State convention in Nebraska last week seems to arise from the fact that Mr. Bryan is understood to have approved, if, indeed, he did not write, its declarations; so that this platform is viewed as a forecast of what the national Democratic platform will be if Mr. Bryan retains control of his party. The Nebraska platform, which was adopted in convention in Lincoln, Mr. Bryan's home city, on March 19 (the day Mr. Bryan reached the age of forty), indorses "in whole and in part, in letter and in spirit, the platform adopted by the Democratic national convention held in Chicago in 1896"; favors an income tax, and the election of Senators by direct popular vote; opposes government by injunction; favors municipal ownership of municipal franchises, the initiative and referendum, "liberal pensions to deserving soldiers and to their dependents," the "immediate construction and fortification of the Nicaragua canal by the United States"; condemns the Dingley tariff as "a trust-breeding and extortion-inviting measure"; pledges the party "to wage an unceasing warfare against all the trusts—the money trust, the industrial trust, and the international land-grabbing trust," and demands "the immediate restoration of the free and unlimited coinage of gold and silver at the present legal ratio of 16 to 1, without waiting for the aid or consent of any other nation"; condemns private monopolies and favors state and national anti-trust laws; condemns the Puerto Rico tariff bill; asserts that "the Constitution follows the flag"; opposes "wars of conquest and colonial possessions"; declares that the United States should give to the Filipinos, "First, a stable form of government; second, independence, and third, protection from outside interference, as it has for nearly a century given protection to the republics of Central and South America"; favors the extension of this nation's trade and influence, but by peaceful means, not by force; and sympathizes with the Boers "in their heroic efforts to preserve their national integrity."

The Republican papers believe that such a policy as this plat

dem outlines will mean sure defeat for the Democratic Party. The *Philadelphia Times* (Rep.) calls the platform "an awkwardly named combination of claptrap political utterances," and says that "the only vital feature in it is its pronounced sympathy with Aguinaldo and his murderous insurgents in the Philippines, who could have abandoned the hopeless contest long since but for like treasonable utterances conveyed to them from this country." The *Philadelphia Inquirer* (Rep.) says of the plan of government for the Filipinos:

"Mr. Bryan wants to set up a government on his own ideas, and then abandon the government to the various revolutionary parties existing there, and while they are fighting it out stand off in the distance and proclaim to the various nations of the earth that the islands are under our protection. If these Filipinos have a right to be free, then Mr. Bryan has no right to set up a government for them. He must let them fight it out. His policy is absurd, and even cruel. It won't work."

Not a few papers think that Mr. Bryan's continued advocacy of free silver is unwise, a loyalty which the *Philadelphia North American* (Rep.) attributes to a desire for campaign contributions from the silver-mine owners. It says: "It is to be noted that in all Mr. Bryan's tremendous assaults upon the trusts he has never during the whole four years he has been before the public uttered a syllable against the silver trust. There is method in the apparent 16-to-1 madness of the highly intelligent Mr. Bryan." The *Boston Transcript* (Rep.), after a careful review of the political complexion of Congress, casts doubt on the oft-heard remark that the Senate is safely Republican for six years and would block any free-silver attempts of a Democratic President and House. The *Transcript* thinks that a Democratic victory next fall would almost certainly mean a Democratic House and very probably a Democratic Senate too, so that no friend of the gold standard can safely vote for Bryan. The *Brooklyn Times* (Rep.) thinks that the Socialistic trend of the platform, instead of bringing Socialists into the Democratic Party, will send Democrats into the Socialist Party. "When the voters are invited to accept a diluted Socialism," says this paper, "they are apt to break away and go in for the real thing," as Eugene V. Brewster, of Brooklyn, has just done. Aside from the declarations of the platform, says the *New York Mail and Express* (Rep.), "so long as Bryan menaces the integrity of the national honor, so long as he persists in all that his candidacy meant in 1896, there can be no issue so great, no duty so imperative and vital, as the one supreme obligation resting upon all honest men to drive this demagog out of public life, and to rid his own party of his pernicious influence."

Nor do the Gold-Democratic papers look upon this platform with any favor. The *Hartford Times* (Ind. Dem.) says: "Mr. Bryan's political 'all-sorts' column, which he has put forth as the 'Democratic' platform in Nebraska, is an even more astonishing composition than was the notorious Chicago platform of 1896, which the Nebraska documents accepts and reiterates." The *New York Times* (Ind. Dem.) calls the platform's treatment of the trust issue "frivolous" and its utterances on our Philippine policy "vague" and "contradictory." Says *The Times*:

"On the one hand it is asserted that the Constitution follows the flag. On the other it is demanded that a declaration should immediately be made promising the Filipinos first a stable government, second independence, and third protection from outside interference. It does not occur to Mr. Bryan that if the Constitution follows the flag, which is now floating over the Philippines, there is no way of giving the islands either a stable government or independence or protection from outside interference without a complete change in the provisions of the Constitution."

The *New York World* (Ind. Dem.) says that the only effect of the free-silver declaration will be "to alienate voters whose support is essential to success." It continues: "Really able and

sagacious leaders seek to unite their own party and divide their antagonists. Mr. Bryan seems to prefer to reverse this process—to perfect the union of the Republicans and perpetuate the division of the Democracy." The *Philadelphia Record* (Ind. Dem.) says: "It hardly needed the speech of Mr. Bryan at the Nebraska Democratic convention and the platform which was made under his auspices to further convince the country that he would be the weakest candidate for the Presidency whom his party could nominate in this contest," and the *Richmond Times* (Ind. Dem.) says: "The Democratic Party has an opportunity to win this year, but if this Nebraska platform is to be, in fact, the platform of the national Democracy, the party will be flayed alive." The *Baltimore News* (Ind. Dem.) remarks:

"It is a pity that Mr. Bryan has not some of Mr. McKinley's capacity for absorbing instruction from the events going on in the world around him, and that Mr. McKinley has not some of Mr. Bryan's fine reliance upon the virtue of charging straight ahead, like a bull, looking neither to the right hand nor to the left, but confident in his own strength and persistence. A cross between the two candidates of the coming campaign would be a wonderful improvement on either of them."

The Democratic papers believe that victory is assured. The *Washington Times* (Dem.) after carefully reviewing the Nebraska platform, says: "Upon such a declaration of principles and purposes as we can assume that the platform of the national convention will be, a united Democracy can go before the American people with confidence, and ought to achieve a sweeping victory." The *Times* thinks, however, that "there is no proper or possible campaign issue before the country to-day but the trusts," and urges the party leaders to make the fight this year on that issue. The *New York Journal* (Dem.), too, would hold the silver issue in reserve until a time of financial stringency again demands remedy. The *Atlanta Constitution* (Dem.) says it has "never seen a brighter prospect of Democratic success all along the line," and continues: "There is hardly a State in the Union where the party, with good management, does not have what is called a fighting chance. It is practically certain that the next House of Representatives will be Democratic. The voters will not tolerate that significantly suspicious subserviency which has led a majority of the Republican Congressmen to suppress their own convictions and vote as the President dictated." The *Florida Times-Union and Citizen* (Dem.) says: "The Republican Party can not rub the stains from its hands. Its sins will rise up like mountains, and all the power the party may bring to its support can not save its head from rolling from the block. It will meet a foe in solid phalanx, the strength and compactness of which have never been equaled in this country before." The *Indianapolis Sentinel* (Dem.) recognizes that there is a prejudice in some quarters against Mr. Bryan, but believes it to be unfounded. It says:

"What is the source of this prejudice? Is it anything that can be separated from the mere partizan heat and passion of the last campaign? We ask any man who is dissatisfied with the policy of the present Administration to consider this question calmly. Do not push it aside in impatience. Honestly and candidly, what have you against Mr. Bryan?"

"See if you can point to any act of Mr. Bryan's in public or private life on which you have any criticism to offer. Where has he done anything, or failed to do anything, improperly? Sum it all up and ask yourself if you differ from him on any material question except the method of restoring bimetalism. You can not well question that he is a man of ability. If any man differs from you on only one proposition you will ordinarily concede that he is a man of pretty sound judgment. Why not the same conclusion as to Mr. Bryan? Suppose he does differ from you on the one subject, is he not superbly right as to trusts and the tariff and the income tax and imperialism? Is he not absolutely sound on the principle of popular government and the limitations of constitutional government? What danger can there be in com-

mitting the affairs of the nation to the control of such a man? We ask you again to think it all over calmly. Study the situation and study your own feelings, and then say if in fact your prejudice is founded on reason or on mere passion."

THE TRUST AS THE FRIEND OF THE WORKINGMAN.

JOHN D. ARCHBOLD, a director of the Standard Oil Company, makes the assertion that trusts, instead of decreasing the number of workingmen employed, have just the opposite effect. In an article in *The Independent*, he admits that the trusts, by adopting the most effective machinery and doing away with competition, often find one man able to do the work of two. "It follows," he says, "that laborers are temporarily displaced, and the hasty conclusion is formed that the general result is the employment of fewer laborers." This idea, however, Mr. Archbold contends, is a mistaken one: for the improved and economical methods result in lower prices and a better product; these, in turn, result in larger sales, and the larger sales mean a demand for more labor; hence "it follows as surely as day follows night that the number of laborers eventually employed is increased instead of being diminished." To make his point more clear Mr. Archbold recalls the time when machinery began to displace hand work. He writes:

"When steam-looms and spinning-jennies began to be adopted in England, spinners and weavers traveled the country destroying the implements which were robbing them of their opportunity to labor. At that time the number of spinners and weavers in England was less than 8,000. Ten years later 350,000 persons were employed in these industries, and to-day they furnish labor, directly or indirectly, to over two millions of the people of England."

The cotton and printing industries illustrate the same truth:

"The effect of combination and the utilization of machinery has been particularly evidenced in the cotton-manufacturing industry. One man will now do the work which required several men seventy years ago. Yet the number of laborers in this industry has increased from 62,000 in 1831 to 220,000 in 1890. And this is not solely due to increase in population, but largely to the fact that the consumption of cotton cloth increased over one hundred per cent. per capita by reason of a reduction of sixty per cent. in its cost price.

"The printing-press furnishes another illustration. I do not know how many men it would require with a hand-press to equal the production of a modern Hoe press. I think many hundreds. Yet the number of printers has been wonderfully increased by the improved press, because it has cheapened the production and thereby increased the number of readers:

"The rule is invariable. Whatever cheapens production increases consumption, and increased consumption creates increased demand for labor."

Enemies of trusts also urge that the trusts, in their greed, reduce wages as well as the number of laborers. Mr. Archbold replies that "this is best answered by an appeal to the facts, which show that it is not true. On the contrary, the trusts doing the most successful business pay the best wages, and, what is more to the purpose, they pay their wages the whole year round." And beside receiving better wages, he adds, the laborer finds that the trusts have reduced the prices of food, wearing apparel, and other necessities of life so that his money has more purchasing power.

Another familiar indictment against the trust is that its employees are like slaves, with no hope of ever becoming interested in the business. Mr. Archbold replies:

"There is always room at the top, and nearly all successful managers and superintendents began as ordinary laborers. Further, in trusts or corporations, even the ordinary laborer may become interested in the business by investing savings in the

stock of the concern, and hundreds of them do in this way become profit sharers."

To sum up the trusts' blessings to the workingman, Mr. Archbold says of the business with which he is connected, the Standard Oil Company:

"It has reduced the price of its products, it has paid the best wages to its employees, and payment has been constant and certain. It has increased the number of employed, and a more faithful and better contented army of employees never existed. A great number of small concerns could never have created the costly machinery and plants, constructed the pipe-lines, built the tanks, tank-cars, and tank-vessels, opened the markets of the world, and built up the present oil business. That required combination and capital, without which there would not be to-day 35,000 workmen drawing \$100,000 per day in wages, thousands of persons of moderate means interested in the business, and cheaper light in the palaces and huts of every continent."

In the article entitled "Nicaragua Neutrality in the Light of History," which appeared in these columns March 17, occurred the statement that "Mr. Frelinghuysen, President Cleveland's Secretary of State, signed the treaty for the United States, but President Cleveland, after sending it to the Senate, recalled it," etc. The statement was in error, as Mr. Frelinghuysen was President Arthur's Secretary of State, and it was President Arthur who sent the treaty to the Senate after Mr. Frelinghuysen signed it. Soon afterward President Cleveland took office, and one of his earliest official acts was to recall the treaty from the Senate. The error was ours, not Professor Moore's, and hence does not detract from the value of any of his statements.

LETTERS AND ART.

TOLSTOY'S LATEST EXPRESSIONS ON ART AND LITERATURE.

SINCE Count Tolstoy's partial recovery from serious illness, and the appearance of his latest novel, "Resurrection," interviewers from many lands have flocked to Moscow, where he has been spending the winter months; but few have been received. The longest and most interesting talk was accorded to a representative of the *Roussky Listok* of Moscow, whom the count had mistaken for a private visitor, but who frankly stated the object of his call. Tolstoy discussed literary, dramatic, ethical, and even political questions. During this "interview" he gave utterance to the hope of reading every morning the news of a fresh English disaster in South Africa—an utterance criticized as wholly inconsonant with his philosophy of non-resistance and submission to Providence. Ignoring the political portions of the interview, we translate those relating to art and literature, with the few words of personal introduction.

"You write for the papers," said the count with a smile, "while I look you for an ordinary visitor. I fear it is not going to turn out well. . . . The interviewers pry into everything and act as confessors. You drop an imprudent remark, and straightway it is published. It can not harm me, of course; but, you know, very often things are attributed to me which I had never said or intended. . . ."

"My health is not good. I feel that the end is not far off, but it does not disquiet me in the least. I go very readily to meet the inevitable. I continue to work, from habit largely, but I am not prepared to say anything about the character of my new literary projects.

"As for my 'Resurrection,' it embodies a few guiding ideas. These I have long held, and in this latest novel is an attempt to express them. I am satisfied with it, for I have said in it what I had wished to say for a long time. I have tried to portray three kinds of love—physical love, higher love, and the highest of all, which ennobles man and produces 'resurrection.' I have been considerably hampered by the censorship, but there has been compensation in the larger number of readers than a more solid periodical, not subject to the censure, could have commanded.

"Literature has been swallowed by the periodical press, especially the daily papers. These have become speculative, gambling ventures. The question with publishers and editors is not: What shall we serve? What shall we teach? but simply, How shall we get rich? Among gamblers in any form it were absurd to look for moral purposes or high aspirations, and since literature has become a commercial enterprise, we can not expect to find much idealism and morality in it.

"The technical side of every form of literature has reached a state of marvelous perfection; but this is not all that is essential to art. They say that the stage has developed wonderfully in the matter of scenic appliances; but we have neither good plays nor good interpreters. And this is true of fiction as well—technic, but no substance. Labor is exclusively devoted to the external side. Take our Dostoevsky. Technically he is beneath any criticism; but he gave not only to Russia, but to all Europe, a new world.

"Turn to the modern drama. I have just read Ibsen's latest play, 'When the Dead Awake.' Heaven knows what it all means! It seems to me mere raving. The hero, the sculptor, seeks truth; the heroine also seeks truth, and in the course of her quest she has made a number of victims. And after all these achievements, the two ascend some mountain to live nearer the truth! Is this life? Are these real human beings? Where is there any drama in this decadent confusion? Thirty years ago it would have been passed over with a few sarcastic remarks. To-day it is eagerly seized upon, praised, translated, produced. Talk about the serious purposes of the modern theater!"

To another interviewer, who congratulated Tolstoy on his completion of "Resurrection" and his fame and influence, the count said among other things:

"If there is anything pleasant in this 'fame,' it is the sense of

the vanity of it all. . . . And yet, I find in some papers praise and eulogies that are unjust and extravagant to the point of indecency. This is by no means agreeable to one's self-love, any more than unjust attacks are. Formerly I abstained altogether from newspaper reading, just as I have abstained from smoking; but since my illness I have fallen into the habit of reading the papers. No, there is no satisfaction in such praise.

"Moreover, there is a feeling of oppression, of acute responsibility for your sayings and doings. You are—how shall I put it?—like the man on board ship who holds the speaking-trumpet. You certainly can not talk nonsense into the trumpet! . . . There can be no pleasure in fame when you have higher objects in view. Greater and better than fame is the consciousness of duty performed—of that which I call the service of God and the doing of His will. Fame is relegated to the rear where there is a consciousness of duty. I certainly was not born in order that people might praise me. The discharge of my duty is the only source of real satisfaction."

Finally, with regard to the more general question of the function and responsibility of authors as a special class, Count Tolstoy said:

"It is impossible to write without drawing a line between good and evil. Unless one is a passive photographer in literature, one must, while writing, keep in mind that which ought to be, and not merely that which is. It is incumbent upon the writer to communicate to the reader his profoundest faith. One should not write in obedience to mere reasoning, but in obedience to a feeling dominating the whole being. The writer's trouble originates in the fact that he sees what others do not see, and that what to him is clear is to others vague and obscure. The expression of what he sees is his spiritual labor.

"Of course, it is necessary to have something new to say, for the insignificant and familiar can not make a subject, and it is essential that what is said be said plainly and intelligibly, and should be prompted by genuine emotion. But in order to know what humanity needs, it is necessary to live and suffer with it. The form, where there is a sincere desire to say something, will be added unto one. The man who moves forward thinks least of all of the mechanics of motion."—*Translations made for THE LITERARY DIGEST.*

READING ALOUD AS AN AID TO LITERARY STUDY.

OF late years many educators—among them Professor Corson, one of the leading English scholars of America—have called attention to the importance of reading aloud as a help in studying literary masterpieces, whether in prose or poetry. In *Werner's Magazine* (March), Mr. S. H. Clark shows some of the ways in which the vocal interpretation of literature is helpful. He writes:

"Oral reading compels the attention to details. Thus, the figures, scenes, incidents of a selection are deeply impressed upon the mind, and as a result the imagination is stimulated. This is the first requisite. Stimulation of imagination vitalizes, makes vivid the picture. I mean more. I mean seeing the picture, and dwelling upon it, holding it by an *effort of the will*, so that there rushes into the plane of consciousness, out of the unfathomable and inexplicable depths of the subconsciousness, ideas, pictures, experiences of the past; in a word, memories. These combine with the picture, and the result is imagination and emotion.

"The action of the subtle law of the association of ideas must never be lost sight of in connection with the development of imagination, and, through this, the development of emotion. Association of ideas is a spontaneous activity of mind. All we need to do is to hold a picture before the mind and the brain will do the rest. The wider our range of experience and culture the greater the number of potential associative ideas. If, therefore, we ponder carefully each detail of a selection, as we are compelled to do in preparing for oral recitation, if we do as Wordsworth tells us in 'Daffodils,' 'gaze—and gaze,' the law of association of ideas will bring to consciousness past experiences that will so stimulate the imagination that the emotions will be

aroused. As a result, we shall feel with the poet the joys of nature, the anguish of despair, or the upliftment that comes from a sympathetic contemplation of the good, the beautiful, and the true. Surely such experiences are worth having, and if worth having, worth striving for. Who can study and read aloud with feeling the stately, dignified speech of Othello to the senate without becoming more dignified? Who can represent the grandeur of soul, the unswerving honesty of Brutus, in the garden scene, without adding somewhat to his own moral stature? We can not by thinking add to our physical height, but we can and do grow *spiritually* only by first *thinking* and then *doing* the right. Good literature affords the stimulus to this thinking, and good reading means that the student is, for a moment at least, in the higher realm of emotion."

Emotion, says the writer, is an educational principle almost lost sight of in modern systems. In this connection, it is interesting to learn that a new school of educators believe it to be demonstrable that the emotions are cultivated through the ear rather than through the eye.

JOHN RUSKIN AS "A MAN WITHOUT PERMANENT CONVICTIONS."

RUSKIN'S great work in preaching to unwilling ears that there is a higher aim in life than material progress and money-making, and in holding up the value of beauty as a living power, are freely acknowledged by most critics; but some of them are disposed to contest his claims to be a great teacher of art and life. Mr. H. Heathcote Statham, writing in *The Fortnightly Review* (March), is of this number. A sober analysis of Ruskin's writings on art, says Mr. Statham, shows that "he had no settled or permanent convictions at all." He continues:

"It was said of a late great statesman that he was a most conscientious man, but that, unfortunately, he had so many consciences. It may be said of Ruskin that while . . . he wrote always with passionate earnestness of conviction, he had so many convictions. It would be difficult to find in his writings on art any positions permanently and consistently maintained except two, viz., a hatred of railways and of Renaissance architecture. Over and over again we find him so carried away by his desire to make a strong point of the idea which at the moment was predominant in his mind, that he appears to have totally forgotten that he had laid down the reverse proposition on another occasion. Moreover, the desire to make an effective point, to make the most of a suggestion of the moment, is constantly betraying him into rhetorical flourishes which are entirely inconsistent with fact. One of the most characteristic examples is furnished by a passage in the Oxford Lectures of 1884. A friend, rather incautiously, had remarked to him that the conventional arrangement of the hair over the forehead of an archaic Greek bust formed a zig-zag 'just like the Norman arch at Isley Church.' The remark was probably a joke, but Ruskin laid hold of it at once and presented it seriously to his audience as an instance of symbolical ornament derived from Greek sculpture by the Norman builders—who, looking to the Greeks as their absolute masters in sculpture, and recognizing, also, during the crusades, the hieroglyphic use of the zig-zag for water by the Egyptians, may have adopted this easily attained decoration at once as the sign of the element over which they reigned, and of the power of the Greek goddess who ruled both it and them." (1) Such a forced derivation for a form of ornament which, like the so-called 'Greek fret,' is part of the *origines* of ornament recurring all over the world among primitive peoples, is really too absurd.

"Modern Painters" is a book full of eloquence and enthusiasm, full of suggestiveness, and in some portions, such as the chapter on cloud forms, really instructive in regard to the problem of the translation of the appearances of nature into painting. But the contradictions of principle in it are so barefaced and preposterous as to nullify any value which it could be supposed to have, and which the author evidently considered it to have, as a didactic treatise on art. His whole claim to respect as a teacher on art is itself based on a barefaced logical fallacy:

"It is as ridiculous for any one to speak positively about painting who has not given a great part of his life to its study, as it would be for a person

who had never studied chemistry to give a lecture on the affinities of elements. But it is also as ridiculous for a person to speak hesitatingly about laws of painting who has conscientiously given his time to their ascertainment, as it would be for Mr. Faraday to announce, in a dubious manner, that iron had an affinity with oxygen, and to put the question to the vote of his audience whether it had or not."

"This is a glaring instance of the fallacy of 'ambiguous middle term'; the word 'law' used in a double sense. A 'law' in chemistry is a discovered and demonstrable fact: a so-called 'law' in painting, as far as there is such a thing, can be at best nothing more than a consensus of opinion based on the practise of the best painters; and it is on the ground of such a fallacy that Ruskin claimed the position of being an *ex-cathedra* and infallible teacher on art. And the infallible teacher contradicts himself over and over again. He tells us, in 'Modern Painters':

"One rule in art, at all events, has no exception; all great art is delicate art, and all coarse art is bad art."

But what do we find in the essay on 'Pre-Raphaelitism'?

"I only wish people understood this much of sculpture, as well as of painting, and could see that the finely finished statue is, in ninety-nine cases out of a hundred, a far more vulgar work than that which shows rough signs of the right hand laid to the workman's hammer."

Read separately, each sentence might be taken to be the expression of a deeply felt conviction; read together, they subside into mere rhetoric."

The truth is, says Mr. Statham, that Ruskin could never make up his mind whether to espouse the side of the Realists or the Idealists in landscape painting, for he had committed himself at one time to the former school as a pre-Raphaelite, and to the Idealists in his vast admiration for Turner. As a critic of architecture, Ruskin, to be sure, has done more than any one else to awaken an interest in this art, Mr. Statham admits; yet even here Ruskin is "entirely a false guide." "The Stones of Venice," altho a wonderful book, full of splendid passages, is "one tremendous paradox from beginning to end," while the "Lectures on Architecture" is "one of the most mischievous books on the subject ever written"—a "medley of false criticism and false analysis." Indeed, Ruskin's architectural animadversions and pronouncements are "really quite beyond comment," particularly his condemnation of Greek architecture as compared with the Gothic. In "The Seven Lamps of Architecture," however, Ruskin, in spite of some fallacies, has, Mr. Statham again admits, really done nobly in quickening the public sense of the greatness and nobility of architecture—and this is where Ruskin has served art. He has little logical teaching to give about art, but "he has made thousands of persons care for it as they never cared for it before, and never would but for him," for Ruskin has been the only writer upon art of sufficient literary genius to make himself read and felt by the people at large.

With respect to Ruskin's attitude toward life, particularly toward his own times, Mr. Statham writes:

"His writings are full of great and noble ideals in regard to social life, and the duty of mankind to one another; he has said many things which much needed to be said, and for which the world should be better and wiser. But his theory of life, as far as it can be gathered from the collective evidence of his writings, was in many respects hopelessly at variance with facts. He could see that the present age, and especially in his own country, was painfully indifferent to the beautiful element in life. But he could not see that, in spite of this, it is in many ways a great and remarkable age in the history of the country; that science has immensely ameliorated the life of man in many important points; that education is better and more widely spread than it has ever been before; and that whatever the effect of railway and engineering works in partially spoiling the face of the country, the increased means of intercommunication opened up during the present century has been one of the most powerful contributors to human progress, and in the main to human happiness. As to the matter of railways, it may be said that, altho a railway in the process of making always spoils a site for the time, once made and in being, and the embankments and cuttings harmonized by vegetation, the supposed injury done to the landscape

by them has been very much exaggerated. The moving train is even a picturesque incident in the scene. Nor could Ruskin see that great engineering works, such as bridges and viaducts, are really the natural and characteristic products of the conditions of modern life, and that they have a grandeur of their own, when they are simply the expression of construction on a great scale."

A RADICAL'S "PLAIN TALK."

MR. ERNEST H. CROSBY is waging as earnest a war against conventionality—political, social, religious—as ever the Rev. Dr. Howard Crosby, his father, waged, as Dr. Parkhurst's predecessor, against the saloons and dives of New

York City. Mr. Crosby, the son, is the foremost American disciple of Tolstoy, was the first president of the Social Reform Club of New York City, is an apostle of Henry George and at the same time—a rare combination—a preacher of Socialism, and withal a man of fine breeding and culture. To this series of forbears by nature or choice—Howard Crosby, Tolstoy, Henry George, and Karl Marx—should also

ERNEST HOWARD CROSBY.

be added Walt Whitman, which makes him five times a radical. Mr. Crosby has lately published a volume of poetry entitled "Plain Talk in Psalm and Parable," written for the most part in Whitmanite stanzas, in which his hatred of false conventionalities finds expression with the earnestness of the old Hebraic prophets. Portions of the book are being translated into Russian by Count Tolstoy for circulation among the Slavs.

In "Morituri Salutamus," Mr. Crosby pays his respects to the drawing-room world of to-day in the following satirical fashion:

Hail, Custom, we, about to die, salute thee! Behold us, thy slaves and prisoners,
Bound and swathed in ponderous frock-coats and satin linings, in new-creased trousers, in starched cambric shirts and silken underclothing;
Shackled in stiff collars and wristbands, in gold chains and finger-rings;
Helpless in patent-leather boots, tight-fitting gloves, and hard-rimmed top-hats;
Decorated, like victims for the sacrifice, with flowers in buttonholes, and rich scarves, and jeweled scarf-pins;
Forced to talk and to walk, to get up and sit down thus and so . . .
Guarded by despotic butlers, and valets and housemaids;
Looking out of windows, hopelessly bored, at the genuine life going by, in which we may not share; . . .
Our women even more deeply sunk in the glittering slough than ourselves;
Nerves snapping, digestion spoiled, temper irretrievably lost, soul unheard of this many a long year!

Oh! for a breath of mountain air, an hour of God-given outdoor toil!
Oh! for a voice of command from heaven, crying:
"Lazarus! come forth!"

For what he regards as the equally exotic and utterly conventional literary life of the day, Mr. Crosby has also his word of commiseration:

Pity our dilettante literary men and artists,
Cut off from their base of supplies, the common people,
Starving as it were, in a foreign land:

Uttering trim facilities for each other's edification,
Their prophetic function all forgotten.

Such were not the men of old—

Sophocles and Euripides, when all Athens watched from sunrise to sunset the destiny of Oedipus or Orestes;

And Cimabue, when the populace of Florence bore his Madonna of the Dawn in triumph from his studio to the Altar.

Such were not the great musical composers of our own time, for they too spake for the masses;

And to-day, where German workmen meet together, you may hear sung the noblest chorals,

And the furthest Italian village can appreciate Verdi and Mascagni.

The artist must embrace his lowliest fellow men; in vain will he seek for inspiration elsewhere.

The bard and painter should be the head and right arm of the People;

What can we expect from Art when we lop these from the trunk?

In Mr. Crosby's concept of love is probably to be found the key to his whole message. The poem "Love" reads thus in part:

In loving you, I love more than you.

When I embrace you, my arms encircle something vague and vast beyond you.

When I gaze into the depths of your eyes, I look beyond the farthest constellation.

You are not a finality: you are the way.

Through you and in you I love the whole world.

If you fall at my side, I know that you will still be walking by me.

If I fall myself, I shall only be the closer to you.

Why then should we be anxious, when we may live where there is neither separation nor death?

Love on a lower plane is but a brief illusion.

WHAT GIVES PREEMINENCE TO FRENCH LITERATURE?

TO most people on the Continent of Europe or in Latin America, such masters of English as Milton, Wordsworth, Burke, and Ruskin are but names; while Montaigne, Molière, Voltaire, Hugo, Balzac, have been a mighty influence in social and political affairs in every country in Europe. Noting this fact, Mr. George McLean Harper seeks (*Atlantic Monthly*, March) to find the reasons for this preeminence of French literature. He believes it to be due to three causes: the lucidity and directness of French thought; the fitness of the French language to express ideas with clearness, facility, and terseness; and the leadership of French thinkers in movements of social enlightenment and reform. This preeminence is not an ephemeral thing. Says Mr. Harper:

"Moreover, it is not merely in recent times that French literature has maintained either the supremacy as compared with other modern literatures, or at least a position in the first rank. It has been of such a sort that if you wish to know what the choice spirits of the world were thinking, at any given time, about the most important contemporary happenings, you will not be far astray if you read the French books of that period. The position of French literature has all along been much like the geographical situation of the country, in the center of Western Europe, or like the political standing of the nation, in the forefront of progress. To be imbued with the French spirit has almost always meant to be near the heart of the age. And furthermore, French literature has shared with Italian the distinction of being a large part of the channel through which Greek and Roman civilization and the traditions of ancient scholarship have flowed downward into the modern world."

As to the chief cause of this supremacy, Mr. Harper says:

"Nowhere has literary competition been so severe as in France. Nowhere has good work been so openly and dazzlingly rewarded. And nowhere, also, has failure been so quickly remarked and unhesitatingly derided. So that, in order to receive the stamp of authoritative approval, literary work in France has had to come up to a high standard. Frenchmen have the artistic conscience more highly developed than Englishmen or Germans, and are less likely to commend a badly written book or a poor painting. It is the carefulness resulting from such sharp competition and such outspoken criticism that, more than anything else, has made French prose so clear, until now it is perhaps a more easily handled instrument of expression than English, and certainly more facile than German, and more precise than Italian."

THE APPLETON FAILURE.

THE news of the failure of another long-established publishing house, following that of Harper & Brothers last autumn, has not only been received with great regret, but has occasioned much speculation as to the cause of these events. The Appleton failure is not, however, regarded as so serious a matter as that of the Harpers. The official statement of the firm's affairs, as given to a commercial agency on February 1, is as follows:

ASSETS.	
Cash	\$140,375.00
Bills receivable	15,483.54
Accounts receivable:	
Merchandise	170,000.00
Installments	900,000.00
Manufactured stock (estimated)	300,000.00
	\$1,410,858.54
Plates and stock in process (estimated)	\$20,000.00
Plates of special books (estimated)	100,000.00
Appleton Manufacturing Co., stocks and bonds	200,000.00
A. J. Johnson Co. stock	100,000.00
A. J. Johnson Co. bonds	90,000.00
Periodicals	25,000.00
	1,005,000.00
Total	\$3,656,237.04
LIABILITIES.	
Capital stock	\$2,000,000.00
Surplus	400,000.00
Bills payable	1,100,000.00
Merchandise account, payable	15,000.00
	\$3,505,000.00

A statement was issued by the firm to its creditors, which was in part as follows:

"GENTLEMEN: For three fourths of a century the house of D. Appleton & Co. has continued without interruption or default. With growing reputation, merited, we trust, the house legitimately has extended its interests until its position in the publishing world is firmly established and also is, we are emboldened to believe, highly esteemed.

"These statements measure the pain with which we announce to you the suspension of our personal operation of the business which three generations of our family have uninterruptedly and successfully pursued.

"The present situation is owing not to undue business risks, nor to trade losses, but mainly to the fact that through the extension of our business on the instalment contract basis (which contracts amount to fully \$900,000, now outstanding and in due course collectible) our capital has become inadequate to meet our maturities, and we are unable to meet our obligations."

Besides the cause here stated—the extension of the firm's instalment business and the delay in collecting these accounts—the impression commonly prevails that the Appletons have suffered by the increased caution of the banks caused by the Harper failure.

The New York Evening Post (March 23) attributes both failures to "internal and personal causes," which consisted partly in an undue value set upon books now dead or moribund, partly in a disproportionate investment (in the case of the Appletons) in books sold on the instalment plan. It continues:

"Unfortunate from every point of view as the failure of two such houses is, there is no warrant for the conclusion that it indicates a falling-away in the public appreciation of literature, or that publishing enterprises, when wisely and conservatively managed, are more hazardous than they formerly were. They are, no doubt, somewhat less profitable, as most forms of business activity are, for the percentage of profit has shrunk. But the market for good books is larger than it ever was. The share of the profits that now goes to authors is larger, and the share that goes to publishers is smaller, than used to be the case; but it has hardly yet come to pass that the downfall of publishers can be laid at the door of authors' greed. These two failures, at any rate, must be laid at the door of the publishers themselves."

The New York Times (March 24) thinks that it was difficult for the Appletons, as it was for the Harpers, to adjust themselves

to the new conditions of publishing which have come in of late years.

The Springfield Republican (March 23) sees "no such interior decay as caused the Harper troubles, but rather an unwise use of some of the less legitimate commercial methods which are resorted to by furniture, sewing-machine, and piano dealers."

PADEREWSKI AS AN EXEMPLAR OF "BARNUMISM."

THE most cruel treatment which Paderewski's personal peculiarities have yet brought forth is bestowed in a recent article by Mr. Philip Hale, the musical critic. After attributing the great pianist's success to personality, and reviving the old Paris tale that Paderewski's hirsute waves were due to nightly curl-papers, he says (in *The Musical Record*, of which he is editor):

"The personal quality of Mr. Paderewski would have carried him far if he had chosen some more peaceful calling, as diplomacy, the army, law, medicine, the priesthood—or if he had sold soap on the street corners.

"Would the effect of his performance be as great if he should play behind a screen? How cunningly contrived is his *mise-en-scène*! The dim hall, the stage light arranged to fall upon the pianist's lucrative hair, the purpose to accentuate the androgynous mystery that sits in the low chair, the delay of twenty minutes to heat curiosity and excitement to the boiling point of hysteria! O Barnumism—*refined* Barnumism—but *Barnumism*!

"The day may come when a still more skilfully managed pianist will play in a hall that is dark, save for a lime-light thrown from the gallery on the hypnotist. He may close the concert with a pianissimo, and then sink through the stage, with the piano, while he gracefully kisses his hands to the ladies. Or with a fortissimo he may ascend with the piano, as in the apotheosis in a pantomime. I wonder why even now Mr. Paderewski does not prefer to appear on the stage by the aid of a vampire trap."

Mr. Hale does not deny Paderewski's attractive qualities as a pianist when he is at his best. His polished and dazzling technique, his exquisite tone, his ringing of the phrase, his clearness in contrapuntal passages are all attainments which distinguish him among pianists, thinks Mr. Hale; but he often forgets his better self and makes an "exhibition of sensationalism" closely akin to "charlatanism."

Mr. Hale prefers De Pachmann to Paderewski as a Chopin player, and in this Mr. W. S. B. Mathews, the well-known critic and editor of *Music*, agrees with him. The latter says (in *Music*, March):

"When one hears him, one carries away a distinct impression, despite defects in the larger and more serious moments. When one has heard Paderewski, one remembers to have *seen* him; one recalls the dim light, the 'lucrative hair,' as Hale calls it, and the sentiment of the cantilena. One remembers the pounding; and, if one is young enough or hysterical enough, one can even remember this as a phase of art. But not otherwise."

It appears that musical "Barnumism" decidedly pays from the commercial standpoint. According to "semi-confidential" information mentioned by Mr. Mathews, Mr. Paderewski's present American tour had already realized over \$100,000 for the pianist at the thirty-first recital.

NOTES.

THE four hundred and thirty-fifth thousand of "David Harum" is announced, and sales are reported to keep steadily on.

TOLSTOY occasionally reads his stories in manuscript to a select circle of his admirers, but on one occasion, says *The Westminster Gazette*, he ventured upon the more trying experiment of reading his drama, "The Dominion of Darkness," to some peasants. To his profound astonishment, his audience not only failed to appreciate the pathos of passages which brought tears to his own eyes, but laughed right out in the midst of them.

SCIENCE AND INVENTION.

SOME AUTHORITIES WHO DO NOT AGREE WITH PROFESSOR ATWATER.

AS is the case in so many controversies, the dispute over the results of Professor Atwater's experiments on alcohol appears to turn largely upon definitions. What is a food? If it is a substance acting as Professor Atwater has shown alcohol to act, then alcohol is a food; otherwise it is not. In choosing the word, the professor specially qualified and explained it in his earliest statement; but such qualifications are lost sight of in a prolonged dispute. Dr. Kellogg, the editor of *Modern Medicine*, collects in his February number the opinions of a large number of experts who disagree with Professor Atwater's conclusions and inferences. Dr. Kellogg says in introducing these:

"It is interesting to note how general and unanimous has been the protest against the statements published by Professor Atwater recommending alcohol as a food. Professor Atwater claims to have proved that alcohol is oxidized in the body, and that on this account it must be regarded as a food. At first this bald statement was received with respectful silence, as the details of the experiments made by the professor had not yet appeared. Science bases its conclusions upon actual facts, and scientific men could do naught else but wait until the facts and details of the experiments made were published, so that the conclusions drawn from the experiments might be critically reviewed and their correctness verified or disputed."

Dr. Kellogg's first quoted authority in opposition to Professor Atwater is Prof. S. Egbert, of the Medico-Chirurgical College of Philadelphia, who writes as follows:

"Professor Atwater's own figures, as set forth in Bulletin No. 69 of the United States Department of Agriculture, do not support his claim. He states that 'whether the body [of the man experimented upon] was at rest or at work, it held its own just as well when alcohol formed a part of the diet as it did with a diet without alcohol.' His tables, on the other hand, show at once that, when alcohol is substituted in part for carbonaceous foods, there is an increased loss of body nitrogen. We can not therefore understand or accept his statement that alcohol protected the material of the body just as effectively as the corresponding amounts of sugar, starch, and fat."

Prof. C. A. Herter, of the University Medical School, New York City, says:

"If persons on a diet adapted to keep them in nitrogenous equilibrium regularly showed such losses of nitrogen while using alcohol as are shown in Dr. Atwater's tables, we should have very satisfactory evidence that the alcohol was acting as a poison to the cells of the body; that is, as a protoplasmic poison."

"The two Atwater experiments with alcohol were carried on for so short a period that they throw no light whatever on the food value of alcohol when used continuously. Even if these experiments demonstrated that alcohol can replace a portion of ordinary non-nitrogenous food during four days in a healthy man, this fact would afford no scientific basis for the view that such a replacement can be indefinitely carried on without detriment to the organism."

Dr. Bieufait, of Liège, in discussing the food value of alcohol, speaks on this question as follows, in a quotation cited by Dr. Kellogg:

"In order to be a food, it is not sufficient that a substance be decomposed or oxidized in the tissues. Under these conditions many harmful substances would be considered foods. Ether is decomposed in part; chloroform is partially destroyed. But do we consider these substances foods? Certainly not. Other things than decomposition are necessary to nutrition. It is necessary that the decomposition be made in a way that will not injure the vitality of the cells. A part of the alcohol that is destroyed in the body undergoes this decomposition in a way that is injurious. Observe that whereas true foods, such as sugar and

fat, are destroyed slowly, easily, without provoking too lively a combustion, alcohol is burned too rapidly, provoking a veritable explosion. Suppose that a locomotive has to run a certain number of kilometers; in order to do this, it must be given fuel. This is the coal, which it burns slowly and methodically. If in the place of coal we throw naphtha on the fire, the combustion of this may furnish as much heat as the coal, but it is burned instantaneously, in the form of an explosion. The heat thus produced is not utilized in the machine. What naphtha is for the locomotive, alcohol is to our bodies; it is an explosive, but not a food."

It is interesting to note, Dr. Kellogg says in conclusion, that Professor Atwater's associate in the experiments referred to, Prof. H. W. Conn, at a very early date in the discussion took care to place himself before the public in an attitude by no means supporting the position of Professor Atwater. In the following paragraph Dr. Conn uses an analogy similar to the one just quoted. He says:

"A physicist could experiment with gunpowder, and prove that it is easily oxidized and gives rise to a large amount of heat and energy. From this it might be argued that gunpowder is a most useful kind of fuel for cook-stoves. Such a conclusion would be hardly less logical than the conclusions that have been drawn from these experiments with alcohol, and which regard it as a useful food for the body. Gunpowder is a very unsafe fuel because of its secondary effects, and in the same way the food value of alcohol can not be determined by its power of being oxidized, but must include the consideration of its secondary effects as well."

A PHOTOGRAPHIC TIME-CLOCK.

MANY ingenious devices have been invented for the purpose of automatically registering the entry and departure of employees in large establishments, and some of them, such as the time-clock, have proved practically useful. One of the simplest and apparently the most effective is the photographic arrangement described below in a translation from *La Science Française* (February 16). The writer of the description, M. C.

PART OF PHOTOGRAPHIC TIME-RECORD.

de Boisgérard, says that the instrument is both swift and automatic; and from the fact that it combines the cinematograph and the chronometer, it certainly may be said to be "up to date." The description is as follows:

"The apparatus, which is a rectangular box having an object lens in front and a glazed panel on top, photographs the face of the person who stands before the lens, by means of a novel but extremely simple arrangement, and at the same time includes in the picture the dial of a clock inside the box. Thus, when the sensitive film is developed, there is seen just under the employee's face, as the illustration shows, the hour at which he reached the factory or left it."

"Instead of signing a time-sheet or receiving a time-card, the employee, whoever he may be, has only to turn his face toward the apparatus and press the button."

"Nothing can be simpler. There is no mistake and can be no possible argument. The operation is instantaneous; the con-

PHOTOGRAPHIC TIME-KEEPER.

structor has shown by precise experiments that each of his instruments can register about fifty entries a minute.

"As in the cinematograph, the film unrolls automatically before the objective; but after each individual pose, which lasts about half a second, the shutter works at the pressure of a button. A small electric bulb in the apparatus enables it to be used at night.

"The clock has a black dial on which are the day of the week, the hours and the minutes, in white, and over which move two pointers of white-enameled aluminum.

"Altho the price of the apparatus is relatively high, it costs incomparably less than a time-keeper of flesh and blood, while guaranteeing much greater impartiality and exactness. The films are sold separately in rolls 3.65 meters [12 feet] long and each will hold 288 portraits.

"This time-recorder has been named by the inventor 'The Guy'not.'"—*Translation made for THE LITERARY DIGEST.*

VANADIUM AS A MEDICINE.

VANADIUM has been known chiefly to chemists, since its discovery early in this century, as a rare elementary substance, altho it occurs quite widely, notably in Mexican lead, in some iron ores, in anthracite coal, and in the furnace slag of certain reducing processes, whence it is now generally obtained. Between 1880 and 1886, Messrs. Witz and Osmond investigated the chemical properties of this substance very thoroughly. These are curious enough to merit special notice, particularly as they have now been applied in medicine by Dr. Laran, of Paris, who describes his researches in an article in *La Science Française* (March 2). Says Dr. Laran:

"These [Witz and Osmond] were the first to show that vanadium—or rather its compounds, for vanadium has not yet been obtained in perfect purity—placed in the presence of an oxidizing body and an organic substance capable of oxidation, has the property of serving as a carrier of oxygen from the former to the latter, and that its office ceases only with the complete reduction of the oxidizing substance.

"This is the starting-point of all the recent investigations of the vanadic compounds. The first result was the application of vanadic acid to the process of painting on porcelain and to calico-printing. But just at present these investigations are tending toward the use of these substances in medicine."

It has been asked whether this property of vanadium may not be used to oxidize the hemoglobin of the blood. Dr. Laran's investigations along this line have shown, so he tells us, that vanadic acid is the only compound of vanadium that will answer this purpose, and he has succeeded in obtaining it in a chemically pure and standard form—something that had not been accomplished hitherto. Having established by experiments on animals the fact that the acid in small doses has no injurious effects, he proceeded to treat with it cases in human beings in which oxidation of the blood was deficient. He says:

"Chlorosis, anemia, tuberculosis, and all maladies dependent on defective nutrition should, it seemed to me, be relieved by this treatment.

"Without detailing the various theories of these diseases, it will suffice to note that iron enters into the composition of the hemoglobin of the blood and does the duty of taking up the oxygen in the air we breathe and fixing it in the cells of the organism, and that the only cures of tuberculosis that have been effected have been brought about by causing the patients to breathe, in high altitudes, air surcharged with oxygen while administering to them continually an excess of nutriment.

"Now vanadic acid plays the same rôle as iron, but in an infinitely greater degree: it increases the appetite considerably, and consequently makes over-feeding easy and perfectly natural."

Not only in such cases, but in those of chlorosis and anemia,

has the vanadic-acid treatment proved a practical success, Dr. Laran writes, and he gives particulars of numerous cases which leave little doubt that he has discovered a useful addition to the *materia medica*.

TO PREVENT THE BURSTING OF FROZEN PIPES.

AN ingenious pneumatic device for this purpose was described by the inventor, Nevil M. Hopkins, in a recent paper before the Franklin Institute, Philadelphia. Tests made since that time have demonstrated its practical utility, and it is already in use in several public buildings, including, it is stated, the White House. The device is thus described in *The Electrical World and Engineer* (March 3):

"As is well known, the bursting of pipes is due to the expansion of water as it is about to freeze, when its volume increases about 10 per cent. The expansive force of freezing water has been utilized to break up heavy ordnance as it becomes obsolete,

FIG. 1.—The Horizontal Pneumatic Dome.

the cannon bursting with loud detonations when the water congeals. It is also well known that ice under pressure becomes plastic and can be molded into various shapes. This peculiar property, together with the expansive force above alluded to, forms the basis of Mr. Hopkins's invention. The system depends for its operation upon the elastic cushioning of the pipes at intervals with air, by means of air domes with inclined planes, or slopes, opposite the mouth of the storage dome.

"In Fig. 1 is shown a horizontal dome, the dimensions of which have been determined by careful laboratory measurements, taken in combination with the percentage of ice expansion. Owing to its viscous behavior, the ice slides along the bore of the pipe until it strikes the double slopes or inclined planes, when it is slid up into the storage-room of the dome, simply compressing the air instead of bursting the pipe. The dome for vertical pipes provides, in practically the same manner, cushioned storage-room for an increase in bulk due to freezing. The column of ice in expanding longitudinally thrusts its end into the air dome without the necessity of being deflected. . . .

"Apart from the prevention of the bursting of pipes an important advantage claimed for the system consists in rendering the water-flow steady and noiseless under all conditions because of the air cushions. In order to secure a perfect elastic cushion wherever the pipe is exposed an automatic air inspirator is provided. The sectional view (Fig. 2) gives a clear idea of the construction of the inspirator and its operation in combination with a pneumatic dome. The tapering nozzle shown at the right hand causes the water to flow more rapidly at the point where it enters

FIG. 2.—Longitudinal Section of Air Inspirator.

the little conical compartment and produces a vacuum there. Air immediately rushes in from the little opening at the top of the apparatus and is forced into the pipe. When the flow stops, however, the vacuum fills with water, which goes into the small

cylinder above, where it lifts the little copper float and shuts the valve. On again opening a spigot, the flow generates another vacuum about the nozzle, the water in the cylindrical top is drawn down, and the valve again opens for the admission of more air. A hygienic advantage claimed for this system is the purification of the water by the air which is forced into the pipes."

The tests referred to above were carried out by the city water bureau of Philadelphia. The freezing of a four-inch main was continued nine days, at 3° below zero. The ends of the pipe were closed with heavy plugs locked in position, allowing no expansion except within the dome. A pipe not thus protected was subjected to the same treatment and burst in a few minutes. Tests with smaller pipes are reported to have been equally satisfactory.

THE SCIENCE OF SHARPSHOOTING.

IN common parlance, a "sharpshooter" is any marksman who fights alone, whether he is able to hit anything or not. But strictly speaking, a sharpshooter is a man of uncommon skill with the rifle, who never fires at random, and who, the instant that he draws a trigger, knows just where his bullet has gone. Skill in rifle-shooting comes, first, from thorough knowledge of what arms and ammunition can do, and, equally important, what they can not do; secondly, from accurate judgment of distance and atmospheric conditions; thirdly, from true aim, and the ability to draw trigger at precisely the right instant, without the slightest jerk or quiver. All of these accomplishments can be cultivated by men of average physique and intelligence, if they work hard, stick to it, and put brains into their practise.

The requisite skill is found oftener among civilians, so Mr. Horace Kephart asserts (in *Cassier's Magazine*, March), than among soldiers, although the standard in modern armies is higher than it used to be. Mr. Kephart says further:

"There are few soldiers in any regular army, to say nothing of the militia, who, with the service rifle, can be relied upon to place most of their shots in a 12-inch circle at 200 yards, off-hand. A large majority of troops can not do nearly so well. But go to the range of some civilian rifle club, whose members practise rifle-shooting for pastime, and note the difference! None of these men consider that they shoot well unless they can 'call their shots,' which means that the shooter can announce almost exactly where his bullet has hit before the marker at the target has signalled the result.

"At prize-shooting, where experts are gathered, you may see one of them call his shots repeatedly within two inches of where they actually struck, 200 yards away. In other words, he can detect a movement of a hundredth of an inch at the muzzle of his rifle at the instant of discharge. This, bear in mind, is with the unaided eye, the marksman standing erect and shooting off-hand. A run of fifty consecutive hits on a 12-inch bull's-eye at 200 yards, off-hand, is not uncommon. Such nail-driving accuracy of fire counts for as much on the hunting-field or battle-field as on the range. Bullets are no respecters of targets. It is all the same to them, be it paper, deer, or man."

Why this inferiority of regular troops to civilians? The difference, according to Mr. Kephart, is due both to training and to armament. The soldier has not the stimulus to excel in marksmanship that the civilian rifleman has, and his weapon is not as good. The present infantry weapon is not adapted for accurate shooting; its barrel is too thin and light, the trigger-pull is too hard, and the sights are inaccurate. In the first place, therefore, if we are to have military sharpshooters, they should carry specially designed rifles. In the second place, the men should be specially selected and trained and should have distinctive rank—say that of corporal. They should be thoroughly practised in estimating distances and in scouting, and ought to be mounted, like the Boers. Twenty such men within 500 yards of a field battery could put it out of action in ten minutes, Mr. Kephart

says. With horses in their rear, no infantry could catch them, nor could cavalry, unless it was prepared to lose three men for one. The sharpshooter's clothing, we are told, should impede him as little as possible in athletic movements, such as climbing, crawling, and swimming. It should be inconspicuous and noiseless. Woolen underclothing, a heavy overshirt, stalking suit, low-crowned stalking-cap, and stout but light and flexible shoes with soft-rubber soles, all tan-colored, would be the proper dress. Unless the man was deeply bronzed Mr. Kephart would even have him stain his face with oak bark, or walnut juice. "This may sound absurd," he says, "but it is a fact that the first thing you see of a Caucasian, when he is motionless in cover and suitably dressed for hunting, is his white face."

SUNLIGHT AND STARLIGHT COMPARED.

SUNLIGHT and starlight seem to us the two extremes of brilliancy among the celestial bodies; yet this discrepancy is, of course, due only to the greater distance of the stars, many of which emit an actual amount of light far greater than that of our sun. Some new and interesting studies of sunlight and starlight have been made by a French astronomer, M. Dufour, who has published his results in the journal of the Italian Spectroscopic Society, a notice of which is contributed by Dr. Albert Battandier to *Cosmos* (February 10).

It would be absolutely impossible, we are told, to compare the light of the sun directly with that of a star, and to solve this problem we are forced to take intermediary types to form a sort of scale between these two extremes. M. Dufour has made his scale consist of four degrees. At the top he places the sun, then the full moon, then a gas flame, and lastly a star of the first magnitude.

First the moon's light must be compared with that of the sun. Here we have results ranging all the way from 1:300,000 to 1:500,000 for the ratio between the two. Dufour believes that the first ratio is more nearly correct. Next the moon and the gas flame are compared, and M. Dufour finds that the light of the full moon at the zenith is equal to that of a standard flame at about 20 feet. For the third comparison—that of the flame with a star—Dufour embarked on a steamboat plying on one of the Swiss lakes, and, as it approached a gas-lighted town, he noted the exact moment when each of the gas-lights appeared precisely as bright as the star with which he wished to compare them. Thus he found that a gas flame 6,500 feet away gave a light equal to that of the star Arcturus. The flame was thus over 300 times farther away than the one whose light was equal to that of the moon. As the intensity of light varies inversely as the square of the distance, the star's light must be about 100,000 times weaker than the moon's, and therefore 30,000,000,000 times weaker than that of the sun. Experiments with other stars gave results of the same order, but differing, of course, considerably in amount. To quote from Dr. Battandier's account:

"From this difference of brilliancy, which is only a subjective impression, can we derive any knowledge of the actual brilliancy of these stars? If their parallax has been exactly measured, the conclusion would be facilitated; but this parallax is very uncertain, for its smallness subjects it to large errors. Suppose that Arcturus and Vega are at a distance a million times as great as that of the sun. . . . Astronomers calculate that light takes 21 years 7 months to get to us from Vega and 34 years 7 months from Arcturus; but we will take the number 1,000,000 to facilitate calculation. . . . If removed to this distance, our sun would appear vastly more dim than they. According to M. Dufour, its light would be 3,300,000 times weaker than that of the full moon, and to compare it to a gas flame we should have to move 10 kilometers [6 miles] away from the flame. Now we have seen that a distance of 2 kilometers was enough to equalize the light of

Arcturus with that of a flame; therefore this star must be much more brilliant than the sun.

"It should be noted that this does not put the case strongly enough; for we have assumed 1,000,000 times the radius of the earth's orbit to be the distance of the star, whereas Vega's parallax shows its distance to be 1,375,000 times this radius, and Arcturus is still farther off, its distance being 2,194,000 times this radius.

"The stars are thus, as has been seen, much more brilliant than the sun, which, in spite of its gigantic dimensions, cuts a small figure among the worlds that surround us, of which we see just enough to show that they exist. As God has created no useless thing, these sources of light, heat, and life which He has so abundantly strewn through space must have their place in the plan of divine Providence, altho we do not know what it is."—*Translation made for THE LITERARY DIGEST.*

WIDTH OF A LIGHTNING-FLASH.

DIRECTIONS for measuring the width of a bolt of lightning are not laid down in the text-books! But by the aid of photography, a German astronomer has been making such measurement, and informs us that the width of a flash measured by him was "about" 5 millimeters (one-fifth inch). He tells us, further, that a flash of lightning may be widened by being literally blown along sideways by a gale—thus appearing as a broad band, or "ribbon lightning."

Mr. George Rümker, of the Hamburg Observatory, according to *The Western Electrician* (quoting from a German journal), obtained in August last the photograph referred to. The bolt struck a tower about one third of a mile (500 meters) from the observatory. Knowing the distance of the tower, and consequently of the bolt, and the focal distance of the objective of the camera, the breadth of the discharge could be calculated. The result, we are told, "closely concurs with that obtained by Piltchikoff, in Odessa, in 1895, obtained in a similar manner."

The account in *The Western Electrician* continues as follows:

"It is thought to be certain that the wind exercises an influence upon the form of the luminous track of the discharge. There is observed on one of the borders a line more distinct, from which there seem to detach small rays toward the opposite border. The photograph in question shows two ramifications to the right and two to the left, plainly distinguishable. The phenomenon appears like a band of silk, with the main body in a dusky light, from which shreds of the material float in the wind into the brighter light, these detachments presenting, in general, parallel curves. In the central portion of the luminous zone there is a large shaded portion, which has hitherto been unexplained, as well as the parallelism spoken of above. Each discharge of atmospheric electricity seems to have an appreciable duration, longer than discharges of laboratory electricity.

"At the instant of taking the photograph by Mr. Rümker, the wind was blowing at a speed of 14 meters a second, west-south-west, and the objective was turned to the south, so that it is possible the peculiar aspect of the discharge at this instant was due to the displacement of the column of incandescent gas which formed the principal brilliant line, under the action of the high wind, which was probably more brisk at the altitude from which the discharge came. The observatory, according to the testimony of those present, was at one moment as if surrounded by flames, yet the telephonic and telegraphic instruments were not seriously affected."

A Baby Athlete.—Chicago boasts a little wonder in the eight-and-one-half-months'-old baby of Prof. A. A. Stagg, director of athletics at the University of Chicago. "His physical training," says *Good Health*, "began when he was four weeks old. It being noticed that he was not equal to the average baby in physical development, his father concluded to try a little training, to see if it would not help him. The child has been able to stand erect almost from the first of the training, and now is so far master of his movements that he securely balances himself on his father's hand held at arm's length. He swings from

a trapeze bar by his hands, stands on his head, walks, and arches his back like an athlete. He can lie flat on his back, and put his big toe in his mouth, or rise to a sitting posture by simply using the abdominal muscles, which is beyond the power of most men. Baby Stagg is probably the strongest child of his age in the world. He weighs twenty-one pounds. His first training was massage; now he can stand quite severe knocks, and with seeming enjoyment. His father has been very cautious about over-training him. 'It is not my intention to make a freak of the baby,' said Professor Stagg, 'or to see how much muscle he can develop. I want him to be as strong and healthy as he can be naturally with his physique.'"

Air-Jackets for Ships.—A Scottish inventor has devised a method by which a moving vessel may be surrounded with an "air-jacket" which serves to reduce the skin friction and so to increase the vessel's speed. Says the *San Francisco Call* in describing this device:

"The 'aspirator,' as the machine is called which supplies the air, is described as being self-acting and without any moving parts. It is a V-shaped air channel, which passes down the vessel's stem as far as the keel, and in most cases goes a certain distance along the keel. This channel may be either inside or outside the vessel, and is provided with certain protected openings or ports constructed in such a way that the water rushing past them produces a minus pressure within them, and consequently draws out a continuous stream of air, which, passing along the submerged surface of the ship, cuts off the immediate contact with the water, and therefore the water friction. It is the claim of the inventor that by means of his process a steamer makes her voyage in a continuous air-jacket. The air of course ultimately rises to the surface of the water, but if the ship be going at a fair degree of speed she will pass her whole length through the air current before it escapes. It is said that in the experiments made with steamships on the Tay there was an increase of speed amounting to from 21 to 26 per cent. of the ordinary speed of the ship, and it was noted that the greater percentage of increase was in ships that had the greater speed to begin with."

SCIENCE BREVITIES.

AN English authority on dentistry, quoted in *The British Medical Journal*, condemns in strong language unwarranted teeth extraction. He states that "teeth-drawing is not dentistry, and the supply of artificial dentures should no more be regarded as the chief aim of dentistry than the supplying of wooden legs is looked upon as the ideal of surgery."

THAT streams of water may be formidable means of electric communication was demonstrated, according to the daily press, during a recent fire in Brooklyn which played havoc with an electric car on the elevated road. "The arrangement of the electrical apparatus," say the *Baltimore Herald*, "had started a blaze which soon enveloped the car. When the firemen arrived upon the scene they, as is their custom, turned the hose on the flames. But the stream had no sooner reached the electrical connection than it became an active conductor, and a powerful current, running along the aqueous line, caused the crew holding the nozzle to see stars."

THE existence of a crystallized form of fibrin has been announced to the Paris Academy of Sciences by M. L. Maillard. The crystals are formed spontaneously in serum preserved aseptically for several years, and were first seen as feebly doubly-refracting albuminoid granulations. Later still, more regular crystals were discovered in tubes of antidiphtheritic serum, forming there by slow but regular precipitation, and "attaining," says Liouss, "if not the geometric contours of the great crystals, at least the structure and physical properties that characterize the crystalline state."—*Translation made for THE LITERARY DIGEST.*

"GERMAN SURGEONS made the discovery," says the *Hartford Times*, "that the delicate membrane that lines the inside of an egg-shell will answer as well as bits of skin from a human being to start healing-over by granulation in open wounds which will not otherwise heal. The discovery was made, for the first time in this country, on a patient in the Seney Hospital in Brooklyn, and it proves to be a successful trial. The patient leaves the hospital to-day and resumes his customary work, a well man. . . . Surgeons have long known that healing by granulation requires, in a weak patient, some point (or points) around which the granulations can cluster and grow. For this purpose they have had to rely upon bits of human skin, taken from some person who is willing, for love or money, to submit to the painful process of having these bits cut out. In this case, the patient's wife, his nephew, and a young man in his employ, all offered to furnish the required cuticle. But luckily one of the surgeons then remembered the German discovery, and getting some fresh eggs, tried the lining membrane of the shell. It proved a successful substitute."

THE RELIGIOUS WORLD.

DR. MIVART ON SCRIPTURE AND ROMAN CATHOLICISM.

PROF. ST. GEORGE MIVART'S theological activity is apparently unabated since his controversy with Cardinal Vaughan and his subsequent excommunication. Besides several communications in the *London Times*, *The Fortnightly Review*, and other periodicals, he appears once more in *The Nineteenth Century* (March) in defense of his attitude toward Catholicism, and in favor of a "liberal" interpretation of the Scriptures. Referring to the recent criticisms of Father Clarke upon his position (see THE LITERARY DIGEST, March 3), he now tries to make more clear what he regards as the "impassable gulf" which "yawns between science and Roman Catholic teaching," averring that "it is absolutely impossible for any reasonably well educated man to join the Roman Catholic Church if he understands what her teaching about Scripture really is." Dr. Mivart quotes from the "momentous decree" of the Vatican Council, as follows:

"And these books of the Old and New Testaments are to be received as sacred and canonical in their integrity, with all their parts; as they are enumerated in the decree of the said Council [Trent], and are contained in the ancient Latin edition of the Vulgate. These the church holds to be sacred and canonical, not because, having been carefully composed by mere human industry, they were afterward approved by her authority, nor merely because they contain revelation with no admixture of error, but because, having been written by the inspiration of the Holy Ghost, they have God for their author, and have been delivered as such to the church herself."

He quotes also the corresponding canon:

"If any one shall not receive as sacred and canonical the books of Holy Scripture, entire with all their parts as the Holy Synod of Trent has enumerated them, or shall deny that they have been divinely inspired, let him be anathema."

No distinction, says Dr. Mivart, is drawn between any of the Old- or New-Testament books, including what Protestants term "The Apocrypha":

"All of them, with all their parts, are alike declared 'sacred and canonical.' The tale relating how Tobit, aided by the Archangel Raphael, by means of a fish's liver, put to flight a homicidal demon, subsequently confined by the Archangel in Egypt, and the other marvel about the husbandman Habakkuk, of Judea, who, when carrying a bowl of pottage to his laborers, was seized by an angel, by the hair of his head, and carried away to Daniel, placed a second time in the lions' den, to supply the prophet with a dinner, are in no way declared to be less true or sacred than the books of the law or the more solemn exhortations of the prophets."

It is indisputable, says Dr. Mivart, that both this decree of the Vatican Council and the bull *Providentissimus Deus* of Leo XIII. render it out of the question for any Roman Catholic to explain away any Biblical narrative or historical statement without heresy. But is it, or is it not, true, he asks, that God is the author of Scripture in the way the Councils and Leo teach? After remarking that "the whole narrative of 'the Fall' is utterly incredible to moderns," as are also the Babel, Deluge, and Jonah stories, together with the "solar legend about Joshua," he says:

"But there are not only the intellectual incredibilities which have to be considered with respect to the Bible, there are also the terrible moral enigmas which are there found. Putting aside that bloody but direct command, 'Thou shalt not suffer a witch to live,' we have the revolting treachery of Jacob and his mother rewarded with the divine blessing! We have the horrible 'hewing in pieces, before the Lord,' by Samuel, of the unfortunate King Agag, after the wretched man had thought the bitterness of death was passed. We have, again, the vile examples of Jael and Judith set before us with praise, and the pusillanimous and deceitful conduct of both Abraham and Isaac with respect to their wives."

"Now these remarks about the Bible are of course nothing

new. Such objections have been made to its authority centuries ago, and repeatedly during that now rapidly drawing toward its close. But the questions to which we have here referred not only call as imperatively as ever for a decisive response, but very much more so since 1870, the date of the Vatican Council, and 1893, that of the Papal Encyclical.

"There are not a few earnest Catholic men and women who have been and are disquieted by the divergence between science and religion, and who most earnestly desire to be authoritatively informed in detail whether they need, or need not, regard the narrative about the Fall, about Babel, etc., as true. They are crying out piteously to their ecclesiastical mother to be fed with the bread of wholesome doctrine as to Scriptural truth. They might as well address a dumb idol, for no clear and decisive response will they obtain. Persons are generally under the impression that the authorities of the Roman Catholic communion preeminently love what is clear and definite, and like to have issues well defined. That church is supposed to thoroughly know her own mind, to say what she means and mean what she says, and to have the courage of her opinions. But the facts are not so. The church will not, because she can not, give a plain answer to a plain question of that kind. As to matters quite unpractical, the belief to be entertained by the faithful will be unequivocally declared, but not as to what men must, or must not, hold as to the animals which entered and left the ark, the history of Babel or that of Habakkuk, etc. The parade of trustworthy authority and infallible guidance is but a solemn sham, as is the profession of tender consideration for the souls of her children. Her action is that of one who has no real relief, no real zeal for her dogmata, or care for her children crying out to her in their distress. She gives stammering, equivocal replies. You must at the risk of your soul's salvation believe the decrees of the Councils, yet what they mean you may disregard. It is absolutely necessary for you to declare that the Bible contains no errors, yet you may regard a number of its narratives and assertions as widely divergent from truth."

"It is enough to make the gorge of any honest man rise through profound disgust at such trifling and double-dealing with things declared to be so sacred that matters of mere life and death are nothing in comparison. In very truth the Bible is a complex collection of most varied documents. They contain much that is admirable and valuable, but also legends, myths, contradictory assertions, accounts expressly falsified to suit later times, mere human fictions and words spoken in the name of the Lord without there having been any authority for attributing to them such a sacred character. There are writings which merit most reverent treatment, and there are stories no more worthy of respect than the history of Jack and the Beanstalk."

But altho, Dr. Mivart avers, the fact may be demonstrated "that Roman Catholicism is founded on absolute falsehood as regards Scripture and is intellectually untenable," no marked results are likely to follow that demonstration, because "the religion of the majority of mankind reposes not on reason, but on feeling":

"The many ties which bind Roman Catholics to their faith, and their great strength, I well know by personal experience. Still, little by little, intellectual progress makes its way. One by one, in many places, the number of the faithful diminishes. But the result of this process only becomes unequivocally manifest when we reckon by centuries. Putting aside the 'ages of faith,' and taking a period when Protestantism had done its worst, what a contrast is presented with respect to the still remaining power, prominence, and influence of Roman Catholicism, if we compare the latter part of the nineteenth century with the latter part of the seventeenth century! What may we then expect in the future? The Egyptian religion lasted more than six thousand years; what may be the state of the Christian religion in the year 4000? It is impossible to repress a smile as we ask, will its dogmata then be absolutely the same? A little flock of faithful souls there may yet be, but it is not by them that their doctrines will be understood. As we all know that the Bible is not comprehended by those who still regard it as 'the written Word,' but by outsiders who study and criticize it while entirely devoid of any belief in its supernatural character; so hereafter the doctrines which the surviving Roman Catholics will still venerate as the 'unwritten word' will be understood and rationally explained to those who are willing to hear, by students who regard

those doctrines from without, entirely devoid of any belief concerning them, save their relations to other departments and modes of action of the great process of evolution.

"In concluding, I thank Father Clarke not only for his courtesy to me, but yet more for his clear and valuable demonstration of what Roman Catholicism is, and what the admission of its claims necessarily entails. He has clearly justified all my assertions as to the authority of conciliar decrees and papal definitions, which carry with them the absolute freedom from error of all the parts of all the books deemed sacred and canonical by Trent, and thus prove that there is, till infallibility is repudiated, an absolute, impenetrable barrier between the domain of science and the Roman Catholic Church."

THE JEW IN FRANCE AND RELIGIOUS INTOLERANCE.

THERE are almost as many explanations of the antisemitic agitation in France as there are persons who write about it. M. Paul Bettelheim, in *The Nineteenth Century* (January), believes that the causes of the constant increase of this agitation during the last fourteen years are "partly religious, partly political, and partly social." According to the most trustworthy authorities, he says, all the Jews in France do not number more than eighty thousand. This, together with the fact that France, as long ago as 1791, was the first country to grant the Jews equal rights, makes the present outburst of hatred difficult to understand. M. Bettelheim thus tries to throw some light on this interesting question:

"Napoleon, wishing to merge as much as possible his Jewish subjects in the rest of the nation, called together a great 'Sanhedrin,' which met in Paris in 1806 and established the rules which to the present day govern the relations between the Jews and the Government. Among other important measures were those by which the Hebrew clergy were recognized and paid by the state, and those which admitted Jews into the national army. From that date until quite recently the life of Israelites in France had been undistinguishable from the life of other citizens. At the time when Macaulay first rose in the House of Commons to defend the bill to remove Jewish disabilities, the French had already seen Jewish officers in the army, Jewish judges on the bench, Jewish deputies in the House of Representatives. Israelites had mixed more intimately than in any other country with their fellow citizens; many of them, indeed, often forgot they were Jews, and remembered only that they were Frenchmen. No one would have believed that within sixty years the principles of tolerance which seemed so firmly established in France would become the object of the bitterest attacks.

"In 1836, a writer, then comparatively unknown, M. Edouard Drumont, published a two-volume 'pamphlet' entitled 'La France Juive.' This book, written in a somewhat desultory style, without any special literary merit, gained a great success by the dauntless courage with which it attacked some of the most powerful men in Paris society. A great number of libel actions and of duels were the consequence of this scurrilous work. 'La France Juive' was quickly followed by other books. In 1891, a daily paper, *La Libre Parole*, was founded with the express purpose of carrying on the war against the Jews; M. Drumont has remained at its head to the present day. Anti-Jewish deputies began to enter Parliament in 1893, but they did not form an appreciable group until 1895, when, owing to the Algerian troubles and to the Dreyfus case, a compact little antisemitic party managed to make its influence felt for the first time."

Altho this recrudescence of medieval antisemitism was due partly to social and political causes, it was largely owing, says the writer, to the clerical reaction from the persecutions of the church beginning about 1879 under Gambetta, Jules Ferry, and Paul Best, who carried on a perpetual warfare against clerical education:

"It would be out of the question to deal here with the other numerous persecutions to which the church was subjected, such as the expulsion of the Jesuits, the interdiction of processions,

the removal of all religious emblems from the doors of the cemeteries, etc. Suffice it to say that among the politicians who were responsible for all these things were to be found many Protestants (this helped to bring about the anti-Protestant movement, which is likewise agitating the country at the present time) and several Jews—Naquet, Raynal, and others. The latter, who certainly ought to have remembered that their first duty, nay, the first necessity for them, was tolerance, could not refrain from the temptation of paying back old grudges, and were among the fiercest persecutors of the Catholic clergy. Of the Republican papers which asked and obtained the expulsion of the Jesuits, several were in Jewish hands: the *Lanterne*, for a time the most popular paper in Paris, edited by Eugène Mayer, whose career ended disgracefully a few years ago; the *Nation*, owned by Camille Dreyfus, the deputy who was imprisoned as a black-mailer not so very long ago, etc. We can scarcely wonder after that at the Jesuits giving their financial and moral support to the anti-Jewish press. Besides, the Catholic clergy has understood within the last few years that it would be a clever maneuver to direct the ever-changing popular dislikes into a new channel, and thus it is that, to a large extent, the hatred of everything Jewish has now superseded the equally senseless hatred of everything Catholic."

MGR. MARTINELLI ON CELIBACY.

THE report that the Pope had dispensed with the law of celibacy among the South American priests has caused no little concern among Roman Catholics, some of whom were at first disposed to credit the rumor. The subject is important enough to have attracted the attention of Mgr. Martinelli, the papal delegate to the United States, who, in an article entitled "The Celibacy of the Priesthood" (*Harper's Bazar*), sets forth the history of the church law of celibacy. This regulation, put into effect during the life of Pope Gregory VII.—the famous Benedictine Hildebrand—A.D. 1073, made "the major Holy Orders an impediment to the Sacrament of Matrimony." Mgr. Martinelli writes:

"Non-Catholics, as a rule, believe that celibacy is part of the doctrine of the Catholic Church. This error will be readily perceived by a knowledge of Gregory's action and the papal legislation which has followed it. It is entirely disciplinary in its character, and in no sense is an article of faith. It is often believed, too, that all Catholic priests make a vow of celibacy, which is also incorrect. The Catholic Church holds, as decreed by Gregory VII. and the pontiffs who have followed him, that the major Holy Orders are a ban to matrimony. This papal mandate renders the marriage of a priest, deacon, or subdeacon, duly ordained, not only unlawful, but null and void according to the Church, and in Catholic countries null and void according to the law of the land. The marriage of a priest, deacon, or subdeacon, is regarded precisely in the same light as the marriage of a divorced person whose husband or wife is living."

There is, however, a certain branch of the church in the Orient—the Uniates—whose priests are permitted by Rome to marry. Mgr. Martinelli says further:

"This divergence has existed from the first ages of the Church. At the council of Nicea, 314 to 325 A.D., some of the bishops resisted the attempt to impose a life of celibacy on the clergy. History says they yielded a point, however, to their Western brethren, and consented to the regulation that no man could marry after ordination. It was permissible for a deacon to marry. About the fifth century this concession was withdrawn, and only a subdeacon was allowed to contract matrimony. The Eastern rite permits the marriage of subdeacons. It is a custom in the seminaries under this control to permit candidates for holy orders to leave the seminary before they have taken deacon's orders and to contract marriage. This permission is not always availed of. Indeed, the proportion is becoming less and less every year. The marriage must be contracted with a virgin. To marry a widow would be a bar to ordination. Nor can a second marriage be contracted. This practise, while permitted, is not encouraged, and the bishops are never selected from among the married clergy. These priests are restricted in their marital intercourse, are permitted to say mass only under certain conditions, and are

expected to practise some trade or lucrative occupation, aside from their pastoral duties, in order to support their families."

Of the idea that the Pope could not rescind the established order, without a council for that special purpose, Mgr. Martinelli writes:

"This is another error growing out of a misconception of the discipline which prevails. Leo XIII. has the same power to withdraw this order that Gregory VII. had to issue it. Nothing, however, is more unlikely. The South American priests do not desire and have never petitioned for such a dispensation. Through the prelates who direct them they sent their wishes to Rome last spring. A council was held in the Vatican, and there it was decided to take measures to reinforce all the disciplinary regulations which have made the Roman Catholic priesthood such a power for good. It is safe to predict that should Leo XIII. issue such a radical order, not one in ten thousand of the Catholic priesthood would take advantage of this permission."

Roman Catholic newspapers, commenting on this article, call attention to the domestic tribulations of the married clergy, which give such scope for ridicule among modern novelists.

RUSKIN'S ATTITUDE TO RELIGION.

THE attempt to classify Ruskin from the standpoint of religion has not proved a very easy task to students of his works. It has been said that he was both Catholic and Protestant at once, Tractarian and Calvinist. Miss Julia Wedgwood, who knew Ruskin during many years and who writes in *The Contemporary Review* (March), says that he was in a sense the heir of John Henry Newman, notwithstanding the fact that both would have denied the relationship; and his teaching, always delivered with the tone of a prophet, gathered up much of the attention which was fifty years ago withdrawing itself from the ebbing tide of Tractarianism. Yet there was much of the Scotch Protestant in him, too, she says:

"He has told us in his deeply interesting fragments of autobiography that his mother made him learn the Bible by heart, and has actually expressed his gratitude to her for the discipline. His Scotch blood somehow benefited by a process which might, one would think, have resulted in making him loathe the deepest poetry in the world's literature. The Bible has passed into his heart, his imagination, not less effectively than into his memory; so far he is a Scotchman and a Protestant. But he could not be a Protestant in an exclusive sense. We can not indeed say that his writings are untouched by this narrow Protestantism: his criticism of Raphael's well-known cartoon of the giving of the keys to Peter seems to me even a grotesque instance of it. To blame a great church painter for translating into pictorial record the symbolism of the command 'Feed my sheep,' instead of reproducing with careful accuracy the details of a chapter of St. John he may never have read—this we must confess to be a strange aberration of genius into something like stupidity. It is so far characteristic that it expresses Ruskin's hatred of the Renaissance; but it leads the reader who seeks to understand his real bent of sympathy astray. The spirit of the Renaissance was equally hostile to Catholicism and Protestantism. Ruskin, by birth and breeding a child of stern Scotch Protestantism, was by the necessities of his art-life an exponent of that which is enduring in the influence of the Catholic Church. For what has given enduring power to Rome, in spite of her association in the past with all that is foul and all that is cruel, is her hold on the vast, deep, lofty revelation that what we see and what we handle is not only an object for sight and touch, but a language unfolding to us the reality of that which eye hath not seen and shall not see. This truth, known in ecclesiastical dialect as the Real Presence, however contemptuously ignored or passionately denied in that particular form, is one that will never lose its hold upon the hearts of men; the church which bears witness to it survives crimes and follies, and manifests in every age its possession of something for which the world consciously or unconsciously never ceases to yearn. 'To them that are without, these things are done in parables,' is, in some form, the message of

almost every great spiritual teacher; it has never been set forth more eloquently than by Ruskin."

Ruskin's religious sentiment, says Miss Wedgwood, was interfused equally with the spirit of art and of "spiritual democracy." This social gospel of Ruskin's sprang from "that central core of his teaching, his belief in beauty as a Divine Sacrament" from which none must be shut out:

"The discovery that whole classes are shut out, that the bulk of the world's workers can not see the beauty of a tree or a flower, because sordid cares and physical wretchedness weave an opaque veil before their eyes—this discovery made Ruskin a Socialist. Why, he seemed always saying, should a message, in its nature universal, be silenced by luxury on the one hand as much as by penury on the other? The feverish hunt for wealth curtains off the influence of nature almost as much as the desperate struggle with poverty, while the commercial development which creates a few millionaires and a mass of overdriven workers (so he reasoned) creates also a hideous world. He longed to spread the truly human life. He hated the phase of civilization which cut off, as he thought, from whole classes of men the power to drink in the message of nature and of art. Those of his writings which deal with this subject fail to exhibit to my eyes the grace and force which belong to his earlier period. But their true spirit of brotherhood must be acknowledged by all. . . .

"He lived his faith, whatever it was, as fully as ever did a human being. I have said that those who admire him are sometimes thinking of different men, but that dual personality of which most of us are so mournfully conscious both within and without—the seeker after lofty truth, and the compromiser with what is low and narrow—of this he knew nothing. He was true to his aspirations; they may not always have been either wise or consistent, but they were always one with his life. A teacher can hardly have a nobler epitaph."

IS THE CHRISTIAN RELIGION DECLINING?

TO decide this question, says Dr. Charles A. Briggs, we must first determine what is genuine Christianity. The Christianity of dogma and popular "orthodoxy," of total depravity and of plenary inspiration of the Bible, is, he thinks, undoubtedly experiencing a "great overturning," which will assume still greater dimensions; but he regards this as a sign not of decay, but of growth, an "advance into the realm of freedom." Writing in *The Popular Science Monthly* (February), he asserts that there is no evidence that Christianity itself has declined:

"If men absent themselves from public worship because it is no longer necessary for them, as good citizens and as respectable members of society, to attend, or because they may get their instruction and stimulation elsewhere easier and with less expenditure of time and money, that is simply an evidence that attendance upon church in the past has been due in great measure to other than religious reasons, and that, these no longer holding, attendance has disappeared with them. The attendance upon public worship, tho reduced so far as number is concerned, is now more simply and purely for religious reasons, and therefore minister and people may with greater freedom make the services more distinctly religious."

"This is indeed the real situation that has emerged. The sermon has declined relatively in importance, and rightly so. It had an exaggerated importance in the Protestant Church, especially in the non-liturgical churches. There is a world-wide tendency now, which is increasing in power, to improve and enlarge the worship of the church. Liturgies and ceremonies of worship are more discussed now in the Protestant world than are sermons and lectures, because it is becoming every day more evident that the church is organized for common prayer and for public worship, and not merely to furnish a pulpit for a minister. The pulpit is more and more being merged in the worship, and is losing its domination over the worship. With this tendency goes increased attention to the Holy Sacraments, especially the Holy Communion, more frequent celebrations and more frequent participation, increased opportunity of worship during Sunday and during the week, and also therewith the greatly increased atten-

tion to the organization of the church for aggressive Christian work. Those who think that the pulpit is everything in the public service naturally suppose that with the decline of the pulpit Christianity declines, but those who think that public worship is the essential thing in the church rejoice at the changes that are taking place, and hold that Christianity is advancing. They maintain that it is not so important for the church to gather large crowds to listen to the sermon as it is for the church doors to be ever open, with frequent services for the convenience and help of worshipers at any time, without regard to whether they are few or many, assured that thereby a much greater number of people are reached and benefited than by the former limited methods."

Dr. Briggs does not credit the charge that the Biblical critics by undermining faith in the Scriptures have become responsible for decline in church attendance. In his opinion, Biblical criticism makes the Bible more attractive to the people, and its reading and exposition more interesting and influential in the church. He concludes as follows:

"A careful study of the situation makes it evident that the Christian religion is not declining in our land; but it is passing through a transition state, putting off antiquated dogmas, customs, and methods, and adapting itself to the modern world, and transferring itself so as to better accomplish its work. In no age has Christianity made more advance than in the century now drawing to a close."

THE "AWAY-FROM-ROME" MOVEMENT IN AUSTRIA.

THE "Los-von-Rom" (Away-from-Rome) agitation in Austria has attained somewhat serious proportions, if we may rely on the figures given in the *Evangelische Kirchenzeitung für Oesterreich*, the official Protestant organ of Austria. It presents the following data:

During the past three months, in German Bohemia alone the number of converts from Roman Catholicism to Protestantism was 836, namely, 374 men, 246 women, and 216 children. This makes a total in this province alone since the inauguration of this movement of 2,794 persons, namely, 1,404 men, 759 women, and 631 children. Only eighteen pastorates contribute to this report, which does not, therefore, embrace the other German provinces of the Austrian empire.

The facts and figures teach some lessons. A comparison of the localities shows that the movement is unevenly distributed, being especially strong in certain centers and almost entirely absent in others. The causes for this condition of affairs are various and their analysis would probably be of doubtful value; but the chief elements contributing to the results mentioned are doubtless of four sorts, namely, personal, local, historical, and ecclesiastico-religious. Then, too, there is a great difference between city and country in the spread of the movement, and a further difference in the choice made between the Lutheran and the Reformed Church. The agitation is essentially confined to the cities, and the bulk of the converts enter the Lutheran Church, altho the Reformed Church is numerically stronger in Austria. Again, there is quite a difference in the character of the cities contributing to the army of converts. The manufacturing centers, with their large proportion of workingmen, easily take the lead, the largest contingent being furnished by that hive of industry, Teplitz. Then, too, the evangelical cause is rapidly gaining ground in those districts that in the Reformation period were under Protestant influence, but where this church and creed were crushed by the counter-Reformation inaugurated by the Jesuits, who, however, were not able to crush out the Protestant memories in the populace. It is somewhat strange that such cosmopolitan centers as Carlsbad, Franzensbad, and Marienbad, where Protestantism has been long known through the many guests of this faith, have taken practically no part in the new Protestant propaganda. The fact that only a comparatively small number of children are found among the converts is to be explained from the fact that, according to the law of Austria, children between the ages of seven and fourteen are not allowed to change their

church. Probably the most remarkable feature in these statistics is the fact that the number of men converts is almost double that of the women. A large proportion of the men are young and unmarried. We have here a repetition of the fact so noticeable in the period of the Reformation, that the women cling much more tenaciously to traditional religious views than do the men.

When it is remembered that the Protestants of Bohemia numbered only 140,000 persons, the addition of these converts is a noteworthy increase, especially to the Lutheran Church, which had hitherto only a membership of 60,000. Some congregations have actually doubled their membership.—*Translation made for THE LITERARY DIGEST.*

DR. SHELDON ON FICTION IN THE PULPIT.

THE Rev. Charles M. Sheldon, in the midst of his preparations to show how he thought Jesus would conduct a daily newspaper, found time to pen an article for a church paper on the use of fiction in the pulpit. Dr. Sheldon himself first became widely known through his story, "In His Steps," which he read serially from his pulpit, and he is therefore well qualified to speak of this novel method of preaching the Gospel. Writing in *The Congregationalist* (February 22), he says:

"The use of fiction in the pulpit allows and invites the preacher to a wider range of subjects. The sermonizer may touch on man's duties at every point, and he may illustrate with practical force the application of Christ's teaching to the life of men on the earth in minutest detail, and still, at its best, there is a limitation to the range of subjects treated, if the sermon is to remain a sermon. The story, on the other hand, naturally has for its field of action the entire range of human passion or action. The congregation is not alarmed, nor disturbed, nor surprised to have the story deal with political reform, or business methods, or courtship and love. These subjects belong to the story as they do not belong to the sermon, and opportunity is given the preacher in his use of the story to choose and picture phases of life from a range of subjects unknown to the sermon form of truth. As an illustration of this wider range of subjects we may take the use of human love in the story form of truth. . . . Every young man and woman in our churches is reading love-stories all the time. The great majority of the stories, it is safe to say, are not Christian love-stories. They are based on passion and sentiment rather than upon the divine love which Jesus sanctioned. Here, then, is a field for Christian fiction in the pulpit. The love between man and woman is a part of human life. If it is not the right kind of love, it will wreck the home and destroy the family. That this great experience in human life should be entirely ignored by the pulpit, or used as the occasion for half a dozen sensational sermons on courtship and marriage, is a deplorable thing to contemplate. And the use of fiction in the pulpit opens up a splendid opportunity for the picture of the sacred, happy, Christian development of the love chapter in human life. I like to think that this field has an attractive power that will invite many and many a preacher into it."

The use of fiction in the pulpit also quickens and enlarges the preacher's sympathy with every-day human life, says Dr. Sheldon, so that it is in a double sense an educational force. Many preachers, he says, are taking up this form of pulpit work, and we may expect it to increase in vogue largely.

FIELD-MARSHAL LORD ROBERTS has lately ordered copies of a new prayer, written by the Archbishop of Armagh, Anglican Primate of all Ireland, to be distributed to the soldiers of his army in South Africa, expressing the earnest hope "that it may be helpful to all of Her Majesty's soldiers." The prayer is as follows, as given by *The St. James's Gazette*:

"Almighty Father, I have often sinned against Thee. O wash me in the precious blood of the Lamb of God. Fill me with Thy Holy Spirit that I may lead a new life. Spare me to see again those whom I love at home, or let me for Thy presence in peace."

"Strengthen us to quit ourselves like men in our right and great cause. Keep us faithful unto death, calm in danger, patient in suffering, merciful as well as brave, true to our Queen, our country, and our colors."

"If it be Thy will, enable us to win victory for England, but above all grant us the better victory over temptation and sin, over life and death, that he may be more than conquerors through Him who loved us, and laid down His life for us, Jesus our Savior, the Captain of the Army of God. Amen."

FOREIGN TOPICS.

FRANCE AND GERMANY.

MUCH of the hope that the Boers will ultimately be saved by the European powers is based upon the supposition that the German Emperor may intervene; but the German Government is convinced that Germany is the object of more hostile regard than any other country, and that she must prepare to defend herself against more than one enemy, should a quarrel leading to war arise. The organs which reflect government opinion especially distrust France. One of the latest causes of distrust is the attitude of M. Paul Deschaud, president of the Chamber of Deputies, who, upon his election to the Académie Française, expressed himself to the following effect:

My predecessor among the Immortals of the Academy foresaw that Germany would increase and that France would suffer reverses. Hence Hervé, after the war, was a strong advocate of an *entente* with Russia, to prevent the hegemony of Germany. France can not act as a rival to England and to Germany at the same time; to establish her power on the Continent she must have her coast free. It is easier for France to bring about an accord between England and Russia than for Germany to strengthen the friendship of Italy and Austria.

Coupled with demonstrations of this kind is the increased effort of the Roman Catholics to arouse discontent in Alsace-Lorraine. There is a paragraph in the constitution of the *Reichslande* which enables the governor to act without the Assembly, under certain circumstances. It has never been enforced; but the Catholics find it a hindrance, and demand its removal. Prince Hohenlohe, however, replied in the main as follows:

I have been governor of Alsace-Lorraine for nine years, and can say that people hardly ever bothered about the paragraph then. Minister von Koller, who was four years in office there, never even read the paragraph. This proves that its value as a means for agitation has only recently been discovered. I admit that the population is loyal in the main; but doubtless there is a minority who are not. In saying this, I do not intend to censure their attitude; I state but the facts. It is characteristic that the clergy should oppose the erection of a Catholic faculty at the University of Strassburg, for fear that French influence would vanish unless the students are restricted to the anti-German Seminary. Our relations to the French Government are the very best; but Alsace-Lorraine is borderland, and we must have the right to act quickly in cases of emergency.

In England there is much satisfaction with the Chancellor's speech, altho some papers question its prudence. The London *Spectator* says:

"The Chancellor only speaks the truth, but was it necessary, or even politic, to be quite so brutally direct? In any case, his words can hardly be pleasant reading to those Frenchmen who have been dreaming that if William II. could only be recouped out of the spoils of England they might regain their provinces without fighting Germany. South Africa, for example, is richer than Elsass-Lothringen. All those dreams vanish before the blood and iron of the Chancellor's speech."

The *Kieler Zeitung* remarks that Englishmen naturally are surprised to hear the truth spoken, especially as they affect to ignore the fact that Alsace-Lorraine was always inhabited by Germans, tho for a while in the possession of France. The paper also asks if it is really thought that the Kaiser could, if he would, part with German territory as with private property. Many Liberal German papers believe that fear of France is groundless. Indeed, French papers print comments of a sort which would have been impossible a generation ago. The Paris *Journal des Débats* says:

"It is not for us to judge whether the Alsacians are perfectly satisfied, or whether, as the Chancellor remarked, there is a

minority which thinks with regretful sighs of French times. What concerns us more closely is that the Chancellor admitted the cordial relations existing between France and Germany. The old wound is not yet healed with us; but we know that, if we are to persist in the colonial policy begun by Jules Ferry, it is England, more than any other power, that opposes French interests. We do not believe that cordial relations between France and England are impossible, for the world is big enough for them; but the actions of Mr. Chamberlain and his fellow ministers prove that they do not think as we do. We can not carry on a struggle on two sides, hence we must stand well with all the continental countries. We regret, however, that government organs like the *Kölnische Zeitung* are so very anti-French."

The Berlin *Deutsche Tages Zeitung* declares that neither France nor Russia can fully trust Germany unless Germany makes herself free from England. "*Los von England!*" (Away from England), says the paper; "England is never trustworthy, and she will treat us only the worse if she believes we are influenced by her."—*Translations made for THE LITERARY DIGEST.*

THE TEMPER OF THE BRITISH PUBLIC.

AN engrossing topic in the European exchanges is the present temper of the British public. There seems to be no doubt that the sentiment in favor of sustaining the war in South Africa until the conquest of the Boers is complete has been strengthened

THE PIG WITH THE GREASY TAIL.

LORD ROBERTS: "Hold har-rd a bit there, will ye? Let me have a thry. Shure it takes a countryman av mine to dale wid an animal like that."
—*Melbourne Punch.*

by the recent successes of British arms. Nearly all the popular English journals report a marked increase of respect in other countries for the British army since General Cronje was forced to surrender. In Canada, too, the prowess of the Canadian contingent is the subject of proud reflection. Thus the Toronto *Telegram* says:

"There is a fine and stirring contrast between the behavior of unseasoned Canadian soldiers outside Cronje's laager and the behavior of the unseasoned American soldiers at Bull Run. The significance of this contrast might have been elaborated under other circumstances, but in the interests of Anglo-Saxon unity Canadian journals have decided to omit all reference to the manifest superiority of their own countrymen."

The London *Times*, *Standard*, *Daily Mail*, *Daily Telegraph*, in fact most of the London papers, anticipated overtures of peace; but they claim that nothing but unconditional surrender will be accepted. "That point is as good as settled," says *The Times*. Most of the war press in London regard civic rights for Boers equal to those granted to the English-speaking population of South Africa as now out of the question. *The Saturday Review* says:

"There are those who declare boldly that the annexation of the

two republics by Great Britain should be prevented by the intervention of the European powers; and there are those who appeal to our magnanimity, or generosity, to spare a foe who has proved

CLEANING UP THE OLD WORLD.

UNCLE SAM: Well, John, this is our washing day, and no mistake.
JOHN BULL: Ah! it's nothing when you're used to it.

—*Montreal Star*.

himself worthy of our steel. . . . We hate the very sound of the word 'magnanimity.' It would be criminal on the part of our Government to jeopardize the future peace and good government of South Africa by any measures short of the inclusion of the Transvaal and the Free State in the British empire, the country being held under a military occupation until the time be ripe for its settlement as a crown colony previous to self-government."

Few people in England doubt that the war is as good as over. *The Spectator* says:

"We note that a few foreign papers are still confident that the British will be exposed to a true guerilla war, their writers forgetting that the Boers have farms to protect and cultivate, and have no England behind them, as the Spaniards had, to provide them with money and provisions."

The Speaker, Morning Leader, Westminster Gazette, the Manchester Guardian, and a dozen or so other journals of less note continue to advise moderation; but no demonstrations in favor of moderation are permitted, not even meetings for which cards are given out. Labouchere and many others who do not approve of the war have been mobbed. Exeter Hall was invaded by a mob anxious to break up a meeting called in favor of peace. Prof. Alexander Tille, of Glasgow, was mobbed by the students who had heard that he had written an article friendly to the Boers for a German paper, and who expressed their regrets when they heard that he had given nothing but a symposium of English comments. *The Outlook* compliments the British people upon their moderation in victory, and promises that the Boers shall be well treated, altho they must come under martial law. *Justice* (London), the Socialist organ, nevertheless thinks it is time for England to formulate terms of settlement.

Very few papers on the Continent of Europe express any hope that Great Britain will not crush the republics. The Vienna *Abendpost* is one of the few. It says:

"It may be said that the capitulation of Cronje as good as ended the British reverses, and therefore the war. A mountain has been taken from the English people. They were confident under misfortune, and will now prove that they can be great in the times of their success."

The overwhelming majority of European papers, however, ex-

press no such feeling. The comment has, on the contrary, increased in bitterness. The Vienna *Ostdeutsche Rundschau* furnishes a sample. It says:

"How they yelled with delight, these English, when brutal Kitchener, the bloodhound of the Sudan, refused an armistice even to bury the dead, the same English who could not talk enough of 'Armenian atrocities' when the Armenians were made to rebel to serve British interests. This most mendacious of all Christian nations has never shown its brutal character more openly."

The *Nedelia* (St. Petersburg) declares that "the loathing with which England is regarded may yet arouse passion sufficient to lead to an attack." The *Rossiya* demands intervention. It says:

"Public opinion in Europe feels that the indifference of the diplomats is dangerous. It feels that British impudence will grow beyond bounds if Britain is permitted to violate every principle of justice. History proves that the English are never moderate when they are in luck, and it is necessary to put a stop to their impudence ere the Boers suffer more reverses."

The Berlin *Krenz-Zeitung* says that the behavior of the English in their success "raises a stench sufficient to offend heaven itself." The *Nation* (Berlin), an advanced Liberal paper of great influence, calls on Russia to intervene. It says:

"Intervention must come if the Boers are to be saved. . . . Neither France nor Germany is situated in such a way as to compel acceptance of their mediation. . . . The United States, owing to its proximity to the Canadian border, could command respect in England. But McKinley has never shown himself the man who will act upon humanitarian principles, and he will not risk the votes of the Anglophile Americans for the sake of humanity. . . . There remains Russia alone. Russia should interfere in her own interest. . . . The Czar could obtain substantial advantages by doing so, and yet cover Russia with the glory of unselfish humanity. Will he do so?"

German resentment was especially aroused by the incorrect telegrams announcing that the German Emperor, the Austrian Emperor, the King of Italy, the Sultan, and other rulers, congratulated the Queen of England upon the victory of the British troops. The *Krenz-Zeitung*, the Junker paper *par excellence*, asserts that these sovereigns, especially Emperor William, were telegraphed to in the name of the Queen, in the hope that something showing their sympathy with the British cause might be construed out of their answers; but only the most guarded acknowledgment of the messages was received. The Paris *Journal des Débats* expresses itself in the main as follows:

With astonishing *naïveté*, the English demand that the whole world side with them in their abominable war. They never

A CARTOON FROM *The New Age* (LONDON) BY WALTER CRANE.

question any lie, however atrocious, that any one may invent about the Boers, and they expect everybody else to act the same way. There is an undercurrent [in England] against the war; but it is too insignificant to count. To speak publicly in favor of the Boers means to become a mark for all sorts of missiles. The journalist who writes against the war is dismissed. English jingoism is worse to-day than was our own in 1870. They do not even see how ridiculous it is to demand that people who have soberly studied the question shall regard the relief of Ladysmith as a step in the direction of civilization. Every Englishman will tell you that the Boers have lost their right to independence because they violated the treaties which guaranteed that independence. Ask Englishmen the contents of those treaties, and you will find that the overwhelming majority have never taken the trouble to read them. That the Americans are not with them in this war, the English do not know. Their admirably trained press takes good care that such news shall not reach them. It is characteristic that the Greeks should be described at this time as an exceptionally intelligent people. As a matter of fact, the British public show none of that critical sense which has been attributed to them.

Even in Japan the sentiment seems to be opposed to the war, and the *Yorodzu Choho* (Tokyo) explains as follows:

"Some writers disapprove of an attitude like ours toward Great Britain in this matter, on the ground that it might create an ill feeling against us in the minds of the British people. Such men are no better than fair-weather friends. They advise our countrymen to sympathize with Great Britain, because she is strong and rich, and it would not pay to lose such a friend, asking no question whatever as to the rightness or wrongness of her conduct. A real, steadfast friend straightforwardly points out what is wrong in his friend's conduct, advises him to stop it, and remains faithful to him in good as well as in bad weather. Let us be such a friend to Great Britain."—*Translations made for THE LITERARY DIGEST.*

KING MENELIK AND THE FRENCH.

IT has been hinted more than once that King Menelik, of Abyssinia, would endeavor to recover the provinces he lost to the Mahdists in 1884, and that he would do so while England is engaged in South Africa. According to the *Neue Zürcher Zeitung*, which has more than once acted as Menelik's official organ in Europe, the King has no such intentions. The paper says:

"All such rumors are French inventions; but the King has no intention to act as the cat's-paw for French ambitions. It is true that attempts were made to influence him against England when the war broke out; but Franco-Russian diplomacy suffered defeat, for Menelik saw through the game. When the special British embassy arrived at his capital in the middle of November, it was received with great honors. The King must be well pleased with the result of his negotiations with England, for he sent costly presents to the Queen, and British influence is doubtless increasing. The fact is that King Menelik hates war, and will not resort to an appeal to arms unless he is threatened. He realizes that his country profits much more by peace than by war. He is chiefly interested in the completion of the Djibuti-Harrar railroad, and he is much pleased with the telephone line from Addis Abbeba to Harrar, which has already great commercial importance. Telegraph lines are also in construction. The rumor of Anglo-Abyssinian complication was due chiefly to the news that the King's Swiss adviser, Mr. Ilg, had deferred his visit to Europe; but Mr. Ilg stayed only because the King wished him to be present at the reception of the British embassy. He is now coming to Zurich and will stay several weeks. It is also certain that the King will not come to the Paris Exposition, partly because the expenses connected with the trip would be enormous, partly because his nobles can not be trusted to keep quiet. That the British embassy has influenced Menelik in this matter is not certain, but the French plan to use the King as one of the special attractions of the World's Fair has grievously failed."—*Translation made for THE LITERARY DIGEST.*

WILL CONSCRIPTION COME IN ENGLAND?

THE war in South Africa has convinced the British that their armaments as they have been are not sufficient for the extensive operations which may be at any time required in the interests of their wide empire. "Some form of compulsory service is necessary to meet the growing exigencies of the empire," said Lord Rosebery recently in the House of Lords, and there are many people in England who now advocate the German form of conscription. We take the following from a typical letter in the *London Spectator*:

"In the letter addressed to you by the Rev. Robert Reade your readers will have seen, for the first time I believe, that an English clergyman who has worked in a poor London parish for ten years has arrived at the conclusion that the best remedy for developing, or rather for restoring, the physical and moral strength of our poorer town-dwellers is the adoption of conscription on the lines of the

German system. Mr. Reade, who writes from Germany, is evidently as well aware as many of us here who have studied the matter in both countries, that conscription has been the true source of German national strength, and national, as also individual, prosperity. Can we not form an association for establishing conscription, and submit the draft-plan for the same to men like Lord Wolseley, Sir William Butler, Mr. Balfour, Mr. Arnold-Forster, and Liberal leaders like Sir H. Campbell-Bannerman and Mr. Asquith? If clergymen like Mr. Reade, and traders like myself, in contact with most countries of Europe and oversea, have long felt the need of conscription from our different points of view, may we not hope that there are many others who are ready to express, and to follow, the same views?"

"Diogenes," in *The United Service Magazine*, says:

"Our imperial responsibilities have far outrun our military strength; to be equal to them we must become a great military power, which we are not. The system must be entirely changed, and if the empire is to be constantly extended, the nation must pay for it in flesh and blood, as well as money. The army must be made, not a pastime as now, but a serious profession, as it is in Germany, where all officers from the generals down do good eight hours of daily work and study."

W. T. Stead, in an article in his *Review of Reviews*, headed "England's Peril: How to Avoid Conscription," declares that expansion is too dearly bought at the price of conscription. He says:

"We are not going to submit to conscription in order to maintain 'the predominance of this empire.' No nation ever yet has submitted to so intolerable an incubus for any consideration less vital than that of self-preservation. France, Germany, and Russia submit to the blood tax, not to secure 'the predominance of

A DIFFERENCE.

UNCLE SAM: "That little Bob has legs over so much shorter than mine, but he's nailed his man, and I'm still hitting the trail in pursuit of my old college chum, Aguinaldo."

—*Montreal Telegram.*

their empire' over distant continents, but to protect themselves from the imminent danger of being overrun by their neighbors.

"Lord Charles Beresford showed a keener appreciation of the real sentiment of his countrymen when he said that conscription was so detested by the English that any attempt to enforce it would probably precipitate a revolution. If, however, any persons in a position of authority and of influence are under any delusion on that point, it will be well to take effectual measures to undeceive them. We are not going to begin this sacrifice of the flower of our youth before the shrine of Moloch at the bidding of Lord Rosebery or any other merely to secure 'the predominance of our empire.' 'Skin for skin, yea, all that a man hath will he give for his life,' and nations too may feel justified in submitting to conscription to save themselves from extinction. But conscription for mere lust of empire—Never!"

The St. James's Gazette dwells on the phrase, "few, but fit," as the key to the army problem, and says:

"A high degree of skill is impossible in every member of a huge conscript army. It is far from impossible for us. By that we won all the fights in which the English archers shot down the chivalry of France. By that we must repel any invaders now. Each gray-goose shaft in the old days meant a foeman's life; each cartridge must mean as much to-day. It is by this principle alone that we can be made impregnable at home, and we are very much mistaken if it will not be by the use of this principle (even at the eleventh hour) that our armies will finally achieve success in South Africa."

The Pall Mall Gazette also believes in spending more money on the soldier who can be obtained rather than in a large increase of numbers. It speaks as follows of the battle of Gravelotte:

"The Germans were presumably about as good as any conscript soldiers likely to be found. But tho they attacked repeatedly from noon till far into the night, the Germans never succeeded in dislodging the enemy, who withdrew unmolested in the early hours of the morning; but the cost to the Germans was close on 5,000 killed and wounded. Eliminating all minor causes of the German failure, the essential fact remains that, had their leaders been able to trust their men, as we have found we can trust ours during the last fortnight, the French position must have been carried at the first rush, and with a diminution in the butcher's bill of, say, 4,000, which, at £360 a head, runs into a very considerable figure—£1,440,000. Taking this at the lowest, a good soldier saves his country the cost of four moderate ones, and a bad soldier is worth many times less than nothing."

Conscription is an ugly word, and some of the papers prefer to avoid its use. "Who wants conscription?" says *The Times*. "What some people doubt is whether it may not be found necessary to enforce more stringently than at present the constitutional obligation to defend our own shores." The same paper thinks Mr. Arnold Foster did the country a service by dissecting the government statements regarding the troops in South Africa:

"He usefully reminded us of the hollowness of the boast that we have sent 194,000 regulars to the Cape, pointing out that the actual number from this country is 55,000 effectives, while at home we have 109,000 who can not even by courtesy be described as effectives. For the results actually obtained we have had to reduce our garrisons in India and in the Mediterranean to an extent which the country, without being in the least panic-stricken, is agreed in regarding as dangerous and unwise."

This much is certain: the British taxpayer must provide more bountifully for war material in the future. Says *The Times* on this point:

"It is no secret to any manufacturer, it is no secret to any foreign government, therefore it need be no secret to the British public, that when the war began we were seriously deficient in ammunition both for guns and for small arms. We are none too well provided now, in spite of the desperate and therefore costly efforts made to repair the inexcusable defect."

Despite the enthusiasm with which victories are received in England, there is no wish for compulsion exhibited among the

masses, if the papers most read by them are a trustworthy indication. *Lloyd's Weekly* says:

"Subjects of the British empire pride themselves on being free, and no compulsion will be needed to make them fight if once they see the empire menaced. The present crisis has abundantly proved this. Not one class of the community has been behind hand in patriotism, and the same spirit has animated the boy trumpeter Shurlock, the little bugler Dunn, who, almost a child, has been wounded in the forefront of battle, and the gallant young Duke of Roxburghe, who did not hesitate to risk his own life to save that of a wounded trooper hard pressed by the enemy. There will be no conscription, that is certain, because while the spirit of Britons remains the same none will be needed. At the same time there is much to be said in favor of making the army more attractive than it is to-day. How this is to be done is a question for the future, just as any general reorganization of our forces must also be. When the war is over these matters can be dealt with properly."

THE ENGLISH IN EGYPT.

THERE have been reports of disaffection in Egypt, and as the British press has been reticent on the subject, it is surmised in Europe that the reported revolt of Egyptian native troops may have assumed serious proportions. This surmise, however, appears to be groundless, tho suspicion on the part of the conquerors appears to have caused a measure of discontent among the troops at Khartoum. *The Cairo Muayad* says:

"The Egyptian officers are dissatisfied chiefly because all newspapers are denied them, with the exception of a couple of journals which are absolutely under British influence. Moreover, it seems as if every one not of English birth is regarded with utmost suspicion by the authorities, and when the soldiers were deprived of their ammunition, open revolt was the result. The men regained their cartridges by force, saying that they must have means to defend themselves against the Dervishes. It was on January 22, when eleven Maxim guns were sent from Khartoum to South Africa, that this occurred. The prohibition of newspapers was, of course, the result of British reverses in South Africa."

The Cairo correspondent of the *Paris Matin* writes as follows:

"The mutiny has been quelled, the cartridges were returned to the authorities, and the ringleaders will be punished; but the matter is not ended there. Lord Cromer is very much embittered. Only a few days before the revolt, he had informed the British Government that the native troops were absolutely reliable, and that as many British battalions could be withdrawn as might be needed. The awakening has been somewhat rude, especially as blood has been shed. The English try to hide this fact, but I can prove it. Yet the court-martial will be very lenient. Sir Francis Wingate, the Sirdar who has replaced Kitchener, is good-natured, and he has no intention to increase the disaffection of his soldiers. The cause of it is easy to find. The Egyptian officers are dissatisfied with the humiliations imposed upon them by the English. They are placed under the command of Englishmen of lower rank than themselves, are underpaid, and are not permitted to obtain high rank."

"Since the mutiny the English have asked the Khedive to exert his influence, and this has naturally raised his prestige, as formerly he was not consulted at all, to prevent the people from regarding him as more than a mere cipher."

"It would be a great mistake to suppose, however, that the Egyptians are likely to rise against the yoke. The French papers which assert this are altogether wrong. The fellahin care nothing at all about politics, and in the cities the population is sullenly resigned. Only the religious element can cause a serious rebellion. The Mahdists and the Marabouts are still the only dangerous enemies of English rule on the Nile."

Five of the discontented officers have been deprived of their rank, and sent to Cairo for trial.—*Translations made for THE LITERARY DIGEST.*

PERSONALS.

NOT TO BE OUTDONE.—James Russell Lowell was a great student of dialect. One day while in England he entered a South Shields restaurant, and sat down opposite a barefooted Shields yokel, who had been walking, and whose feet were tired. "Walter," he said, "bring me a steak and fried potatoes." The yokel leaned his elbows upon the table. "Bring me yan tee," he said. "Bring me a cup of coffee and rolls," continued Lowell. "Bring me yan tee," said the yokel. "And John, you may bring me a boot-jack," said Mr. Lowell. "Bring me yan, tee," added the yokel. "Why, what on earth can you want with a boot-jack?" asked Lowell, surprised into asking the question. The retort nearly took away his breath. "Gan oway, yo fule," said the yokel; "d'ye think I canna eat a bootjack as well as ye?"—*Glasgow Evening Times*.

MADAME PATTI'S AUDIENCE OF ONE.—An interesting anecdote is told of Madame Patti in *The Westminster Gazette*: She had arranged to sing at a big concert in America, but when the night arrived the weather was very bad, and she felt she could not venture out. At the last moment she notified the management, who in turn notified the public, and she retired to her room in her hotel. After resting there for some little time she was disturbed by the continual sobbing

FROM MAKER TO USER.

Singer Sewing-Machines cannot be obtained through department stores or merchandise dealers; they are delivered directly from maker to user only through our own employees. They are offered to the public on their intrinsic merits as the best device obtainable for family sewing.

CAN YOU TRY ONE FREE? CERTAINLY. Deliver it at your door, in our own wagon, upon application to any of our offices, located in every city in the world.

EITHER LOCK-STITCH OR CHAIN-STITCH.

ANY STYLE OF CABINET WORK.

Sold for Cash, or Leased. Old Machines Exchanged.

SINGER SEWING-MACHINES ARE MADE BY THE SINGER MFG. CO.

We have no agents or branch stores. All orders should be sent direct to us.

New Spring Suits, \$5.

The costumes and skirts which we make are exclusive in style and distinctly different from the ready-made garments. When wearing one of our styles you do not run the risk of meeting other ladies wearing garments which look exactly like yours. There are hundreds of firms selling ready-made suits, but we are the only house making fashionable goods to order at moderate prices.

Our catalogue illustrates an exclusive line of suits and skirts. We will mail it FREE, together with a choice line of samples to select from, to the lady who wishes to dress well at moderate cost. Our Catalogue illustrates:

New Skirts, in the latest Paris cut, \$4 up.
Tailor-made Suits, \$5 up. Wash Suits, \$4 up.
Wash Skirts, \$3 up. Rainy-day Suits and Skirts made of double-face materials.
Bicycle Suits, \$5. Bicycle Skirts, \$3 50.

We also make flannel garments and send samples of all grades. We pay express charges everywhere. If you will mention any particular color of samples that you prefer, we shall be glad to send an assortment of the kind you wish. Write to-day for Catalogue and Samples—you will get them free by return mail.

The National Cloak Company,

DON'T SEW ON BUTTONS!

Bachelor's Buttons made with Improved Washburne Patent Fasteners slip on in a jiffy. Press a little lever—they hold like grim death, but don't injure the fabric. Instantly released when desired. By mail, 10c. each. Also catalogue, showing collar buttons and other useful novelties made with these fasteners, free on request.

American Ring Co., Box 55, Waterbury, Conn.

of a little child in the next apartment. This crying became so distressing and hysterical that she felt impelled to find out what was the matter, and going to the room found a little girl in bed sobbing her heart out. After some coaxing and pressing Madame Patti learned that the child's mother had gone to the concert to hear her sing! "Mother's gone to hear Madame Patti, and I wanted to go, but mother said it was too wet and foggy, but she's gone and I wanted to go, oh! so bad. I never have heard Madame Patti sing, and she's going away to-morrow!" All this information and lament came out by degrees, Madame Patti goes on to say, and between gasps and sobs and grievous sighs. "I soothed the pretty thing as well as I could, and at last told her I would sing to her. But she would not hear of it; she wanted Madame Patti, and evidently thought I should make a very poor substitute. However, after a while I persuaded her to let me try—and not particularly graciously she consented, and I sang—for it was, I have said, only the muggy night air I was afraid of. I sang to the little girl, and she was gratified, and applauded and encored me. Presently I found her sitting up in bed and gazing at me intently, and suddenly she cried with pleasure in her voice, "Why, you are Madame Patti!" And the child's happiness seemed to be complete.

The King of Spain has started by not being king in name only. His self-assertion is exhibited in the following, taken from *The Westminster Gazette* (London):

Some of the sayings and doings of the little king of Spain find a place in an article on his majesty in *The Captain*. The little king, we are told, can handle a difficulty with firmness and tact. The Pope is his godfather, and having received an autograph letter from his holiness, Alfonso made shift to answer it himself. His mother looked over the royal epistle and altered a misplaced capital, suggesting that a clean copy of the note be made. "Not at all," said his majesty; "my godfather did not see the letter before you made that alteration, and so he won't know that I didn't make it myself. I shall send it as it is." And he did.

Another anecdote runs as follows:

The fact with which his majesty manages the Queen Regent gives place to more peremptory methods in the case of less august persons. Driving out one day with his governess, the little king

Excels Life Insurance or Savings Bank.

A deed for a home excels a life insurance policy or a savings bank account. While you live you enjoy it, and it is a safeguard when you die. See Wonderful Growth of Wealth, page 2.

grew tired of acknowledging the salutations of his subjects, and, to put it plainly, went on strike. His governess protested. Alfonso was firm. "Very well," said the lady at last; "if you do not obey me, I shall not allow you to go driving with me." "Halt!" cried the king to the coachman. The carriage stopped. "Here is a lady who wants to get down," said his Majesty, with provoking self-possession, indicating the governess. Every one smiled respectfully; the lady tried to look angry, and failed. Alfonso was master of the situation, and the carriage went on again.

MORE OR LESS PUNGENT.

A Sharp Truth.—He jests at scars that never shaved himself.—*Tale Record.*

A Natural Episode.—"Did the Brooklyn man die a natural death?" "Oh, yes, he was run over by a trolley car."—*Princeton Tiger.*

A Good Reason.—"Why don't you marry that girl? She is a real pearl." "Ah, yes; but I don't like the mother of pearl."—*Exchange.*

Discouraging.—"He says his wife learned to sing in Paris." "That may be. She certainly can't sing in Philadelphia."—*Philadelphia Bulletin.*

A New Gender.—TEACHER: "Willie, what's the masculine of laundress?"

WILLIE WISEGUY: "Chinaman!"—*Brooklyn Life.*

Disobedience to Orders.—"Fall in!" thundered the captain, as they were crossing the Tugela. "Not me, cap!" faltered the Dublin recruit. "O! can't shwim."—*Chicago News.*

Every One's Duty.—BASS: "What is the first duty of a man coming to America?"

BASS: "The duty he pays on everything he brings with him."—*Harlem Life.*

Classic Arithmetic.—BRUTUS: "Hello, Caesar, how many eggs did you eat for breakfast this morning?"

CÆSAR: "Et tu, Brutus."—*Exchange.*

How Foolish!—RIVERS: "I froze my feet going home in the street-cars the other night."

BROOKS: "That was an idiotic thing to do. My feet froze too, but I didn't freeze them."—*Chicago Tribune.*

Arbitration.—SEIMSON: "Willie, where did you get that black eye?"

WILLIE: "It's all right, father. I've only been civilizing the boy next door."—*University of Chicago Weekly.*

Mixed Spices.—"Don't you think he has wonderful control over his voice?" said the young woman. "No," answered Miss Cayenne. "I can't say I think that. He sings every time any one asks him to."—*Washington Star.*

One of Those Foolish Questions.—"Hello!" exclaimed Mr. Jay Ascum; "What are you doing? Building a new shed?" "No," replied the lung-suffering Mr. Outskirts. "I'm building an old one; can't you see I've torn the new one down?"—*Philadelphia Press.*

Accommodating.—"What have you got?" he

inquired, as he seated himself at a table in the restaurant. "Almost everything," replied the waiter. "Almost everything? Well, give me a plate of that." "Certainly. 'Hash!'" screamed the waiter.—*Ohio State Journal.*

Spring Poets.—MISS SCRIBBLER: "Why are so many poems written on spring?"

MISS RHYMER: "Oh, one can't help but write a poem on spring, you know! There's ring, thing, ding, king, sling, bring, sing, fling, wing, and a hundred other words all rime with spring, you know."—*Judge.*

Beginning Early.—VISITOR (viewing the new baby): "He's the very image of his father."

PROUD MOTHER: "Yes; and he acts just like him, too."

VISITOR: "Is it possible?"

PROUD MOTHER: "Yes; he keeps me up nearly every night."—*Chicago News.*

The Longest Sentence.—"How many of my scholars can remember the longest sentence they ever read?"

BILLY: "Please, mum, I can."

TEACHER: "What? Is there only one? Well, William, you can tell the rest of the scholars the longest sentence you ever read."

BILLY: "Imprisonment for life."—*Tit-Bits.*

Without Prejudice.—"My man," urged the Rev. Mr. Goodley, "can I not induce you to come into church?" "Oh! now, boss, I—er—" the poor tramp stammered. "I hope you have no prejudice against the church," the good man continued, eagerly. "No unpleasant recollection of your past suggested—" "Oh! No. I ain't got no grudge ag'in' the church. Mine was a home wedding."—*Philadelphia Press.*

Current Events.

Monday, March 20.

compromise between the Senate and the House bills.

Wednesday, March 27.

—The Boers opposing Lord Methuen at Warrenton, on the Vaal River, are retiring toward Pretoria.

—The Swiss Council has replied to the Boer republic's appeal for mediation, regretting inability to grant the request.

—Cecil Rhodes sails from Cape Town for England.

—Secretary Hay and Ambassador Cambon sign a protocol, extending for one year the time set for the ratification of the Franco-American reciprocity treaty.

—Admiral Dewey is warmly received in Savannah.

Thursday, March 28.

—General Roberts reports that burghers in the Free States continue to surrender their arms and return to their farms.

—The Boers report the defeat of General Gattiere near Bethulie, Orange Free State, and the repulse of the Mafeking relief column under Colonel Plumer.

—In the Senate, the conference report on the Puerto Rican relief bill is discussed.

—A treaty providing for the settlement by arbitration of claims of American citizens against Nicaragua is signed at the State Department.

—D. Appleton & Co., the publishers, assign.

Friday, March 29.

—General French, with a cavalry brigade, is operating east of Bloemfontein, Orange Free State, trying to intercept the Boers retreating northward.

—The relief column under Colonel Plumer has been forced to retreat northward by the Boers, who are investing Mafeking.

—James Lyall, acting British consul at Ciudad Bolivar, Venezuela, is assassinated while leaving his office.

—The conference report on the Puerto Rican relief bill is adopted by a party vote of 35 to 15.

—Ex-Congressman Maerum arrives in Washington, to appear before the House committee on foreign affairs.

Saturday, March 30.

—Skirmishing is reported in Natal, where the Boers are strongly entrenched.

—The session of the Italian Chamber is suspended on account of disorder.

—At the request of Mr. Furaker, the pending Puerto Rican bill was sent back to committee, in order that the tariff and civil government features may be separated.

—In the House, the conference report on the Puerto Rican relief bill is adopted.

—The ceremony of beginning work on the rapid transit tunnel takes place in City Hall Park.

—The cable Chess match is won by Americans, by score of 6 to 4.

Sunday, March 31.

—General Clements enters Philippolis, in the Orange Free State, and reads Lord Roberts's proclamation to the burghers, many of whom give up their arms.

—The total British losses thus far are estimated at 16,418 killed, wounded, and missing.

—The coal famine in Germany continues.

—The harmony committee on the Puerto Rican tariff question meets.

—Plans are proposed by which the number of naval officers may be increased.

—Gabriele d'Annunzio, the novelist and poet, joins the ranks of the Socialists in the Italian Chamber.

For General Debility Use Horsford's Acid Phosphate.

Dr. W. L. SEVERANCE, Greenfield, Mass., says: "For years I have prescribed it in general debility, nervous exhaustion and insomnia, with the happiest results."

A Bicycle Free.

The Mead Cycle Co., of Chicago, is offering an up-to-date 1900 model bicycle to any person who will act as their agent. The employment is easy and consists of distributing 1,000 catalogues in your own town. This seems an easy way of getting a good wheel and if you want one and can give good references, write the Mead Cycle Co., Department 36M, Chicago, Ill.

Life Insurance Fr. e.

You can make an investment that will make you money should you live, and you will have free life insurance, a safeguard for your family should you die. We predict that no such opportunity will be available again. Judiciously handle the pennies and your fortune is made. An investment of 3 1/4 cents a day on each \$100 will prove a wise and profitable investment. See Wonderful Growth of Wealth, page 2.

This Stove

weighs 4 lbs., is of solid brass, with tinned iron standards. It is 8 1/4 inches high and 8 1/4 inches in diameter at the top. It will boil a quart of water in four minutes, or do a six pound roast of meat to a turn in sixty.

No smoke or bad odor. It is a gas stove, producing its own gas from kerosene, yet is perfectly safe. Its cost for fuel is only one-half a cent an hour. A quart of oil will run it for five hours. Flame is perfectly regulated or instantly extinguished. The stove is handsome and should last a lifetime. It costs \$3.75.

For use in kitchen, in camp, on yachts, or anywhere a compact, portable and good stove is needed.

Write and let us tell you more fully of its convenience and economy.

THE PRIMUS CO., Dept. A., 197 Fulton Street, New York.

Damp Days of Spring and Cool Nights of Fall

demand a thoroughly heated house for comfort as well as a protection

against sickness. The Jackson Ventilating Grate

stands alone in its profession of sanitary and economical heating.

Three quarters of the heat from an ordinary open fire goes up the chimney. The furnace and steam-heater eat fuel all day and all night, whether heat is needed or not.

During these seasons one Ventilating Grate will heat your entire house if it be of moderate size, at one-half the cost that your present system incurs. It burns either coal, wood, or gas, and can be fitted into any ordinary fireplace.

Write at once for catalogue "D" on Spring and Fall Heating...

PRACTICAL painters say that when they come to repaint a house which has been painted with ready-mixed paint or combination White Lead (so-called), it costs more to prepare the surface than to apply the paint.

The moral is to use only **Pure White Lead**, because it is not only more durable, but is always in good condition for repainting. These brands are genuine.

FREE For colors use National Lead Company's Pure White Lead Tinting Colors. Any shade desired is readily obtained. Pamphlet giving full information and showing samples of colors, also pamphlet entitled "Uncle Sam's Experience With Paints" forwarded upon application.

National Lead Co., 100 William Street, New York.

Pocket Size
Standard
Novels.

The thinnest printing paper in the world
is used in making the

NEW CENTURY LIBRARY

Dickens' and

Thackeray's Works

are now being issued simultaneously; one volume per month. Each novel will be complete, unabridged, in a single volume, size only 6 1/2 x 4 1/2 inches and no thicker than a monthly magazine. They are equally suitable for the pocket, library, or satchel.

The type is standard library size, slightly larger than that you are now reading, clear and easy to read, and although the paper is so thin it is remarkably opaque. They are neatly bound in cloth, \$1.00 per volume; leather limp, \$1.25, and leather boards, \$1.50. "A real delight to lovers of Dickens and Thackeray." For sale by all booksellers.

The *Cincinnati* says of the first volume (Pickwick Papers): "It is really a gem of a book" and "one of the most remarkable feats of modern bookmaking."

Already published: *Dickens*—"The Pickwick Papers," "Nicholas Nickleby," "Oliver Twist," "Sketches by Boz," "Old Curiosity Shop," and "Martin Chuzzlewit." *Thackeray*—"Vanity Fair," "The Newcomes," "Pendennis," "Henry Esmond." Sample pages and prospectus "D" mailed free on request.

HAVE YOU MONEY TO LOAN AT 6 PER CENT?

New York City Real Estate Security for Double the Amount. Interest Payable Quarterly.

IT has been decided by the Managers of the Prohibition Park Company to accept additional loans for a limited amount of money, for which 6 per cent. interest-bearing Deposit Certificates will be issued in denominations of \$10 each.

INTEREST will be forwarded to the holders of Certificates quarterly. The principal will be payable at any time on thirty days' notice. The Deposit Certificates are secured by deeds of unencumbered real estate and mortgages to double the amount of the Certificates, deposited with L. K. Funk, President of Funk & Wagnalls Co., as collateral. In addition to this security, the Deposit Certificates are a first lien upon all the assets of the Prohibition Park Co.

The security makes the loans absolutely safe. The money will be used in completing the improvements and in beautifying Prohibition Park (Westerleigh), Borough of Richmond, New York City.

WHOLE NUMBER, 520

Published Weekly by
FUNK & WAGNALLS COMPANY.

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

WHAT THE PRESS THINK ABOUT THE PUERTO RICO TARIFF.

A SURVEY of the American press shows that the question of tariff or free trade between Puerto Rico and the United States still holds a leading place on the editorial pages, from Boston to Honolulu. A large majority of the papers, as we noted last week, are strongly in favor of free trade with the island.

New England.

The Boston *Transcript* (Rep.) says: "If we insist upon exacting tribute from the suffering island, we shall be acting the motherland very strangely. It will be more like the stepmotherland of the conventional type." The Boston *Advertiser* (Rep.) believes that, aside from the injustice of the proposed tariff, "it is unwise to insist upon a policy condemned by most of the leading Republican newspapers of the country and plainly distasteful to a large portion of the party." The Boston *Herald* (Ind.) goes so far as to say that "unless we can rid our minds of the notion that, like Spain and France, and England in the last century, dependencies under our control are to be exploited for the benefit of our own people—and this is what this form of tariff legislation means—the sooner we rid ourselves of these dependencies, the better it will be both for our national honor and material well-being." The Boston *Journal* (Rep.), however, favors the tariff bill, and warns the Connecticut tobacco-growers that if we have free trade with the island, they will have to admit the Puerto Ricans into partnership in the cigar trade. The Providence *Journal* (Ind.) welcomes the protest against a Puerto Rico tariff as a "cheering indication that public spirit is not decadent in this country, that the people do not like public officials who do not dare to do right, and that partizanship does not blind men or newspapers to the highest considerations of humanity." The Manchester (N. H.) *Mirror* (Rep.) calls the tariff bill "not a bill for relief or justice to Puerto Rico, but for the benefit of the sugar

and tobacco interests," and the Burlington (Vt.) *Free Press* (Rep.) says that the Green Mountain State is solidly opposed to the measure. The Springfield *Republican* (Ind.) thinks the arguments for the bill preposterous, and requests Mr. Hanna to "treat the American people as if they had some little intelligence." The Hartford *Courant* (Rep.) quotes at considerable length the argument of a Puerto Rican in favor of free trade, and remarks that "comment would be superfluous." The Worcester *Spy* (Rep.) favors free trade.

New York.

In New York City *The Tribune* (Rep.) and *The Press* (Rep.) favor the proposed tariff heartily, and *The Mail and Express* (Rep.) and *The Commercial Advertiser* (Rep.) consider the bill the best that can be passed under the circumstances, altho they are not so outspoken in praise of it as the first two papers. *The Sun* (Rep.) favors free trade, but is willing the 15-per-cent. tariff bill should pass, if the tariff is to be merely temporary. *The Times* (Ind.), *The Evening Post* (Ind.), and *The Herald* (Ind.) are heartily in favor of free trade, as are also *The Journal* (Dem.) and *The World* (Ind. Dem.).

Philadelphia.

In Philadelphia *The Press* (Rep.) favors the tariff measure, declaring that "the clamor against it is the result of misapprehension, selfishness, spite, and low partizanship," but *The Inquirer* (Rep.) says that if the objection to the tariff bill is "serious enough to endanger much-needed legislation for Puerto Rico, by all means let it be dropped." *The Ledger* (Ind. Rep.) is one of the leaders in the campaign against the tariff. *The North American* (Rep.) says that free trade "is the path the Republican Congress must take if the Republican Party is not to be led into a morass of difficulties. It is good policy to do our plain duty." *The Evening Telegraph* (Rep.) considers the long delay over the matter an "unpardonable outrage," and demands the immediate passage of a free-trade measure. *The Times* (Ind.) says of the proposal to pay over the tariff revenues for the support of the island government: "It would be simply grotesque to levy tariff taxes and give them back to the people, as it proclaims the broken faith of our Government and exhibits only ludicrous and contemptible misfit statesmanship." *The Record* (Ind. Dem.) thinks the proposed tariff a tobacco and sugar-trust measure.

Chicago.

In Chicago *The Inter Ocean*, one of the most loyal Republican papers in the United States, calls the proposed tariff "an outrage," and says that Congress must choose between "plain duty and plain perfidy." *The Times-Herald* (Rep.) goes so far as to say: "When we begin to erect tariffs against territories 'belonging to the United States' we may as well prepare to pull down the flag—for we can not square the condition with American principles and American history. The tariff line marks the boundary where republicanism becomes imperialism, for which the Republican Party will not stand." *The Evening Post* (Rep.) also strongly opposes the tariff. *The Record* (Ind.) observes that "several Republican Congressmen who voted for a tariff for Puerto Rico will have the pleasure of remaining at home while their successors vote for free trade." *The Journal* (Ind.)

says that nothing less than the fulfilment of General Miles's promise to the Puerto Ricans, guaranteeing them equal privileges and immunities with citizens of existing American Territories, "will satisfy the public conscience or appease the public demand." *The Chronicle* (Dem.) declares that in the Republican program imperialism is "plainly avowed." *The Tribune* (Rep.), after holding out a considerable time for free trade, accepts the compromise tariff measure.

The Middle West.

In the Middle West, the region which was considered doubtful in the last Presidential campaign, the protest against the tariff is especially strong. *The Cleveland Leader* (Rep.) says: "Republican policies can not safely or successfully be turned away from the instinct of right and justice involved in the demand for free trade between the United States and the little island which welcomed the American flag with high hopes and every demonstration of joy. Republican leaders ought to know the history of their party too well to trifle with its moral sense." *The Cincinnati Enquirer* (Dem.) thinks that the defeat of plain justice to Puerto Rico is due to "the greed of the monopolists which now prevails in the executive and legislative departments of the Government." *The Toledo Blade* (Rep.) says, however, that the matter "has been obscured in the public mind." The distress in Puerto Rico, it says, is due to "the tornado which devastated the island a few months ago," and "no change in revenue laws nor in the form of government can do anything to alleviate it." The question of revenue "is a purely business one," it continues, and will be settled accordingly. *The Cleveland Plaindealer* (Ind. Dem.) believes that "what the President has so well termed 'our plain duty' will be found at this juncture to be superlatively good politics." *The Indianapolis Journal* (Rep.) strongly favors free trade. *The Indianapolis News* (Ind.) says that the arguments against the tariff measure may be called sentimental, "but the people will prefer sentiment to a breach of faith or to the assertion of a right to maintain a despotism anywhere on

News (Ind.), in the same strain, says that "at the demands of these [sugar and tobacco] trusts Congress is making one of the most cruel experiments in governmental vivisection that a nation ever undertook, and the President is seeking to justify it in the name of American labor." *The St. Louis Post-Dispatch* (Ind.)

THE DELIGHTS OF ANNEXATION.—*La Discusion, Havana.*

predicts that the triumph of the "commercial politicians" will "surely be short-lived." *The St. Louis Globe-Democrat* (Rep.) favors the tariff. "A tariff," it says, "if applied, will touch its people so lightly as to be imperceptible. Puerto Rico has reason to rejoice over American liberality." *The Burlington Hawk-Eye* (Rep.) takes a similar view. "Our Senators and Congressmen at Washington," it says, "have no thought of oppressing the Puerto Ricans. It is amazing that any portion of the Republican press could have entertained for one moment such an absurd thought." *The Milwaukee Sentinel* (Rep.) takes quite a different view, however. It says: "If the voters of the United States think that protected interests should control the policy of the United States toward its new possessions, then a refusal of free trade to Puerto Rico is 'good politics.' If the voters do not believe this, then it is Mr. Hanna and the Republicans who agree with him that are doing the party most harm." *The Minneapolis Journal* (Rep.) says that "it will not hurt the Republican Party to abandon this mistake, and the Republicans look with hope to the Senate to save the party from persisting in a dangerous error," and the *St. Paul Pioneer Press* (Rep.) puts it still more strongly by declaring that "the country will not tolerate the idea of skinning Puerto Rico for the supposed benefit of highly protected industries." Looking further West, one finds the *Topeka Capital* (Rep.) opposed to the tariff measure. *The Kansas City Journal* (Rep.) says: "In their efforts to be loyal to a 'party measure' the Republicans in Congress have supplied the Democrats with a large amount of campaign material in the shape of clippings from the prominent Republican papers of the country." The report that the tariff measure will probably be passed causes the *Kansas City Times* (Dem.) to observe that "this finally agreed upon program of the Republicans makes it doubly certain that they will depend on the slush fund raised by the trusts and tariff barons to carry the coming election, in the face of the unmistakably serious defection in their own party ranks, which has been caused by the enactment of this flagrant breach of faith, this outrage against humanity and justice, this contemptuous brushing aside of the Constitution, this indefensible legislative crime." *The Omaha World-Herald* (Dem.) is quoting anti-tariff arguments from the Republican papers with considerable satisfaction, and the *Salt Lake Herald* (Dem.) remarks that "President McKinley should enforce his censorship a little more strictly," and asks, "What is the censor doing? Can not this appeal to the American sense of honor and love of justice be suppressed?" *The Salt Lake Tribune* (Ind.), however, thinks the Democrats are not actuated purely by considerations of mercy and humanity. It says: "The Democracy has been out in the

PUERTO RICO: "I may be heavier on election day."—*The Chicago Record.*

the face of the earth under the American flag," and the *Indianapolis Sentinel* (Dem.) declares that "the Puerto Rican question has served to link the causes of imperialism and trust domination tightly together. Nothing can now separate them, and nothing can separate them from the Republican Party." *The Detroit*

cold for four years. It is crazy for the loaves and fishes, and so it is gathering to itself every discontented man, every fault-finder, every man with an ism or a fad. It is invoking race prejudices, and hopes, out of the mighty accumulation of political dyspepsia, to gather a majority." The *Denver Republican* (Rep.) trusts the wisdom of the party leaders. It says: "According to our best judgment the Republican Party committed a deplorable error in adopting the single gold standard, but it is now and always has been sound and wise in its tariff legislation, and a majority of the voters will heartily approve whatever law it may finally enact on that subject for the people of Puerto Rico."

The South.

Turning to the Southern press, one finds the *Baltimore American* (Rep.) strongly opposed to the tariff bill. It says: "While the supporters of the bill are confident of its passage, their assurance does not alter the 'plain duty' of the Republican majority. That duty is to give the island free trade, and the employment of argument grounded only on party expediency can not change it." The *Baltimore Sun* (Ind.) remarks: "Cecil Rhodes, the cynical South African imperialist, recently pronounced the British flag the most valuable 'commercial asset' which his diamond company possesses. Are the people of Puerto Rico to learn from bitter experience that the flag of the United States is a mere 'commercial asset,' owned by the trusts and unfolded only when there is a dollar in sight?" The *Washington Star* (Ind. Rep.) says: "Puerto Rico and Hawaii are now American territory. Their interests are our interests. We can not afford to exploit them, or to retard their growth, for the benefit of private interests here or there." The *Washington Times* (Dem.) remarks bitterly that "the American community of Puerto Rico may starve to death, but the trusts must still be fattened," and the *Richmond Times* (Ind. Dem.) asks: "What have these poor people in Puerto Rico done that they should be made the victims of an oppressive tyranny like that under which we hold them?" The *Charleston News and Courier* (Dem.) also opposes the tariff bill, and the *Atlanta Constitution* (Dem.) calls it "a cowardly and heartless attempt on the part of the Republican leaders to rob and defraud and deny the rights of a people which had received our troops with open arms and gladly gave up their connection with Spain in order to become a part of the great American republic." The *Nashville American* (Dem.) says: "Party necessities may force the passage of the bill, but it will be a heavy load for the Republicans to carry during the campaign." Coming to the sugar-fields of Louisiana, one finds considerable opposition to free trade with the sugar-growing island of Puerto Rico, and the *New Orleans Times-Democrat* (Dem.) and *Picayune* (Dem.) both favor the Republican tariff bill. The latter paper says: "Pity for the Puerto Ricans or Cubans does not warrant the destruction or injury of any American industry; hence the talk that free trade is due Puerto Rico as a matter of right and justice is arrant humbug." The *Houston Post* (Dem.), however, calls the Republican tariff position "indefensible," and says: "The American voter can not be less observant than the undeceived Puerto Rican. He must see also that the trusts and not the Constitution, that organized selfishness and not the people, dictate the course of Republicans in control of the Government. It remains to be seen whether this American voter will deliberately permit himself to be handcuffed and plundered."

The Pacific Coast.

The press of the Pacific coast are also deeply interested in the tariff measure. The *San Francisco Chronicle* (Rep.) favors free trade. It says: "The lawyers may perhaps quibble over the meaning of the words of the Constitution, altho we believe the legal meaning to be clear, but neither lawyers nor anybody else can quibble with justice or make the American people believe

that any American citizen should be deprived of his rights," and the *San Francisco Call* (Ind.) says: "The more the country considers the problem of the Puerto Rican tariff the stronger becomes the conclusion that protection and imperialism can not be made to work together without a good deal of friction and more or less kicking." The *San Francisco Evening Post* (Rep.) says that "the moment any one endeavors to justify such a departure from constitutional precedents as is involved in the enactment of the Puerto Rico bill he falls into a slough of legal contradiction from which it is impossible to extricate him." The *Seattle Post-Intelligencer* (Rep.), however, favors the tariff bill, and thinks the opposition to it is ill-advised. It says: "If the Republicans who are playing the Democratic game by joining in the chorus of foolish and hyperbolic criticism do not know better, they are not to be congratulated upon their intelligence." The *Spokane Spokesman-Review* (Ind. Rep.) looks with sorrow upon the "squabble" in Washington while the Puerto Ricans are suffering for the necessities of life, and says: "If the confidence of American islanders in both oceans is to be gained it will require a different method than that adopted in Congress in the month past." The *Portland Telegram* (Ind.) says that the proposed legislation is "unworthy a statesman or an honest man," and the *Portland Oregonian* (Rep.) thinks that the quality of the statesmanship displayed is the most important phase of the whole matter. It says: "What especially concerns the country is this striking proof that protected avarice and greed have been able to control the House of Representatives and overbear the President, against plain duty, manifest justice, and the interests of industry and trade between peoples under the common flag of the United States."

The *Hawaiian Gazette* and *The Star*, of Honolulu, fear that if a tariff is established between Puerto Rico and the United States, the next step will be a tariff that will bar Hawaii's products from United States markets, and they are watching the course of the bill with considerable anxiety.

SECRETARY HAY AND THE "OPEN DOOR" IN CHINA.

THE promises of the European powers that they will not interfere with our business in China are again stirring up comment as Secretary Hay makes public the written notes containing the guaranties. These notes guarantee that whatever influence England, France, Germany, Italy, Russia, or Japan ever exercises over China, or any part of it, the treaty rights of the United States, and of all other nations, with China, will be respected; and neither our citizens and commerce, nor those of any other nation, will be placed at a disadvantage by any discriminating tariff laws or other laws. All nations are thus placed upon an equality in the campaign for Chinese trade; none can exercise such influence over part of China as to bar out the rest. The *Philadelphia Press* (Rep.) says of the agreement:

"Once accepted by all nations, this declaration will, as past precedents show, be enforced by all nations. Important to each European nation, this concession is of paramount value to the United States, whose Pacific-coast line is the greatest on that ocean, whose posts encircle and cross it, and whose trade is destined to be greater than that of any other nation. During the twentieth century this new 'doctrine' established for China is destined to be as important as the Monroe doctrine has been for the Americas in the past century. It protects the present, it safeguards the future, and it establishes the United States in an impregnable position antagonizing no nation, entangled with none, and demanding for all and of all equal rights guaranteed by past treaties and accepted by this new 'declaration.'"

The *New York Evening Post* (Ind.) says: "This is a noble work of peace. Mr. Hay has extended the saying that he serves

his party best who best serves his country, and converted it into the larger truth that he serves his country best who best serves the whole world."

The *Journal des Débats* (Paris) says, as reported by cable:

"The United States has incontestably just achieved a great success, and has, moreover, rendered a true service to other interested nations, among whom France has the greatest reason to congratulate herself on what has been done. We were the first to sign the declaration when asked by Secretary Hay, and this is not the only mark of confidence which reigns between the two countries. Everything indicates that the old cordiality still obtains in our mutual relations, and what has just occurred at Rouen shows no opportunity for a demonstration of friendship will be allowed to pass."

British sentiment, as revealed in the cabled comments of the London press, is of considerable interest. Says the *London Daily Mail*: "America has forever renounced the policy of the hermit. She pledges herself to take a leading part in the greatest task of the coming century—the reform of the Chinese empire. The attitude of the United States has a cryptic but yet weighty warning for the merchants of Europe, who have hitherto thought it desirable to bolster their trade by all manner of restrictions of competition. America, in her foreign trade, disregards competition, and some day she will learn the same lesson for her home trade. It is a triumph for President McKinley." The *London Chronicle* says that "from England it was only to be expected that the answer would be favorable, but that Russia should have replied that she is happy to comply with the wishes of the United States bears eloquent testimony to the position which the latter power has assumed in the councils of the world." The *London Times* says:

"The Government and people of the United States are to be congratulated upon the successful achievement of a considerable service to the world. The credit of having formulated the 'open-door' policy belongs to England, but the honor of winning for it the formal acceptance of the powers has fallen to our American kinsmen."

"Nowhere outside of the United States will this signal success of American diplomacy be welcomed so gladly as it is welcomed here. Secretary Hay has contributed, in no small degree, to weaken the grounds of serious international complications pregnant with danger to the world's peace."

"It is perhaps doubtful whether the united action which Washington anticipates as a means of procuring reforms in China is within the range of practical politics, but we must hope for the best."

The doubt expressed in the last paragraph of *The Times's* comment is also seen in the remark of the *London Standard* that "the real value of such assurances, which in no wise alter existing conditions, will be seen only when the disruption of China comes to pass."

So, too, think some of the American press. The *Springfield Republican*, for example, says:

"A perusal of the correspondence sent to Congress shows that, so far as the 'open door' is concerned, the situation remains unchanged, and that the lawful rights of the United States are no better established than they were before. France, Germany, and Russia, in their notes, merely reaffirm the policies which they had already proclaimed, and, so far as the future is concerned, they offer nothing but 'assurances' which have no binding effect upon future governments. The United States Government can enter into no contract or convention, and can make no pledge, without the consent of the Senate; and, as our Government is so situated, the assurances of the foreign governments regarding the 'open door' must be seen to have no potency. Mr. Olney, whose experience as Secretary of State gives weight to his opinion, estimated these assurances at their real value in his recent *Atlantic* article, in saying:

"Our appeals are said to have brought forth satisfactory 'assurances.' But such 'assurances' can hardly be regarded as definite obligations, nor

as more than expressions of present views and intentions, nor as being more unchangeable than the views and intentions themselves."

"While good may come from securing notes from the powers simply reaffirming policies already adopted by them, it is difficult to see how and where a great diplomatic triumph has been achieved, or how the Chinese problem has been changed or simplified. America's rights remain where they were—in her treaties with the Chinese Government. If other powers invade our treaty rights in China, it would be the duty of our Government to protest and to uphold American interests, just as in the case of any other country, whether in Europe or Asia, where they might be attacked."

THE CŒUR D'ALENE RIOTS.

SUCH conflicting reports and opinions are current regarding the riots and the subsequent reign of martial law in the Cœur d'Alene mining region of Idaho last spring, that few papers have yet arrayed themselves either on the side of the miners charged with destroying \$250,000 worth of property with dynamite, or on the side of the military rulers charged with barbarous cruelty toward the same miners imprisoned in the stockade or, as the miners called it, the "bull pen." The *New York Sun*, a strongly Republican paper, thinks that "there can be no excessive appreciation of the heroic and manly figure" of Gov. Frank Steunenberg, of Idaho, a Silver Democrat, who called on the President for troops and quelled the rioting. Governor Steunenberg told his version of the case last week before the House committee on military affairs, which is investigating the whole matter, and he took full responsibility for the acts of the military in Idaho. *The Sun* says:

"The riot of the strikers had assumed so grave a form, that it amounted to levying war against the State and the nation. The strikers burned buildings, held up railroad trains, and murdered men. Law and order were banished. The militia of Idaho were in the Philippines, and the armed forces of the State were powerless in the emergency. Then the governor called upon the President for aid. The troops, when they arrived under the command of General Merriam, were subject to the governor's orders. So far from the civil power being subordinated to the military, the reverse was the case. The martial law that was proclaimed was proclaimed at the governor's instance. It was the governor who arrested and imprisoned miners and placed them in a stockade in lieu of a better place of detention. It was the governor who declared that the strikers should not be permitted to return to the places they had devastated unless they gave guaranties for their future good conduct. It was the governor who took charge of the business of suppressing the entire insurrection, and whatever was done was done by him and at his orders. No one who remembers what happened there can deny for an instant that all that was done was done rightly and properly. Despite his Populism and his labor-unionism the governor protected the property and the other rights of the people of his State like a brave and honest man."

"A weak or dishonest man, if governor of Idaho, would have appeared before the congressional committee and endeavored to besmirch the President and make political capital out of the newspaper howl that has been raised. Not so with Frank Steunenberg. He told the truth and appealed to the good judgment of all self-respecting citizens for the approval of what he did. Every American worthy of the name will say all honor to him."

A quite different view of the matter, however, appears in the following comment by the *Detroit Evening News* (Ind.), which says:

"Despite Governor Steunenberg's bold acceptance of responsibility for all the arrests and detentions under military rule in the Cœur d'Alene district of Idaho, the testimony brought out in the congressional inquiry has been sufficient to satisfy the average American that the condition about Wardner were such as should never be permitted to exist in a free country, and such as could not long have existed in a more accessible portion of the United States, where the facts would have been more promptly and more

widely disseminated. Enough has been developed to convince any unprejudiced observer that the United States military were operating practically under the command of wealthy and powerful mine-owners and operators, and that the latter took every advantage of the unrepudiated license thus afforded to inaugurate a system of terrorism, destructive of every conception of liberty; and that they used their brief and unrighteous authority for the satisfaction of personal grudges and even for fouler objects, including commercial coercions which amounted, in intent at least, to robbery.

"It has been repeatedly testified that men were offered immunity or release from arrest if they would enter into certain business contracts so disadvantageous to themselves that their voluntary consent could never have been secured; that men who were not in or near Wardner at the time of the riots and destruction of property were brought long distances and made to suffer the unnecessary and brutal hardships of the 'bull-pen' for no better reason than that, at some time or other, they had incurred the displeasure of the capitalists who, by the aid of the military, had usurped the place of government; that methods abhorrent to our own or any other civilized form of government were adopted in the effort to obtain testimony against suspected or proscribed persons; that subornation or perjury by threats was rife, and that conditions generally were such as no good citizen of the Republic, no believer in the justice and wisdom of any constitutional guaranties, no lover of liberty, and no opponent of oligarchy can contemplate without astonishment and indignation.

"There can be no question that the troubles out of which these abuses grew presented a serious and puzzling problem, but declared rebellion itself could not justify some of the methods that were adopted in an effort which seems to have been less to restore peace than to establish social, political, and economic supremacy of the operators."

THE MACRUM CHARGES AGAIN.

I NTEREST in the case of ex-Consul Macrum was revived last week by his appearance before the House committee on foreign affairs, where he told the story of the interference with his mail and telegrams in South Africa. On the same day that he told his story, the news came out (in a letter from Secretary Hay to Chairman Hitt of the House committee on foreign affairs) that our State Department has been having some correspondence with the British Government concerning the opening of Mr. Macrum's mail by the British censor in Durban, and that Mr. Macrum's allegations were found to be true, and "a very satisfactory apology was returned." The *New York Times* (Ind. Dem.), which thinks that Macrum has an exaggerated idea of his own importance, says of his testimony before the House committee:

"Poor Macrum! Thanks to the mistaken kindness of the House committee on foreign affairs in assuming that the ex-consul's requests for an investigation of his charges were sincere, his microscopic wrongs and his mountainous follies are now public property. The result is that the final condemnation of his course, long held back by the hope that the man had some slight excuse other than treachery or cowardice for his flight from his post of duty, will at last be pronounced by his countrymen, and the best he can expect hereafter, even from the most charitable of them, is contemptuous pity. And really it was a pathetic exhibition that he made of himself when the opportunity which he had so often asked and so adroitly evaded was, to his obvious dismay, actually forced upon him, and he had to tell the ridiculous trifles out of which he and a few sensational newspapers had tried to manufacture an international grievance. All he could say was that two entirely unimportant letters had been opened by mistake, and that an unnamed person had seen in an unnamed paper a bit of worthless information that might or might not have been secured through the deciphering of a code despatch! Such, when reduced to the bare facts, was the mystery the elucidation of which was to set two great nations by the ears, sustain Macrum's claim to the honors of martyrdom, and convict the President and his Cabinet of base subservience to perfidious Albion. Fortunately for the ex-consul, it is easier to laugh at

the outcome of the inquiry than it is to work up effective anger over his past misbehavior."

The opposition papers, however, believe that the British apology confirms their contention that Consul Macrum is altogether right, and that Secretary Hay and the President have too much consideration for British interests. Thus the *St. Louis Republic* (Dem.) observes:

"Premier Salisbury of the British cabinet having confirmed the truth of former American Consul Macrum's charges by apologizing to Secretary of State Hay for the opening of Macrum's official mail by the British censor at Durban, there is but little interest now attaching to the congressional investigation of the Macrum incident.

"This investigation, however, may with reason take up the point as to whether the Salisbury apology was sufficient in form and terms. The diplomatic offense contained in the opening of one government's official mail by another government is quite serious. Lord Salisbury should have been required to tender in writing a full and formal apology for that offense. It is doubt-

TOO MUCH HAY.—The St. Paul News.

ful if Secretary of State Hay, sadly lacking in regard for American dignity, held the British Premier closely to this requirement.

"By rights, also, and as a matter of diplomatic courtesy, Secretary of State Hay and British Ambassador Pouncefote should apologize to former Consul Macrum. When that faithful American first preferred the charge that the British censor tampered with mail from the American State Department addressed to him at Pretoria, Secretary Hay advanced in defense his opinion that Macrum was a liar. He also secured an expression to the same effect from Lord Pouncefote. It is plain that both were wrong. Mr. Macrum is not a liar. An apology is therefore due for having said that he lied.

"This, however, need not be insisted upon, as it is a bit out of the ordinary routine of diplomatic red tape. But it must be seen to that the British Government has made the proper amends for intercepting, opening, and reading the American Government's mail. Secretary of State Hay is too easy-going about these matters. He is likely to reason that any old thing is a good enough apology where British domination of American consulates is concerned."

A Check to Prize-Fighting.—After the first day of next September exhibitions of prize-fighting will be illegal in New York State. By an almost solid Republican vote, the Horton law has been repealed in the legislature at Albany. Says the *Philadelphia Evening Telegraph* (Rep.):

"The Horton law . . . has for the past year been one of the

greatest scandals which has occurred in the political history of the Empire State. Briefly, the statute permitted boxing-matches to be carried on by any club that could obtain a license, these contests being limited to twenty-five rounds of three minutes each, the gloves worn not to weigh less than five ounces. The result of this law was to practically legalize prize-fighting. . . . There can be no doubt whatever concerning the propriety of passing the bill which has repealed the Horton law. It was an iniquitous piece of legislation that should never have been allowed to deface the statute-books. It was nothing but a money-making scheme hustled through the legislature a year or so ago by the lowest class of politicians and district heelers. Nothing could more clearly show the character of these boxing clubs than the fact of each one of them being subservient to a man of the Dry-Dollar Sullivan type, low, debased characters whose sole idea was to fill their own coffers at any price. No man is likely to have his moral character injured by learning to box, nor should an ordinary sparring match have any debasing influence upon the members of the community who may care to witness such affairs. When, however, any organization is able to clear over \$250,000 in one year, as the Broadway Athletic Club is doing in New York City, it is surely absurd for its managers to claim that they are in business for their health, and are also holding sparring matches for the purpose of honest sport and for the instruction of the amateur public."

A CUBAN VIEW OF CUBAN CONDITIONS.

EDWIN WARREN GUYOL, editor of *La Lucha*, Havana, in an interesting view of American rule in Cuba which he gives in *Harper's Weekly*, corroborates Major Runcie's picture of General Brooke's administration, presented in these columns last week, but paints a more cheerful picture by adding what Major Runcie left out—a sketch of General Wood's management of Cuban affairs. General Wood's appointment, says Mr. Guyol, "gave hope to the Cubans throughout the island, reports from Santiago having long shown that the Easterners believed in this doctor-governor." He goes on:

"Since his arrival there has been more actual visible, beneficial work done than there was during the entire year gone by. Where Brooke came to his office at 10 A.M. and went driving in the afternoon, Wood is to be found at his desk by eight, an hour for lunch, another for dinner, bed at midnight. And the rapidity with which he grasps a subject enables him to accomplish a tremendous amount in a given time."

"Where Brooke asked and blindly accepted advice from one or two men, then allowed them to do as they pleased, Wood consults a dozen, then issues instructions, and sees that they are obeyed. Where Brooke received 'reports,' Wood makes personal inspections. Where Brooke 'filed' or 'respectfully referred' complaints, Wood conducts an investigation."

"Wood declares himself candidly, and proves his declarations to be sincere. His policy, which he will carry out to the end unless interfered with by Washington, can be summed up in a few words. He will trust Cubans always, and help them prevent themselves from betraying the confidence. He will convince these people that he is sincere in his desire to place them on their feet, by showing them that he realizes that he needs their assistance to insure their success, and that successful accomplishment of the task before him means his own future assured."

"Cubans are being shown every consideration by Wood, who appreciates their natures thoroughly, and understands that what might appear trivial to an American may mean the lasting friendship or enmity of a Latin."

"He will use the greatest care in selection of incumbents for public office, and will unhesitatingly remove his own appointees should they prove unworthy."

"He intends that the judicial and educational institutions shall be as nearly perfect as possible, and that they shall be the bases of the Cuban governmental establishment."

"The brightest sign, in Wood's eyes, is the apparent anxiety of children and adults to obtain education. This desire is so

manifest that schools are being opened as rapidly as furniture and books can be obtained."

Contracts for \$500,000 worth of school furniture, including 100,000 desks, have just been made for the Cuban schools, and it is expected, says *The Independent*, that where there were only 4,000 pupils in the schools under Spanish rule, there will soon be 200,000. Much of the credit for this is said to be due to Alexis E. Frye, the superintendent of schools, who is developing the Cuban schools along lines of his own planning. Mr. Frye gives his salary to the Cuban orphan asylums. The next step after the reformation of the schools, continues Mr. Guyol, is the revision of laws. "This," he says, "is in the hands of two commissions of lawyers—Cuban and American, three each, with an independent commission of two Americans to advise on special points. The plan on which they will conduct the work is one of mutual consideration, suggestion, and adoption. Reformation of the judiciary will come next, beginning with the magistrates and notaries, and closing with the supreme tribunal."

Next month will come an event of great importance for Cuba, and of great interest to the people of the United States—Cuba's first election under the new *régime*. Says Mr. Guyol:

"Mayors and municipal councils will be elected. The electoral commission is now hard at work on plans for suffrage and polling regulations. What they will adopt, I can assert, will be somewhat as follows: Qualifications will be, in accordance with the desire of the people, such as to permit suffrage as near universal as it is safe to approach. Knowledge of reading and writing; two hundred and fifty dollars in money or property, or a certificate of service through the war. Cubans by birth, but naturalized American citizens, may vote on relinquishing rights as such."

"The blanket ballot will be used, polled in secret except when the voter can not read. In such cases the ticket will be read to him in the presence of representatives of each party. The oath as to truth of representations regarding qualifications will be exacted from each voter, and determination to subsequently investigate all claims and prosecute for perjury will be impressed on the public beforehand."

"Every effort will be made to convince the people of the advisability of eliminating factional spirit and presenting as few parties as possible. In spite of all efforts, some towns will run as many as fifteen candidates for the mayoralty."

"Qualifications for candidacy will be—knowledge of reading and writing, freedom from any criminal record or pending criminal charge, and indorsement by at least ten per cent. of the voting population of the corporation represented."

"The present acting mayors will be required to manage the elections with their own police, no soldiery to be used unless in case of rioting. There will be no policemen at the polls, merely patrolling the cities."

"The people generally will be urged to remember that they are approaching the crucial point; that the elections will be accepted as a criterion of what they can do for themselves; that this is the crisis; that officers now elected are only to serve one year; and that, with so many interested parties eager to see Cubans display characteristics inimical to a nation wishing self-government, it will be better to vote for an enemy than create a disturbance."

"We all believe that these elections will come and go without any trouble whatever, and are confident that we will have no cause for regret of our faith in Cuba and the Cubans."

After the election, thinks Mr. Guyol, real independence for Cuba will be in sight. First, he says, "will come the beginning of the wind-up of American military occupation":

"Commencing in June, troops will be returned to the States. Six thousand will go, leaving us in the neighborhood of four thousand. These will be composed of cavalry to move around when necessary, and artillery to care for forts and guns."

"The rural guard as a body will be done away with, except in the wild districts of Santiago, Puerto Principe, and Santa Clara provinces. Instead, the municipal police will be mounted in suburban villages, and will maintain surveillance over rural property."

"Then Cuba will, for the first time since her discovery, settle

down to a purely civil life, with no fear of interference from an arbitrary military régime.

"Let Leonard Wood alone, and it is safe to assume that he will, during one more year, have insular affairs in such shape that he will conduct general elections, elect a president and congress, have a constitution framed, and turn over to a grateful people what he wishes to build as much as they to have—a model republic."

EFFECT OF GENERAL JOUBERT'S DEATH.

WHAT effect General Joubert's death will have on the duration and outcome of the South African war is just now the subject of considerable discussion. Occurring while Lord Roberts was recuperating his forces at Bloemfontein, just before the beginning of his northward advance, the loss of the commanding Boer general is

thought to be a particularly untoward event for the Boer cause. Indeed, the London correspondent of the *New York Tribune* believes that this "will mark the beginning of the end of the Dutch resistance." The *New York World* says that in General Joubert's death "the Boers suffer a loss not less than the British would should General Roberts die, and scarcely less than the Germans would have suffered had von Moltke passed away on the day after Sedan." Not all take this view, however. General Olivier's successful march around the British flank, and the Boer trap by which a British detachment with six big guns were captured last Saturday lead some to think that Boer strategy still lives.

General Botha, it is said, will take General Joubert's place as commander-in-chief of the Boer forces. General Botha has made his reputation wholly during the present campaign, and it is said that foreign officers serving with the Boers have expressed surprise at his clever tactics. The *Philadelphia Times* says that "as a matter of fact, the strategy of the Boers has been of so obvious a character that the effect of Joubert's loss is likely to be more important in a personal and political than in a military sense. The Boer campaign, apart from the excursions of small bodies of light troops, has now resolved itself into a simple question of holding an inner circle of strong defenses, and this they should be able to do without the need of any scientific generalship, provided they main-

tain their determination and do not fall out among themselves." The *Baltimore American* says, in a similar strain:

"It remains to be seen what effect his death will have on the war. Following so closely the defeat and capture of Cronje, it would, under ordinary conditions, be a crushing blow to the Boers. But it is doubtful if General Joubert has for several months done more than give his influence to the cause. He was severely wounded early in the war, and since then the names of other commanders have figured conspicuously in the various operations of the campaign. He was great as an organizer as well as a fighter. The remarkable organization of the Transvaal army, by which it could be mobilized for active service in forty-eight hours, and the tremendous accumulations of stores of food and munitions of war, were proposed by General Joubert and carried out under his supervision.

"His influence will be sadly missed by the Boers. His plans, however, like those of von Moltke, have been so carefully prepared and so thoroughly impressed upon the Government that his lieutenants will probably be able to execute them with reasonable precision. The Boer is a natural soldier, and the commanders of the Boers appear to be natural generals. The world has thus far learned more about the Boers than their officers, with the exception of Joubert and Cronje. But De Larey, De Wet, Pretorius, and Olivier are men out of substantially the same mold. Olivier has just accomplished the marvelous feat of marching 5,000 men, with 2,500 wagons, between the immense army of Roberts and the heavy forces concentrated below Roberts for his capture. Joubert's death is a great loss, but the British have plenty of fighting before them."

General Joubert was nearly seventy years old, and the exposures and hardships of the Natal campaign are thought to have been the causes of his death, which resulted after a few days' illness in Pretoria. The *Philadelphia Press* says, however, that his death "spares a brave man the sad, inevitable day when the skill of General Roberts and the overwhelming numbers of the British force a way into Pretoria"; and the *New York Journal* says:

"The soil of the Transvaal Republic is unviolated. The virgin fortresses of Pretoria have not yet seen an invader. No doubt General Joubert would have wished his hand and brain to help his countrymen in their last stand, but for himself he could have asked nothing better than to be taken away while the inevitable fate was still in the future. His fame is secured. He has not been subjected to the ordeal of defeat. Always successful when fighting was possible, he withdrew his forces in good order and without loss when irresistible numbers made it necessary for him to take up new bases. Few commanders have ever practised Fabian tactics more successfully. Joubert was a specimen of the best type of the Transvaal Boer. His French blood refined the primitive Dutch instincts and gave him adaptability to the conditions of modern life. If he had been in control instead of Kruger the Transvaal would probably have kept step with the outer world sufficiently to avoid giving cause for war. Whatever becomes of the Boer republics, Petrus Joubert will remain a South African hero as long as there is a Boer people."

The Delagoa Bay Award.—The dispute which has just been settled by the Swiss jurists at Berne is explained, and its bearing on the South African war pointed out, in the following paragraphs from the *New York Commercial Advertiser*:

"Briefly, Portugal [in 1883] gave a concession to McMurdo, an American, to build a railway into the Transvaal. He formed a construction company in England and went to work. President Kruger, for obvious reasons, wanted this to be a state railway, like his own, which continued it to Pretoria. He did not want private British and American capital interested in the only outlet to the coast, which might some time become of supreme military importance to the Republic. After preventing completion of the road by prolonging a boundary dispute, he prevailed on Portugal to confiscate and complete it, recognizing responsibility for damages to McMurdo and the British construction company. Where Portugal got the money to complete the road, and how she ex-

GEN. PIET JOUBERT.

pected to satisfy claims for damages is not known. She is as poor as the Transvaal is rich.

"This was in 1889. The case went to arbitration next year, the British and American governments having taken up the cases of McMurdo and the construction company. The Swiss federal council appointed three jurists as arbitrators, and they have been sitting for ten years. The award at last is about half the lowest sum expected. It is something over \$3,000,000, with simple interest at 5 per cent. for eleven years, about \$5,000,000 in all. The actual claims for physical value of the road were \$1,500,000 by McMurdo and \$7,500,000 by the British company, and the value of the concession as a charter, based on earning power, has been estimated at from \$15,000,000 to \$30,000,000. . . .

"There was a time when it was thought this decision would precede a *coup* in the war by enabling the British to take Delagoa Bay, cut off men and supplies, and take a short cut to Pretoria. On the contrary, the award preserves the *status quo*. Portugal can certainly raise \$5,000,000 and keep her colonies."

CAN SOCIALISM CURE THE DRINK EVIL?

AMERICAN Socialistic leaders and periodicals have during the past few years advanced with much earnestness the claims of Socialism as a remedy for the drink evil. The Prohibitionists, however, have vigorously combated these claims, and in support of their point of view there recently appeared in *The New Voice* (Chicago) an interesting article from the pen of William E. Johnson, who has been traveling in England and Scotland as correspondent for that paper. He selected Glasgow and Huddersfield as the field of his investigations, for the reason that municipal ownership and "practical Socialism" are partly in operation in these cities. He says:

"Glasgow has done about everything possible for the workingmen save abolishing the rum-shops. She has erected for them homes in every portion of the city, which are rented to the poor at a nominal rate. Widows and widowers have two well-equipped homes where they are boarded at almost a trifling sum, and the babies are cared for by city nurses while the breadwinners are at work. Penny baths are erected by the municipality in all parts of the city where workingmen reside. Municipal tramways take laborers to their work at from one to two cents. Municipal ferries take workmen to the shops for five miles down the Clyde for two cents. Municipal concerts are free for the workmen in the evening; municipal lectures free; free night schools, with free courses in business and technical studies. A free employment bureau is maintained by the city to seek work for the unemployed. Almost without exception the city takes the part of the workingmen in labor disputes. . . . All this has the city done—but she has also licensed 1,746 grog-shops. . . . Forty-five thousand persons are arrested for drunken rows every year, and an annual average of 1,200 women are assaulted by drunken husbands—one hundred and seven poor women thrashed by their husbands each month."

In Huddersfield the outlook for temperance is not much brighter. Says Mr. Johnson:

"For a quarter of a century Huddersfield has had the reputation of being a 'Socialist city.' While all the things planned in Bellamy's Utopia have not been attempted, yet not a public function exists, save the telephone, which is not owned and operated by the municipality, and arrangements are now being made by the city for a municipal telephone service. . . . Nevertheless, the police statistics for the past five years show that during this period the total arrests have steadily grown; the arrests for drunkenness have, on the whole, slightly decreased; the number of saloons has remained substantially stationary, while it has been necessary to employ more policemen to keep order."

To the arguments of Mr. Johnson, *The People* (organ of the Socialist Labor Party, New York) replies as follows:

"As to the Socialistic character of Glasgow and Huddersfield, it amounts to just this: The municipal governments have carried out some beneficial, but very insufficient, measures for the relief of the working-people there. Among them may be mentioned cheap municipal street-cars and ferries, good lodging-houses at

cheap rates, cheap and good tenements, free employment bureaus, free concerts and lectures, free baths and playgrounds.

"Now these are all very good things, so far as they go. They are things that Socialists work for, whenever and wherever they get into power. They are things that Socialists in the municipalities of France and Belgium have done better than the English and Scottish reformers. But they are not enough. They are only first steps. They do not constitute Socialism, nor a tithe of the Socialist program. To call Glasgow and Huddersfield Socialist cities is ridiculous. . . . Moreover, it is not shown that drunkenness in those cities is worse than or even as bad as it was before the moderate reforms were instituted there. . . .

"When the workmen of any community receive the full product of their labor by working cooperatively for the common good; when this system has been in practise long enough for the people to have formed new habits, new customs, new ways of living, adapted to their changed conditions, then the test will have been made. And if, then, drunkenness continues as bad as before, we shall be prepared to admit 'Socialism can not cure the drink evil.' . . .

"Great physicians, criminal judges, students of sociology, and even some temperance reformers (as Miss Willard and, we believe, Miss Anthony and Mrs. Stanton) have agreed that the drunkenness of the poor is the result of bad social conditions—poor food, bad housing, overwork, anxiety, and despair, all combined with ignorance. Among the rich we find drunkenness, too. And there we find its causes in idleness, luxury, and a generally unnatural way of living.

"Now the establishment of Socialism would put an end to the present evils of semi-starvation, bad housing, overwork, idleness, luxury. It would reduce the causes of anxiety to the minimum. It would insure every man a chance of healthy activity. It would allow no one to live off of others. It would give every man hope and pleasure in his work. And thus it would destroy the greatest causes of drunkenness and of other abnormal practices."

TOPICS IN BRIEF.

GENERAL HULLEN ought to tell a waiting world where he expects to eat his Easter dinner.—*The Ohio State Journal*.

MR. R. KIPLING has arrived at Bloemfontein, and the Boers are reported to be fleeing in every direction.—*The Boston Transcript*.

WHEN we remember how small Portugal is, it seems remarkable that the Delagoa Bay matter was ever arbitrated at all.—*The Detroit News*.

ADVICE TO CHICAGO VOTERS—Good citizens should not vote to place in the city council a man who would disgrace a penitentiary.—*The Chicago Record*.

BLAME THE TRUSTS.—There does not seem to be any way to work the approaching solar eclipse into any political platform.—*The Philadelphia Ledger*.

ONE valuable result has already been achieved by Mr. Sheldon's "ideal newspaper." It has made everybody think better of the real newspaper.—*The New York World*.

THE CARNEGIE-FRICK RECONCILIATION.

THE SHORT ONE: "Aye, Hal, thou'rt right. Why should we brawl and fight, when there's better plunder in sight?"

THE LONG ONE: "'Tis sage advice, friend Andy. Here comes our meat."—*The Minneapolis Journal*.

LETTERS AND ART.

MAETERLINCK: DEMIGOD OR DEGENERATE?

FEW names in modern literature, a recent writer has said, arouse such anger in the celestial souls of critics as the name of Maurice Maeterlinck. To the devotee of the Maeterlinck cultus, he is an incarnate god of letters; to the scoffer, he is the

MAURICE MAETERLINCK.

recrudescence of a degenerate imbecility. Perhaps both believers and scorn-ers have good reason for their opposing views, says Mr. A. R. Roper (in *The Contemporary Review*, March), tho he fails to bring out any notable points in favor of the demi-god theory. He writes:

"The average man, or even the average literary man, takes down Maeterlinck's first little volume of lyrics, 'Serres

Claudes,' and plunges into a passage which I may translate roughly as follows:

O hothouse in the midst of the forests!
And your doors shut forever!
And all that there is under your dome,
And under my soul in your likeness!
The thoughts of a princess un-hangered,
The weariness of a sailor in the wilderness,
Brazen music at the windows of incurables.

Sheer Earlswood, says the average reader; and yet, if he did but look closer, there is a sort of meaning in the piece. The hothouse is a type of the modern overcultivated morbid soul, in the midst of a wide, healthy nature, but cut off from the free air of heaven as by a thin viewless barrier of glass. The hungry princess—a favorite type of Maeterlinck's—is the soul pining in vain for its birthright of sympathy. That a beggar should starve, tho painful, is natural, and has no especial significance; a princess is born with a presumed right to live in abundance and tender care. The hunger of a princess, therefore, is a poignant image of forsaken helplessness. So, too, the mind isolated in its own morbid self-consciousness may be likened to a sailor in the desert, sick of the sand and the glare, longing for the cool breath of the waves. And the military music passing under the windows of a hospital for incurables is an obvious emblem of the vigorous healthy life outside that awakens vain aspirations and longings in souls sick, beyond cure, of doubt and melancholy."

Undoubtedly some of Maeterlinck's obscurity, remarks Mr. Roper, arises from the fact that he, a Fleming or Low-Dutch thinker, writes in a ruthlessly lucid medium such as is the French language, in which the lights and shades of mysticism appear sheer idiocy and balderdash. Then, too, Maeterlinck as a symbolist uses words as symbols of whole realms of thought, often far removed from their common import.

Mr. Roper points out the paucity of Maeterlinck's literary repertoire:

"As a dramatist, he plays on an instrument of one string. He can present one character alone—the sensitive, timid, fascinating, misunderstood, doomed being, belonging only half to this world, homesick for fairyland, with strange spiritual insight and strange mental deficiencies. It is a real type, if a morbid one. Then

Maeterlinck sets forth the mystic love of such a creature with her masculine counterpart, and the doom of both. He also hints at the silent tragedies that lie behind common life, and images forth the terror of imminent death. Has he done more than this? I do not think so. His personages are not human beings, hardly even types. We should not know one of them if we met him in the street. They express nothing; they call attention rather to what is unexpressed and inexpressible. Their silences, some critics have said, are more eloquent than any speech. But is this really the fact?

"Here we come on the important question that determines Maeterlinck's true place. Is the eloquence of his pauses really his own, or supplied by the audience? Is his queer Ollendorffian dialog the trelis for flower and fruits of spiritual meaning, or is it a weak and wooden crossing of laths? A symbolist may be defined as a man who says something else. Unable or unwilling to put his thoughts into definite words, he uses certain terms or metaphors to shadow it forth. Hence, symbolism is only justifiable, from an artistic point of view, when the real meaning of the writer can not be put into plain words, or can not be so expressed in proper artistic form. Beyond this, symbolism is unnecessary, and simply irritating. A painter may and indeed must indicate, by a symbolic use of color, certain effects that no paint can render; but for him wilfully to abstain from rendering what *can* be rendered truthfully would be coxcombry."

We all have this sort of eloquence, remarks Mr. Roper, and can all outvie Shakespeare and Homer in the dim recesses of our inner consciousness, in our "dreams between sleeping and waking." The rub is when we sit down to think out our dreams and write out our thoughts. Why should the silences in Maeterlinck's dialog be credited with an infinity of meaning? Says Mr. Roper:

"Never—or hardly ever—do his characters utter the inevitably right word of passion or emotion, the one speech that the person would say. It is cruel to contrast the riotous exuberance of Shakespeare's young fancy with the absolute Ollendorf of 'La Princesse Maleine.' Take the famous dialog of the Cowherd and the Nurse:

COWHERD: Good evening!

NURSE: Good evening!

COWHERD: It is a fine evening.

NURSE: Yes, fine enough.

COWHERD: Thanks to the moon.

NURSE: Yes.

COWHERD: But it has been hot during the day.

NURSE: Oh! yes, it *has* been hot during the day.

COWHERD (*going down to the water*): I am going to bathe (etc.).

This is not simplicity; it is impotence. And it is the same in moments of strong emotion. The characters never speak out their souls like Lear over the dead Cordelia. They simply repeat ejaculations three times. Hjalmar finds his love lying murdered, and this is all he has to say:

Yes! yes! yes! Oh! oh! Come! come! Strangled! strangled! Maleine! Maleine! Maleine! Strangled! strangled! strangled! Oh! oh! oh! Strangled! strangled! strangled!"

If this be tragedy, says Mr. Roper, then can tragedy be written with a *rubber stamp*!

Walt Whitman in Symphony.—Whitman has always been more of a prophet in England than in his own country, altho his fame in America has been steadily growing since his death. It is, therefore, rather fitting that England, which first gave pronounced critical recognition to Whitman's verse, should pay him the tribute of interweaving his verse with music. Mr. William M. Thomas, editor of *The American Art Journal* (March 24), writing of the new "Walt Whitman Symphony" just put forth in London by Mr. William Henry Bell, remarks that to English critics Whitman's "barbaric yawp" is what Wagner's music is to passionate lovers of the music drama. Whitman, to them, is something more than a man "clad in skins and eating wild honey"—he is, in the fullest sense of the word, a prophet.

with a new message in a new measure, which, when rightly understood, is full of music as well as of prophetic utterance. The "Whitman Symphony," says the writer, is in length and massiveness well adapted to the poet's manner of expression and thought:

"Mr. Bell is the composer of the 'Canterbury Tales' and 'The Pardoner's Tale' (Chaucer). His 'Whitman Symphony' was to be produced at the Crystal Palace on March 10. We hope it may prove to be a work of interest. We learn from Percy Betts that in length it exceeds Schubert's great Symphony in C, requiring a full hour for its production. The London *Daily News* says that while it is so long that the second movement, a 'Humoresque with variations on an original theme and waltz finale,' had to be omitted, it is a work of marked ability. *The News* adds:

"It seems a pity that young composers so often fail to perceive the merits of condensation. The symphony is not 'program' music, but it bears as motto Whitman's lines 'To Mine Own Folk,' and the opening allegro is to a certain extent influenced by the American poet's 'Song of the Broad Ax.' The third, entitled 'Elegy,' was doubtless suggested by the 'lovely and soothing death,' which has already formed the subject of an English cantata. It starts with a mournful subject, given out alternately by horns and wood wind, and followed by a funeral march, with a brighter cantabile second subject, the music, after much development and varied treatment, ultimately dying away till it becomes inaudible. The last movement is optimistic, and the coda may suggest 'The show passes, all does well enough of course.' The symphony is dated September 11, 1899."

LITERATURE AS A PROFESSION.

MANY well-known English writers, including the perennial Sir Walter Besant and Mr. Richard Le Gallienne, had their say a few months ago on the subject of the literary calling, its advantages and drawbacks (see *THE LITERARY DIGEST*, August 26, November 4, 1899). Now comes Prof. Brandér Matthews, in *The Forum* (April), to tell what he thinks about the profession of literature. In the first place, he says, the name is not a little vague. Such diverse callings as those of college professor, editor, lecturer are included in the term. Yet, says Professor Matthews, the object of journalism is almost the opposite of literature—the two arts are "incompatible and almost hostile, the one to the other":

"The man of letters is almost the exact antithesis of the newspaper man. He seeks above all things to express himself—to give form to a something within him that is striving to be born, to body forth his own vision of life, to record once for all his own understanding of the universe. He toils joyfully, without haste and without rest, never quitting his work till he has done his best by it, until at last he knows it to be as perfect as he can make it, however dissatisfied he may remain with his final achievement. The object of his effort may seem but a trifle—a little lyric or the briefest of short stories; yet he never relaxes his standard, believing that the Tanagra figurines called for as keen a conscience in the artist as the Attic marbles themselves. Tho he may work swiftly when the mood is on him and the Muse inspires, he is never in a hurry. And where the journalist writes every night what must be forgotten before the next new moon, the man of letters may keep to himself what he has done, even for seven years, as Horace advised; and in all that time again and again he may bestow on it ungrudgingly the loving labor of the file.

"Thus we see that journalism is a craft while literature is an art; and that the two callings are almost irreconcilable. The practise of one of them tends to unfit a man for the practise of the other. There are journalists, not a few, who have become men of letters, and there are men of letters who have gone on newspapers; but I can not recall the name of any man who won equal fame in both vocations. Bryant was a poet who was also the chief editorial writer of a daily newspaper; and one of his biographers tells us how careful Bryant was to do all his journalistic writing in the office of the paper itself, leaving his own home free from any taint of contemporary pressure. And there is an anecdote of Bryant that illuminates the conditions of journalism. A friend repeatedly urged him to advocate a certain cause, and

supplied him with facts and arguments in its behalf. Finally, an article appeared, and Bryant asked his friend if it was not satisfactory—if it was not good? The friend responded at once that the article was too good altogether, too complete, too final, since Bryant had said in it all he had to say on the subject, and, therefore, would not recur to it again, whereas what his friend had wanted was, that the editor should take up the case and keep on writing about it, day in and day out, until he had really aroused public interest in it."

Neither is the lecturer or the college professor necessarily a man of letters, says the writer. Both lecturing and teaching are *per se* wholly apart from the main purpose of the literary artist. And yet literature is in many cases—perhaps generally—the by-product of other professions:

"At the present time there are in the United States half a dozen novelists, as many dramatists, perhaps an essayist or two, or a poet by chance, each of whom receives from his literary labors alone enough to live on; and there are probably twice as many in Great Britain. But for the large majority of the men of letters of to-day, literature is still what it was in Charles Lamb's time—a very bad crutch, but a very good walking-stick.' For example, when the Authors' Club was organized in New York, in 1882, by seven men of letters, only one of them was then supported wholly by literature—a novelist who happened also to be the writer of certain school-books; and of the other six one was a stock-broker, one was the editor of a magazine, two were journalists, and two had private means of their own. Among the members of the Authors' Club of late years, there have usually been ten or a dozen of the officers of instruction of Columbia University who chanced to be authors as well as professors.

"Perhaps another fact will show how wide the membership of such a body must needs be. Mr. McKinley has sent five members of the Authors' Club abroad as ministers and ambassadors—Mr. Hay to London, General Porter to Paris, Mr. White to Berlin, Mr. Hardy to Athens, and Mr. Straus to Constantinople. And in doing this the President was but abiding liberally by a precedent of more than one of his predecessors. Irving was minister to Spain, Motley to Austria and to Great Britain, Bancroft and Bayard Taylor to Germany, Lowell to Spain and Great Britain. In this, the great American commonwealth has been following the example of the little Italian republics, which were wont to send men of letters—Dante and Petrarch and Boccaccio—on missions of importance, perhaps desirous only to make use of their learning, and perhaps perceiving in the literary artist himself some special fitness for a delicate task.

"However few the men of letters may be to-day who are supported by literature, pure and simple, they are not less numerous than they were yesterday. In our own language especially, the conditions of literature as a profession whereby a man may earn his living are far more favorable in the present than they ever were in the past. The expansion on both sides of the Atlantic, the swiftness of communication, the spread of education, the granting of international copyright have all united to pay the author a reward for his work never before offered. Shakespeare, at the end of the nineteenth century, would not need to be an actor to make a living. Neither would Molière, since we have also international stage-right. And Homer would not be forced to go on the road giving author's readings, in his time the sole resource of the epic poet.

"Whether this will be altogether a gain may be doubted. It did not hurt Homer's epic that he was rewarded for reciting it at the banquets of the rich. It did not injure Molière and Shakespeare as playwrights that they were also players; of a certainty it helped them. It is not well for the man of letters that he should be free from close contact with the rest of mankind. It is not the worst that can happen to a genius that he should be forced to rub elbows with the common run of humanity. . . .

"Hawthorne it was who declared that 'the only sensible ends of literature are, first, the pleasurable toil of writing; second, the gratification of one's family and friends; and, lastly, the solid cash.' And Stevenson insisted that 'no other business offers a man his daily bread upon such joyful terms; the direct returns—the wages of the trade—are small, but the indirect—the wages of the life—are incalculably great.' Thus Stevenson speaks of the artist at large; and as to the man of letters he maintains that 'he labors in a craft to which the whole material of his life

is tributary, and which opens a door to all his tastes, his loves, his hatreds, and his convictions, so that what he writes is only what he longed to utter. He may have enjoyed many things in this big, tragic playground of the world; but what shall he have enjoyed more?"

"The profession of literature is not for those who long for the flesh-pots of Egypt, as it is not for those who dwell in the Bohemia which is a desert country by the sea. It is not for those who do not enjoy its toil and who do not love it for its own sake. It is not for those who are thinking rather of the wages than of the work. Above all, it is not for those who have a high standard of wages and a low standard of work."

THE "JEWISH ENCYCLOPEDIA" AND THE NEW JEWISH SCHOLARSHIP.

A BANQUET was given in London a few weeks ago by members of the Maccabean and Jewish historical societies to Mr. Joseph Jacobs, who was then about to depart for America to assume an editorial position in connection with the projected Jewish Encyclopedia. Mr. Jacobs improved the occasion by bringing out a number of interesting facts regarding this work, now well under way, and the growth of Jewish scholarship, particularly in the New World. In his address, as reported in *The Jewish Chronicle* (London, February 23), Mr. Jacobs says of the new encyclopedia:

"Almost every Jewish scholar of note in America, England, and the Continent has given his adhesion to the scheme, and if carried out on the lines indicated in the prospectus, it ought to summarize the long line of research on Jewish matters that has been carried on through the nineteenth century. The twelve volumes should present to the world the truth, the whole truth, and nothing but the truth about that very interesting personality the Jew. . . . On almost all these lines an immense mass of work has been done recently by a few in the Anglo-Saxon world. The Talmud and how it has been formed—the inner life of the medieval Jew—the family histories of the chief representatives of the modern Jews—the Bible and its influence on Jewish medieval literature—the paradox and irony of the modern Jewish position—all these have been sought out and thought out till they can be presented with some approach to accuracy and fulness in encyclopedic form. Zunz and Rappaport at the beginning of the century began to build the stately dome of Jewish science. Masses of inquiries have dealt with the history of Jews in all lands. The bibliography of Jewish books, the thoughts of the Jewish sages and philosophers, even the numbers of every petty Ghetto in all Europe can now be accurately known. Above all, Jewish bibliography has been organized into a science, and every book or article on a Jewish subject can now be identified and consulted. We of the Jewish Encyclopedia can enter into the labors of Zunz, Steinschneider, Graetz, and their many followers in many lands. If we can adequately sum up their labors in alphabetic form, we shall, I consider, be doing a great work for the Jewish cause, both within and without the community. Externally, there will be, for the first time in the census of the world, an adequate census of what Jews have done for it, and a refutation, in the cold light of fact, of what Jews have been alleged to do against the highest interests of civilization. The long roll of Jewish literati, whatever be the value of their productions, will prove at least that many Jews have at any rate devoted their lives to something other than mere money-grubbing. Are the Jews accused of working more with the brain than the hands—if that be called an accusation—look at the encyclopedia article upon artisans among the Jews, and see there enumerated some 700,000 working with muscle for a scanty pittance.

"And internally, also, we shall at last have the very problems which disunited us brought consciously to focus. Disputed questions we propose to treat stereoscopically. We shall have Zionism treated by a Zionist and an anti-Zionist, and the greatest freedom of truth ought to result from the collocation. When the encyclopedia is completed we may use the noble words of Zola in a new sense, that the truth is afoot and must prevail. There is sad occasion, as we all know, for such a presentation of the Jewish truth. It has been obscured by malignity almost through-

out the civilized world, except in Anglo-Saxondom. This new imperialism and militarism that is seen in the whole of the world is almost necessarily brought into conflict with the Jewish system, which consciously or unconsciously, willy nilly, must in every country form an *Imperium in imperio*. 'Cosmopolitanism,' the enemy calls it; but what, after all, is that cosmopolitanism but the recognition of the essential unity and fraternity of mankind? May it not be one of the many missions of Israel to break down the barriers of international hatred and internecine strife? The ideals of the French Revolution are somewhat discredited nowadays; but wherever he is, the Jew must stand for liberty, equality, and fraternity."

Commenting editorially upon this address, *The Jewish Chronicle* (March 2) says:

"We doubt whether the full importance of the projected Jewish Encyclopedia, in connection with which Mr. Joseph Jacobs is leaving England for America, is fully grasped by the community, or is likely to be realized until a number of its twelve volumes have been in use for some time. But an attempt may already be made to gage the value of this vast undertaking. It is a work which has never been attempted before. Such fragments of it as are comprised in the German encyclopedias of Hamburger and Herzog and the English dictionaries of Smith, Kitts, McClintock and Strong, Cheyne, and Hastings have proved of immense help to Jewish students. A complete encyclopedia, written for the most part by Jewish scholars and from a Jewish point of view, should prove invaluable. . . . Not to speak of the benefits it will confer on historical and scientific research and the encouragement it will give to Jewish study among Jews, it is certain that a work of this character will serve a humanitarian purpose and tend to the removal of prejudice."

The Rev. Dr. Bernhard Drachman, writing in *The American Hebrew* (March 6), after alluding to some misapprehensions as to the character of the work which prevailed when the announcement of the Jewish Encyclopedia was first made, remarks that these have now all been removed, and "a great chorus of approval is heard from all parts of the Jewish world testifying to the beneficial and highly desirable character" of the undertaking:

"Such a work must teach even the most ignorant or careless what it means to be a Jew, to belong to a people which has left such a deep mark upon the history of the world, and which nothing could induce to fall away from the One, Ever-living God. Indeed, the Encyclopedia will not be so much a glorification of Israel; it will rather be—to quote a much-abused but still impressive phrase—'*Ad maiorem Dei gloriam*.'"

The Encyclopedia was first projected by Dr. Isidore Singer, of Vienna, who, finding the conditions for such an undertaking in Europe not improved by the antisemitic wave, came to this country two years ago and succeeded in completing his arrangements. More than three hundred scholars, it is announced, are now at work upon the Encyclopedia under the supervision of Cyrus Adler, Ph.D., Gotthard Deutsch, Ph.D., Richard Gottlieb, Ph.D., Marcus Jastrow, Ph.D., Morris Jastrow, Ph.D., Kaufman Kohler, Ph.D., Crawford H. Toy, D.D., LL.D., Isidore Singer, Ph.D., and Joseph Jacobs.

A New French Tragedy—M. Henri de Bornier's new historical play, "France d'abord!" ("France above all!"), dealing with the period of Louis IX., has been one of the events of the present season on the Parisian stage, and has on the whole met with favor from the dramatic critics. From the *Revue Encyclopédique Larousse* (February 10), we take the following critique of the play by Georges Pellissier:

"The time is in the minority of Louis IX., during the regency of Blanche of Castile; and it is the spirit of Blanche of Castile which seems to brood over the tragic scenes. Arrayed against her are the courtiers, and among them are two, present as ambassadors, who enjoin her to choose a husband who shall be regent. These two lords are Thibault, Count of Champagne, and Hugonnet, Count of Boulogne, the latter brother to Louis VIII., and

brother-in-law to Blanche of Castile. She, however, repels Hugonnel, who, sent as an ambassador, returns an enemy; but she falls under the influence of Thibault, for whom she feels a secret love. The theme of the tragedy is, in brief, the wavering of Blanche in the face of her destiny, the struggle between the mother who would preserve the crown for her son, and the woman who wishes to live with her lover. Hugonnel determines to revenge himself for the refusal of the queen, and conspires with his niece, Aliénor, who has been injured by Blanche of Castile. This Aliénor, on the coronation day of Louis IX., is to place on the head of the young king a poisoned crown. Filled with remorse, however, she places it upon her own head. She dies and Hugonnel is made prisoner; and as this *finale* is not sufficient, another is provided in a duel between Thibault and Hugonnel, resulting in the latter's death and the departure of Thibault to Palestine, carrying with him the secret of his love for Blanche of Castile."

The play at this point parts with history, which does not present this love in so platonic a light, but makes Thibault both a fortunate and a culpable lover, expiating in the Crusades the violent death of Louis VIII. M. Pellissier objects to the play for this departure from historical truth. "Why choose historical personages merely to travesty them?" he asks. "It is, as it were, a confession of impotence to warp the truth of history in its terrible puissance, and I feel certain that Blanche of Castile, just as she was, far surpassed in interest the vague figure shown at the Odéon by M. de Barnier." Other critics, including Emile Faguet, Gustave Larroumet, and Henry Bauer, speak favorably of the play.—*Translation made for THE LITERARY DIGEST.*

THE HISTORICAL NOVEL AND ITS RECENT SUCCESSES.

THE most marked feature in American fiction of the past year has been the predominance of the historical novel. Of the six most popular novels in the month of January, 1900, four—"Richard Carvel," "Janice Meredith," "When Knighthood Was in Flower," and "Via Crucis"—have historical scenes for their background. The latest success—and, considering the question of time, the greatest success of all—is Miss Johnson's "To Have and to Hold," a novel dealing with early colonial days in Virginia. The latter book is already, at the end of little over a month, in its hundred and thirty-fifth thousand, while at least three of the first mentioned books are still in the high tide of their popularity. These facts are startling literary phenomena, and, as a recent critic has remarked, "if they do not give what Adam Smith calls a 'filip to the trade,' it will be because authors lack the commercial sense." We are not unlikely to be flooded by a downpour of historical novels during the next twelvemonth, and to have all the scenes of history, from Noah, the primeval sailor of history, to Cæsar, Charlemagne, Napoleon, and possibly Kruger, served up to us with every variety of literary spicing. Those contemplating historico-fictional authorship need not, according to the literary critic of the *New York Commercial Advertiser*, feel backward by reason of a distrust of their personal equipment. "Any man," he says, "with a literary temperament and a capacity for compilation, stands a very good chance of success in this field." And he further encourages the incipient author in the following strain:

"The critics are bland and the public cordial, and there will be plenty of people to say that the fifth historical novel is better than any of the preceding four, and the sixth is more wonderful yet. And while hard work is necessary, it is a kind of work that can be systematized and makes comparatively slight drain on the creative force. It is a good, straightforward, definite job, with materials ready to your hand. A part of it consists in rearranging certain well-tried properties, and some parts could almost be let out on sub-contract. Almost any one will soon be

able to handle the George Washington scenes, and duels will become a mere matter of clerical routine.

"The public thus far has shown no disposition to discriminate between what a man invents and what he reproduces. This is what makes it easy. You do not have to create an atmosphere. It is already made for you. Historical associations will help you out when your art fails. Rig a man up in small clothes and silk stockings, give him a sword and a peruke and four or five old expletives, and a hot temper and a brave heart, and the thing is half done. Put in a few 'auns' and 'tweres' and 'tises' and 'say I's' and the conversation will fit any past century you like. In the older historical novel they reproduced the spirit of ancient Rome or Jerusalem by making all the characters say thee and thou and talk generally like the Book of Common Prayer, but at present one or two archaisms suffice, and there need be no consistency in their use. Richard Carvel's conversation often spans three centuries in a single sentence. But none of these things are noticed if enough happens. That is the one relentless law of the present historical novel. The hero must be kept busy from beginning to end, with never an instant's pause in heroism. There is no interest in him apart from what happens to him. The art that can so build a character that he holds you whether he is doing anything worth mentioning or not is not needed here. For the business of clinging to the masts of sinking ships, hurling back insults in other people's teeth, standing unmoved amid fearful carnage, and waiting for a proud, capricious beauty to recognize his worth, there is scarcely any need of a character at all. He is not a man but a literary storm center, and requires only four or five large, plain virtues and a good physique."

This is nothing against the historical novel in itself, the writer thinks. These books do a useful work, and at least leave the reader no worse off for reading them. They are monuments of diligence; and, since on the whole they have more facts than fallacies, they serve to impress some lessons of history upon their readers' minds.

NOTES.

The Criterion will soon appear in monthly form under the management of Mr. Francis Bellamy, who has had experience editorially with *The Youth's Companion* and *The Ladies' Home Journal*. The editor-in-chief is to be Mr. Albert White Vorse, who also brings editorial experience from newspaper work.

ANOTHER romance of the French Revolution is soon to make its appearance, written by Mr. William Sage. The book will be entitled "Robert Tournay," and will deal with many familiar characters, among them Robespierre, Danton, and General Hoche. The fact that even before its publication (by Houghton, Mifflin & Company) the dramatization of Mr. Sage's book is being arranged, makes it safe to assume that "Robert Tournay" will be full of dramatic incidents in its love element.

EMPEROR WILLIAM'S play, "The Iron Tooth," does not seem to have met with much success in Berlin, altho not all the papers take that view of the case. The play, whose moral "is submission of the people to their Emperor," was beautifully staged, and the chief characters were entrusted to fine performers who have received honors from the Emperor playwright. The Berlin correspondent of the *New York Herald* says: "The acting and *mise-en-scène* were marvelous. The costumes were most beautiful, and the scenery such as has seldom been seen in the Royal Theater." But as the play progressed, disapproval became so manifest that, one report says, a number of the audience, ignoring the axiom "The King can do no wrong," came to the conclusion that the royal play was no good." After such a reception, many papers are doubtful as to the final issue of the play.

DR. WILLIAM R. HARPER thinks that the league of representative colleges formed recently at Chicago is "the most important movement that has taken place in higher education in this country in fifty years." The objects of the association are declared to be all matters of common interest relating to graduate study. It will also consider the advisability of requesting foreign universities not to admit American students to the examination for the degree of Doctor of Philosophy unless they have already presented a bachelor's degree from an American college or university. The chief aim of the organization, therefore, is to enable American institutions of learning to work in harmony and to raise and make uniform the requirements for higher degrees. It is thought that such united action will raise the standard of many colleges which otherwise now do not meet requirements for graduate work. Yale, Harvard, Princeton, Columbia, Cornell, Johns Hopkins University, the University of Pennsylvania, the University of California, the University of Chicago, Leland Stanford University, the Catholic University of America, the University of Michigan, the University of Wisconsin, and Clark University have thus far cooperated in the movement, and it is hoped that other institutions will seek admittance into the association. Such united action will have a twofold influence, not only making a Doctor's degree mean more, but also keeping the graduate student abroad in touch with the university at home.

SCIENCE AND INVENTION.

THE PREVENTION OF HAIL.

EXPERIMENTS made in various parts of Europe on devices for the prevention of hail-storms by creating an explosive disturbance of the air have already been described in these columns. We now give a translation of an illustrated article contributed to *La Science Illustrée* by M. Victor Delosière, describing the latest work along this line. The matter has passed the

HAIL PREVENTERS RECENTLY EXPERIMENTED WITH, AT MONZA, ITALY.

experimental stage apparently, and we may expect to hear soon that it has been taken up in this country also. M. Delosière first reminds us that hail is a local phenomenon of thunder-storms, rare in the tropics, unknown in the polar regions, and of greatest frequency in temperate zones, especially in hilly localities, where they follow valleys and avoid forests. He briefly states the various theories of its formation, from that of Volta, in which electrical attraction and repulsion played a part, to the one generally accepted at present, which assumes that the hailstones are sustained, during their formation, by a rotary air current. All these theories of hail, however, are of more interest to the meteorologist than to the farmer, who is most anxious to know how to protect himself against its effects. How can he do this? First, of course, there is insurance, and many agriculturists avail themselves of this; but there is now a method by which hail-storms may be actually prevented. Says M. Delosière:

"The question of defense against hail was solved when it was proposed to combat it with artillery. Powder was first used in this way on the assumption that it would cause rain, and later,

by M. Albert Stieger, with the idea that it would prevent the formation of hail.

"This idea may seem absolutely original, but this is a great error. There is nothing new under the sun! The ancient Romans were acquainted with the phylloxera before us, and they used, like us, artificial clouds of smoke to protect their vines from nocturnal frosts. We will doubtless be told some day that they would also have known of the hail-protector mortars, only powder was not invented in their day. But altho the Romans had not these mortars, it is plainly shown by ancient accounts that various farmers of the seventeenth century used the explosion of powder to prevent hail from falling on their fields. It was also believed in that day that thunder-storms could be driven off by firing guns and ringing bells.

"These facts were completely unknown to M. Stieger, and of course do not detract from the credit due to him. In 1896 this proprietor of vineyards, the burgomaster of Windisch-Freistritz, having replanted part of his lands on the Schnitzberg, adopted the following plans to protect the young plants against hail-storms, to which this treeless region is now much exposed.

"Along a line about 6 kilometers [3½ miles] and at elevated points, he set up six brass mortars weighing each about 80 kilograms [180 pounds]. Each mortar was about 3 centimeters [1¼ inches] in diameter and was 50 centimeters [20 inches] long. M. Stieger organized a corps of volunteers composed of inhabitants of the neighborhood.

"During the first experiment, black and threatening masses of clouds advanced from the neighboring mountains. The fire of the mortars began, and after several minutes the clouds stopped, dissipated, and dispersed without sending down hail or rain on the protected region.

"The experiment was repeated six times in the course of the summer, always with success.

"So in 1897 the number of stations was increased: there were thirty-three in that year and fifty-six in 1898 in the same region.

"The effect of a violent disturbance of the air in preventing a hail-storm may be explained if we suppose that the superfusion of water plays a part in the formation of hail. The little drops would solidify separately on formation and could not unite to form large hailstones. The phenomenon would thus be in some sort regularized. On account of the excellent effects obtained with hail-protecting mortars the farmers of Venetia and Piedmont have established associations of defense against hail.

"It seems certain now that a mortar fitted with a conical mouthpiece can protect a circular space 500 to 700 meters [1,650 to 2,300 feet] in diameter. It is thus sufficient to space these novel pieces of artillery from 1 kilometer to 1½ kilometers apart. Experiments have been lately made at Monza, Italy, to determine the best form for the conical mouthpiece, its proper dimensions, and the charge of powder necessary to give a satisfactory result. They seemed to be quite conclusive.

"Our southern cultivators of the vine, who suffer such injury yearly from devastating hail-storms, are beginning to be moved by these facts. During the discussion of the agricultural budget a question was put to the minister on the subject. He promised to encourage experiments, and these will take place during the course of next summer. We shall keep our readers informed of the results."—*Translation made for THE LITERARY DIGEST.*

Oxygen from Liquid Air.—It has been predicted by all those who are familiar with the properties of liquid air, which has only of late been obtainable on a large scale, that one of its chief uses would be in the separation of the atmospheric oxygen from its nitrogen. It has been assumed that this would be effected by mere evaporation of the liquid product, since the nitrogen is the more volatile of the two gases. According to the daily press, however, a method has been discovered by Prof. Raoul Pictet, of Geneva, Switzerland, one of the most eminent scientific men of the world in all that pertains to processes involving intense cold, by which the gases may be separated without liquefaction, altho liquid air must be used in the process to obtain the necessary low temperature. The process, we are told by *The Scientific American*, is about to be introduced in New York on a commercial scale. It consists in forcing through liquid air under a pressure of only about one atmosphere a stream of atmospheric air. This is cooled in the liquid air, and as it rises

its component gases separate by gravity and run off in tubes, the oxygen through the lower tube, and the nitrogen above. The carbonic acid, which exists in the air as an impurity, leaves the machine as a liquid. It is promised that with an expenditure of 500 horse-power, 500,000 cubic feet of oxygen, 1,000,000 cubic feet of nitrogen, and 1,500 pounds of liquid carbonic acid will be produced. The chief market which Professor Pictet expects to find for the oxygen is to support combustion at high temperatures in furnaces where coal is burned. In burning fuel with the oxygen of the air, there must be admitted to the furnace about three times the bulk of oxygen or nitrogen, and this absorbs a large quantity of the heat. By admitting oxygen Professor Pictet thinks that 40 per cent. of the present fuel bill can be saved.

AN ALPINE MYSTERY.

UNDER the title, "A Strange Luminous Phenomenon," Dr. Albert Battandier contributes to *Cosmos* (March 10) an account of a curious moving flame or light, observed nightly near a small Italian town. No satisfactory explanation seems yet to have been made, altho the appearance possibly belongs to the little-studied class of which the so-called "will-o'-the-wisp" is a type. The phenomenon appears near the Alpine village of Berbenna, where it has been seen nearly every night for about twenty years. It consists of a flame, ordinarily whitish, but sometimes colored, which moves in a definite course down a road and through vineyards, sometimes rapidly and sometimes pausing. Sometimes several flames appear, which unite into a single one at a certain point in their course. Says Dr. Battandier:

"The flame is constant in its effects. . . . It avoids man, and when it is approached it recedes more or less swiftly, according to the speed of the pursuit. . . . The forms of the flame vary infinitely—it appears as a cone, a globe, or a fiery serpent, and tranquilly glows or spits out sparks; it is 5 centimeters to 5 meters [2 inches to 25 feet] above the ground, moving along on the surface or advancing by leaps, and often stops abruptly. It sometimes disappears as if hidden by the tree-trunks; at other times it gives so bright a light that it illuminates the whole country. . . .

"The wind has no effect on its movement. . . . and rain and snow neither diminish nor extinguish its brilliancy. It has no fixed hours, but usually appears early in the night. When it has once shown itself it appears no more during the night, but its journey may last several hours."

These particulars, we are told, were gathered by Carlo Fabiani, and are published by him in the last volume of the transactions of the *Nuovi Lincei Pontificii*. Dr. Battandier notes that the whole matter can scarcely be said to have been adequately investigated, as this would require several trained observers and a series of experiments, covering perhaps months of work. Fabiani, however, gives four explanations of the phenomenon, from which the reader may make his own selection. The first, Dr. Battandier remarks, is hardly scientific, being that advanced by the dwellers in the region, who assert that the flames are the visible manifestations of the souls of the departed, or, according to some occultists, the astral bodies of the defunct, seeking reincarnation. Secondly, we may account for the testimony by saying that the inhabitants of the region are suffering from collective hallucination. There is much in favor of this explanation, such as the different accounts of alleged observers and the reported impossibility of approaching the phenomenon. Of course a hallucination enduring for twenty years would be unusual, to say the least, but Dr. Battandier reminds us that the cause of the hallucination, namely, the superstitious tales of the peasants, has certainly lasted during that time, so that a continued recurrence of the apparition would not be so remarkable. Another theory is that we have here a special case of what the French call *feu follet*—"will o' the wisp." This is generally regarded as due to marsh-gas, or to phosphoretted hydrogen, and there is

plenty of organic matter in the soil at Berbenna whose decomposition might produce these gases. But this does not explain why the flames did not appear until twenty years ago, nor why they move against the wind and always along the same course, appearing only once each night. Will-o'-the-wisps are proverbially capricious, and this phenomenon is more or less regular. A fourth explanation is that the flame is a "St. Elmo's fire"; in other words, an electrical brush-discharge; but this is open to precisely the same objection. Thus the matter is left unsettled, but Dr. Battandier notes several other cases of similar phenomena in Italy, and believes that by careful observation and comparison the mystery may be solved.—*Translation made for THE LITERARY DIGEST.*

A Trolley Wire for Automobiles.—Several years ago we described and illustrated an experiment made in Greenwich, Conn., with an automobile stage using an overhead trolley wire. The plan was not successful enough to come into regular use, but a modification and extension of it is now being tried in

TROLLEY MOTOR.

Courtesy of The Electrical World and Engineer.

France, and promises to be practically successful. An interesting feature of it is that the trolley-wheel itself is furnished with a small motor, which propels it along the overhead wire in advance of the carriage. Two trolleys and two wires are necessary, for of course there are no rails to provide a return circuit. The trial is taking place on a line somewhat over half a mile in length on a road along the Seine just outside the limits of Paris, the inventor of the system being M. Lombard-Gerin. An article in *L'Industrie Electrique* by Professor Hospitalier descriptive of the mechanism is abstracted in *The Electrical World and Engineer* (March 10), to which we are indebted for the facts. It is the opinion of Professor Hospitalier that the applications of this system are innumerable. The service of existing lines of road may be extended to serve localities the traffic of which is not sufficiently important to justify the extension of the main line.

Trolley-fed carriages in this case would constitute secondary lines, whose aerial wires, traversing the country, would also place at the disposal of farmers a source of power for agricultural work. From a central generating station lines could extend to the suburbs, to railway stations, manufacturing works, etc., thus creating at little expense a new market for current.

HEATING A TOWN WATER-SUPPLY.

TO attempt to warm the whole water-supply of a city by means of electrical heaters placed in the intake-pipes would seem at first sight almost absurd, yet the authorities of Marquette, Mich., believe they have hit upon a plan of warming the water of Lake Superior in just this way, altho the rise of temperature is to be only sufficient to prevent freezing. By carrying this plan into effect at a cost of \$25, they consider they have saved \$50,000 to \$100,000 by making it unnecessary to change the location of the pumping-station and intake-pipe. Says E. J. Hart in an account of the plan contributed to *The Electrical World and Engineer*:

"For many winters past the city has been greatly bothered by ice from the lake, which has choked up the intake-pipe so as to entirely shut off the water-supply and necessitate the closing down of the pumping-station. This has occurred dozens of times in the past few years, and water famines have resulted annually. It has been necessary in each case of a 'choke-up' to thaw out the mouth of the intake with salt, but this has only remedied the evil temporarily, and after some delay and a great deal of trouble. The trouble has grown to such proportions that the question of spending many thousands of dollars to change the location of the intake-pipe and pumping-station had been agitated."

The trouble at Marquette, Mr. Hart tells us, was not with the surface ice, but with "needle ice," as it is called. Surface ice is a protection to the intake, and the trouble comes when the ice-fields are carried out of the bay by winds which prevent new surface ice from forming. The water freezes then in minute needle-like crystals, and millions of these mass together and are carried into the intake-pipe. The vertical section of the pipe is two feet in diameter, but the masses of ice are sufficient to entirely block it. To quote again:

"About three weeks ago a famine of unusual severity resulted from an ice blockade of this sort, and the city water board solicited the assistance of some local engineers to remedy the trouble, if possible, permanently. Superintendent Charles Retaillic, of the municipal electric light and power plant, was one of these, and he devised a plan by which it is hoped to do away with the evil entirely. The plan provides for an electric heater of cylindrical form, hung concentrically within the opening of the vertical section of the intake-pipe. This heater was completed and put in place last week, and it will be tested as soon as the wind again carries away the surface ice and the conditions are suited to the formation of the fine ice particles that cause the trouble."

"The heater is of the iron resistance-coil pattern, and the only novelty about it lies in its adaptation to the use for which it is intended. It consists of an inner and outer drum of galvanized iron, respectively 19 and 21 inches in diameter, and both 5 feet in length. The inner drum has flanges at the ends extending outward, and to these the outer drum is soldered. The inner cylinder was wrapped with asbestos sheeting to a depth of nearly half an inch, and around this were wrapped convolutions of No. 18 iron wire, in one continuous spiral. Terminals were carried through the flange at one end, through water-tight gaskets of heat-proof insulating material. Iron shoulders are riveted to the apparatus, and by means of these it is hooked over the top of the intake-pipe. It extends from the top of the vertical section of the intake to within two feet of the horizontal section, and the former only stands seven feet high."

"Current is supplied from the electric-light wires at the water-works plants on the beach. It is carried through conductors intended for submarine service, and where the wires enter the water they pass through a conduit of iron piping to protect them from shore ice. The stove will generate enough heat, it is be-

lieved, to melt all the needle ice before it passes through the cylinder. The plan is not to keep it in constant use, but only when the conditions of the weather are favorable to the formation of this sort of ice."

WANTED: SOME CABLE-SHIPS.

THE United States is at present notably deficient in appliances for making and laying submarine cables, so that if we are to build a transpacific cable without aid from our English cousins, we shall have at once to set about erecting plants for manufacturing the necessary cable and must build or buy ships with which to lay it. *The Electrical Review* brings this important matter to the attention of the public in a leading editorial (March 21), in which it says:

"The process of manufacturing deep-sea cable of great length is one that is not generally understood. Almost equally important is the proper laying of the cable after it is made. In Europe the universal custom at present is for cables to be manufactured at points on deep water, the factories being adjacent to piers alongside of which the cable-ships lay, so that the cable is coiled up in the tanks on these vessels as rapidly as it is manufactured. In this way the unit of cable length is a shipful."

"To undertake successfully the building of the transpacific cable in this country will, therefore, necessitate the erection at the waterside of a sufficient plant or plants for its manufacture and the acquisition of several cable-ships to lay the individual sections. Such a factory with its machinery would cost about \$1,000,000."

"There are in the world about thirty-five cable-ships, of which more than twenty-five fly the British flag. Not one is American. The construction of the cable will, therefore, necessitate the building of at least two cable-ships, at a cost of about \$600,000 each. Their operation and other costs of transporting and laying the cable will bring this figure for the ships up to about \$2,000,000 before the cable is laid. The cable itself will cost in the neighborhood of \$13,000,000, this price being based on a length of seven thousand nautical miles and a price of thirty cents per foot of the finished cable."

The question of cable-ships, the writer asserts, is perhaps the most difficult one that we have to deal with. Such vessels can hardly be chartered for laying a seven-thousand-mile cable, for this cable will necessitate practically the continuous operation of one repair ship. The vessels must be able to handle long coils of cable and should be modern in all details. To quote further:

"It is also no mere sentiment that dictates the necessity for these ships to be of American register. It is stated on good authority that in some of the recent British cruisers and other naval craft provision has been made for cable tanks and cable handling, so that these ships can be used for cable laying, repairing, cutting, etc., when not required for their military functions. It would seem that this fact contains a valuable suggestion for us, and that some of the new United States cruisers of moderate size might well be fitted to undertake the task of laying the Pacific cable. This is not entirely sufficient, however, for repair ships, as was stated above, can not be dispensed with."

"The United States have a vast coast line and immense and growing maritime interests. They are the dominant power of the Pacific now, and their new territories in both Eastern and Western waters create an imperative demand for cable connections and facilities. They must have cable-making and laying plants. In the case of the transpacific cable the cost will be about \$20,000,000. If it cost twice that much we should still need it sufficiently to build it. It must be built, and that quickly. Consequently, in view of the facts stated above, if any department of the Government is to undertake its construction, one of the first essentials is the cable-ships; provision for their construction or the alteration of other vessels to fit them for this duty should be made immediately."

It is not to be understood, of course, that we have no cable-manufacturing plant in this country; only that it has not hitherto been used for making long submarine cables, and that it is not

situated in the necessary proximity to the Pacific Ocean. On this point *The Electrical World* says:

"Only those who are familiar with American cable factories and the quality and quantity of their output, can have an adequate conception of the tremendous growth of that industry in the United States. It is only in the branch of submarine cable work that our factories have been behind; and that is only for the reason that hitherto there has been little call or necessity for such work."

THE RAPIDITY OF MODERN INVENTIONS.

THE increasing speed with which useful inventions are introduced and perfected was dwelt upon by Sir W. H. Preece, the English electrician, in a recent address before the Association of Students of the English Institution of Civil Engineers. After some remarks on the dignity, responsibility, and opportunities of the profession, he alluded to the rapid differentiation of skill in modern times, and asserted that the progress of invention takes place at a compound rate. He said, according to a report in *The Electrical World and Engineer* (March 17):

"It took 3,000 years to mature the alphabet. It has taken 450 years to perfect printing, but 60 years in our days have matured telegraphy and photography, and only 60 months have been sufficient to apply Roentgen rays to assist the physician to apply his gentle art to restore to health the maimed and wounded."

Commenting upon this, the journal already mentioned says in its editorial column:

"This is ingenious, but risky reasoning. At such a rate, we ought soon to have startling, revolutionary inventions every fifteen minutes, so that instead of one bad quarter of an hour in the day there would be ninety-six. A kindly Providence forbids such things. Inventions not only have to be made, but they have to be digested and assimilated, and fortunately that takes time. Here in America we are always capitalizing the invention that is to be made to-morrow. In England they are just beginning to capitalize the trolley when we are taking to the conduit; and thus it runs all along the line. We would like to ask Sir William what great electrical invention has been made, not in the last fifteen minutes, but in the last fifteen months?"

"But that is after all an aside, and when a man who has done so much for the practical engineering arts stands up to laud them, we are heartily with him. It is true, as he says, that 'the engineer is not only a benefactor to his race but he is a necessity of the age.' And more, without him this age of long peaces and short wars, of greater comfort, happiness, and general welfare would not be. As to the general education of the engineer, the opinion of Sir William is in line with the most recent thought. The first foundation, he says, is clearly a broad, solid, general education, not specialized in any way until the pupil has reached a stage where he can work and think for himself. The late Franklin L. Pope, who was a strong believer in this dogma, on one occasion pointed out to the writer that every member of the technical staff of a certain large manufacturing company had been graduated from an academic college course before taking up technical study. As to the rôle of mathematics in the education of an engineer, Sir William calls it the shorthand of thought and the purest form of logic; this, together with 'experiment, the handmaid of observation, measurement, the instigator of accuracy and precision, and reasoning, the organ of common sense,' are denominated 'the tools that shape the store of knowledge which memory brings to his help when he is called upon to practise what has been learned.'"

Admiral Dewey and the Holland Boat.—Admiral Dewey does not seem to agree with the representatives of the navy who recently advised the Government not to purchase the Holland submarine torpedo-boat. He has sent to Representative Foss, acting chairman of the House naval committee, a report prepared by his aide, Lieut. H. H. Caldwell, on the trial of the boat in the Potomac on the 14th inst. According to *Electricity*, "Lieutenant Caldwell, who was on board the *Holland* during

the trial, says that there was no accident or hitch of any sort. The mechanism worked easily, the crew was confident and skilful, the slight pitch of the boat on submersion disappeared when she attained the required depth, the torpedo was discharged with the greatest ease, and only a slight shock occurred when it left the tube. There was not the slightest confusion or hesitation in obeying orders. 'It is worthy of note,' says Lieutenant Caldwell, 'that from the first immersion the water as seen through the deadlights was entirely opaque, and at the maximum depth it looked entirely black. During the nearly three hours we were in the boat the air was entirely sweet.' Lieutenant Caldwell expresses the opinion that the duties of the crew could be easily performed by petty officers of the navy after a short trial. He says also that a determined enemy, with a submarine boat like the *Holland*, could have made the occupation of Manila Bay by Admiral Dewey's squadron impossible. In this and the other remarks of his aide, Admiral Dewey concurs."

A TELEPHONIC PROBE.

MOST of our readers will remember the "induction balance" with which President Garfield's surgeons unsuccessfully endeavored to locate the bullet that caused his death, and which figured largely in the sensational press reports of the day. The latest form of this instrument is a telephonic probe, which is

thus illustrated and described in *The British Medical Journal* (March 10), quoting from a recent work on "Therapeutic Electricity":

"It was De Wilde, a civil engineer, who (1872) first proposed the use of the electric bell as a signal of a metallic body in the tissues. An improvement on this is the telephonic probe. Its action depends on the difference of potential between two different metals, and upon the delicacy with which the telephone will disclose an electric current so engendered. A thin sheet of pure silver is placed upon an indifferent part of the body, and attached by means of a wire having a telephone in circuit to a silver probe or heavily plated exploring needle. If the probe be inserted into the tissues the telephone is silent, because there is no difference of potential that the telephone will register; but immediately a metallic body other than silver is touched there is a fall of potential, a current is produced, and the telephone indicates the fact. Used to verify the localization of foreign metallic bodies whose presence has been shown by radiography, this probe is a strikingly effective device."

TELEPHONE PROBE.

gendered. A thin sheet of pure silver is placed upon an indifferent part of the body, and attached by means of a wire having a telephone in circuit to a silver probe or heavily plated exploring needle. If the probe be inserted into the tissues the telephone is silent, because there is no difference of potential that the telephone will register; but immediately a metallic body other than silver is touched there is a fall of potential, a current is produced, and the telephone indicates the fact. Used to verify the localization of foreign metallic bodies whose presence has been shown by radiography, this probe is a strikingly effective device."

A PLEA for power-brakes on trolley cars is made by *The Electrical Review*. It says: "The modern forty-foot trolley car full of people weighs a good many tons. To start it with any reasonable degree of swiftness requires the expenditure, for a few seconds, of about one hundred horsepower. Naturally, to stop it with the same degree of celerity will require the same power. To start it powerful motors and heavy gearing are employed; to stop it, a brass handle about eighteen inches long with a more or less able-bodied man at the end of it is used. The consequence of this arrangement is that the newspapers keep standing in type head-lines like this: 'Another Trolley Horror!' 'The Deadly Juggernaut!' etc. Is there not a lesson to be learned from these well-known facts? It is not as if there were no power brakes to be had, for there are several varieties, all good and all tested by experience." The new cars of the Third Avenue Company in New York are equipped with power-brakes, which apparently give satisfaction.

THE RELIGIOUS WORLD.

"WHY MEN DO NOT GO TO CHURCH."

THE alleged decrease in church attendance during the past few years has called forth much discussion, and many reasons have been offered for the phenomenon. The cause has been variously attributed to the church itself, to the individual, to society as a whole, and sometimes to all three. This latter view is that taken by Dr. Cortland Myers in a little book entitled "Why Men Do Not Go to Church." The author begins with the weaknesses of the church, and his most important arguments may be thus epitomized:

Men demand a church adapted to the dawning hours of a new century. Everywhere new conditions arise which have to be met, and the minister must see that he advances with the advance of civilization, and not remain in the old ruts. The intelligent application of the Gospel is what is more needed: usefulness is to be considered before attractiveness, and a true religious sentiment is to be awakened before many worldly comforts are thought of. The financial element in church life should not be a prominent factor, as it is in so many instances at the present time.

Again, if we consider the minister, and his power in the pulpit, sincerity must be at the heart of all that comes from him. Men are drawn by earnestness and honesty, and frankness, more than by the beauty and fragrance of flowers. Truth is what man wants, not the straining after effect, which results in verbosity, for he will come only to hear the unvarnished truth, red-hot from a courageous heart.

On the subject of courting the rich, and boasting of wealthy parishioners, Dr. Myers writes:

"In our great cities, up-town has its church magnificence, and down-town has its church reminiscence. The population in the poor districts has been increased by the thousands, while the churches have decreased for the thousands in a greater ratio. A gulf is fixed by traitorism to divinest truth. We have splendid buildings and able ministers and uncounted money, but we fail to reach the men, because we have run away from the place where most of the men live, and run away from the supreme mission of the church to seek and save the lost, and to recognize one of the lost to be just as valuable as the other. We discuss and mourn, but fail to act and remedy."

A positive theology, thinks Dr. Myers, with its unvarnished application to the common affairs of life, should replace the theory of evolution, which leads to adverse criticism of the Bible. When men go to church, they go to hear spiritual interpretation, as applied to themselves, and they do not care for individual criticism, which in most cases ends in doubt and skepticism. "The demand is for the Bible, not changed, but adapted." "With all the faults of this age," says Dr. Myers, "it admires reality, and hates 'cant' and hypocrisy." We are all fellow men in a world of many evils, and the way we are to be aided spiritually is by the human touch, by what is commonly called personality, or personal magnetism. One of the great faults of the church is "the lack of real living brotherhood in church life"; outside, in this busy world, we see union in all branches; the church should stand for unity, because a disagreement "means empty pews." Dr. Meyers continues:

"The cold world wants warm words, warm smiles, warm welcomes, warm hearts, warm prayers, and the warm atmosphere of the brotherhood of man in the place where they teach the fatherhood of God. There is another evil related to this one, or rather an expansion of it, in the lack of the brotherly relation, and of cooperation between the various churches. The world is not schooled in doctrinal distinctions, and can not easily recognize the necessity for church separation, and sometimes church opposition. No period in the world's history has witnessed more significant changes than this age in which we live. The tendency of the time in the political and business world alike is unquestionably toward consolidation and centralization and cooperation.

The man who fails to recognize this fails in his undertaking. The church which fails to adapt itself to this characteristic of the age must also fail to reach the men of this age. Cooperation must be one of the watchwords of the church in the dawning hour of the twentieth century. Organizations have been multiplied, and even different denominations separated into more divisions, and religious efforts have been scattered and weakened, and fields have been neglected while others have been crowded, and no great and united effort has been made toward cooperation in spending money and utilizing effort to reach men. Denominations with vital principles should live, and can live, even if we destroy sectarianism and bigotry."

It is this division which has driven men away from church, says the writer. "All denominations should get together, as business concerns, and, in the spirit of the age, map out the work and utilize the force," and in so doing, "denominations need not mean less, but Christianity should mean more."

In his other chapters Dr. Myers discusses ethical and social defects in man, and in society. The first duty of the church, he writes, is toward man spiritually, and the church will become a benefit to human society only so far as it benefits the individual. But man's misunderstanding of society and of himself, where, firstly, the church can not enforce, and where, secondly, the individual is blind to his proper position in the world, leads to unjust criticism and narrow views. Many outward influences are to blame for the absence of church-goers. Home life also has suffered material changes. "The tendency in this age is toward the destruction of some of the essential features of home and home life. Our great centers of population are practically homeless. Families have an existence within a few square feet of space enclosed between brick and mortar, but they do not live in homes."

Among other faults of society, the author in his final chapter criticizes modern invention, as encroaching on the Sabbath day. He berates the Sunday newspaper, which he calls "the modern criminal," for "it vitiates literary tastes, deadens religious feeling, destroys desire for worship, and drives worshipers from the house of God."

Social clubs, the encroachment of the bicycle, the evils of the saloon, and the predominance of materialism over spiritual things also come in for their share of Dr. Myers's condemnation.

THE RELIGIOUS PRESS ON MR. SHELDON'S EXPERIMENT.

MR. SHELDON'S brethren of the religious press are in the main inclined to judge his recent attempt in Christian daily journalism with more patience and to accord it a little more commendation than did most of his brethren of the secular press. *The Independent* (undenominational) criticizes the week's issue of the *Topeka Capital* under Mr. Sheldon's editorship as being, first, "too preachy"; and, second, as lacking a proper and legitimate news instinct; but it defends Mr. Sheldon from the charges of charlatanism and blasphemy that have been so freely imputed to him. It says (March 22):

"There has been no little contemptuous talking and writing about the scheme of the publisher and principal proprietor of the *Topeka Capital*, to have the Rev. Charles M. Sheldon edit the paper, advertisements and all, for a week as nearly as he can as he thinks Jesus would edit it if He were on earth. We see no reason for such contempt. The aim is a right one. The principle of Mr. Sheldon's famous book, 'In His Steps,' is correct. A publisher or an editor ought to try to do his work, as every one else should, after the pattern and the great rule of universal love laid down by Jesus Christ. To call this a mere scheme for a big advertisement, or a foolish and pretentious mixing of the other world with this, appears to us ungenerous and unjust.

The aim, the ideal, is a right one, the only right one; and the single week of the Sheldon edition of the *Topeka Capital* is no solitary attempt of a newspaper to live up to this ideal."

The Watchman (Bapt., March 22) agrees with those who think the plan a sacrilegious one. It also thinks the outcome a failure:

"Coming to the consideration of the question, What kind of a newspaper has Mr. Sheldon succeeded in making? we should say, in a general way, that it is greatly inferior to our best religious weekly papers. His work is not marked by the breadth of information, the insight or balance that characterize journals of this class, while it very decidedly reveals a disposition to advocate facts of various sorts.

"Compared with the better daily journals Mr. Sheldon's experiment also appears to a disadvantage. His idea of suppressing news, because he does not think that it is well for people to be informed about it, is not a defensible one. The *New York Times* takes as its editorial motto, 'All the news that's fit to print.' That is a far saper standard than to resolve to print only that which you approve of having your readers know. A daily paper may be rightfully expected to give the news. If that is not so, then we ought not to have these papers at all. But all the news that's fit to print may be given by two journals with totally different results, dependent upon the editor's sense of proportion and method of treatment."

Zion's Herald (Meth. Episc., March 21) says:

"The experiment has been a decided disappointment, and to no one perhaps more than to Mr. Sheldon himself. . . . On the whole we regret the venture. It has belittled and profaned the name of Jesus, the one adorable Name. The conception as well as the experiment was a mistake, tho made in all sincerity and good purpose by Mr. Sheldon. We regret to see that he has been misapprehended and misrepresented. He is one of the most modest and conscientious of men. . . . He thought he could materialize his ideal of a Christian daily, but he has failed. That he was wholly sincere in his purpose does not change the result. We leave our readers to point the moral."

The Presbyterian (March 21) thinks that Mr. Sheldon "has failed to satisfy the public that Christ has especially appointed him for this kind of work." It adds:

"We wish Dr. Sheldon had let this newspaper scheme alone. We fear more harm than benefit will result from it. At best, it is only a possibility. It will require a series of years to test the practicability and value of the experiment. In some quarters it encounters contempt. The world is making it an occasion for mockery and jest. The Christian public generally takes very little stock in it."

The Congregationalist (March 22), altho an organ of the religious body with which Mr. Sheldon is affiliated, thinks his attempt a failure, and attributes this to what it regards as his initial error in the treatment of news. Even some of his religious news, it says, was "lamentably stale":

"For instance, a portion of the column entitled 'Religious Notes' contained statements that had been in type weeks ago, both in the religious and secular press. Mr. Sheldon missed a great opportunity when he did not develop this side of his paper, bringing to light exact and fresh information touching important religious interests. . . .

"The fundamental mistake was his attempt to do a work for which he had no training. One can not manage a modern hotel or run an express train with no other equipment than Christian impulses and ideals. To be sure, Mr. Sheldon possesses literary ability, but until a few weeks ago he had little acquaintance with the practical workings of a newspaper office. He thought that by giving half a day for several weeks he could become master of one of the most arduous and exacting of modern professions. The result of his experiment has revealed not only his inadequacy to the making of a modern newspaper, but his own personal limitations of thought and vision."

The Christian Standard (Disciples, March 24) says:

"In joining in with the popular criticism over the alleged defects of Mr. Sheldon's enterprise, the friends of a Christian secular journalism are apt to lose sight of the most significant lesson

of the whole experiment. . . . That 300,000 or 350,000 subscribers could be secured, from all over the country, for a daily paper published in a Western town of 50,000 inhabitants, is one of the pregnant facts of current history. Making due allowance for the influence of curiosity and the impulsive zeal of certain Christian workers, this remarkable response to the proposal to publish a daily secular paper on distinctly Christian lines shows that a large number of the best people are ready to support a higher order of journalism than is now represented by our metropolitan daily papers."

The Churchman (Prot. Episc., March 24) thinks that a primary defect in Mr. Sheldon's editorship was his lack of discrimination in the emphasis he gave to news which he used and his mistaken judgment regarding news which he debarred, particularly that relating to the stage:

"The stage may be pretty bad in Topeka, and indeed it is by no means ideal anywhere, but the instinct which takes people to the theater is both ancient and widespread, and has good grounds in human nature, and there are plays which it is profitable to see. The Christian teacher who will really profit the community is one who, after all due investigation, shall inform the public, as the editor of *Life* did a week or two ago, just what current plays are good to see, and what are bad. The heaping together of a great number of things, some of which are good, under a general ban offends that common sense which ought to have a recognized and honorable place in all moral teaching. One of the characteristics of our Lord was that He knew men. Anybody who would carry on a newspaper, or any other business in His name, must have a large fund of the same knowledge."

Ave Maria (Rom. Cath., March 24) says:

"We are not disposed to find fault with the Rev. Charles M. Sheldon, the Protestant minister who has been conducting a newspaper out in Kansas as he imagines our Lord would have this work done. There are plenty of people, notably preachers, to throw stones at Brother Sheldon. We will not join them. If he were not doing good, we doubt whether the devil would stir up so much opposition against him. His methods may smack somewhat of sensationalism, but there are strong reasons for thinking that at heart he is honest and sincere. The energy and earnestness of the man are admirable. He is another John Wesley in this respect, and we wonder that devout Methodists have not noted the resemblance."

IS THE JESUIT ORDER MOHAMMEDAN IN ORIGIN?

THE startling hypothesis of Victor Charbonnel, recently outlined in a French review, that the celebrated Society of Jesus founded by Ignatius Loyola was instituted by him upon a Mohammedan model, has attracted attention from a German scholar, Dr. Arthur Pfungst, who in an article in *The Open Court* (March), translated from a late number of the *Frankfurter Zeitung*, states the grounds upon which this theory rests. The argument is mainly drawn from the similarity between Mohammedan religious societies and the official rule of the Jesuit order. Dr. Pfungst says:

"At the time of Loyola, we know of two Mohammedan religious societies in Spain—the Kadryas and the Kadelyas, the latter so-called because they were founded by Sid Abdel Kader. The members of this congregation are called *sufis*, or *kuans*, i.e., brethren; they are subject to the *ucrd*, i.e., rule. They have a *dikr*, i.e., common prayer, which must be repeated several thousand times a day, and serves them as a means of mutual recognition. They are absolutely subject to a *sheik*, who governs the whole congregation. They live in *zanias*, i.e., monasteries, governed by *niokaddems*, or abbots.

"The reception of a novice among the Kadryas consists in an apprenticeship of at least a year and a day, in which the novice learns by heart all the rules of the order, and practises the virtues which are expected of him. Thirty to forty days of perfect isolation are required, during which time the novice is not allowed to speak except with his superior. He must demand in writing what he needs, and is not allowed to take more nourish-

ment than is absolutely necessary for the sustenance of life. The time of sleep is also limited, and is strictly submitted to rule. The novice's employment consists of prayers, meditations, and the reading of sacred books. Unless he be reading, the novice must 'close his eyes to illumine his heart.' In the same way the Jesuits expect a retirement of thirty to forty days, in which the first week is devoted to a purification of the soul. Light is permitted only for reading and eating. The novice is forbidden to laugh, and must speak to his superior only, who regulates his fasts and vigils. His meditations are limited to such subjects as death, hell, etc. The result of these spiritual exercises is the same both with the Kadryas and the Jesuits, a mental condition which prepares the mind for hallucinations.

"The similarity between the rules of the two orders can be traced in detail. The regulations of the Kadryas prescribe: 'If a novice is of a common nature, it is advisable to let him proceed by degrees, and only easy prayers should be imposed upon him.' The Jesuit rule reads: 'If the leader of exercises notices that his disciple shows only inferior natural faculties, it is advisable to impress upon him only lighter exercises.'

"The same regulations exist among both the Mohammedans and the Jesuits for the repetition of some definite prayers. Even the attitude in prayer is prescribed. The Mussulman Kuan must 'raise his eyes in praying, and gaze at one single definite point without swerving'—a method which was known to the Arabians as the best way of self-hypnotization. The same is literally prescribed for the Jesuit exercises. The Kuans pray in cadences, utilizing inspiration and expiration, and pronouncing some sacred word while breathing, then devoting the time of exhaling to meditation thereon. Between the various acts of breathing, no more than one single word must be uttered. In the same way the Jesuits know in their prayers one method which is called 'the third way of praying'; and is praying according to the rhythm of breathing as prescribed in the regulations of the Kadryas. And it is stated in the latter that a truly faithful Kuan 'will see, and hear, and feel, and smell, and taste' the object of his meditations. These words remind the reader of one of the Jesuit exercises in which it is said that 'Hell shall be meditated upon from the point of view of the five senses: first, I see with the eyes of imagination the enormous flames and the souls of the condemned entirely surrounded with fire; secondly, I hear with the aid of imagination the shouts and cries and blasphemies of the condemned against Jesus Christ and His saints; thirdly, I imagine that I breathe the fumes of sulfur and the odor of the pit or of fetid matter; fourthly, I imagine I see bitterness, tears, sadness, the gnawing worm of conscience; and fifthly, I touch the flames of vengeance and imagine vividly how the souls of the condemned burn.'

The inner organization of the two orders exhibits a like similarity, says Dr. Pfungst. The authority of the superiors is absolute among the Mohammedan orders as among the Jesuits; the novitiate, the mode of electing a general, the regulations as to property, the renunciation of judgment on the part of the member to the superior, so that the former is "forthwith as a corpse (*perinde ac cadaver*)" in the hands of the superior, are the same alike in the Christian and Muslim brotherhoods. Indeed, this very simile conveying the primary Jesuit regulation of obedience is used in the Sheikh Si Soosi's book of rules: "Thou shalt be in the hands of thy sheik as a corpse in the hands of an undertaker." Even the famous Jesuit motto, "*Ad maiorem Dei gloriam*" (to the greater glory of God), is of Mohammedan origin according to Abbé Charbonnel, and he adds that the spirit and aims of the Kuans and the Jesuits are the same. The abbé's denunciation, as given by Herr Pfungst, is a sweeping one, and will no doubt meet with denial by members of the Society of Jesus. Herr Pfungst says:

"The spirit of these organizations [the Kuans and the Jesuits] is an absolute theocracy, the aim a spiritual government over all worldly affairs. A specialty of the Kuans is their method of assassination and the disposing of adversaries through the murderer's dagger. Charbonnel abstains from drawing further parallels, saying: 'We do not mean to make odious comparisons, but we should in this place consider that the Jesuits have fre-

quently justified political assassination.' And he adds that this is one of the points which led to the expulsion of the Jesuits in almost all the states of Europe, and caused Pope Clement XVIII. to abolish the order.

"The salient results according to Charbonnel are the same in both societies—the Mohammedan Kuans and the Christian Jesuits. He says: 'Wherever among the nations Kuanism or Jesuitism penetrated races, political parties, and religions, wherever their spirit was impressed upon them, we find the same corruption, the same fettering of all energy, the same shadows of death. The whole Orient is dead, Uruguay and Paraguay are dead, the republics of South America are dead; Cuba and the Philippines are taken away, otherwise they would be dead too. Spain is dead. All these countries were the possessions of the Sufis or the Kuans, of the clergy and the monks. The dreary work of the sheiks and of the monastic generals has been complemented everywhere through the assistance of real soldiers!'

MAY ROMAN CATHOLICS ACCEPT THE THEORY OF NATURAL SELECTION?

THE impression has prevailed that the excommunication of Dr. Mivart was largely due to his acceptance of scientific teachings condemned by the Roman Catholic Church. A well-known Roman Catholic, Dr. William Seton, writing in *The Catholic World* (February), makes a plea for the acceptance of some scientific teachings which would imply that Dr. Mivart's controversy with Cardinal Vaughan (see THE LITERARY DIGEST, February 3, 17, March 3) was mainly on matters of theological dogma and Scriptural interpretation, and not science. Dr. Seton does not care to discuss the large question of "organic evolution as opposed to the old-time theory of separate, special creation of numberless organisms"; for, in the words of the Roman Catholic bishop of Newport, "it should be well borne in mind that the foremost Catholic men of science of the day not only hold a theory of evolution, but consider that there can be no doubt on the matter." Dr. Seton's object, is, however, to defend the doctrine of natural selection, and to "show that this factor is, when properly understood, not only not opposed to the idea of God's creative act, but that, on the contrary, His wisdom is manifest in it." Dr. Seton writes:

"As we know, Charles Darwin was guided to the discovery of his celebrated hypothesis . . . by the study of what Man has accomplished through artificial selection. He cites the common opinion of naturalists that the various breeds of the domestic pigeon—the carrier, pouter, tumbler, fantail, and others—are all descended from the wild rock-pigeon through slight differences accumulated by pigeon-fanciers during many successive generations.

"Man has done this for his own pleasure, until finally he has changed the original rock-pigeon not only outwardly, but he has brought about modifications in the skulls of the different breeds. The same thing man has done with the dog, horse, sheep, and other animals. The different breeds have been produced by man's selecting and accumulating in one direction the variations which suited his purpose, which variations are so slight that an uneducated eye can not appreciate them. The same principle of continual selection of slight variations has been followed in regard to plants. The gardener cultivates the best variety; then when a still somewhat better variety springs from its seeds, he selects it, and thus little by little the vegetable and the flower are modified and improved. . . .

"As every naturalist knows, animals and plants present individual differences under changing conditions of life. And here we declare our belief that when the Almighty created the first plants and animals, He did implant in them the power to respond to extrinsic factors acting on them. These extrinsic factors arouse, call forth, so to speak, dormant variations which are thrown out promiscuously in all directions, and there being far more births than there is room or food for, severe competition ensues, and certain ones among these variations are (of course metaphorically speaking) selected by nature as the fittest to survive in a changing environment; and the environment is, as a

rule, always more or less changing. This is what we mean by natural selection.

"Only for this God-given tendency in animals and plants to respond in a favorable way to outward changes—and only for such response there could be no selection—the Creator must have been continually working fresh miracles through new creations in order to adapt organic life to new conditions; for vast indeed have been the changes in sea and land and climates, in food and in enemies, since organic life first appeared. And we know by fossil remains, by the testimony of the rocks, that vast also have been the changes in animals and plants."

After tracing the course of evolution in the first geologic ages, and of natural selection in the Eocene epoch of the Tertiary age as evidenced in several species of mammalia, Dr. Seton says:

"We can not too often repeat that variations are the groundwork for natural selection to act on; and we say again that we believe Almighty God willed in the beginning that slight differences should appear in the offspring of the same parents in response to outward changes. And there must have been great changes in the conditions of animal life during the two million years which we may allow for the Tertiary period. As thus explained there is surely nothing in the hypothesis of natural selection that a Catholic may not accept, and, as Bishop Hedley tells us in the *Dublin Review* for October, 1893, theologians are already beginning to look upon Darwinism with a more favorable eye."

SCIENCE AND PROVIDENCE.

JUST as in the early ages of the Church Christianity found itself face to face with Hellenism, and found its energies and life crippled at every turn until through battle and partial compromise the issue was decided, so now, it is believed by many students of religion, Christianity must face Science and come to terms with it. So thinks Dr. D. S. Cairns, who writes in *The Contemporary Review* (March). "The position of Science," he remarks, "is incomparably stronger than the medley of philosophies and beliefs that early Christianity had to encounter. No educated man doubts the solidity and permanence of her contribution to human thought." In the light of the scientific conceptions of the present day, "Christianity seems an exotic," or, as Professor Hermann more bluntly put it, "in our modern world Christianity is an alien." Until this difference has been transcended, says Dr. Cairns, the aggressive force of Christianity will be crippled and hampered at every turn. One of the central problems in this contemplated concordat of Christianity and Science is the reconciliation of the Christian conception of the world, as a realm of Divine Providence, with the scientific conception of it as a Reign of Law.

"We must recognize that at first sight the demonstration of the Reign of Law in nature seems to conflict with that view of the world which we derive from the Revelation which culminates in Christ. If we take a man who has been living purely in the world of scientific ideas and transport him into the world of thought of revealed religion, we can not wonder if he shows signs of surprise and of revolt. He has changed his 'psychological climate.' He has been living in a world of uniformities, of measured spaces and forces and times, a world of which the central principle seemed to be its own consistent action; and the world into which Revelation would bring him seems to be ruled by radically different principles. For, from start to finish, there can really be no doubt as to the teaching of Revelation. In the clearest and most memorable fashion it proclaims that God's providence controls in their own interest whatsoever happens to His children. If you try to take this faith out of the Old Testament, Hebrew religion becomes a mere ruin. Take the Psalmists: what can shake their conviction that the whole power of God is at the disposal of the solitary faithful Spirit, for protection, discipline, and salvation; what can match their magnificent confidence in God as the Shepherd, the Fortress, and the Refuge of the soul? All the histories in like manner are based on this theory of human life, and the gigantic spiritual achievement of

Prophecy is undertaken and carried through in the strength of this faith. And when we come to the climax of Revelation we find this principle expressed with a clearness which can not be increased. 'Be not anxious for the morrow,' said Jesus, 'for your Heavenly Father knoweth that ye have need of these things.' Nor does any one of the Apostles ever dream of moving from this ancient standpoint.

"Some years ago the present writer remembers reading a letter relating to the death of a friend who had perished in the wreck of an ocean liner which had gone ashore on the Spanish coast. The writer of the letter, in referring to this friend, rightly, from the Christian point of view, laid stress on the fact that her death was the Will of God, and was therefore best for her. A scientific writer, looking at the same event, might have viewed it as part of an immense context of phenomena. He would have taken the proximate causes—the strong shoreward current in the Bay of Biscay, the mists that at that season envelop sea and land, the deflection of the compass, perhaps, caused by the geological composition of the Finisterre Rocks, and so on. He would have shown that these again had their antecedents, climatic, geological, chemical, and so on, and these again their antecedents, reaching back through the ages. He would have shown further that these proximate causes must also have their consequents, and these again their consequents, and so forward throughout the future. He would have shown us, in short, a great system of things reaching onward from the primordial Fire-Mist to the ultimate Crack of Doom, and maintained that to alter any one part would be to alter the whole, and then would have turned on us triumphantly and asked us if we actually believed that all this vast process was set in motion to drown a particular person on a particular day for her own good. The difficulty certainly seems a serious one, and so long as we stand by the barely Positivist view of Science and the barely Individualistic view of Religion, it would seem to be insoluble so far as the intellect is concerned.

"But in stating these limitations we have already indicated the lines of a solution. It has become impossible for Science to remain at the purely positive standpoint; and Evangelical religion has in like manner outgrown the excessive Individualism which for a long time characterized it.

"Take first the drift in Science. The whole conception of Evolution is teleological. There is an interesting passage in Mr. Darwin's 'Life' in which this point is very clearly brought out by him in a letter to Prof. Asa Gray, thanking him for an article written in *Nature*, June 4, 1874. 'What you say about Teleology,' he writes, 'pleases me especially, and I do not think any one else has ever noticed the point. I have always said you were the man to hit the nail on the head.' The passage referred to in Professor Gray's paper is thus given: 'Let us recognize Darwin's great service to Natural Science in bringing back to it Teleology, so that, instead of Morphology versus Teleology, we shall have Morphology wedded to Teleology.' In the same strain Professor Huxley wrote: 'Perhaps the most remarkable service which Mr. Darwin has rendered to the philosophy of Biology is the reconciliation of Morphology and Teleology, and the explanation of the facts of both which his views offer. The teleology which supposes that the eye, such as we see it in man or in one of the higher vertebrata, was made in the precise structure it exhibits, for the purpose of enabling the animal which possesses it to see, has undoubtedly received its death-blow. Nevertheless, it is necessary to remember that there is a wider teleology, which is not touched by the doctrine of Evolution, but is actually based upon the fundamental proposition of Evolution' ('Darwiniana,' p. 110).

The vital point, says Dr. Cairns, is that in dealing with the positive or physical standpoint and that of teleology or final causes, we are dealing with two worlds. The Hidden Purpose moves upward through the several strata of the inorganic and organic realms until the central interest of the divine comedy concentrates on the fortunes of human society, the last and highest result of time.

"If this be so, if there is a real climax to the long history of nature, then it surely must needs be that no part of the long chain of process which leads to this consummation can be without meaning. Logical coherence compels us to suppose that the whole natural order is an immense system of final causes con-

verging at last upon one supreme *Telos* [Final Cause], the 'one far-off Divine Event to which the whole creation moves.' It is toward this end that law must be working, the ocean currents flowing, the mists rising and falling, the strata being piled mountains high, and human life being lavished by land and sea. All roads of Nature at last converge upon some mother city of Man.

"But is this version of the Scientific Conception of the Reign of Law in radical antagonism with the Christian view of the world? If the argument hitherto has been a sound one, it is, on the contrary, in profound harmony with it. If it is true that Science has advanced from the positive to the Teleological standpoint, it is true also that the advance of Biblical Theology has carried religious thought beyond the narrower Individualism in which it was bound, and has given it a vaster horizon and a larger hope. The Gospels also teach us that all God's individual providences converge upon a universal end, which is nothing else than the most perfect form of Society, a union of God and Humanity in the 'Kingdom of God.'"

THEOLOGICAL IMPLICATIONS OF "PARADISE LOST."

MILTON'S great epic is held responsible for a profound and long-lasting influence upon the religious and theological conceptions of a large part of the English-speaking world. Its theology is in the main in close accord with what is now called the "traditional view" of the Bible. Milton's purpose, of course, was to "reconcile the ways of God to men," and to do this he had to draw upon sources outside the creeds and even outside the Scriptures. A writer, Mr. H. Rawlins, Jr., in *The Westminster Review* (January) thinks that Milton's poem is, in fact, an indictment of his creed; that his noble and free spirit unconsciously revolted against his theological beliefs; and that "Paradise Lost," "with its massive splendor, crushes the dry bones of a system which it was meant to enshrine for men's reverence." The line of reasoning by which Mr. Rawlins reaches this conclusion is as follows:

"The most obvious and yet the most telling criticisms upon the Bible story of the Fall, when interpreted in the traditional way, are these—that the whole account is miserably meager for so stupendous an event; and that the *causes* of the catastrophe and the way in which it took place are altogether trivial and unintelligible. That the whole race of mankind should be ruined by a serpent enticing with a fruit, and that the whole incident should be explained in a single page of print, is so incongruous as to be ridiculous the moment it is thought about without implicit faith in Biblical authority. Now, in 'Paradise Lost' the theme is at least treated with fulness and dignity. The length of the poem is worthy of the issues. The crisis is elaborately led up to. There is a serious attempt to make the causes clear and show them to be sufficient. Bravely is the question of divine justice wrestled with. If Milton fails, as he does fail theologically, a hundred times greater is the failure of the literal theologian who sticks to Genesis.

"But even if the poet is held to have succeeded, all the new resources which he employs in aid of his attempt are themselves so many unconscious criticisms upon the Bible story.

"Paradise Lost' has twelve books, but the fatal fruit is not tasted till the ninth book. A general glance at the contents of the preceding eight books will at once give an insight into Milton's methods, and a more detailed examination will show how splendidly he built upon his false foundation. . . .

"In the first place, the figure of Satan in 'Paradise Lost' bears some fit proportion to the events which in Genesis are attributed to a mere serpent. The whole episode of the war in heaven and the expulsion of the fiends, especially the picture we have of the personalities of the rebel leaders—all this is not only a marvelous poetic creation, it also gives much-needed balance to a theological system. It provides something like an adequate cause for the ruin of mankind. But to feel the majesty of it in Milton's poem is to feel also the lack of majesty in the Genesis story. There is nothing whatever in the Biblical story to suggest that

the word serpent was meant in any but a plain and literal sense—it signifies just a paltry snake. The identification of this snake with a mighty spirit of evil, Satan or the Devil, came later; and it came just because the story, when taken seriously as the basis of a theology, would have been a sheer mockery without such identification. No Biblical writer read the new interpretation into the word serpent. This was the work of the systematizing theologians. It was they who identified 'the most subtle of all the beasts of the field' with the Devil who tempted Jesus and the Satan who (we are told in Revelations) fell from heaven. From time to time attempts were made to present his personality and history in some clearer and fuller form. But when Milton approached his subject he found ample ground not yet occupied. One can not resist the impression that he must have felt very keenly the curtness of the story of the Fall. The whole record must have seemed to him too incomplete and trivial for the stupendous issues involved. And, tho he could at times deny as stoutly as any one the right of the human mind to speculate in matters of religion beyond the bounds of the Biblical revelation, yet in this matter we see him impelled with irresistible force beyond those bounds. In any case, he deliberately aims at giving a full vision of events (as he imagined them) which preceded and led up to the temptation in Eden; and this is the boldest, the most original, and the largest part of his poem."

Nowhere, says Mr. Rawlins, does Milton's art "come so nobly into conflict with his theology as in his portrayal of Satan's affection and pity for the innocent creatures whom he is about to ensnare." A merely brutal enemy of mankind would have repelled every reader—Milton creates a being for whom we can feel a genuine interest, even admiration. "Milton has ruined the Genesis fable—for theology," says Mr. Rawlins; but from the point of view which no longer accepts for its guidance the ethical code of primitive barbarians, this is no calamity:

"This great work of art is at present much neglected, especially by those who have given up the old theology. Probably the chief reason (next to the flood of present-day literature and newspapers) is this—that the reader of the poem feels that he is expected to believe its main story as a truth of religion, and the instructed mind now resents that expectation. But the time is coming (for a large number of people the time has already come) when such expectation and such resentment will both have become impossible, and when it will be as natural and easy to discuss the plot of 'Paradise Lost' as that of 'King Lear' or 'Macbeth.' To reach this position is to cease to be disturbed by any question as to the historical validity or non-validity of the original fable, and to be free to enjoy the way in which it is treated. From this point of view 'Paradise Lost' is seen to be the revelation of a master mind struggling heroically with a theme not altogether tractable even in his hands, but ennobling it with the splendid riches of his imagination, and throwing broadcast pearls of wise and beautiful speech which are admirable and helpful for all time."

RELIGIOUS NOTES.

THE Liberal Congress of Religions, which aims to perpetuate the spirit of the World's Parliament of Religions held at Chicago during the World's Fair, is to be in session in Boston from April 24 to April 29. Its prime object, in the words of its secretary, is "not to create a new fellowship, but to emphasize, expand and incorporate a fellowship that already exists."

THE plan for establishing an American school of Oriental studies in Palestine is being actively pushed by a number of American colleges. Such an institution, it is thought, is much needed by the modern student of Biblical archeology, and is justified by the results obtained from the schools of classical studies at Athens and Rome. Prominent among the supporters is Dr. Richard J. H. Gottbell, of Columbia University.

By a slip of the pen, a recent statement in THE LITERARY DIGEST was made to assert that the Baptists are the most numerous of the Protestant denominations. According to the statistics which we have already printed for the past year the Catholics (three bodies) come first among Christian denominations with 2,446,304 members; the Methodists (seventeen bodies) come second, with 2,302,316 members; and the Baptists (thirteen bodies) come third, with 1,442,678 members. These figures, however, are not absolutely trustworthy, for church records are often imperfectly kept and often not reported. There is, too, a radical difference of method in reckoning membership in some of the Christian bodies. The Roman Catholics, for instance, report as members every baptized person, whether adult or infant, while most of the Protestant bodies report only those who have, as adults or adolescents, formally announced their Christian allegiance.

FOREIGN TOPICS.

CONDITION OF THE BRITISH NAVY.

ONE result of the South African war is a more rigid inspection, by the British, of the condition of their navy, and more especially of its artillery. Facts are being published which will be new even to naval men. *The Saturday Review* (London) says:

"At a time when the importance of an all-powerful navy is manifest, the parliamentary returns of the fleets of Great Britain and foreign countries is not a reassuring document. Of the fifty-three completed battle-ships with which we are credited no less than sixteen are still armed with inefficient artillery in the shape of muzzle-loading guns. These would be completely out-classed and outranged—to use an expression now being applied elsewhere—if pitted against modern ordnance. In the French navy there does not appear to be a single muzzle-loading gun. If an ironclad is worth retaining on the effective list, and having her machinery renewed, her artillery should be improved as far as possible. . . . When we find historic craft like the *Warrior* and the training squadron included, we may well doubt the value of a return containing such anomalies, and equally demand that our sea scouts should be up to date."

M. Lockroy, ex-minister of marine in France, recently published a book in which he set forth that the French navy is inferior to the British, except in its artillery. The excellence of the French guns has lately been shown, and as our own war with Spain revealed the importance of the artillery service, many English papers, even the most jingoistic, express uneasiness. *The St. James's Gazette* says:

"Let us consider what it is that is claimed by Frenchmen for the armament of their navy. It is not that their gun has a greater velocity only, or is merely a better piece in itself, and apart from its ammunition and fittings. What they maintain is that the whole of their armament, guns, mountings, and ammunition taken together, are better, more simple, more military than ours, and in finer order than those of any other nation, and especially than ours. There is a look of ostentation about all this, which if we heard it from an Englishman concerning any belongings of our own would make us at once suspect the speaker for a windbag. But it is the case with the French that they may be thorough workmen, and able men, but also braggarts to an extent which no Englishman ever reaches save when he is also a quack and a fool. Therefore we will not jump to the conclusion that all French authorities tell us of the admirable qualities of their naval armament is mere exaggeration. Our critics at the admiralty, whose duty it is to make themselves acquainted with the facts, do not seem to be by any means confident. Here also we may allow for the English habit of self-depreciation, and may suppose that the technical authorities in the admiralty are expressly making the least of their own case. Still, when every allowance is made, we are left with an uneasy conviction that our war-ships are on the whole less well armed than the French. . . . Supposing now they can show that their navy is better armed than ours, will they not have a still stronger case for recommending a war at once?"

The Times, too, thinks General de la Roque must know what he talks about when he describes the French artillery as in every respect superior to the English. But the French are not the only ones to claim that their artillery is superior to that of the British navy. We take the following from an account published in the *Vossische Zeitung* (Berlin):

"It is not at all impossible that Great Britain would experience as much disappointment in a naval war as now in her struggle on land. A portion of the English press have acknowledged that all is not as it should be; but the general public hardly know the extent of the corruption rampant in the navy. Many of the guns are made of bad material, are faultily constructed, and have wrong caliber. Guns must be manufactured with the utmost precision, else they are likely to burst and can not be de-

pended upon for accurate shooting. Krupp, for instance, owes his reputation to the fact that nothing is allowed to leave his works ere it is thoroughly tested and able to pass the most rigorous inspection. Now in England it is very common for cabinet ministers to be interested in large industrial establishments, and to draw large sums as shareholders or directors. It is, therefore, easy to understand that government contracts are not always given to the most reliable firms. Thus the guns obtained from the Italian branch of the Armstrong Company are said to be very faulty. (Naturally a part of the Italian artillery also leaves much to be desired.) Faulty caliber is a serious matter. For if the ammunition of a gun should run short, it may be found that ammunition supplied for another gun nominally of the same caliber is useless, and a gun is put out of action. To this must be added that many ships are armed with old, inferior guns, and therefore hardly able to cope with an enemy carrying the best modern artillery.

"The quality of the crews leaves much to be desired. Their discipline is not good, and that counts almost for more nowadays than personal courage. Their training also is faulty. There can be no doubt that the British navy has ships which might well be the envy of any nation: but, on the average, that navy is certainly not what it is 'cracked up to be,' and it may with certainty be assumed that the German—excepting, of course, in point of numbers—is much more serviceable."—*Translation made for THE LITERARY DIGEST.*

POLITICS AND TRADE IN SOUTH AMERICA.

FRENCH papers, notably the *Journal des Débats*, have mentioned the visit of the Argentine training-ship *Presidente Sarmiento* in Spanish ports as a demonstration against the United States. It can hardly be regarded as such if we believe the *España Moderna* (Madrid), which keeps itself well informed on South American affairs. We take the following from its latest summary:

The visit of the Spanish cruiser *Río de la Plata* was the cause of much rejoicing in Argentina and Uruguay. All the more disappointing was it that the vessel should have been ordered to leave so suddenly. What made the Spanish minister of marine send that order? Only one explanation seems possible—the visit of Admiral Schley and his squadron. These United States vessels were given a grand reception at Buenos Ayres, showing beyond a doubt that the Argentine Republic is on the most cordial terms with the United States. We do not blame the Americans for making the most of this; but the presence of their ships was no reason for the Spaniard to leave. Or does some secret article of the Treaty of Paris prohibit the Spanish flag in South America? To many people it would seem that President Roca goes a little too far in his subservience to McKinley.

The writer thinks that, on the whole, Spanish America is very quiet just now. Mexico is sure to rest content with President Porfirio Díaz for another term, and all through South America there is a tendency to take the power out of the hands of the political generals, and appoint civilians. The *Kölnische Zeitung* (Cologne) also points out that the Southern continent is tolerably peaceful. Brazil and Bolivia have settled their boundary quarrels, and the new republic of Acre has been forced out of existence in consequence. The *Porto Alegre Tageblatt* declares that, at least so far as Brazil is concerned, the revolutionary tendency does not hurt business much. It declares that this is well known in England, Belgium, and the United States. We summarize as follows:

The most barefaced, stupid business tricks still seem to be effective. One of the oldest is to call a thing nasty if you want to get it away from somebody else. Even the children know of this joke. Jack says to Jill: "Huh! I would not eat that bit of cake. An ugly bug has been sitting on it." And poor Jill not only throws away the cake, but is even grateful to Jack, who, nevertheless, gets very much the best of the bargain. The cake is Brazil, and Jack is England. But lately Belgium and the United States have seen through the trick, and they join in the

merry game of frightening off poor Jill—Germany. Thus it happens that the German waits too long ere he invests his money here, and all the plums are picked up by others.

For seventy years the rate of exchange has steadily declined in Brazil. But neither is a dollar worth as much to-day in Germany as it was seventy years ago. Yet Germany has progressed wonderfully, and Brazil also has progressed. Brazil is as large as the European continent. Almost yearly there has been some sort of a revolt somewhere within her wide boundaries; but she has not fallen to pieces, and will not fall to pieces any more than Europe fails to be progressive tho she has wars. We Brazilians are a little hot-headed. We are familiar with weapons, and sometimes we break heads. But that is our private business. The security of capital in Brazil has nothing to do with it. Our trade and our industries are far removed from politics. Our *pronunciamentos* are facts; but the English use them to send out their lying telegrams, by which they seek to destroy our credit in order to have us all to themselves. Hence we are only too glad to see people from other countries coming to do business with us.—*Translations made for THE LITERARY DIGEST.*

TALK OF AN ANGLO-FRENCH WAR.

IN France, Germany, Spain, Holland, and Portugal, the press discuss the possibility of an attack on their country by Great Britain. This talk is founded on the apprehension that England will attempt to restore what is called her "lost prestige" by a sudden descent upon some nation whose navy is much weaker than her own. Especially in France is this supposed danger a continual topic. *The Spectator* (London) remarks:

"We can not doubt from the information before us that Frenchmen as a body believe, or at least think they believe, that the British intend to attack them, that as soon as the army returns from South Africa a cause of war will be discovered, and that the British fleet will be used to lay their coast towns in ashes and 'snap up' their colonies. They are actually spending millions on home defenses under this illusion, and sending artillerymen in defiance of admitted law to man their arsenal in Madagascar lest we should pounce down upon it. To listen to some of their writers is to suffer as from nightmare, and even their Government, tho it retains its reason and expects no attack, uses the impression of the majority to obtain large votes for coast defense."

The Spectator says these French fears are groundless, and *The Times* assures France that Englishmen would much rather fight Germany. *The République Française*, nevertheless, says:

"We do not believe in the war. But the best means to make it impossible is to be prepared for it ourselves. We hope, therefore, that the Government and Parliament will put aside their petty quarrels for once, and apply themselves to the task which circumstances impose, namely, that of rendering invulnerable our coasts and our colonies, organizing a colonial army, and reinforcing our distant garrisons."

Nearly all the French papers complain that their own remarks anent the Boer war receive close attention in England while the no less stinging comments of the German press are generally ignored. *The Temps* (Paris), in a very moderate article, remarks that it is impossible for Frenchmen to revise their opinion in such a way as to please the English. It says:

"If the English would revise their own attitude; if, instead of their lust of conquest, they would adopt once more those principles of justice and humanity by which they can so easily be influenced, they would soon recover the sympathies of their generous neighbors. When will England cease to play the part of enemy to the whole human race, as she so foolishly does now?"

The *Matin* supposes that Mr. Chamberlain's question to the colonies, regarding the number of men that could yet be furnished by them, is pointed against France. The *Nation* (Berlin) expresses astonishment at the fact that Englishmen expect to meet with anything but distrust, and says:

"The former England, which assisted Italy, Greece, Bulgaria,

and Belgium to obtain their independence, that England had the sympathies of enlightened Europe. Modern England, which makes it her business to crush two small Dutch republics, must expect to be disliked. The sympathies of the civilized world to some extent prevented England's enemies from acting against her. To-day the United Kingdom has entered upon a career which must lead to increased armaments. But if she adopts a policy of guns and big battalions, she may find that other empires have bigger trumps."

The Handelsblad (Amsterdam) says:

"Undeniably the overwhelming majority of the French people are opposed to wars. But if a war must come, they prefer to fight England. When the British troops left for South Africa it was the cry 'Remember Majuba!' that accompanied them. If ever French troops battle with English, we will hear the cry 'Souvenez-vous de Fashoda.' For that humiliation is not forgotten or forgiven, and the increased energy with which the anti-English agitation is carried on since Lord Roberts's successes bodes no good."

Some Frenchmen certainly speak of an energetic initiative in case of war with England. General de la Roque, in the *Revue des Deux Mondes*, sets forth that Great Britain is not as invulnerable as some suppose her to be. At any rate, France is to-day less inclined to fear her neighbor across the Channel than at the time of the Fashoda affair, and England knows it. The "invasion cry" is raised once more in England. *The St. James's Gazette* is, perhaps, the most active in this. It even claims to have exclusive information, as it intimates in the following:

"It may be asked, How is it that *The St. James's Gazette* has come into the possession of so large and important a portion of the plan of the coming campaign? We can not divulge our sources of information. But, as the revelations of the Dreyfus trial have shown, military information, and that of the most secret nature, can be obtained in Paris for a consideration."

We give below a summary of what *The St. James's Gazette* claims to have discovered:

France, in 1875, submitted to Bismarck's threat of war, because he had the power to crush her. Again, France obeyed Lord Salisbury's mandate in 1898 because she did not then know that England would need nearly a quarter of a million men to prevent one fifth of that number of Dutch and Huguenot squatters from taking the Cape Colony. France may forgive Germany, the powerful, but she can not forgive England's "bluff" game. A war is inevitable before the commencement of the winter storms.

Four army corps and two independent cavalry divisions will be under arms in France for the next maneuvers, in August. If the order to mobilize is given at nine o'clock at night, 50,000 French troops can be passing on board ship by daylight the next morning, not counting the marines. England has at present hardly anything to oppose them. The British fleet will be induced to appear off the coast of Morocco by an attack upon that country. The one prominent fact, however, is that when the great exhibition closes, 200,000 men will be massed within a few hours' journey by train to the French ports nearest to England. A special service squadron should immediately be organized to ward off the blow.—*Translations made for THE LITERARY DIGEST.*

Cronje's Tactics at Magersfontein.—The following Boer description of the manner in which General Cronje prepared for the British attack at Magersfontein is taken from an account given in the *Handelsblad* (Amsterdam):

"The scene of the action is tolerably level ground, with here and there a small kopje. In the center of the Boer position, thorn bushes were planted by General Cronje's orders, for the purpose of masking his batteries. His guns, however, were not permitted to fire until the end of the second day. They were in reserve. In front of the trees were placed ten Boers with Martini-Henry rifles. They were ordered to fire volleys at certain intervals, the smoke of the old-fashioned powder being intended to convey the impression that the Boer cannon were placed there.

Next toward the enemy came a large, conspicuous entrenchment. It was without defenders; but served to protect the Boers armed with Martini-Henrys, as it received the enemy's cannonade. Next followed an entrenchment full of Boers armed with Mausers. Both flanks were protected by Boer commandos with Mausers.

SKETCH MAP OF BATTLE OF MAGERSFONTEIN.

The English hoped to outflank the Boers, but did not succeed. When General Wauchope reached the neighborhood of the Boers' first line (marked IV in the sketch), he was heard to exclaim: 'Here we've got them!' The next moment he fell, pierced by about forty bullets. The Boers to the left of Cronje's position never fired a shot, as it was not necessary.

THE THREATENING TARIFF WAR WITH GERMANY.

A LARGE proportion of the German people regard the meat inspection bill, which would prevent the importation of salted and canned meats at once, and that of fresh meat in 1904, with anything but pleasure. That the measure is directed mainly against the United States, in the hope that the United States Government may be forced to conclude treaties more favorable to German trade, is not doubted; but many Germans are not at all certain that the Americans can be thus driven to make concessions. The Berlin correspondent of the *London Times* says:

"There is, no doubt, a great preponderance of imports from the United States over exports from Germany to America. Yet these exports amounted in value in 1898 to 334,562,000 marks, notwithstanding the Dingley tariff, and exceeded the whole exports of Germany to Spain, Portugal, Italy, Greece, Rumania, Bulgaria, Servia, Turkey, Canada, and Mexico added together. Another important consideration is that while America, in the event of a tariff war, could easily obtain elsewhere the supply of toys, porcelain, cement, leather goods, millinery, and various products of the textile and chemical industries which form her chief imports from Germany, the German empire can not dispense with the petroleum, copper, maize, and cotton which she receives from America."

The matter is regarded with no little interest in England, as the German navy bill is supposed to hinge upon it. The Agrarians and other Conservatives are likely to oppose the navy bill, unless protection is granted the German stock-raiser. The *London Spectator* says:

"German merchants are desperately afraid of losing their

American market, and may give up the navy bill rather than provoke a war of tariffs. The German Government, of course, have no wish to make meat dear, but the stock-raisers have, and between their obstinacy about profits and the Emperor's obstinacy about his navy a very serious situation may be created. Nothing irritates Americans more than a tariff directed against them. They think themselves at once cheated and insulted."

That the German merchants are "desperately afraid" is hardly putting it too strongly, considering the manner in which they express themselves, in meetings as well as through their organs. The *Boersien Courier* (Berlin) asks, "What is the use of a navy for the protection of trade, if there is no trade to protect?" The member for Bremen warned the House that "the Americans would be very angry if their trade is interfered with." The *Völkisch* (Berlin) remarks that "any one who knows the Americans must be aware that a most determined tariff war must follow the exclusion of American meat." The Hamburg Trade Chamber words its protest as follows:

"The whole of German shipping, the whole of German export is at stake. The possibility of concluding a new commercial treaty with the United States is removed. Australia, England, and South America will, like the United States, threaten retaliation. Moreover, great injustice is done to the poorer classes. The price of meat, already too high, will become prohibitive. That the importation of meat is injurious to health is absolutely unproven."

The *Weser Zeitung* points out that the value of the meat imports are only valued at \$10,000,000, yet it is proposed to risk exports to the United States valued at \$77,000,000.

On the other hand, a large number of papers point out that Germany is losing by her trade with the United States, and that American tariff legislation has gradually forced the German industries into a position of dependence which is described as

"humiliating" by the *Dresdener Nachrichten*. The same paper claims that American lobbyists have influenced the German Foreign Office. The *Kreuz-Zeitung* (Berlin) says: "The Americans threaten to retaliate. We must show them that the foreigners can not frighten us." The *Neuesten Nachrichten* (Leipzig) says:

"Always this fear of 'retaliation' by the foreigner. When England takes our steamers, everybody, from Dan to Beersheba, shakes in his shoes for fear that expressions of dissatisfaction may hurt John Bull's tender feelings. When it is necessary to protect the health of our people by a measure which may be unpleasant to a dozen or so American merchants, we shiver because Brother Jonathan may get mad. Are we, then, really so helpless? We do not believe that a tariff war threatens. It would be a jump in the dark which the cute Yankees will not undertake, for fear of breaking their own legs."

We condense the following from an article in the *Deutsche Oekonomist* (Berlin):

The question is not whether Germany should become free-trade or protectionist in principle. We must and shall be the very strongest advocates of international free trade, now and in future; for a high tariff can only hurt us. It must cripple us. Our population is growing enormously, and more than any other civilized people are we forced to find markets beyond our own narrow, political limits. To earn our bread in peace, we must have free trade all over the world. If it should be absolutely necessary, we must not scruple to enter into a struggle with blood and iron even, to enforce that free trade. If imperialism and the high-tariff systems of other countries force such a war on us, we should arm to the utmost to bring it to a successful issue. If we are merely forced into a tariff war, we must prepare to carry that through as well, without foolish considerations. There is yet time to do so, and nothing would be more disastrous than to fancy that we may not fight with prohibitive tariffs for fear of being starved. Some nations are such enemies of progress that they surround themselves with a Chinese wall. They refuse to understand Graf von Bülow's *do ut des* policy. The advisability of proceeding against the worst offenders with prohibitive Agrarian duties is well worthy our consideration.—*Translations made for THE LITERARY DIGEST.*

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Ernest L. Harris, consular agent at Eibenstein, discusses European and American commercial competition, in a report dated January 24, 1900. Mr. Harris writes as follows:

"A recent article by George Wenersse in the *Grande Revue* says, in part:

"The danger is already at our threshold and is making itself felt. Brutal figures prove this fact most conclusively. A revolution which will change the commercial balance of power is taking place before our eyes. Until recent years, the Americans have been the best customers of European industries; they are now our competitors, and in very many branches have beaten us in the world's markets."

"Mr. Wenersse pays especial attention to the foothold which American manufactures have gained in the far East. The United States has succeeded in flooding China and Japan with guns, leather products of all kinds, machines of every description, electrical motors, etc."

"Gradually the Americans are pushing their way into the British colonies. The last railroad built in India has American rails. American manufacturers export their iron and motors, their machinery, and galvanic wires to Cape Colony. Egypt, too, has Philadelphia bridge-builders on the scene. Three hundred railroad coaches have found their way from Jersey City into the land of the Pharaohs, and electrical tramways are forged in the foundries of Pittsburg to connect Cairo with the pyramids. Even Europe is not safe against the invasion of American goods. Russia, France, Germany, and Italy must pay tribute. England herself buys American locomotives, steel rails, paper ware, railroads, coaches, and even coal. Sheffield, the home of the steel industry, has been dethroned by Pittsburg. It would be frivolity itself to remain indifferent to the expansion of this leviathan people."

"We have reached our present position without special effort on the part of our manufacturers. Our export trade is in its infancy. How may we best focus our efforts to increase it? I believe this depends mainly upon two things—schools and ships. We must have industrial schools, wherein our young men may be thoroughly trained for their vocation in life. If a youth expects to become a manufacturer of cotton, he should learn all about cotton—whether it be a growth of his native country or of Egypt, India, or the Caucasus. He must learn about picking, carding, spinning, and weaving. The same is true of the would-be manufacturer of wool, iron, and steel. Germany's

IVERS & POND PIANOS

Sent on FREE TRIAL.

We pay freight charges both ways if unsatisfactory...

Experience has given us such confidence in those who answer our advertisements that where we have no local dealer we will ship entirely on approval any style of our upright or grand pianos, and leave it to your judgment whether you would be better off to keep it and pay the price arranged—either in cash or

or return it to us. This offer is backed by our business record of over 20 years, and has no catches or hidden entanglements—it is a straight business proposition. Think about all the best things that have ever been said about the best pianos. They would all apply to an IVERS & POND. Sum it all up in one sentence—**"No better piano is made or ever has been made."** The New England Conservatory of Music has purchased 239 of our pianos.

ALL YOU HAVE TO DO IS

to send for our handsome catalogue (free), and we will mail it with a personal letter quoting lowest prices and giving valuable information about piano-buying, including our unique easy payment plans giving from one to three years to complete the purchase. Old pianos taken in exchange.

IVERS & POND PIANO COMPANY, 121 Boylston St., Boston.

success as a commercial nation is to be attributed directly to her schools. The lad of Eibenstein who proposes to be a merchant divides his time between some business house and the industrial high school. There are schools all over the empire for boys in the lowest ranks of life; schools for the coming locksmith, shoemaker, blacksmith, etc. If it pays Germany to educate her laborers to manufacture products from imported raw material, what could we not accomplish through training-schools with the raw material at hand?

"As to ships, a per cent. of the freight from the United States is carried in foreign bottoms. If the English or German steamship lines are compelled by any chance to divert a number of vessels from the transatlantic traffic, loss will be incurred by our exporters of cotton, grain, etc. The more steamship lines the cheaper the freight. To-day, ships may be built at Bath, San Francisco, Philadelphia, Wilmington, Chester, and Newport News as cheaply as anywhere in the world."

PERSONALS.

Is the recent death of J. Schabelitz, the famous Zurich publisher and author, the world of art and letters has lost one of its extraordinary characters. He was a shrewd business man, an excellent linguist, a skilful writer, and probably the most savage publisher who ever lived. When he accepted the famous memoirs of Count von Arnim, he wrote on the postal card with the acceptance the proviso, "I reserve the right to correct your infernally bad grammar."

To an aspiring poet who had submitted manuscript he answered by postal card: "I refuse to be disgraced by printing your doggerel. I don't return the copy because you didn't enclose enough postage. If you will send it, with the price of this card, I will send it to you, but I don't think the stuff is worth the expense on your part."

One of his postal cards to a novelist read about as follows: "For heaven's sake, come and take away the unnamable mass of paper you left here for me to look at!" An ambitious historian was

AMERICAN WATCH AND DIAMOND CLUB

Co-Operative Plan. Members secure Wholesale Cash Prices and \$1 Weekly Payments

Any Monogram, Special Subject, or Emblem

Engraved to Order without Extra Charge

Any Size, Ladies' or Gents', Open or Hunting Case

Join one of our Clubs and secure a High-Grade Watch—\$25.00, \$35.00 or \$45.00—or Diamond—\$40.00, \$50.00 or \$75.00. Privilege of \$1.00 a week, or \$5.00 a month payments. Our co-operative plan secures you the net wholesale cash price, and the benefit of the easy Savings Bank method of payment. Besides, you have the use of watch or diamond while paying for it.

Watch or diamond shipped on receipt of first payment and references. Catalogue and testimonial letters tell all about it. Address

We have no agents or branch stores. All orders should be sent direct to us.

New Summer Suits, \$5.

WE have just received from abroad some entirely new styles in Suits and Skirts for summer wear. We have had these illustrated on a supplement Sheet, which will be sent free, together with our Spring Catalogue and a choice collection of samples of Suitings, to the lady who wishes to dress well at moderate cost. We make every garment to order, thus insuring that perfection of fit and finish which is not to be found in ready-made goods. We pay all express charges.

Our catalogue illustrates:

New Designs in summer Suits, \$4 up.

In Pique, Crashes, Cotton Cover Cloth, Ducks, Linens, etc.

Tailor-Made Suits, \$5 up.

In All-wool Serges, Cheviots, Broadcloths, Cover Cloth, Venetians, etc.

Duck, Pique, and Crash Skirts, \$3 up.

Separate Skirts, \$4 up.

Lined with Percale, well stiffened and bound with Corduroy; made of All-wool

Cloths, Serges, Cheviots, etc., in the latest effects.

Bicycle Suits in the newest fabrics, \$5 up.

Separate Bicycle Skirts, \$3.50 up.

Rainy-day Suits and Skirts made of double-face materials.

Our line of samples includes the newest materials, many of them being exclusive novelties not shown elsewhere. We also have a special line of black goods and fabrics for second mourning. All orders filled with the greatest promptness; a suit or skirt can be made in three days when necessary.

Write to-day for Catalogue, Supplement and Samples; you will get them free by return mail.

crushed by the following, written, like all of his correspondence, upon a postal card: "You are making the mistake of your life. You don't want to study history. You want to learn how to write."

ISADOR COHN, the New York Assemblyman from "de Ate," may not be a statesman, but when it comes to getting a bill through, he is certainly resourceful. He had distinguished himself during the present session of the Legislature by doing nothing but smile until his Dewey Park bill came up for consideration, and Slater, of New York City, moved to strike out the enacting clause. Then Cohn made his maiden speech and got his bill considered. Here is the speech: "This is my first speech, and perhaps my last this session. This is the only bill which I hope to pass, and I do not think that any one ought to vote against it. I have never voted against anybody's bill, and I don't think that anybody ought to vote against my bill. I have tried to be a friend to everybody, and I really think that everybody ought to be a friend of mine. This is a good bill. I don't see how anybody could be so unkind as to vote against it." Daniel Webster might have made a more eloquent speech, but the bill passed unanimously.

THE Anti-Death Penalty League of Massachusetts requested an opinion from William Dean Howells, and received the following reply:

"I think capital punishment a legal atrocity, and a species of homicide, incomparably more cruel than most private murders, since it inflicts death after long knowledge of death to come has multiplied its terrors for the victim. It is one of the most useless pieces of wickedness left in the world."

MAJOR ALBRECHT, who was in charge of the Orange Free State artillery and was captured with General Cronje, has a keen sense of humor. During his bombardment of Kimberley he kept a good lookout with his field-glasses, and when he saw a British shell coming he used to shout, "Koeat, Kerels!" ("Down, fellows!"), his men then immediately taking cover. One of his German officers, Lieutenant Heister, evidently thought it *infra dig.* for an officer to lie down, and seemingly resented the idea of being included among "fellows," and was so in the habit of remaining standing. At last, however, he was compelled to take cover, for Major Albrecht, noticing his behavior, laughingly cried when the next shell started, "Down, fellows, and Lieutenant Heister!"

AN amusing correspondence recently passed between Rudyard Kipling and a London publishing house that deals extensively in American works. A letter was addressed to the author in care of this firm and by it forwarded to him at Rollingdean, with the following note:

"The enclosed letter has just reached us from America, and you will see that we had to pay a letter fine of threepence on it. Your obedient servants, G—B—"

Here is Mr. Kipling's reply:

"DEAR SIR.—Mr. Rudyard Kipling desires me to acknowledge the receipt of your letter of November 10. The letter that you enclose was from a firm of pirate publishers on the Pacific slope, and Mr. Kipling is glad to learn that you are only out of pocket threepence by it. Faithfully yours, 'S. ANTERSON.'"

Then came the last of the correspondence:

"In forwarding you the letter from America addressed in our care, we thought we were doing a courteous act. We did not know from whom it came, but because it was from 'a firm of pirate publishers on the Pacific slope,' your secretary reports that you are glad to learn that we are only threepence out of pocket by it. This strikes us as the action of an 'absent-minded beggar.' Yours faithfully, G—B—, P. S.—Kindly put the threepence in the tambourine."

If You Feel Depressed

Use Horsford's Acid Phosphate.

Dr. W. E. PITMAN, Lynchburg, Va., says: "I have used it in nervous depression and dyspeptic troubles, with good result."

PRICES \$5 TO \$12, EXPRESS OR FREIGHT PREPAID.

Racine Cabinet For Turkish Baths

THE RACINE CABINET is a strong double-walled room, rubber-coated inside and outside and fitted with a door. When ready for use, the walls are rigid, yet by merely tipping the cabinet you fold it in a second into a 6-inch space.

A patent alcohol stove heats the cabinet to 150 degrees in three minutes. For a vapor bath, pour a pint of water into the vaporizer. For medicated baths, put the proper drugs in the water. We send 35 formulas with the cabinet.

The Racine cabinet places in your home all the benefits of the best Turkish bath rooms. Not an essential feature is lacking. You save breathing hot air, save the risk of exposure afterward, save time and expense. The cost is but 3 cents per bath.

For the cure of rheumatism, kidney and blood diseases, no other treatment can approach it. The hot-air bath forces the impurities that cause the disease out from five million pores at once. In all sanitariums the Turkish bath is the most important treatment. All who value cleanliness, complexion and health will eventually own one of these cabinets. The quieting, refreshing, invigorating effects of the bath are the pleasantest sensations possible. One bath will always stop a cold.

The Racine Cabinet is guaranteed to be the best one on the market. Not in any way similar to the worthless affairs now advertised for this purpose. We sell on approval, to be returned at our expense if not satisfactory. Sold direct to users at from \$5 to \$12, express or freight prepaid; alcohol stove, vaporizer and face steaming attachment included. Send today for handsome illustrated catalogue, and order from that.

RACINE BATH CABINET CO.,
BOX X, RACINE, WIS.

BURPEE'S "Seeds that Grow"

If you want to get the Best seeds for your garden this year, you should send your address on a postal card for **Burpee's Farm Annual for 1900**

It is a bright new book, considered by intelligent planters everywhere, "the Leading American Seed Catalogue." You had better write to-day. Simply address **BURPEE, Philadelphia.**

MORE OR LESS PUNGENT.

In the Dining-Car.—HE: "Isn't it delightful to be dining together without a chaperon?"
SHE: "I should say so! Marriage is certainly a great economy."—*Puck*.

Ambitious.—"What I want," said the young applicant, "is a chance to rise in the business."
Very well. How would 3.30 A.M. suit you?—*Harvard Lampoon*.

Not Fitted for It.—VISITOR: "When you are grown up, will you be a doctor, like your father?"
BOBBY: "Mercy, no! Why, I couldn't even kill a rabbit!"—*Brooklyn Life*.

The Difficult Thing.—TEACHER: "Now, boys, who can tell me which is the most difficult thing to acquire in cycling?"
CHORUS OF YELLS: "The bicycle, sir."—*Tid-Bits*.

An Accommodating Neighbor.—PIANO-TUNER: "I called to tune the piano."
LADY: "I did not send for you."
PIANO-TUNER: "No, but the man next door did."—*Cornell Widow*.

Tis Ever Thus.—MRS. HENPECKER: "Doctor, I need a tonic. I am all run down."
DOCTOR: "Let me see your tongue."
MR. HENPECKER (*sotto voce*): "He won't find much evidence of it there."—*Philadelphia Record*.

Great Improvements.—"I see," remarked the observant boarder, "that meals are to be served in Chicago street-cars." "When," asked his neighbor, "will sleeping-cars be put on the Philadelphia street railways?"—*Pittsburg Chronicle Telegraph*.

One Effect of the War.—HIS WIFE: "If you can stop reading about the Boer war for a few minutes, I have something to tell you about the book."
THE SUBURBANITE: "Yes? Is she going to trek?"—*Puck*.

Current Events.

Monday, March 26.
—Lord Roberts's movement on Pretoria will, it is expected, be accompanied by an advance of General Buller's force at Ladysmith.
—Mr. Forsaker announces that he will press the Puerto Rican bill to a vote; Mr. Davis introduces a free-trade substitute.
—In the House, the consideration of the Military Appropriation bill is begun.
—The court of inquiry on the wreck of the *Charleston* exonerates the officers of the cruiser from all blame.
—An exciting scene occurs at the examination of the men charged with conspiring to kill Senator Goebel, and bloodshed is narrowly averted.
—Rabbi Wise dies at Cincinnati.

Tuesday, March 27.
—Skirmishes are reported from several quarters in South Africa; at Warrenton the Boers have apparently decided on offensive tactics against Lord Methuen's force.
—Serious disturbances are reported in China.

One School Buys 239 Pianos.
This number of pianos under one roof seems a strange fact, but when they are all from one maker it becomes remarkable. In another column will be found an attractive offer from the Ivers & Pond Piano Co., to sell a piano by mail, and in this connection the following letter will be of interest:

NEW ENG. CONSERVATORY OF MUSIC,
Boston, Mass., Aug. 25, 1898.
IVERS & POND PIANO CO., Boston, Mass.

Gentlemen:—This institution has purchased since 1882 two hundred and twenty-seven Ivers & Pond Pianos, and last month we placed with you an order for twelve more, to be delivered early in September next. This increases the total of your pianos purchased by this institution to 239. The fact that we have used your pianos continuously for seventeen years and are still ordering them is a stronger proof than anything we can say of the high estimation in which we hold the Ivers & Pond Pianos.

Yours very truly,
FRANK W. HALE, Gen. Manager.

Digest readers are urged to learn about their free trial piano. Simply send for catalogue to the Ivers & Pond Piano Co., 127 Boylston Street, Boston, Mass.

A HOT BATH IN FIVE MINUTES

at any time, day or night, summer or winter, fire or no fire, if you have a Humphrey Crescent Instantaneous Water Heater. It is a comfort the more appreciated the longer enjoyed, a convenience which no well-appointed household can do without. An inexhaustible supply of hot water instantly, costing one cent a tubful. An ornament to any bathroom. Guaranteed perfect in every detail. No complicated piping—simply set up and connected with gas and water. You can not afford to be without this great home convenience and luxury. Write to-day for free illustrated price-list and booklet.

So simple any child can use it.

Play Whist?

Then You Will Be Interested in This Table.

It is intended for Duplicate Whist. In the illustration, the large cut is the table set up for use. The small disk is the pocket for holding the cards. It is fastened to the bottom of the table and revolves. The dot on the margin shows the spring which controls it. At the side is the table folded. The pocket holds sixteen decks of cards. There are sixteen hands and each player has four leads. After playing a hand, cards are replaced in the pockets, and by touching the spring, a new hand is before each player. The advantages over trays are no lost cards, no errors and a place on which to play. The table is made in oak or mahogany and is a handsome, substantial piece of furniture. Price of each \$6.00, f.o.b. cars, Green Bay, Wis.

GEO. H. RICE, - Green Bay, Wis.

HANDBOOK OF MEDICAL GYMNASTICS...

The principles and applications of Swedish gymnastics, massage, and orthopedics. By Anders Wide, M.D., 8vo, cloth, 382 pp. Illustrated, \$3.00.

Funk & Wagnalls Co., Pubs., - New York.

The Starvation Plan

Of Treating Dyspepsia and Stomach Troubles is Useless and Unscientific.

The almost certain failure of the starvation cure for dyspepsia has been proven time and again, but even now a course of dieting is generally the first thing recommended for a case of indigestion or any stomach trouble.

Many people with weak digestion as well as some physicians, consider the first step to take in attempting to cure indigestion is to restrict the diet, either by selecting certain foods and rejecting others or to cut down the amount of food eaten to barely enough to keep soul and body together, in other words the starvation plan is by many supposed to be the first essential.

All this is radically wrong. It is foolish and unscientific to recommend dieting to a man already suffering from starvation because indigestion itself starves every organ, nerve and fibre in the body.

What people with poor digestion most need is abundant nutrition, plenty of good, wholesome, properly cooked food, and something to assist the weak stomach to digest it.

This is exactly the purpose for which Stuart's Dyspepsia Tablets are adapted and the true reason why they cure the worst cases of stomach trouble.

Eat a sufficient amount of wholesome food and after each meal take one or two of Stuart's Dyspepsia Tablets to promptly digest it.

In this way the system is nourished and the over-worked stomach rested, because the tablets will digest the food whether the stomach works or not, one grain of the active digestive principle in Stuart's Dyspepsia Tablets being sufficient to digest 3,000 grains of meat, eggs, or other albuminous food.

Dr. Harlandson and Dr. Redwell recommend these tablets in all cases of defective digestion because the pepsin and diastase in them are absolutely free from animal matter and other impurities, and being pleasant to the taste are as safe and harmless for the child as for the adult.

All drug stores sell this excellent preparation and the daily use of them after meals will be of great benefit, not only as an immediate relief, but to permanently build up and invigorate the digestive organs.

Rheumatism and Gout

A prominent physician writes:

DEAR SIR:—Replying to yours on the use of TARTARLITHINE as a remedy in the treatment of gout, I will say that I have used it in the treatment of about a dozen cases with results that are a little less than wonderful. The characteristic feature of its action is the rapidity with which patients improve under its use. An improvement is noticeable within 24 hours. One of the most striking cases was that of a physician suffering from gout, muscular rheumatism and frequent bilious headaches. I prescribed Tartarlithine, and in one week there was absolute disappearance of all of the uric acid manifestations. The nervous irritability disappeared, and he stated that he had done the best week's work which he had accomplished in years.

Tartarlithine is supplied in bottles containing 50 doses at \$1.00 and can be obtained of all druggists or post-free by mail. Pamphlets with Testimonials sent FREE.

Saturday, March 31.

—General Roberts sends a telegram of condolence to President Kruger on the death of General Joubert, and Rudyard Kipling writes a poem on Joubert for a Bloemfontein paper.

—Governor General Davis declares in an interview that free trade is not advisable for Puerto Rico.

—Socialist obstructionists force the resignation of Signor Colombo, president of the Italian Chamber of Deputies.

—In the Senate, Mr. Fairbanks argues in favor of a tariff for Puerto Rico.

—The Kearsarge's double turrets prove a success.

Sunday, April 1.

—A British convoy and six guns are ambushed by the Boers near Bloemfontein and captured.

—Comment was caused at Albany over the failure of Republican county conventions to endorse Governor Roosevelt for re-nomination.

—Governor Steunenberg of Idaho, made a strong argument for the presence of Federal troops in the disaffected mining districts.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Alois P. Swoboda

teaches by mail with perfect success, his original and scientific method of Physiological Exercise without any apparatus whatever and requiring but a few minutes' time in your own room just before retiring. By this condensed system more exercise can be obtained in ten minutes than by any other in two hours and it is the only one which does not overtax the heart.

It is the only natural, easy and speedy method for obtaining perfect health, physical development and elasticity of mind and body.

ABSOLUTELY CURES CONSTIPATION, INDIGESTION, SLEEPLESSNESS, NERVOUS EXHAUSTION

and revitalizes the whole body.

Pupils are of both sexes ranging in age from fifteen to eighty-six, and all recommend the system. Since no two people are in the same physical condition individual instructions are given in each case.

Write at once for full information and Booklet containing endorsements from many of America's leading citizens to

ALOIS P. SWOBODA, 34-36 Washington St., Chicago, Ill.

Children's Food

It may seem a far cry from the waving wheat fields of the great northwest to your children, but the wheat grown there is richest in real food elements, and they will thrive better and grow stronger on it than on any other cereal.

Cream of Wheat

is the best preparation of wheat made. It contains literally, the cream of the wheat, hence its name.

When purchasing, ask your grocer to show you our gravures of north-western scenery. Very fine works of art, nothing cheap, and no advertising card attached.

Cream of Wheat Co., Minneapolis, Minn.

Cod Liver Oil is a food

and the greatest care should be exercised in its selection.

Peter Moller's Cod Liver Oil

is the best oil that fifty years of continued scientific research has produced. By the process now employed the oil is kept from contact with the atmosphere from the beginning of the process of manufacture until it is safely corked up in bottles, thus preventing contamination of any kind and excluding all impurities.

Give this new oil a trial. Ask for Peter Moller's Oil, and see that the bottle—a flat, oval one—bears our name as agents. Notice the date in perforated letters at bottom of the label.

"Modern Chess Brilliances."

Persons who pride themselves on being "students" of Chess take a pleasure in plodding through hard, close, and generally stupid games; but the average Chess-player finds a delight in seeing something smart, cute, bright. The "Modern School" may be right in commending conservative play, or, as one of our Chess-wits calls it, "Pawn-grubbing," but we all like to see a player "risk" something, or do something out of the usual style. Hence, those games that may be called "Brilliances" are always attractive, if not specially instructive. It must be said that the "brilliant" games of the Masters, while they appear to be "risky," are usually the results of perfectly sound combinations, revealing the peculiar Chess-genius that can see some bold, unlooked-for move, leading to beautiful after-play.

The little book, "Modern Chess Brilliances," which we received from Will H. Lyon, Newport, Ky., is a collection of seventy-five of the most brilliant Chess-masterpieces on record up to 1898. Some of these games took the Brilliancy Prizes in Masters' Tournaments, and all of them are by the great Masters.

We give the game that Steinitz praises as "one

Successful Fruit Growing.

The Superintendent of the Lenox Sprayer Company of Pittsfield, Massachusetts, has delivered an address before the Lenox Horticultural Society at Lenox, Mass. The address is almost a college education to fruit growers, fruit dealers, and in fact to anybody eating fruit or even having but few fruit trees, or in any way concerned. Had this address been placed on the market in book form it would no doubt have sold at a good price. The full address, profusely illustrated, in pamphlet form, will be sent complimentary to any one enclosing ten cents, for postage, to the Lenox Sprayer Company, 30 West St., Pittsfield, Mass.

EVERYBODY'S WATCH

THE INGERSOLL

FOR A DOLLAR!

It is not a "cheap" Watch. It is superior to much by because of its accuracy, because it keeps good enough time for all practical purposes, and what more does any one want?

It also has a reputation for over 100 years of reliability, and its reputation is growing. It is a fact that a watch of this kind, which has been in service for 100 years, is still going strong. The fact that such a watch has lasted so long is a proof of its reliability.

At 10,000 dealers, or post-paid on receipt of price.

APPROVED ROBE H. INGERSOLL & CO. Dept. 17 NEW YORK CITY

The Leonard Sofa Bed

A luxurious Sofa, couch length, instantly convertible into a Large, soft hair-mattress bed, with receptacle for bedding or dresses. 10 styles, \$28.00 to \$75.00—equally luxurious and serviceable. Freight prepaid, catalogues free. Returnable if not entirely satisfactory. There is but One Leonard Sofa Bed. Patented, manufactured and sold only by

The Leonard Sofa Bed Co., 496 Erie St., Cleveland, O.

of the finest monuments of Chess-geniusity" and one of "the most brilliant gems in the annals of practical play."

Notes (abridged).

- (a) Castles, followed by P-Q4, is better play here.
- (b) Kt-Kt3 is preferable.
- (c) Sound and brilliant.
- (d) Q-Kt3, followed by Q-B3, is better for White.
- (e) If Kt-B3, Kt x B P.
- (f) Splendidly played.
- (g) A magnificent sacrifice such as has very seldom occurred in actual play.
- (h) Really magnificent.

The Literary Digest Chess-Association.

Somewhat jokingly we spoke of THE LITERARY DIGEST Chess Association when asking for players to take part in the "composite game." The name seems to have taken the fancy of many of our Chess-friends, and the proposition has been made to regularly and formally organize such an association. If this meets with your approval, it will be necessary to elect a president and secretary; whether or not we need a treasurer, to be decided by the opinion of the majority. If any rules or laws are needed a committee should be named to do this work. The only rule that we insist upon is that concerning membership: Any person can become a member of this association by subscribing to THE LITERARY DIGEST and sending name and address to the secretary. Of course, all present subscribers can become members of the Association by notifying the Secretary. If you think well of this, write to the Chess-Editor as soon as possible.

A \$12 Bath Cabinet FOR \$5.00

Our new 1900 style Square Quaker guaranteed best of all cabinets at any price. Has real door on hinges, steel frame, best materials, rubber lined, folds flat, lasts 20 years. Turkish and Vapor baths at home 50 each. Open the millions of pores, sweats poisons out of the blood, keeps you clean and healthy, beautifies complexion. Physicians recommend it for Colds, LaGrippe, Rheumatism, Neuralgia, Obesity, Female Ills, all blood, skin, Nerve or Kidney troubles. Money refunded after 30 days use, if not as represented. Price with heater, directions, formulas, \$5.00. Face Steamer \$1.00 extra. Order today. Write us. Valuable Book FREE. Agents Wanted. Big Wages. Splendid Sellers. World Mfg. Co., 37 World Bldg., Cincinnati, O.

BOOKS BY MAIL CHEAP

Why pay publishers' price for books when by joining the Empire Book Club you can secure any book you wish, delivered at your home, at wholesale price? Write at once for booklet "D," which tells of the advantages we offer you and the terms of membership. THE EMPIRE BOOK CLUB, 71 Broadway, New York.

Authors' Manuscripts critically examined and prepared for the press. Publication secured. Address DR. CARLOS MARTYN, Box 166, Madison Square Post-Office, New York City.

LEGAL DIRECTORY.

We append below a list of leading lawyers in different portions of the United States.

Legal business, collections, and requests for local information will meet with prompt attention at their hands:

Henry C. Terry, 506-7-8 Hale Building, Philadelphia.
Mordcael & Gadsden, 48-45 Broad St., Charleston, S.C.
John Moffitt, 50 Dearborn St., Chicago, Ill.

The Literary Digest

VOL. XX., No. 15

NEW YORK, APRIL 14, 1900.

WHOLE NUMBER, 521

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$2.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

HOW ADMIRAL DEWEY'S ANNOUNCEMENT IS RECEIVED.

NO great wave of enthusiasm seems to have followed Admiral Dewey's interview announcing his candidacy for the Presidency. Very few journals are ready to commit themselves to his support without knowing his position on the leading questions of the day, and the only platform as yet enunciated by the admiral—"the flag and the Constitution"—most papers think decidedly too vague. His view of the Presidential office, too, is considered absurd by many. He is reported as saying: "Since studying this subject, I am convinced that the office of the President is not such a very difficult one to fill, his duties being mainly to execute the laws of Congress. Should I be chosen for this exalted position I would execute the laws of Congress as faithfully as I have always executed the orders of my superiors."

Altho the admiral at first expressed no preference for either party, speaking of a nomination by "the people," later interviews indicate that he hopes to be placed in the field as a Democrat either by displacing Mr. Bryan, or on an independent Democratic ticket. The Republican and the Silver Democratic press show no disposition to desert their prospective candidates, McKinley and Bryan, and even the Independent Democratic papers, for the most part, confine their expressions to regret that the admiral had not announced his willingness to run earlier, when his popularity was at its height. A few papers, however, indorse the admiral's candidacy heartily.

Among Republican papers, the *Chicago Evening Post* (Ind. Rep.) says that "Admiral Dewey's notion of Presidential duty is so innocent and childlike that his best friends should advise him to seek information on this subject before proceeding with his imaginary candidacy. Even elementary knowledge would satisfy him that his announcement is a blunder and an injustice to his own record." The *New York Sun* (Rep.) calls the admiral's announcement "almost childish," and the *Boston Transcript*

(Rep.) says: "This latest of our indiscreet naval heroes makes such a revelation of naive vanity that his candidacy has already become ludicrous, too much so for any disaffected element of either party to prosecute it with straight faces." The *Chicago Tribune* (Rep.) believes, however, that "the substitution of Dewey for Bryan would give the Republican Party all it wanted to do to win a victory"; and adds "A candidate who has no record and whose simple and artless platform is that he will 'execute the laws of Congress' may be a dangerous fellow, especially when his opponent is the candidate of the party which has been in power for four years and which inevitably has made some mistakes and enemies during that time."

Among the Democratic press the *New York Journal* (Dem.) admits that Admiral Dewey is worthy of any reward in the gift of the nation; but, it adds, the Presidency is not a reward, it is a responsibility. It continues: "The *Journal* believes that Bryan will be nominated by the Democratic convention. As an American paper it would like to see Bryan nominated by the Democrats and Dewey by the Republicans, in order that whichever way the election went the people would have an honest President and an end of the corruption and favoritism which have disgraced the country under the McKinley Administration. As a Democratic paper it would carry at the head of its columns the name of William Jennings Bryan for President of the United States." The *Indianapolis Sentinel* (Dem.) thinks that the admiral's seeming indecision as to whether he is a Democrat or a Republican, his silence on such questions as the Puerto Rican tariff, and his "backing and filling" in his attitude toward Aguinaldo "indicate a readiness for subserviency to Congress that stamps him as a man whose sphere is under orders. He will not be nominated, and he would not be elected if he were nominated." The *Atlanta Constitution* (Dem.) treats the matter lightly, saying: "The famous artillery punch of Savannah has had a more serious reaction than usual. What the admiral needs at this time is a good, strong, healthy man to advise him. The untimely taking off of the gallant Tom Brumby was the greatest loss Dewey ever sustained."

It seems to be pretty generally believed that Admiral Dewey's best chance lies in a rising of the Gold Democrats and other independent voters in his favor. The comments of the Independent

ADMIRAL DEWEY.

From a photograph taken last month.

be a refreshing change from the present and immediately preceding Presidential reigns." The *Baltimore Sun* (Ind.) says that "meantime, pending the November election, the admiral, whether he win or lose, is entitled to the sympathy of the people. When the opposition gets done with him he will be lucky if he escapes with any part of his reputation left." The *Philadelphia Record* (Ind. Dem.), like many other papers, seem to be waiting for the admiral to disclose his views. It says: "The gallant admiral has hosts of admirers and no enemies in the country he has so highly served. But the people are entitled to know something more definite than they now know as to the way he stands affected toward the important issues which now divide opinion. He should hoist his flag and set his sail, so that we may know whither he is steering."

The *New York World* (Ind. Dem.), which tried to start a Presidential "boom" for him when he returned from Manila, and whose Washington representative obtained the interview in which the admiral announced his candidacy, gives him a hearty welcome. It says: "Welcome to the nomination table, Admiral Dewey! Draw up a chair and unfold your napkin. The last comer is not always the worst served. And the extreme agitation among those already seated is not a bad sign for you." The *New York Times* (Ind. Dem.) seems willing to support Dewey. It says:

"Dewey showed unfailing good judgment in his professional service in the East. His chief distinction, the thing people most praised him for on his home-coming, was his perfect judgment. That is good evidence of first-rate capacity, and no higher praise was bestowed on Grant. . . ."

"He is the very embodiment and personification of the new era upon which the United States have entered, of the new world questions which *The Times* has always felt that it was worth the cost of the Spanish war to have thrust upon the attention of the American people, too long occupied with narrowing and ignoble issues of home politics. Is it not better for the Democratic Party; is it not, after all, very much better for the Republican Party and for the country, that the candidate of the opposition should be a man who has a creative and visible relation to the things of the new historical epoch than that the campaign should be made by one who spends his time and his breath in loud declamation on repudiated, dead, and forgotten propositions?"

"Admiral Dewey has done in an unconventional way an act that we think must be esteemed fortunate and of good augury."

Another paper of considerable influence that looks upon Dewey's candidacy with favor is the *Philadelphia Times* (Ind.),

which says: "That Dewey would make a patriotic and faithful President will not be questioned, and the announcement of his candidacy gives the Democrats the only opportunity to save themselves from another defeat that would mean little less than annihilation." So, too, thinks the *Columbus Press-Post* (Dem.) which declares that "with no reflection upon Mr. Bryan it may truthfully be said that if Dewey is nominated at Kansas City he will certainly be the next President, a certainty that does not appear from Mr. Bryan's candidacy, however great or popular he may be."

PROSPECTS OF THE PUERTO RICO TARIFF.

LITTLE doubt is expressed by the Washington correspondents that the Puerto Rican tariff bill, as passed by the Senate last week, will be adopted by the House this week, and be signed by the President. The bill passed the Senate by a vote of 40 to 31, the only noticeable features of the vote being the affirmative ballot of Senator McEnery (Dem.) of Louisiana, and the opposition of six Republican Senators, Davis and Nelson, of Minnesota, Hoar of Massachusetts, Proctor of Vermont, Simon of Oregon, and Wellington of Delaware. In the House there are seven Republicans who oppose the tariff, Messrs. McCall of Massachusetts, Littlefield of Maine, Lorimer of Illinois, Heatwole of Minnesota, Crumpacker of Indiana, Lane of Iowa, and Warner of Illinois.

The bill, as passed by the Senate, is a civil government as well as tariff bill. It provides that on all imports entering Puerto Rico from foreign countries the tariff rates of the United States shall be paid, besides five cents a pound on all coffee; permits books printed in Spanish and all books imported from the United States to enter free of duty; imposes on goods imported from the United States into Puerto Rico and from Puerto Rico into the United States 15 per cent. of the tariff rates now existing between the United States and other nations; provides that the duties and taxes collected in Puerto Rico shall be used for the government and benefit of Puerto Rico; recognizes the inhabitants as citizens of Puerto Rico and as entitled to the protection of the United States; recognizes the laws of Puerto Rico so far as they are not inconsistent with the laws of the United States; admits Puerto Rican shipping to American registry and to the coasting trade; provides for the substitution of American for Puerto Rican coins; extends our statutory laws, except internal revenue laws,

FIRST WHITE HOUSE FLUNKY: "What's all that noise in the next room about?"

SECOND FLUNKY: "Why, that's the President changing his mind."

HAWAII GETS A SCARE.

PUERTO RICO: "And the goblins'll git you, if you don't watch out!"

—The Minneapolis Journal.

to Puerto Rico; defines the powers and duties of the governor of Puerto Rico; provides for the appointment by the President, for four years, of a secretary, attorney-general, treasurer, auditor, commissioner of the interior, commissioner of education, and five other persons to constitute an executive council, at least five of the eleven to be native inhabitants; vests legislative powers in the executive council and a house of delegates containing thirty-five members elected biennially; provides that the chief justice and the associate justices of the supreme court and the marshal be appointed by the President, and the judges of the district courts by the governor; provides for a resident commissioner of the United States, who must be a *bona-fide* citizen of Puerto Rico, thirty years of age, and able to read and write English, and who shall be entitled to official recognition by all departments; provides for a commission to compile and revise the laws of Puerto Rico, and provides, lastly, that the act shall take effect May 1, 1900.

If This is Oppression, Make the Most of it.—"There might be some force in the talk about oppression of unrepresented Puerto Rico if Congress were to levy special and higher taxes on it than on the home Territories for federal purposes. But it has done no such thing. It levies no taxes on Puerto Rico for federal purposes, and for local purposes levies a tax of which Americans trading with Puerto Rico must bear a share, instead of putting the whole burden on the island. If that is oppression of Puerto Rico, make the most of it. In fact, it is uncommon generosity, and nobody would dare question it except in the confusion over the novelty of a customs tariff being levied for purposes of local taxation, a course warranted in this case by the peculiar conditions of the island, and fairly entitled to a trial before being denounced. It no more violates pledges given to Puerto Rico than would the levying by Congress of a direct tax for building a road in the island.

"The substantial vote by which the bill was passed is gratifying testimony to the ability of the Republicans in Congress to face the problems of expansion and act on them as actual situations demand, undeterred by the misrepresentation of enemies or the qualms of friends. They have not been driven into making a precedent which might embarrass, as in the Philippines, but have prepared the way to a needed final settlement of the constitutional power of the Government in outlying possessions. At the same time they have given Puerto Rico an open door to prosperity and practical means, financial and administrative, for conducting the affairs of the island. Only a little time is needed to prove the value of that work and silence slander and calm fears. The sooner the act of the Senate can be followed by the signature of the President and the beginning of the regeneration of Puerto Rico, the better for Puerto Rico, for the United States, and for the Republican Party. Speedy action is good patriotism and also good politics."—*The New York Tribune (Rep.)*.

A Remarkable Case of Party Bossism.—"Aside from the indefensible character of the Puerto Rican bill on constitutional grounds, and from the standpoint of humanity and fairness, its passage is probably the most remarkable case of party bossism that was ever known in this country. The opposition to it was notable as coming from the people. There were very few Republican Congressmen who made any stand against it of their own initiative. But out through the country everywhere the people rose up against it, and the Republican newspapers merely voiced public sentiment in their opposition to it. There has not in years been so extensive and open condemnation of a party measure by party organs and by men who have been considered party leaders, but despite their protests the machine moved on with its work as relentlessly as if not a word had been said. There has not been a moment's hesitation on the part of the Republican managers. The delay has only been sufficient to whip enough recalcitrants into line to insure the passage of the bill. They have served notice on the Republican masses that they must swallow what is set before them and ask no questions. Bow to the machine leaders' will or feel the party lash. There is no shibboleth of Republican fealty now but 'stand by the President.'

"While it is disgusting to see how the picked representatives of the Republican Party in Congress crouch under the party

lash it is interesting to note how correctly Mark Hanna has estimated the lack of nerve and backbone among his followers. There has never been a time before in the history of this country when one man so completely dominated the Government as this beefy money king does at present. The President is completely under his control, and the action of the House caucus shows that Congress is likewise ready to do his bidding."—*The Indianapolis Sentinel (Dem.)*.

BOER AND BRITISH RAIDS.

IN two Boer raids and a few skirmishes near Bloemfontein Lord Roberts appears to have lost more men than General Methuen lost in the disastrous battle of Magersfontein, and more than Buller lost in his reverse in December at Colenso. The Boers, too, are thought to have suffered a serious blow in the death of the French Col. Villebois de Mareuil, killed in a British raid led by General Methuen northeast of Kimberley. The capture of 450 British and seven guns on March 31 twenty miles east of Bloemfontein, the capture of nearly 600 more last week about thirty-five miles south of Bloemfontein, and the loss of 200 or more killed and wounded in small engagements north of the city have led many papers to the belief that the Boers are trying to surround Lord Roberts and his army and shut them up in the Free State capital. This audacious movement and the Boer successes about Mafeking, where General Snyman defeated Baden-Powell's garrison and Colonel Plumer's relief force both in one day, last week, seem to have greatly heartened the pro-Boer press. Says the *Detroit Journal*: "All the evidence submitted by the correspondents with the British army to the effect that the Boers were about to quit the game seems to have been born of hope rather than to be a deduction from facts. It may easily appear in the near future that the war has hardly more than begun." "There is no longer any talk in London," remarks the *Springfield Republican*, "of capturing Pretoria by the middle of May." The *Philadelphia Evening Bulletin* says:

"The Boers are giving military experts a surprise second only to the shock they administered when their columns dashed suddenly over the border into British territory and enclosed Ladysmith, Kimberley, and Mafeking in an iron net at the beginning of the war. With an audacity which is alike opposed to the teachings of the text-books and the predictions of professional soldiers in England or elsewhere, they have enveloped Roberts's huge army at Bloemfontein with a cloud of swiftly moving detachments, behind which considerable masses of their combatants are supposed to be concentrated. Despatches from the Orange capital are carefully censored, and it may be taken for granted that news unfavorable to the British side is minimized as far as circumstances permit. But when the correspondents with Roberts telegraph descriptions of the mounting of the long-range naval guns for the protection of Bloemfontein, it is evident that, for the moment at least, the British forces are compelled to stand on the defensive."

The *Detroit Tribune* predicts that "now that the Boers have discovered that they can take liberties even with Lord Roberts's army, their confidence will increase." The *St. Louis Republic* adds: "And in figuring on these new developments it must never be forgotten that the Boers are a manful and liberty-loving people fighting for home and freedom. Such a people as a rule may not safely be reckoned as whipped until they have been exterminated." The *Baltimore American*, indeed, thinks that British success is not certain. It says: "The cause of the Boers does not appear to be so desperate, after all. There is such a thing as demoralizing an army. The finest troops existing have been demoralized by bad generalship, and a few more affairs like those which have recently occurred in South Africa may demoralize the British army, and make the work of conquest very difficult, if not impossible." Another British difficulty is noticed by the *Philadelphia North American*, which says:

"Of course, the more men Roberts detaches to guard his com-

THREE NEW BOER LEADERS.

munications, the fewer he will have for fighting at the front. As the Boers concentrate their forces for the final stand the British will not have the advantage they had over Cronje. Their attacking column will be the end of a line five hundred miles long. It will not be so easy for them to envelop the forces of the republics as it was at Magersfontein. The fact that Roberts with his two hundred thousand men has not yet been able to relieve Mafeking shows that his work is not so simple as some enthusiastic Englishmen have thought it."

The military situation is sketched by the *Philadelphia Ledger* as follows:

"The position is that Lord Roberts, with probably 40,000 to 50,000 men, is at Bloemfontein nearly surrounded by a thin line of Boers, having possession of the water-works of the town, and operating both east and west of his railroad communications to the south, and that the Boers have to face, not only Lord Roberts, but General Methuen, who may descend upon them from the northwest, and General Gatacre, who has a considerable force south of the scene of Boer activity. The Boer position is, of course, precarious; but they are mobile, and may be able to get away and avoid a fight, except on their own terms. They abandoned Bloemfontein, on the ground that it was not defensible, and now they have Roberts and his army cooped up there. Roberts could break through their lines if they would stand, but he has nowhere to go until his lines of communication, now threatened, have been made secure. The Boers can not beat him in a stand-up fight; but they may keep him tied up for a long time, and harass him greatly by raids upon the railroad and isolated detachments of his troops."

Considerable comment was set going last week by the resignation of Webster Davis, Assistant Secretary of the Interior, who has just returned from a trip to South Africa, where he visited both armies. Mr. Davis explains his resignation by saying that he comes back a Boer sympathizer, and resigns his government position so that he will be free to advocate the Boer cause. Some of the press refuse to treat Mr. Davis seriously. Thus the *Boston Herald* says:

"We are told that Mr. Webster Davis is now rejoicing in his freedom. 'What's banished but set free?' is his exultant shout. He is free to tell all he has seen and all he has learned about the Boers, which he could not properly do, you know, while in office. He has a past which he believes will make a seductive background for a lecturer. And for the rest, he has voices, and emotions, and tears. The nation shall know the truth about Oom Paul and his people. He gives a foretaste of what he has to

present to astonished American audiences. In this preliminary sample of his wares, he reveals what was not suspected before, that he knows all about the science of war, being able to pronounce authoritatively that Pretoria is untakable. Where he gained his competency to judge, who can tell? It must be accepted as the power of genius. He and Consul Macrum should travel together and divide time. They are a drawing pair. Separately, they drew themselves out of office without half trying. Let them combine in one show to exhibit what they can do yoked."

The *Detroit Journal*, however, says:

"But in any event the position taken by Mr. Davis must go far toward confirming the opinion widely held in this country that the Boers, whether clean or the contrary, whether rude or of elegant manners, whether bigoted or broad-minded, have a large measure of right on their side in the present contest, and that they are fighting for national existence of a kind that is not undeserving of perpetuation, even if it does not mark high water in the scale of civilization."

SUPERIMPOSED TURRETS OF THE "KEARSARGE."

THE first trial of the new arrangement of big guns on the battle-ship *Kearsarge*, last week, has brought out some interesting remarks on Yankee inventiveness and its relation to supremacy on the sea. It is said that Lieutenant Strauss suggested to Admiral Sampson the device of placing smaller turrets on top of the big ones, when the admiral was head of the ordnance bureau; and both have expressed themselves as highly pleased with the results of last week's trial. The *Philadelphia Evening Bulletin* explains as follows the new gun plan and what it is expected to do:

"It looks very much as tho American ingenuity and enterprise had once more worked an important revolution in the methods and mechanism of naval warfare. Experts in foreign navies as well as our own officers have waited with interest for the practical demonstration of the operation of the unique superimposed turrets of the new battle-ships *Kearsarge* and *Kentucky*. No other nation had ventured the apparently dangerous experiment of placing four heavy guns in pairs above each other on ship-board. When this Yankee innovation was attempted, predictions were freely made that its results would prove disastrous both to the ship and to the men in the lower turrets.

"As the news despatches show, nothing of the sort occurred.

The *Kearsarge*, which is an exact copy of the *Kentucky* in all respects, has just been through an exhaustive and decisive gun trial at sea, and the doubled-storied turrets, with their unmatched concentration of destructive power, have borne the test triumphantly.

"The trial took place in the presence of Admiral Sampson and of several other prominent officers, in addition to the regular complement of the vessel. The utterances of these men prove that the unfavorable effects feared from the new device were altogether absent. The gunners in the lower story of the turret were not injured by the blast of the eight-inch guns above, as had been prophesied, and the accuracy of their aim was not interfered with. It was the purpose of the demonstrators to fire the two thirteen-inch and the two eight-inch guns simultaneously, in order to measure the shock to the vessel caused by such a tremendous discharge. This was not accomplished, owing to the fact that the primer of one of the lower big guns was defective; but the other thirteen-inch monster and both the upper guns were fired at the same instant, and no harm whatever was done either to the vessel or the crew by the concussion.

"Admiral Sampson emphatically declares that it has been proved that the strength of the ship is easily great enough to

four guns simultaneously, a tremendous waste of ammunition will occur. Then, too, the thirteen-inch guns in the lower turret are intended for use against the heavily armored body of the enemy's ship, while the lighter guns above are for use against the lightly armored ends and upper works; and as the turrets can not move independently, all four guns must be used on one part of the ship. Moreover, if the lower turret is disabled, the upper one is also put out of action. "These are criticisms," says the *Hartford Times*, "which the double-turret partizans will find it hard to answer."

QUEEN VICTORIA'S VISIT TO IRELAND.

THE unusual interest manifested on two continents in the Queen's visit to Ireland is due, of course, to the feelings of antipathy that have so long existed between the Irish and the English, and a general curiosity to see to what extent recent events may have allayed those feelings. The prominent part taken in the British campaign in South Africa by Irish generals

(Roberts, Methuen, Kelly-Kenny, and others) and Irish regiments has called forth something very like enthusiasm in London for the "wearers of the green." To what extent this feeling is returned, it is yet difficult to tell. In the department of "Foreign Topics" this week we quote expressions from a number of British and Irish journals. American comment is for the most part destitute of any very pronounced opinion, except on the part of some of the Irish-American press. The *Cleveland Plain Dealer* says that "if the royal visit should be a prelude to a better understanding between the two peoples and a consequent gratification of the natural Irish desire for a larger measure of Home Rule, the visit begun to-day will be entitled to a place in the record of the most important events in the history of Great Britain in the nineteenth century." The *Philadelphia Evening Telegraph* thinks there is reason to hope that such a wish will be realized, because the Queen's visit "must make a strong appeal to the sentiments of chivalry entertained by all true Irishmen, and apart from the brilliancy and magnificence of her reception officially provided for there is abundant evidence that the Irish people appreciate the motives of her visit, and respond heartily to the feelings of amity prevailing throughout Great Britain which this visit is intended to manifest."

The *New York Sun*, however, thinks that "it will scarcely be pretended that Irish Nationalists have any cause to regard with satisfaction the reign of Queen Victoria, or to feel any gratitude to the sovereign herself. The truth is that the sentiment of loyalty has become wellnigh extinct in the greater part of Ireland, and that the epithet 'Loyalist,' adopted by the larger landowners and by the Protestant minority in Ulster, has become a term of reproach among the people at large." The *Irish World* (New York), under the caption, "England's Insult to Ireland," says:

"In the month of April, year 1800, the English Government resolved to destroy the Irish Parliament in Dublin; and the destructive resolution was villainously put into effect soon after. In this present month of April, year 1900, the English Government sends the English Queen to Dublin. There is nothing now in Dublin to indicate that that beautiful city is the capital of a nation. The 'Castle' is there, a symbol of foreign conquest, but

THE NEW BATTLESHIP "KEARSARGE,"
Showing the after pair of turrets.

stand the strain of the simultaneous discharge of the four guns; and his testimony is echoed by Captain Folger and other officers. No ship in the world, the admiral asserts, 'could stand the impact of these four projectiles' smiting at one point with a force capable of crushing in the heaviest armor that floats.

"When the *Monitor* was built the navies of Europe were reconstructed in haste. The double-storied turret may be destined to bring about structural changes hardly less vital than those inspired by the success of the original invention."

In a later trial all eight of the big guns in the two pairs of turrets were fired at once without disturbing the ship's balance or injuring the men in the turrets.

Rear-Admiral O'Neil, the naval chief of ordnance, is not yet convinced, however, that the new device is a success; and Chief Constructor Hichborn, who has always been opposed to the two-story turret idea, thinks that his objections still hold good. In battle, he says, there are twenty misses to one hit, and by using

in Parliament. 'The Castle still stands, but the Senate's no more.' When a great movement was on foot to restore Ireland's Parliament, a few years ago, this same Queen 'soured' on Gladstone, who favored the movement, and did all that lay in her power to baffle the hope of the people of Ireland. Her soldiers out in Africa are now bent on the destruction of another parliament and the spoliation of another nation. And there are Irishmen, in the English army, who are lending assistance to this wicked work! It is to honor the brute valor of those English-Irish mercenaries—those traitors to Ireland and liberty—that the English Queen pays a visit to Dublin. She goes there not for love of the Irish people, but to popularize enlistments in her service and to help along her recruiting sergeants. She goes there, figuratively, with the 'Queen's Shilling' between her fingers. The flunkey element, of course, will sink to the level of their degradation. We hope patriotic Irishmen, on the other hand, will resent the English insult in the way it deserves."

A TEN YEARS' WAR.

IT is ten years since Jacob A. Riis wrote his book on "How the Other Half Lives." Now he is ready with another book which reviews the results obtained during this past period and the lessons which they suggest for future battles with the slums. A long-cherished project of Mr. Riis has just been brought to a successful close—a Tenement-House Exhibition on Fifth Avenue, in New York, designed to furnish an object-lesson to "the First Half" of how "the Other Half" lives. His book, therefore, appears at this time with special significance. He explains the genesis of the slum in the following fashion:

"In a race there are usually some who for one cause or another can not keep up, or are thrust out from among their fellows. They fall behind, and when they have been left far in the rear they lose hope and ambition, and give up. Thenceforward, if left to their own resources, they are the victims, not the masters of their environment; and it is a bad master. They drag one another always farther down. The bad environment becomes the heredity of the next generation. Then, given the crowd, you have the slum ready-made."

As far as the final remedy is concerned, Mr. Riis says: "Justice to the individual is accepted in theory as the only safe ground-work of the commonwealth. When it is practised in dealing with the slum, there will shortly be no slum. We need

TYPICAL EAST SIDE TENEMENT BLOCK IN NEW YORK.

Where 2,500 persons have their "homes": the only playground of 2,000 children. (From a model of the block, exhibited at the Tenement House Exhibition.)

not wait for the millennium, to get rid of it. We can do it now." Mr. Riis dates the awakening of the civic conscience in New York from 1879, when the slum was arraigned in the churches and the story shocked people into action. Money was raised to build model houses, a bill was passed in spite of the opposition of the landlords giving the health authorities summary powers in dealing with tenements. But the landlords, with the help of the politicians, managed to transfer the whole assessment of half a million dollars for park benefits to the city, altho they themselves

were the principal financial beneficiaries, through the rise of their land values. Then came the Parkhurst and Lexow disclosures, the era of Colonel Waring, and finally the return to Tammany rule which obtains to-day.

Mr. Riis considers the stretch which reform has covered in the past ten years a long one. Among the hopeful signs of the present he cites the tearing down of unsanitary tenements, the building of schools, the relatively clean condition of the streets, the making of public parks, playgrounds and play piers, the people's clubs, and the destruction of the police-station lodging-rooms which were always foul dens.

"Twenty-nine years have passed since I slept in a police-station lodging-house, a lonely lad, and was robbed, beaten, and thrown out for protesting; and when the vagrant cur that had joined its homelessness to mine, and had sat all night at the door waiting for me to come out—it had been clubbed away the night before—snarled and showed its teeth at the doorman, raging and impotent I saw it beaten to death on the steps."

JACOB A. RIIS.

Police-Commissioner, now Governor, Roosevelt abolished the police-station lodging-houses. The worst of the tenements have been bought up and torn down. "Bottle Alley" and "Bandits' Roost," "Bone Alley," "Thieves' Alley," and "Kerosene Row" all are gone; "Hell's Kitchen" and "Poverty Gap" have acquired the appearance of decency. But in spite of such improvements Mr. Riis is obliged to record that only the outworks of the slum have been taken. More tenements are being built every day on twenty-five-foot lots. The common type is the double-decker, and the double-decker is hopeless. He says:

"In 1880 the average number of persons to each dwelling in New York was 16.37; in 1890 it was 18.52. In 1895, according to the police census, 21.2. The census of 1900 will show the crowding to have gone on at an equal if not at a greater rate."

With all his delight in the reforms which have already been accomplished, and with all his trust in human nature, Mr. Riis is not unmindful of the present dangers of New York. He does not mince matters in describing the rule of Tammany, as it has returned to the city, since the overthrow of the administration of Mayor Strong. He writes: "The Health Department is wrecked. The police force is worse than before Roosevelt took hold of it, and we are back in the mud out of which we pulled ourselves with such an effort." In conclusion he appeals to the reforming power of human sympathy, to the humane touch. "When we have learned to smile and weep with the poor," he says, "we shall have mastered our problem. Then the slum will have lost its grip and the boss his job. . . . Until then, while they are in possession, our business is to hold taut and take in slack right along; never letting go for a moment."

It only remains to enumerate the practical measures which Mr. Riis advocates for eradicating the slum. In addition to the suggestions contained in this brief digest of his book, it may be interesting to refer to the address which he made in closing the

Tenement-House Exhibition on March 24. As reported in the daily papers Mr. Riis said that the recommendations of the legislative committees of 1857 and 1867, made after investigating the tenement districts, hold good to-day. The remedies they suggested were the requirement that housekeepers or landlords live on the premises, and licenses restricting the number of inhabitants permitted to the tenements. A \$2 license fee, Mr. Riis said, figuring on the basis of the present 40,000 tenements, would support the body of sanitary policemen necessary to enforce the law. Continuing, Mr. Riis said:

"Doubtless drunkenness ruins many homes, but friends, don't you know, I've seen ever so many homes which caused drunkenness. There is nothing, however, in the tenement-house desolation of to-day to compare with what existed forty years ago. Some day we'll put up a monument in this town for our first municipal saint, Colonel Waring. . . .

"In the first place the public conscience must keep the door open for constant discussion upon this vexed question. Secondly, we must compel the builder to understand that he is his brother's keeper, at least to the extent of not murdering him. For certainly to smother children is murdering them. Thirdly, the public conscience must enforce the law. The governor spoke of that in his address at the opening of this exhibition. That's what we most need in this town, friends—the enforcement of the law. . . . I am looking for great things from rapid transit—not up and down the island, but across the rivers on both sides. Then it must be that with the steam and electric transportation, and homes that will be built on Long Island, the tenement-house slums of New York will be relieved."

Mr. Riis's writings are sprinkled with epigrams. Here are a few of them:

"Vested rights are to be protected, but no man has a right to be protected in killing his neighbor."

"You have no more right to kill a man with a house than you have to kill him with an ax."

"Deal honestly with the boys of your slums or they will deal dishonestly with you."

"Egypt used to have the sacred bull. We have added stupidity. We have made the grass sacred. The grass is sacred, but the boy is not."

"The true work of reform is at the top, not at the bottom. The man in the slum votes according to his light, and the boss holds the candle."

"The boss is like the measles, a distemper of a governing people's infancy. When we shall have come of age politically, he will have no terrors for us."

"Charity in our day no longer means alms, but justice."

PROHIBITION IN TWO WESTERN STATES.

IN the first issue of Mr. Sheldon's *Topeka Capital* prominence was given to a statement from some of the leading citizens of Kansas regarding the working of the prohibition laws in that State. Governor Stanley and three ex-governors testify to the necessity of prohibition and to its success in Kansas. "If prohibition in Kansas has done nothing more than close the open saloon," says ex-Governor Humphrey, "it should have the support of all those who desire peace and good order in society." Ex-Governor St. John thinks that "license is a sin against God, and ought to be made a crime against humanity." Ex-Governor Morrill says that "one great benefit resulting from the prohibition law has been that it has made the liquor traffic disreputable and the use of intoxicating liquor unpopular," and Governor Stanley declares: "I have often said, and say yet, that I believe prohibition at its worst is better than high license at its best." A mass of testimony from well-known citizens, professors, lawyers, and clergymen, is printed to show that prohibition in Kansas has meant less drunkenness and higher morality in every grade of the community.

An equally encouraging account of North Dakota's prohibition

laws is given by Judge Charles A. Pollock, of Fargo, N. D. Writing in *The Christian Endeavor World*, he says:

"The time was in the State when the liquor elements controlled the policies of the parties. That time has gone, and public sentiment is becoming so strongly in favor of prohibitory methods of dealing with the traffic that the politicians are discovering means to satisfy that public demand. At the last state election about 46,000 votes were cast. The Republican Party triumphed by 10,000 majority, having the following plank in its platform: 'We believe in the strict observance of all laws, and especially that no backward step should be taken in the maintenance and enforcement of the prohibition law.'"

"With such a record, the dominant party will hardly be expected to recede from its present position upon the liquor question."

"In my district, covering the counties of Cass, Traill, and Steele, during the license period there were about 125 saloons. Fargo, then a city of 6,000 inhabitants, had 41. There is not a saloon to-day in the entire district, and at this moment I am not aware of a single place where it is claimed there is a 'blind pig.' That there may be a few such places, I have no doubt; but, if they do exist, it is so under cover as to avoid the diligence of the officers. The law with reference to the sale by druggists for medicinal purposes is without doubt used in many cases to cover unlawful sales; but time and patience will eradicate that evil."

TOPICS IN BRIEF.

THE Boer generals have only to die to become immensely popular with the British.—*The Baltimore American*.

GENERAL BELFUR would do well to fight shy of the little town of Fourteen Streams.—*The St. Louis Globe-Democrat*.

It is asserted that the person responsible for Dewey's presidential aspirations is no gentleman.—*The Tacoma Ledger*.

THE loneliest man in Kentucky just now is the fellow who has not been suspected of killing Goebel.—*The Ohio State Journal*.

ROBERTS started for Pretoria yesterday. It is a long time until Christmas, but then the roads are bad.—*The Chicago Record*.

THE British have not fully decided what to do with Kruger, but they have some time yet in which to make up their minds.—*The Chicago Record*.

As Mr. Shakespeare would put it, "Thrice must he be armed who hath his quarrel just over the line in Kentucky."—*The St. Louis Globe-Democrat*.

UNLESS matters are carefully managed some ambitious person will arise and try to pose as the George Washington of Puerto Rico.—*The Washington Star*.

LI HUNG CHANG has acquired control of a newspaper in Peking, and may hereafter be properly referred to as a yellow journalist.—*The Chicago Times-Herald*.

"YOUR capital is not large." "But quite sufficient. You see, our business is peculiar in that it does not necessitate any evasion of the laws."—*The Detroit Journal*.

SENATORS who declare that the public mind will soon forget Puerto Rico and be fastened on something else, must contemplate doing something awful to the country.—*The Chicago Record*.

MR. CARNEGIE and Mr. Frick have set a good example in making peace rather than fighting their way to each other's pockets through the courts. They have compromised with at least a hundred millions of dollars at stake. Why can't men whose differences are measured by \$50?—*The Springfield Republican*.

"How do you intend to treat the Puerto Ricans?" asked the friend. "We don't intend to treat 'em at all," answered Senator Sorghum. "We intend to keep 'em reminded that now and henceforth forever it's their treat."—*The Washington Star*.

LETTERS AND ART.

THE LATE RICHARD HOVEY, AND
"TALIESIN."

IT is believed by many that in the late Mr. Richard Hovey, whose untimely death at the age of thirty-five occurred last February, America lost a singer who might in future years have taken high rank among our leading poets. He was one of the most serious of our recent verse writers, and his ambition is known to have contemplated still higher flights than he had already taken in his most considerable poem, "Taliesin." A review of the latter work appears in *The Bookman* (April) by Mr. Curtis H. Page. "Taliesin" is a poet's poem, he says—or, to use Mr. Hovey's own phrase, a masque of art:

"As a part of his 'poem in dramas' on the Launcelot-Guenevere story, it introduces the second trilogy as the 'Quest of Merlin' introduced the first, and prefigures the Quest of the Graal, which is to be the subject of the following play, as the 'Quest of Merlin' foreshadowed the 'Marriage of Guenevere.' Yet in a way it stands alone, not only independent of the other dramas of the series, but apart from them, a symbolic Masque, a poem of poetry; it is also a presentation of life, but of life chiefly in relation to art and the artist. Perhaps for these reasons it may not make so broad an appeal as Mr. Hovey's other dramas, which present life more simply and directly. Yet it is in many ways his highest poetic achievement. Let me define more exactly, and not shun superlatives where they are needed as the only means of defining a unique work. It is the greatest study in rhythms that we have in English. It is the greatest poetic study

has set out on the Quest of the Graal, but knows not what path to take, meets in the enchanted forest of Broceliande with Taliesin, the poet, on his way to Arthur's court. Taliesin seeks counsel and teaching from Merlin, poet of the Druid years and prophet of half-forgotten nature-gods, who lies enchanted by sleep under the spells of Nimue, in the dim dream-forest. The voices of sleep would overcome Taliesin also, but at last he takes his harp and subdues them by his song—imaging into vivid expression,

My love for thee dost take me unaware
When meet with lesser Kings my brain is wrought,
As in some nimble interchange of thought
The silence eases and the fancies store,
Suddenly I am still and thou art there,
A visionless visitant and unbesought,
And all my thinking trembles into naught
And all my being opens like a prayer,
Thou art the lifted Chalice in my soul
And I a dim church at the thought of thee;
Brief though the moment be, the mass is said,
The benediction like an aureole
Is on my spirit, and shuddering through me
A rapture like the rapture of the dead.

Richard Hovey

RICHARD HOVEY.

that we have of the artist's relation to life, and of his development. And it is a significant study of life itself in its highest aspirations.

"Three such statements as these about a new poem demand justification, which can be given only by presenting directly something of the poem itself. And the three elements are so interwoven into each part of the poem, and so interwoven with each other, that they must be presented simultaneously, in their development through the three Acts—or 'Movements'—of the Masque. At the beginning of the first Movement, Percival, who

in a lyric form of peculiar beauty, the fundamental thought of this first part of the Masque. It is the thought of the poet's instinctive relation to life and to his art; the thought that he must neither deny his temperament or his dreams or his inspiration, nor yet be possessed by them, but must possess and rule and shape and use them:

Yet still to you,
O dreams, I turn;
Not with a prayer,
But a bidding to do!
I surmount and subdue you;
Not without you but through you
I shall forge and fare
To the chosen bourne.

And, yet more, it is the thought of all our life in its relation to the universe, and of our lives in their relations to each other, through that dim under-world of instinct from which we are sprung, in which all love, all friendship, all knowledge, still take their rise and on which they still depend, even as the relations of star to star depend on the deep and vasty dark of ether through which their pulsing fires vibrate each to each:

O vast of Sleep
Wherein we grew!
Whence wrench by wrench
Self heaved its steep!
The bond abides;
Your mighty tides
Still clasp and clench
The soul to you.

In your darks indwelling
The lonely Mind
Regains its deeps. . . .

For save in you
(Strange under-life!)
We can but trust
If the world be true,
Or if our vision
Be but derision,
The smoke and dust
Of a phantom strife.

Oh, then, to gain
The eternal streams!
Nor fail as flakes
In the gulping main!
No lordship losing,
To fare on fusing
The self that wakes
And the self that dreams!

MISS CHOLMONDELEY AS A LITERARY ARTIST.

SINCE the success of her "Red Pottage"—the leading novel of the year in England—Miss Mary Cholmondeley is regarded by many critics as a serious aspirant for a high place among leading contemporary novelists. Her remarkable power in drawing character, her humor, and her sympathetic and intelligent touch are largely recognized; but in the important matter of her handling of the plot, opinion is not so favorable. In *The National Review* (March), the Hon. Mrs. Alfred Lyttelton refers to the "hopeless framework" of "Red Pottage," and says:

"No one can help admiring the skill with which almost all the situations are treated, while resenting this very skill expended on such material. For the characters live and move, irritate and enchant, just as they might in real life; it is only the difficulties and complications that surround them which force an unwilling attention from the reader. Miss Cholmondeley has not allowed us to take refuge in a realm of romance and adventure where we can believe anything, but has selected the men and women we all meet, put them into drawing-rooms and hansom cabs, and then proceeded to weave round them preposterous entanglements belonging to a fantastic time. The result is a marred success, and is bound to be so, looked at as a whole. A writer like Hawthorne might have succeeded, but only because he would have shed over the whole story that atmosphere of mystery and unreality in the midst of every-day life, which perhaps among writers of English no one has ever done so well. . . . The first qualification for the novel of adventure is that its mechanism should be vivid and real, arresting the attention of the reader at once, by the tapping, say, of a blind beggar's stick, or the entry into Paris of a ragged gentleman on a wretched horse. But adventure as such—pure adventure—is very rare nowadays in London drawing-rooms, and if we are to believe in it, it must be given us in a different shape from Miss Cholmondeley's 'Red Pottage.'"

The reason why we revolt and refuse to accept Miss Cholmondeley's plot, says the writer, is because it is not a fitting stage for the characters, "who are supremely good," to perform upon. She continues: "Can there, in a sense, be any stronger praise than thus violently to take up the cause of these imaginary people against the person who created them? Lord Newhaven, Hester, the Gresleys, Dick, the Bishop, Rachel, Scarlett—they are one and all excellent, and drawn with that rare detachment and impartiality which betrays the observant and sympathetic attitude of the author." Mrs. Lyttelton concludes as follows:

"The reader very much hopes to meet Hester again in the next novel, which is going to be Miss Cholmondeley's greatest achievement. Next time she will surely give us a series of the events which come into the ordinary lives of the people she knows so well how to draw—we could never have too much of the Gresleys or the Bishop—the quieter, the more detailed the story the more we should love it. Miss Cholmondeley's real talent and power lies in the drawing of character with profound and witty comment, and this implies a long range of the greatest gifts—perception, humor, thought, pathos, emotion. If when she has got her people alive she will let them go, let them shape their own stories in common, every-day conditions, we shall be the richer by a beautiful and tender book, a book that will not merely amuse or interest, but will create and inform new sympathies and help its readers both to laugh and to cry."

LONGEVITY OF LITERARY MEN AND ARTISTS.

LONGEVITY as an index of literary usefulness is by no means conclusive, for a Keats, dying at twenty-five, is of infinitely more value to the world than a Tupper, who lived to be nearly eighty; but, in general, longevity is accepted as an index of the relative beneficence of different environments, and it is pleasant to learn that not only in the professions, but in the fine arts and literature, the average age is in this century far higher than in preceding times. In *The Forum* (February) Mr. W. R. Thayer

claims that tho this has been called a degenerate age, in which people "live too fast," there is really no foundation for the opinion. Mr. Thayer gives a list of 46 poets who lived, on an average, 66 years. Among these are Landor and Manzoni, who died at 89, Tennyson at 83, Wordsworth at 80, Whittier at 85, Béranger and Browning at 87. Only seven of the forty-six writers failed to reach the age of 40.

Of 39 painters, only one died under the age of 40, while their average age was 66 years. The oldest of these was Cornelius, aged 84, and Watts, aged 80, while the youngest was Fortuny, aged 36.

Of 30 musicians, 4 lived to be over 80, 9 to be 70 or more, 7 to be over 60, while only 4 died under 30. The oldest of these, Anber, died at 89, and the youngest, Schubert, at 31.

Mr. Thayer, in conclusion, says:

"A general summary of all these groups and individuals shows that the average duration of life has been about sixty-eight years and eight months, viz.:

Summary.		Average.	
46 Poets.....	66	18 Philosophers.....	63
39 Painters and sculptors.....	66	38 Historians.....	73
30 Musicians.....	69	58 Scientists and inventors.....	79
20 Novelists.....	61	14 Agitators.....	69
40 Men of letters.....	67	48 Commanders.....	71
22 Religious.....	60	112 Statesmen.....	71
15 Women.....	59	Average, 68 years 8 months.	

"It may be urged that a considerable minority of these persons grew up in the eighteenth century and died before the distinctive conditions of the nineteenth century had full play. This is true; but on analysis we find that most of the long-lived belong to those whose career fell wholly within the nineteenth century. Roughly speaking, 1820 may be set down as the year when the general adoption of steam-power revolutionized methods of manufacturing and of travel by water; as early as 1840 railways were beginning to affect the distribution of population and of commercial products; by 1860 the electric telegraph had come into general use; and since 1860 one invention after another has helped to quicken the rate of speed at which society moves. Accordingly, we can say that the distinctive conditions of the century have been in full swing for nearly fifty years, and that, if injurious, their effects would be seen on the men who reached their prime about 1850 or subsequently."

HENRI DE REGNIER AND SYMBOLISM.

HENRI DE REGNIER stands, in the common estimate, as one of the most important figures of the symbolistic school. He is a poet of genuine power, but weird and pessimistic—a natural effect perhaps of his symbolism. He is a prose writer also, and many see in his work an imagination fraught with things eerie and grotesque, and resulting in an effect comparable to the vividness of Poe.

Before beginning the course of lectures on French poetry and the symbolistic school, for which he has lately come to America, M. de Regnier himself defined what he means by the term "symbolism." We quote his words as reported in a recent issue of the *Boston Transcript*:

"The point that many critics of this falsely called 'decadent' school have ignored is the fact that all true poets of all countries are more or less symbolists. It is not the actual, lexicographic meaning of the word that inspires the imagination, but the sound of the word itself or its peculiar significance in the phrase in which it occurs. Remember symbolism in poetry is not a means, but an end. The prose realist employs such words and in such a way as will best describe a thing or emotion as it actually exists. He neither invites the imagination of his reader nor leaves room for it. It is the function of the poet, on the contrary, to express his own emotions. He realizes that his ideas are beautiful. He would convey them to the reader as they are. It is then that the poverty of common speech forces him to place known words in uncommon sequence or to resurrect an archaism that his idea may be better expressed. He is in no sense an analyst of emo-

tions, but an artist, pure and simple: his function is not with life and nature, but with the imagination."

In *The Bookman* (April), Jane Grosvenor Cooke enters into a more lengthy discussion of symbolism. She says:

"The symbolist shows that he is one by differing as widely as possible from every other symbolist—that is, he is determined to do exactly as he chooses, unfettered by traditional usage, and to express his own joys and sorrows and general impressions with all attainable candor and spontaneity. He is always introspective, reading his own weariness and impatience, his own rare delights and frequent recoils of dread, into his surroundings. Perhaps this intense individualism was the greater shock to the public for clashing directly with the prevailing naturalism. There was in it, too, an infiltration of foreign qualities, which accentuated its strangeness. There are many foreigners among the symbolists—Maeterlinck and Ghil, the Belgians; Merrill and Vielé-Griffin, the Americans; Vignier, the Swiss; Moréas, the Greek, and others, and they certainly have introduced some non-French ways of feeling. The mysticism and lack of locality which characterize symbolism are not French qualities, but acquired from abroad—from the dreamy and sensuous charm of English pre-Raphaelitism and from the minds of foreign stamp, which selected the French language as their means of self-expression. The symbolist does not expect always to convey a clear meaning, for he aims to suggest what is spiritual and illimitable, and this he can only do vaguely with his partial and limited means. It is the heart, not the mind, of things that he tries to probe, and all his effort is to suggest and convey emotion, not to state fact. He seems to possess abnormal faculties for seeing, hearing, feeling, tasting, and smelling, particularly for smelling, and his physical surroundings oppress his morbidly acute consciousness with their hopelessly ugly and sordid elements. So he is sad; and sad, too, because educated out of pleasant self-illusion. He still dreams, but with his eyes wide open and a mocking smile at his own folly on his lips. He avidly pursues material pleasures, but scorns himself for doing so, and makes constant demand for nothing less than ideal satisfaction. His ideal is vague, best summed up as beauty—beauty which is divine goodness and harmony and satisfaction—of which he catches tantalizing glimpses through partial manifestations, or rather symbols of it, furnished him by material fact."

The symbolist therefore is one who is self-centered: his poetry must be self-revelation, and as such can hardly fail to lack that universality which appeals to all and not to the few. Hence M. de Regnier depicts his individual as "an intellectual aristocrat." Miss Cooke continues, referring to M. de Regnier:

"There is something about this tall, young Frenchman, with his meditative, blue-gray eyes, his long, nervous fingers, his ease of bearing and gesture, which suggests acute and delicate sensitiveness and impatient disgust of mediocrity; and these dispositions characterize everything he has written. 'Any one who wanted to paint him so as to express his whole nature at once should show him descending the broad stairways of Versailles,' declares a fellow poet, Albert Samain. The poor, the humble, the ignorant, make no such appeal to his sensibilities as to those of François Coppée, for instance, and so far as possible he ignores those who must exist for the support of the intellectual *élite* to which he consciously belongs. His refinement isolates him. The human lives around him look sordid, trivial, ignominious, and he avoids contemplating them, and creates a misty dream-land for his aspirations. The fair green forest of his fancy is laced with devious footways, abounds with gleaming fountains and twilighted glades, and has nothing in common with primeval wildernesses. Here fair creatures and strange monsters, nymphs and fauns and satyrs, sport and sorrow; and here he wanders, a sad, inactive spectator of his own life, haunted by Hope and Memory and Regret, while sere leaves of dead illusions flutter down in a soft, continual shower."

This predominance of fancy, this isolation from all things worldly—where, afar off, the roar of humanity comes as a warning and as a deep, angry shriek of the brute in man's nature—

this, it has been said, constitutes the characteristic note in all that Henri de Regnier writes.

As to his technique, it has been pointed out that independence marks his work. Miss Cooke continues:

"Much of his verse abounds in irregularities, which are certainly daring, but which under his skilful manipulation result in pleasantly novel and sonorous effects. He has expressed his opinion that, after all, it is the rhythm, not the number of verses, in a stanza which matters, and his original combinations of lines of varying length and most erratic feet are undeniably pleasant to the ear. Lately he has evinced a disposition to return to the ample and stately Alexandrine of French classicism, and has shown himself well able to make it a richly musical expression of his theme. There is a certain vastness in M. de Regnier's conceptions, something imposingly grandiose, suggesting the vague rhythms of waves and winds which the Alexandrine suits."

Thus the symbolistic school has what Matthew Arnold considers "the eternal note of sadness," but it has accomplished some positive results. "To be thoroughly in sympathy with it," Miss Cooke concludes, "requires a mood of mental leisure and a certain *blasé* attitude toward life, from which healthy men and women are usually safeguarded by intense interest in their own lives, an inalienable sense of responsibility and a utilitarian desire to extract the utmost good from the means at hand."

SARAH BERNHARDT IN "L'AIGLON."

THE renown of M. Edmond Rostand, and the marvelous success of his earlier work "Cyrano de Bergerac," made the production of his new drama "L'Aiglon" at the Théâtre Sarah Bernhardt, Paris, an international event. With little or no exception thus far, the continental and British critics have spoken in terms of praise of the play and of Mme. Bernhardt's impersonation of the chief character, altho the consensus of opinion appears to be that the dramatist has not in this play reached the masterly heights that he attained in "Cyrano." The French dramatic critic of the *London Standard* (March 16) writes thus from Paris:

"The play is laid in Austria, between 1830 and 1832. It commences with a scene at Baden, a gay health resort situated at a comparatively short distance from the Austrian capital. It serves chiefly as a prolog for the introduction of the personages, of whom the most important, after the Duke of Reichstadt, are Flambeau, an old Grenadier Guard, who has succeeded in approaching his idol's son by getting engaged as lackey in the Schönbrunn palace to Metternich; the Emperor Francis; Marie Louise, the Duke's mother; and the Countess Camerata. There are in all no fewer than forty-nine personages whose names appear on the playbill, to say nothing of numerous other stage-walkers. The drama was, however, written especially for Mme. Sarah Bernhardt, and, therefore, has the defect or advantage of throwing every one else completely into the shade. For any one else the rôle of 'L'Aiglon' would be crushing; but Mme. Bernhardt's marvelous talent elicited loud applause from the house, which was crowded with dramatic critics and the *élite* of Parisian society."

"The second scene is in the Duke of Reichstadt's apartment at Schönbrunn, formerly inhabited by his father, Napoleon I. 'L'Aiglon' is not a prisoner, but yet a person who longs for liberty, and dreams of recommencing the *épopée* of his father. Several plots for his escape are made, and promise success, but he in the first instance puts off their execution, because he considers he is not yet sufficiently prepared for the grand and glorious part he wishes to play in the world. . . .

"In the fourth act there is a powerful scene between Metternich and the Duke of Reichstadt. Taking him before a mirror, Metternich tells the Duke to scrutinize his features and examine his pale face. Is that a Napoleon? No. The greatly afflicted by his examination of the reflection of his face and frail form, the Duke decides to attempt to make his escape by the aid of his friends. The last arrangements are made at a masked ball or—

ganized by Metternich in the grounds of Schönbrunn palace. The Duke is to go to Wagram, where a horse will be waiting for him. When in the night he reaches the spot, accompanied by his faithful Flambeau, dressed in his old uniform of a Grenadier Guard, he, by his hesitation, compromises the success of the enterprise. The police arrive before he has mounted the horse which was to have carried him out of the reach of Metternich and toward France. The conspirators are allowed to withdraw without being arrested; but the Duke returns to Schönbrunn, nominally in command of the Austrian regiment of which he is colonel, and which had been sent to Wagram to facilitate his entrance into the palace without scandal. The last scene is that of the death of the Duke."

The final scene, which is pronounced by the Paris dramatic critic of the *London Times* to be wholly unique in literature, is thus described by that writer:

"It is the custom at the Austrian court that when a member of the imperial family receives the death-bed sacrament all the others should be present. But it is desired to conceal from the King of Rome the fact that his last hour is at hand, and a chapel has been arranged next to his bedroom. One of the young archduchesses comes to entreat him to accompany her to the altar. Napoleon II. refuses. It is this last communion which she begs him to accept. 'Why now,' he replies, 'for there is no member of the family present?' 'It is a favor that I ask of you,' she replies, 'and which you will grant me because I love you.' So the Duke allows himself to be led to the chapel. The doors are shut. At this moment the imperial family and Metternich appear in the bedroom. The court *huissier* informs him that Napoleon II. is about to partake of the communion; that, meanwhile, since it is impossible for him to look round, the *huissier* will open the doors, but that there must be complete silence, and that, once the communion accomplished, the doors would be closed and the imperial family must quit the bedroom. This, in fact, is what is taking place when one of the archduchesses, who is deeply in love with him, utters a cry of despair, and Reichstadt appears in the midst of the family. He understands. Marie Louise, in whom the sorrowing mother's heart awakes, sobs out, 'I don't want him to die.' But he dies, nevertheless, and under Metternich's eyes, while by his orders a colonel of the guards recounts the episode of the baptism of the son of Napoleon I. 'You regret nothing?' he asks of Metternich. 'No, nothing,' Metternich replies. 'I did it for the peace of the world, for the safety of the empire, for the Emperor.'"

All of the lines, says *The Times* critic, are of an extreme splendor, and all have the epic swing. As to Mme. Bernhardt, he writes: "She is herself, so to say, the entire piece; and when I say that never has her tragic genius reached such a height, I shall have summed up in a single word all that language can express of admiration."

The Paris correspondent of the *New York Tribune* gives the following description of the characteristically Gallic scene on the first night:

"The enthusiasm was immense. It was a triumph both for Sarah Bernhardt and for Rostand. All who are prominent in letters and in public life defiled last night before the actress and the author as they stood in the brilliantly lighted reception-room. Victorien Sardou, after the third act, threw himself into the arms of Rostand and kissed him. Coquelin ran up to Sarah's loge and embraced her. M. Casimir-Perier, ex-President of the French Republic, accentuated his congratulations by pressing his lips to Sarah's hand. So did also the veteran General Saussier. Among those who thus expressed their congratulations in the form of kisses were Ludovic Halévy, Paul Hervieu, Henri Houssaye, Prince Murat, Count Robert de Montesquieu, General Zurlinden, and General Brugère."

"It was a sight to be witnessed only in Paris. The *'emballage'* was prodigious, and the enthusiasm was almost indescribable. At the close of the play, when, in accordance with time-honored French tradition, Sarah Bernhardt advanced to the footlights and in a firm voice said, 'The drama which we have had the honor of playing before you is by Edmond Rostand,' the author received a fresh ovation, and shouts of 'Rostand!' 'Rostand!' resounded on all sides, mingled with those of 'Sarah!'

'Sarah!' In short, there were all the elements that constitute a theatrical first night's triumph. But it should be recollected that this *élite* audience was stirred by its personal sympathy with Sarah Bernhardt and with Edmond Rostand, and was also keenly disposed toward the patriotic illusions of the Napoleonic legend. When, removed from this magnetic influence, one begins in cold blood to analyze the play, it is difficult to find a satisfactory explanation for all this enthusiasm. The writer put this question to Victorien Sardou, to Jules Lemaitre, and to Félix Duquesnel, the incisive dramatic critic of the *Gaulois*. All three admitted that the enthusiasm was largely due to causes beyond the play itself, and could not be expected from any other audience but a French one."

THE MUSICAL IMPULSE THE BEGINNING OF ALL CULTURE.

HERBERT SPENCER, in a well-known essay, has undertaken to trace the beginnings of music; but, in the opinion of the English musical critic, M. J. Donovan, he has not taken a step beyond the crude physiological aspect, presenting music as simply a putting forth of nerve energy. Mr. Donovan now attempts (*Westminster Review*, March) to go back to the psychic impulse which he thinks must have preceded the physiological aspect, and to account for the origin of this impulse. In doing so, he finds that it is the very beginning of culture, the first phase of man's elevation from the brute.

History and even geology, Mr. Donovan thinks, help us little in such a search. Axes, arrow-heads, pottery, fishing-gear, and other implements of work abound in the remains of primeval man; but the only musical instruments found are "the supposed whistles made from the phalanges of the reindeer found in the caves of Périgord and elsewhere, the flute-like tubes found in the caves of the Pyrenees by M. Piette, those discovered at Langerie Basse by the Abbé Landesque, and at Rochebertier in Charente by M. Fermond." And yet Mr. Donovan claims that the art of music not only "lies at the very root of all human culture in the earliest ages," but had its beginning even anterior to man's entrance upon the earth, in the play of brutes. He writes:

"Of course it may be, at first, a vague, far-off, slow-working motive; it may have taken long periods to become effective in creating during play a demand for rhythmic stimuli—a demand which would impel the playing brutes to bring their movements into rhythmic form. But, no matter how far below the plane of conscious effort the motive worked at first, if a playing brute once moved a muscle, let us say, stamped a foot, and *attended* to the muscular sensation of it, or the sound of it; if a brute once *attended*, and stamped again, and *attended* again to the succession of stamps, at that moment the great obstacle to the free output of nerve-energy in play would be in some degree removed, and the motive to *attend* again would be established. Thus would begin that growth of rhythmic movement and sound which we call the art of music, thus would begin that unique sort of pleasure which is brought into existence while we *attend* to rhythmic movement and sound; thus our race must have learnt to attend to constructed rhythms until this act of attention became as natural to man as the breath of life; so natural, that the infant is capable of it long before it is capable of any other act of attention; so natural, that it is no easy task for a sanguine theorist to separate the act of attending to musical constructions from the pleasure of music in order to show that this pleasure may be simply the animal delight of play; only in music it has become specialized in its great reservoir of constructed rhythms."

Among primeval men, the "musical" results at first achieved in a similar way might be the veriest wildness and have turned him into a yelling, leaping monster. The rhythmic excitement of savages encourages this supposition. But when the next playing mood came, the movements would again become rhythmic, "the spur for seeking absorption of attention being always the psychological motive." "Thus, slowly but inevitably," Mr. Donovan adds, "would be established the first condition of education from brute to man, thus would be built the first school-house wherein the brute attention could be broken from the slavery of brute instinct and appetite."

SCIENCE AND INVENTION.

SOME ORIGINAL IDEAS IN WARFARE.

THE present struggle in South Africa is regarded by M. Bloch, the Russian writer, as confirming in all important particulars the contentions of his recent work. This was brought out in a recent article translated for these columns. But according to Hudson Maxim, who contributes to *The Home Magazine* (April) an article on "The Warfare of the Future," M. Bloch's

COMPARATIVE LOSSES IN BATTLE IN ANCIENT AND MODERN TIMES.

In the times of Cæsar about fifty per cent. of the participants were killed. In the Napoleonic wars about twenty-five per cent. were killed and wounded. In the Civil War about twenty per cent. and in the British Boer War less than ten per cent.

views on the impossibility of war could only be sustained by an acknowledgment that there is at present no war at all in South Africa. The very existence of the Anglo-Boer conflict negatives the thesis that war has now become impossible, altho it may confirm many other statements of the Russian writer. Warfare has certainly, however, taken on new and terrible aspects. Mr. Maxim, who has contributed not a few inventions to this end, describes some of them in the article to which reference has been made, and outlines others that are not yet perfected. In the first place, Mr. Maxim is of the opinion that the present field siege-gun is capable of great improvement. He says:

"A gun could be made, weighing no more and costing no more than the present seven-inch howitzer now used in the United States service, and which, instead of throwing a bursting charge of only ten pounds of black powder, would throw a projectile carrying a bursting charge of fifty pounds of high explosive—five times the quantity of explosive that is now thrown—and the high explosive being four times as powerful as black powder, it would equal in force 200 pounds of black powder, and the projectile would have an explosive energy forty times as great as it now has. This could be accomplished by making the gun longer and increasing the caliber without increasing the weight, and by employing a specially made progressive smokeless powder, which would exert a comparatively low initial pressure and maintain it well up to the muzzle."

Mr. Maxim believes that larger siege-guns may be made in segments, starting with a breech-piece and a thin, rifled tube, upon which wire-wound belts or rings could be forced and secured by strong longitudinal stay bolts. The gun might be further supported by an independent structure, similar to the long pneumatic guns erected at Sandy Hook. Torpedo-guns could thus be made to throw 500 pounds of high explosives beyond the range of any field siege-gun now in use. Mr. Maxim believes that the production of a veil of smoke in front of an enemy's position will be specially provided for in future warfare. Projectiles could be thrown carrying from 100 to 500 pounds of smoke-producing materials, and smoke-producing torpedoes may

likewise be used with effect for the production of dense smoke to veil flanking movements of an army in battle, or in covering a retreat. "The ink-fish," says Mr. Maxim, "is a good illustration in nature. He covers his retreat with a cloud." The writer goes on to say:

"Projectiles, or aerial torpedoes, carrying from 100 to 500 pounds of sulfuric anhydride, might be employed. The anhydride might be carried in metallic capsules, packed in an outer shell or casing similar to shrapnel. By a small bursting charge of explosives the capsules of sulfuric anhydride would be scattered over a large area. Let each capsule be provided with orifices, so that, upon striking, it would fume off and send up a dense and heavy vapor of concentrated sulfuric acid, which would blind and singe and burn men in trenches or behind breastworks, and force them from their positions. The cry will be raised that such warfare would be barbarous and would not be permitted; yet, while some ugly wounds would be inflicted, especially when a capsule should strike and enter the flesh of a victim, in the main the effect would be not the production of a large number of severely wounded or slain, but a forced abandonment of positions."

In general, the prohibition of the throwing of poisons by international law is regarded by Mr. Maxim as not likely to be obeyed in future warfare. He says:

"It is sufficient only for us to recognize the fact that international laws, like spiders' webs, are made for the authors of those laws—made to bind the weak, while the strong can break through."

"We may confidently expect the employment of the most efficient means for securing the salvation of a nation when her salvation shall come to depend upon the use of those means, bombs charged with 500 pounds of such substances as cyanide of arsenic, hydrocyanic acid, etc., carried in a similar manner as that already described for charging with sulfuric anhydride. Such quantities of such poisons, thrown upon fortifications or trenches, would produce enormous volumes of heavy, poisonous vapors, which

THE BATTLE-SHIP DESTROYER.

Fig. 1 is a side view of the battle-ship destroyer, partially submerged for action. The highest water-line shows the boat completely submerged, while the lowest water-line in the figure shows the boat in cruising position. Fig. 2 is a longitudinal section. The ports are seen in dotted lines and the three torpedo guns in section. Fig. 3 shows the tubes carrying automobile torpedoes. Figs. 4, 5, and 6 are cross-sections.

would hug the earth, filling rifle pits, trenches, and depressions with very rapid and widespread destruction of life. Thrown into cities, such bombs would prove exceedingly disagreeable.

"A torch bomb could be made by charging a projectile with calcium carbide and water, with an igniting device and burner, and means for bringing the water in contact with the carbide for the production of acetylene. Bombs could be made which would upon striking throw up a flame to a distance of ten feet, and which would, for ten minutes, give off a most dazzling light."

Some other "improvements" suggested by the author are a magnified kind of shrapnel in which each bullet is replaced by a separate explosive shell; the use of dynamite for digging trenches by planting and exploding cartridges in earth; and a submarine

battle-ship-destroyer, which he proposes to drive at high speed through the water by the combustion of an invention of his own, which he has named "motorite." To quote his description:

"Long candles or rods of a self-combustive material, similar to smokeless powder, a foot in diameter, solidly encased and sealed in steel cylinders a hundred feet long, would be ignited at one end, and as the sides of the rods would be protected from ignition, they would continue to burn only from one end, and the heat would be utilized to evaporate water, and the steam produced and the products of combustion together would be utilized directly upon powerful turbines, the exhaust gases escaping at the rear beneath the water; or the smokestack port might be opened, and the exhaust conducted through it to the outer air.

"In a vessel of the size described, thirty cylinders 100 feet in length could be provided and filled with solid rods of motorite a foot through. The motorite contained in one of these cylinders could, under a pressure of 250 pounds to the square inch, burn for more than an hour, and the products of combustion, together with the steam generated, would supply to the turbines 25,000 pounds of mixed gases and steam per hour. At the rate of 25 pounds of steam and gases per horse-power hour, this would develop 1,000 horse-power for that time. If half the number of cylinders were ignited at once, 15,000 horse-power would be supplied for two hours. If the whole number were ignited, then we would have 30,000 horse-power for an hour.

"By increasing the pressure slightly, the rate of combustion could be doubled or quadrupled, and 60,000 horse-power could be furnished for half an hour, or 120,000 horse-power for fifteen minutes.

"Motorite would prove expensive fuel, as it would cost about \$2 per horse-power hour, and it would, therefore, cost about \$60,000 to run the boat for an hour with 30,000 horse-power. Altho expensive, it might enable the attainment of results which would make even this expense not worth considering."

The armament of this craft, Mr. Maxim tells us, would consist of two lateral submarine tubes 150 feet long, each charged with ten automobile torpedoes, with means for successively discharging them rapidly. The torpedo-throwers need not throw far, and the pressure, therefore, would be low. The torpedoes could be charged one upon another like the balls of a Roman candle. The discharge would be controlled from the lookout tower by an electrical keyboard, and could take place so rapidly that the operator could discharge 500-pound torpedoes as fast as a typewriter can strike off the letters of the alphabet. Says the inventor in conclusion:

"A few thousand dollars expended by some government in the construction and testing of this battle-ship-destroyer would save very many millions, and, perhaps, an empire. Were the French or Germans to recognize in time the import of this invention and proceed at once with its construction and trial, and then follow with a few of them, they might, as a reward, wrest from England the mastery of the sea. It might even be in the power of little Holland to become again Queen of Neptune's domain."

Does Worry Cause Insanity?—The popular modern notion that worry is at the bottom of most of the nervous troubles of the present day is negatived by the observations of Dr. Clouston, of the Royal Edinburgh Asylum. In an address at the annual meeting of that institution recently, he held, according to an account in *The Hospital*, "that purely mental and moral causes played a comparatively small part in the production of insanity, as compared with causes which were bodily and physical. In only 11.5 per cent. of the cases they had had to deal with had trouble and anxiety or mental shock produced the disease. The remainder of the great mass of the cases were due to causes acting on the brain through the body—drink, faulty development, gross brain disease, strong hereditary predisposition, child-bearing, and such-like causes; and as showing how mental troubles were caused by bodily disease, he said that the recent epidemic of influenza had caused more insanity than all the public and private anxiety in connection with the war." "These remarks," *The Hospital* goes on to say, "have a very definite bearing on preventive measures. Without doubt the present

generation is apt to coddle its nerves, and almost to plume itself on the delicacy of its organization. It is widely held that so great is the influence of worry in the production of nerve disease that those prone to nervous breakdown should be in every way protected from irritating and disturbing influences. The medical profession is not entirely without blame in this matter. The phrase, 'it is worry, not work, that kills,' has received high and wide professional sanction, and it is to be feared that we are far too ready to prescribe a placid mental life rather than a rigid bodily regimen. But we can not get out of the old philosophical dictum which sums up so much in the few words, *mens sana in corpore sano*, and we find the spirit of the old adage breathing in what Dr. Clouston says about the bodily origin of so much of the insanity which we meet with on every hand. He says that the only two great methods to lessen the nervous disturbances in civilized societies are (1) to live according to physiological and moral law, and (2) to arrange suitable marriages."

RELATION OF ELECTRICITY TO MATTER.

THE question, "What is electricity?" really means in most cases, "What is electricity's relationship to matter?" To explain an electric charge is to explain what happens to the material body that is charged; and to understand an electric current, we must know what occurs in and around the material conductor. An interesting theory of this relationship, developed chiefly by Prof. J. J. Thomson, of Cambridge University, England, has been noticed from time to time in these columns. It is continually being put into new literary shape and has now reached a stage where it may be grasped by one not an electrical expert. An explanation is made in *The Electrical World and Engineer*, in a series of editorial paragraphs, some of which we quote below. Professor Thomson's theory is based on the fact that he has evidence, as he believes, that the masses of flying matter constituting the cathode rays in an excited Crookes tube are much smaller than the atoms of chemists and physicists, and that these smaller "corpuscles" of different substances seem to have similar properties. Thus a corpuscle of hydrogen does not appear to differ from a corpuscle of nitrogen. Says the editor of *The Electrical World*:

"This theory, if it continues to gain favor and support from the accumulation of experimental evidence, bids fair to revolutionize our preexisting ideas concerning matter and its electrical properties.

"It had until recently been supposed that matter could not be divided more finely than into molecules, and that these were chemically divisible into atoms. But the atom was the end of all dissection, while an atom of iron was absolutely and completely distinct from an atom of some other substance, such as lead. Now it would seem that we can tear off minute chips from atoms, and that the chips so torn off lose identity and can not be distinguished from one another. Of course, the suggestion naturally follows, as a matter of speculation, that if we could tear off a sufficient number of chips from the atoms of any substance, it might be possible to rearrange or reconstruct the chips in a new way, and possibly produce an atom of a different substance; or, in other words, that the process of tearing chips away from atoms is analysis of matter into 'protyle,' or the mother substance from which all chemical elementary substances may have been originally constructed."

Professor Thomson's last paper, which appears in *The Philosophical Magazine* (December), is an attempt to show that matter exists in an ionized condition, or electrified state, in the cathode rays, in the neighborhood of an active incandescent lamp filament, and near the surface of a metallic reflector immersed in gas, upon which ultra-violet light falls. In each of these different cases he calculates the electric charge, and on comparing the charge of a gram of negatively electrified matter in cathode rays with that shown by Faraday's researches to be carried by a gram of hydrogen in an electrolyzed solution or plating bath, he finds that while in the latter case it is in inverse proportion

to the electrolytic equivalent in the former, the charge per gram is constant, and about seven hundred times greater. To quote further:

"The question which arose from this result was, Whether the charge which an atom could carry in a cathode ray was greater than that which an atom could carry in an electrolyte, or whether the charge was the same in both cases, but the carrier was only a corpuscle in the cathode ray, and a full-sized atom in the electrolyte? To answer this question Professor Thomson undertook to measure the charge produced by ultra-violet light on a zinc plate by a very pretty but intricate process, which involves the production of an artificial rain cloud in a chamber illuminated by ultra-violet light shining on a zinc plate near the top of the chamber."

The result showed that the charge carried by an ion, the unit of matter considered in its action toward electricity, is always the same, whether the ion be in the electrolytic solution or in the cathode ray. It is the mass of the ion which changes, and this mass must, therefore, in the last-named instance be about seven hundred times smaller than a mass of the atom. In other words, in this case the material carrier of the electricity is a mere chip, or, as Professor Thomson called it, a "corpuscle." From these results some remarkable inferences are drawn. First, an atom is made up of many equal corpuscles, of which the hydrogen alone contains about seven hundred. Electrification of a gas consists in the detachment from its atoms of chips carrying a negative charge. In the electric decomposition of solutions (as in electroplating) the charged chips move and the atoms may remain at rest. More than one chip may be detached from an atom, but the force required is increasingly hard in each successive case and generally the number is small. Friction possibly electrifies substances by rubbing off chips from the atoms. *The World and Engineer* says in conclusion:

"No doubt many consequences will be found to flow from the theory if it once takes deep root in experimental verification. The principal idea is that a definite group of corpuscles produces a non-electrified atom, and that the destruction of this fabric by the removal of a corpuscle immediately leaves the fabric positively, and the corpuscle negatively, electrified. This is a sort of reversion to the Franklinic doctrine of electrical fluids that can not fail to interest the student. It is also interesting to contemplate a Crookes tube as a protyle factory; but the process of manufacture must be so slow that concrete protyle does not seem yet attainable."

A NEW FIGURE AMONG FRENCH SCIENTISTS.

AN octavo of 800 pages bearing the formidable title, "The Constitution of the World," and bristling with formulae and figures, has just been published in Paris. The author is a Frenchwoman nearly eighty years old, an invalid for years; and her book, according to Emile Gautier, who writes of it in *La Science Française* (March 16) is "one of the most powerful and original of the twenty-five last years of a century that has seen Lamarek and Renan, Humboldt and Proudhon, Littré, Darwin, and Spencer." The author's name is Clemence Royer, and tho unknown to the mass of people, even in her own land, she is, says M. Gautier, "one of the most extraordinary figures of our time," while her book is a "systematic *résumé* of the labors of a career consecrated wholly to science in its most transcendental and delicate phases." She was the first to translate Darwin into French; and France, according to her eulogist, owes its knowledge of the great English biologist wholly to her lucid commentary on his work. She has written widely on such different subjects as geology, esthetics, ethnology, astronomy, and comparative physiology, and is even more convincing and clear as a lecturer than as a writer. Of her scientific attitude, M. Gautier says:

"Many great minds, with Auguste Comte, have recoiled before

the unfathomable difficulties of the universe, which seemed to them too high, too complex, or too arduous for feeble human intelligence to solve. Clemence Royer has none of this timidity. 'Nothing,' she says, 'is unknowable, save what does not exist; nothing is incomprehensible save the contradictory, that is to say, the impossible.' In what follows she goes forward for 800 pages with marked energy, decision, and nervous force to attack the problem both mathematically and experimentally, balked by no obstacle and treating in turn of the constitution of matter, of atomic and etheric dynamics, of the inner mechanism of energy, of the vital process, and of the evolution of the worlds, in an alert and limpid style whose brilliance illumines with unexpected clearness the profound gloom of the well whence scientific truth has risen with so great difficulty."

There may be but a few hundred persons in the whole world, M. Gautier thinks, who will read and understand Clemence Royer's book; but even so its goal will be attained. The spectacle of an aged woman, in poverty and retirement, writing such a book as this, is one to make every man of science thrill with sympathy, all the more that her ideas may be too deep or too high to affect the ordinary course of scientific thought. — *Translation made for THE LITERARY DIGEST.*

ELECTRICALLY DRIVEN SURGICAL INSTRUMENTS.

THE application of the electric motor to small implements continues to extend. It is even finding a field of usefulness in surgery, as a motive power for instruments required in the mechanical work of that profession. The accompanying illustration shows a saw, operated by an electric motor, for use in operations where a hand-saw has been employed to cut bone, etc.

A MOTOR-DRIVEN ELECTRICAL SAW.
Courtesy of *The Electrical Review*.

This rotary surgical saw is thus described in *The Electrical Review*, March 21:

"The motor, . . . running at 2,200 revolutions per minute, develops in the neighborhood of one-tenth horse-power. It is arranged to be held in the hand of an assistant by means of the leather strap shown in the illustration, this construction enabling

the assistant to follow the surgeon about who is using the saw as may be necessary for the purposes of the latter. The current is fed to the motor through a double push-button, such as is used with electrolier fixtures, so that holding it either in the same hand used to carry the motor or in the other, the assistant can instantly start or stop the saw as required. Attached to the motor shaft is a flexible spiral coil incased in a braided sheath, the whole being three feet long. This enables the utmost freedom of movement on the part of the operator, who holds the saw in his right hand as shown. The saw is not directly connected with the end of the shaft, but is attached to it through a right-angle bevel, so that it operates in a plane parallel with the end of the shaft. This is for greater convenience in handling the saw as it puts it in a better position for use.

"This machine has already found an extensive use in several of the larger hospitals in New York City, and has proved of value in severe operations where the shock attending the use of the slower-acting hand-saw has frequently proved fatal to the patient. In the difficult operation of craniotomy it has found especial use, and has made a good record in both this and resection operations. The whole apparatus weighs about 12 pounds and is thus easily carried by the assistant, who stands near the operator."

CAN OVEREATING PRODUCE CANCER?

THE theory is advanced by Sir William Banks, in a recent series of lectures delivered before the British Medical Society, that overeating, or even a "high standard of general nutrition," may predispose to cancer, which he believes to be eminently a disease of the healthy and robust. Thus abundance of food, which is a result of national prosperity, and on the whole a powerful factor in the improvement of public health, is not without its drawbacks. "More than one hygienic prophet," says *The British Medical Journal*, in a note on the subject, "has lately uplifted his voice in warning as to the evils of overfeeding," and Sir William but adds one more reason for deploring and discouraging it. Says the writer of the note just quoted:

"The theory is not altogether new, but it undoubtedly acquires new strength from the adhesion of a surgeon of his experience and sagacity. He points out that the increase of cancer coincides with an increase of food throughout the country [Great Britain]. Ever since the passing of the Corn Laws, he says, bread has been cheap and plentiful, while during the last twenty years the importation of animal food from other countries has been enormous. The increased wages and emoluments of all classes in this country have enabled them to purchase freely of the best there is to be had in the whole world of things to eat and drink. Our working classes fare admirably. Our better classes eat infinitely too much, especially of animal food partaken of at breakfast, lunch, and dinner. But for the athletic tendency of the age and the general passion for games and exercises which pervades all classes, this over-stuffing must have proved very dangerous. Sir William Banks is pretty well convinced that, when a man is over forty-five, excess in food is perhaps worse for him than excess in drink, and believes one of the results of too much nourishing food is the production of a widely spread, second-rate kind of gout, of a different type from the acute and furious attacks produced in former days by the copious drinking of beer and port wine. Sir William Banks is distinctly of opinion that it has also to do with the increase of the constitutional tendency to cancer. The theory is supported by the fact that the increase of cancer in males has been more rapid than in females. And it is precisely the male population that eats heavy food in ever-increasing quantities, whereas the female remains much as she was before in this respect."

The Risks of Siphons.—The common siphon-bottle is by no means as innocent as it looks. We are told in *The Scientific American* that the ordinary charging pressure is from 120 to 150 pounds to the square inch, and when a bottle so charged falls a few feet the jar is liable to cause an explosion. The same result may occur by exposure to heat. *The Druggist's Circular*, in a

recent article on the risks of the siphon, cited several cases of the kind, and recommended that a special warning label setting forth the risks of handling siphons be placed on every bottle. "The moral obligation to protect one's fellows from danger is obvious enough, and pharmacists and others who sell siphons could readily force the bottler to affix such labels. The siphon should always be carried by the head. Children should be specially warned to do this because they are apt to find the bottles heavy and clasp them close to the body. Sudden changes of temperature should be avoided, and the cold bottle should not be grasped with the hand. The courts seem to have always held in siphon accidents that the bottler was responsible, if there was the slightest defect in the siphons or the slightest carelessness in handling them. The driver of a wagon containing filled siphons was delivering some of them to a customer; one of the bottles fell and struck the ground where it burst into fragments, striking a man in the face, permanently impairing his vision. A suit was brought against the manufacturer whose wagon was delivering the water. A verdict of \$1,000 damages was obtained. The case was carried to the Appellate Division of the Supreme Court, and the judgment was affirmed."

A Shell Searchlight.—Recent experiments at the naval proving-station at Indian Head may obviate the necessity of using the searchlight on shipboard on occasions when it is desired to "pick up" objects within a limited distance and yet conceal the ship's position from an enemy. "The invention," says *The Marine Review*, "consists of a shell filled with gas. When the shell explodes it illuminates a considerable area. Its one weak point is that so far no shell has been found with walls sufficiently heavy to stand the shock of explosion required to project it more than a mile or two. Four-and 6-inch rifles have so far been used in the trials, and the best results secured have been with a shell that explodes and sets the fuses burning when one mile distant from the ship. Lieutenant Strauss, who has charge of the station, has made some very successful trials with the invention recently, and is encouraged to believe that if a shell can be made which will stand the shock of exit from the rifle and at the same time will explode at the proper time, a light can be produced that will answer many purposes of the searchlight and have the advantage of not disclosing the precise locality of the vessel firing the torch. Its usefulness would be apparent in a closed harbor, where it might not be advisable to use a searchlight at all times. After the tests have been concluded at Indian Head, several specially made projectiles, filled with the new invention, will be sent to some of the ships with a request that they continue the trials when practicable. It is believed that a shell can be manufactured capable of discharging the explosives at a distance of at least five miles."

SCIENCE BREVITIES.

Corks that have been steeped in vaseline are an excellent substitute for glass stoppers, according to *The National Druggist*. "Acid in no way affects them and chemical fumes do not cause decay in them, neither do they become fixed by a blow or long disuse, which latter fact will be appreciated by those who often lose time and temper by a 'beastly fast stopper.' In short, they have all the utilities of the glass without its disadvantages."

"The pathology which new conditions of life is ever creating," says *The Lancet*, London, "tends more and more toward conditions where the absence of sleep may play a prominent causative part. We improve our sanitation and our general hygiene, and we abolish the plagues of our forefathers; but we work our nervous systems more in a day than they did in a week, and we fall victims to insomnia and the whole train of nervous disorders in which worry, overwork, and want of sleep occur as etiological factors. Sleep all men must have who use their brains much, and especially all men whose work is associated with extra worries."

REGARDING the present remarkable demand for copper, an American authority is quoted in *The Mining and Metallurgical Journal* as saying: "The consumption of copper in this country, as well as abroad, is phenomenal. As this is the electrical age, copper is being put to new uses every day, and the demand is naturally large. The product of the various mines throughout the country has been sold months ahead, but the demand appears to be as pronounced as ever it was. England is now in the market for a large amount of American copper, thousands of tons of it being required for war purposes. Germany and France are also buying liberally. The demand from the latter country can be traced to the construction of telephone systems in the various countries. Germany needs it for traction and manufacturing purposes. It is estimated that one third of the entire copper production of the country is now being exported."

THE RELIGIOUS WORLD.

SOME EASTER CUSTOMS AND SUPERSTITIONS.

EASTER, perhaps more than any other religious festival of the year, has been prolific in symbolic customs and popular observances. The astronomic significance of the day, as the date of the vernal equinox, when the sun crosses the celestial equator and rises after a period of apparent decline, now as in pagan antiquity, forms the basis of many of these customs, en-

building chanting in low voices. They go, or so the ritual runs, to see 'where they have laid Him.' At last twelve strikes, and a wonderful scene occurs, that can but faintly be realized by those who have not witnessed it. '*Christos voshres*' ('Christ is risen'), cries a priest, and the people echo the cry. The members of each family embrace. '*Christos voshres*,' say strangers to each other, the answer being '*Vo istini voshres*' ('He is risen indeed!'). Meanwhile the priests, in their most gorgeous robes gleaming with cloth of silver and gold, march round the churches singing triumphant hymns. Without, the bells clang out, the cannons thunder a salute, the houses and streets are illuminated. So Easter Day is welcomed in with the Greek Church."

The Western Church also has its ecclesiastical and popular Easter rites. Chief among them is the ceremony of "washing the feet," performed on Maundy-Thursday in many of the great European cathedrals, and in not a few Roman Catholic churches in this country. In former days, the king performed this humble rite, in memory of Christ's last evening with His disciples. James II., not a particularly humble scion of the Stuarts, was the last English king to perform it. In Austria, however, it is still kept up with great pomp by the aged Franz Josef. Mr. Robinson says:

"Surrounded by the chief of the Austrian nobles in the gorgeous robes of their various orders, he walks through the streets of Vienna to perform the *Fusswaschung*, as the ceremony is called. In Jerusalem, the Patriarch washes the feet of pilgrims, presenting to each a wooden cross some seven inches high with spaces left for relics—a most valued possession. In Venice the *Lavanda dei Piedi* is performed by the archprêtre in the Cathedral St. Mark, that glorious building in which the exquisite and fantastic are carried to the point of sublimity. Under the wonderful mosaics of the middle nave a space is cleared, and to the benches there set out come hobbling thirteen old men in what can best be described as long white dressing-gowns. Each of them removes a stocking. Then, accompanied by a train of priests and acolytes, comes the archprêtre and seats himself in a great gilded chair. A sort of apron and sleeves of white linen drawn over the hands are then slipped on to preserve his valuable robes from the slightest stain, and, rising, he passes down the line of old men, dabbling a little water on each foot out of a golden ewer, and wiping the spot with a towel. While the old men are putting on their stockings, he washes his own hands with a marked thoroughness, and the ceremony is over. Impressive it may be, but the humility of the archprêtre is not peculiarly obvious, either in the actual performance of the ceremony or in his general bearing."

Even in England, some ancient popular Easter customs still linger. Of the custom of "lifting" on Easter Monday and Tuesday, once well known in the north of England, together with some other similar superstitions, Mr. Robinson writes:

"It was performed by two lusty men joining hands across each other's wrists, and then, having made the person to be heaved up sit upon their arms, they lifted him three times into the air. This custom had, undoubtedly, originally been intended to signify the joy of the people at the Resurrection of our Lord."

DR. MCGIFFERT'S WITHDRAWAL.

THE various assertions and counter-assertions regarding Dr. Arthur C. McGiffert's relation to the Presbyterian ministry which have been made during the past month have been somewhat confusing. Now, however, according to an "authenticated interview" in the *New York Tribune*, Dr. Birch, the prosecutor of the heresy case, says that Dr. McGiffert has decided to withdraw from the Presbyterian ministry, and has actually sent a letter to the moderator of the New York presbytery asking that his name be erased from its roll of membership. From this "authenticated interview" (which is, however, a report rather than an interview, in form at least), we quote as follows:

"Dr. Birch regards this [Dr. McGiffert's withdrawal] as a victory, but he will be quiet and dignified about it, believing that

CEREMONY OF THE "WASHING OF FEET" AT ST. MARK'S, VENICE.

twined often with distinctively Christian meanings. In the word "Easter" itself we have the name of the Teutonic goddess Eostre, closely associated linguistically with the Anglo-Saxon word "east," the Latin "aurora," and the Greek *ēōs*, meaning dawn, the time of resurrection of the sun-god from the dead. In *The Quiver* (London, April), Mr. B. Fletcher Robinson tells of many of these curious Easter rites and customs. The Easter egg is, he remarks, a survival of the old legend of a bird changed into a hare in the spring, and the hot "Easter cross buns" are a relic of the cakes offered to Eostre—afterward marked with the sign of the cross to destroy their pagan significance.

Some of the Russian Easter customs are particularly interesting. Mr. Robinson writes:

"Until a few years ago, a Russian breaking the great Lenten fast of seven weeks was punished not only by religious penances, but by a heavy fine levied by the police! Much could be written of the magnificent ceremonies that fill the Holy Week in Moscow, that ancient city, the center of national and religious life among the peoples of the Czar. The crowds that throng the churches look faint and wan from their long abstinence and exhausted by hours of kneeling, for no seats are allowed. The Monday of the week sees the preparation of the *myro*, the so-called holy oil used for the baptism of children, the consecration of churches, and the coronation of the Czar. In cauldrons of silver and gold the oils and spices simmer, while priests slowly stir it and read prayers without cessation. Into it finally are poured a few drops from the holy flask, brought from Constantinople when the Greeks fled before the invading Turks. Before the holy flask is half-emptied it is always refilled with the fresh *myro*, the idea being that thus there is always a minute portion of the holy oil that it originally contained left within it.

"With Good Friday, mourning falls upon churches and people. Lights are extinguished, black is everywhere seen, the bells are silent. An embroidered tapestry of Christ is carried and laid in a coffin amid solemn chanting. As Saturday evening draws on a look of expectancy is seen on every face. The churches are crowded with silent worshipers. Shortly before midnight the tapestry is removed from the coffin. A priest approaches it and signifies that it is empty. Then a procession moves round the

he will thus do more for the cause he has been fighting for than he would otherwise. When Dr. McGiffert withdrew it was a tacit admission—and everybody will understand it in this way—that he could not refute the charges made against him. He and his friends must have read the appeal very carefully for it was absolutely unanswerable. . . .

"As for Dr. Birch's plans, he will act firmly, giving up none of his rights, but, for all that, with a Christian spirit. The appeal will be considered by a judicial committee of the General Assembly, and if it is decided to be in order, as it will be, it will come up for consideration. It will doubtless be entertained, for everybody will wish the case settled. Then Dr. McGiffert having decided to withdraw, the case against him will drop. Whether Dr. Birch will insist on action against the New York presbytery for dismissing his charges against Dr. McGiffert, I do not know. But I am sure that if the General Assembly shows a strong desire to drop it, Dr. Birch will not be insistent, for the history of the controversy will go on the records, and Dr. McGiffert will have withdrawn."

The Outlook (undenom.), commenting on the report that Dr. McGiffert will transfer his membership to the Congregational Church, says that, "in the latter denomination, as indeed in almost any of the larger Protestant denominations except the Presbyterian, he would certainly be warmly welcomed." It regrets Dr. McGiffert's withdrawal, but says that he can not be expected to maintain the battle for "liberty of prophesying" unaided: "We doubt whether that battle can be won in this great historic church so long as the present subscription is required to a creed which, interpreted in its most natural sense, no longer expresses the conviction of more than a very small minority in that church. It is not certain that Dr. McGiffert's proposed withdrawal will give the church the peace for which it sighs."

BISHOP POTTER ON THE RELIGIOUS SITUATION IN THE PHILIPPINES.

SINCE Bishop Potter's return from the Orient in the latter part of March, the newspaper press has been giving much attention to his views upon the military and civic situation in the Philippine Islands. In *The Churchman* (Prot. Episc., March 31), Dr. Potter gives the results of his observations of religious life in the archipelago, in the form of a reprint of his official report to the Joint Commission of the House of Bishops on Increased Responsibilities. The report is signed by both Bishop Potter and the Rev. Dr. Percy S. Grant, rector of the Church of the Ascension, New York, who accompanied the bishop as his secretary. The report of the two clergymen is a severe arraignment of the ecclesiastical policy pursued in the islands under Spanish domination. The writers say:

"The religious situation in the Philippines is such as was to be expected in a colony of Spain. She has stamped her ecclesiastical traditions, narrow, intolerant, and often corrupting, wherever she has gone, and she has gone almost everywhere, among all the various islands of the archipelago, great and small. Worst of all, her religious orders, except perhaps the Jesuits, have robbed the people, wrong from them their lands, and taxed the administration of the sacraments and ordinances of religion with a scale of exactions and impositions at once scandalous and outrageous. No marriage, *e.g.*, can be celebrated by a priest of the Roman obedience, without (a) a certificate from both parties of baptism; (b) of confirmation; (c) of a confession to a priest immediately preceding the marriage; as well as a certificate of marriage, all of which must be severally and separately paid for, and for which the charge is in each case from \$5 to \$8. It is only necessary to visit the Philippine Islands to see, in the obvious and extreme poverty of the great mass of the people their utter inability, ordinarily, to pay any such charges; which charges are fixed by the archbishop, who, it is understood, divides their proceeds with the clergy who collect them. It need not, therefore, surprise any one acquainted with the facts, that thousands of the people are living practically in a state of concubinage, in which,

to their honor be it said, men and women maintain, generally, conditions of marital fidelity, and in which, curiously enough, they are not refused the greater sacrament.

"An ecclesiastical discipline which permits such wrongs not unnaturally permits others of even larger proportions. One wonders, as he hears the history of long-continued wrong and robberies by means of which the friars have dispossessed the Filipinos of their homes, seized their lands, and practically driven them forth, under the pretext of exacting the church's dues, whether those who have done these things could ever have read the burning language of the Hebrew prophet addressed to men of their type! It is no wonder that at last an outraged people revolted, and that, having appealed in vain to their own civil government for either protection or redress, they should have risen against their oppressors. As your representatives are preparing these words they have read the summary, which has only just reached them, of the report of the American commissioners to the Philippines, and they are thankful that at least it recognizes the relation of these great wrongs to the situation which, when the arms of the United States came to the Philippines, they found there. If we are to retain these islands, and the undersigned are constrained to own, however they may differ from any of their associates as to the wisdom of originally entering upon them, that no other course seems for the present open to the United States, *these wrongs and the righting of them lie at the foundation of the whole Philippine problem.* It will be a colossal blunder if any delicacy as to the policy which may affect or offend a particular vote, important to any political party, is allowed to obscure the facts, or to paralyze our action. We must do justly in the Philippines, or God will have no use for us, and our presence there will inevitably redound to our national dishonor."

This arraignment, it will be noted, applies more especially to the ecclesiastical traditions of Spanish Catholicism. Elsewhere in the same paper, the bishop discriminates between Spanish and American Catholicism, and even questions whether it will be wise for the Protestants to send missionaries in case the Roman Catholics of America obtain control of church affairs in the Philippines. Bishop Potter writes:

"Is it worth while to send missionaries to the Filipinos? Are they not largely, as we have been told, a Christian people, with churches, schools, ministers of religion, and the like? Is it worth while to intrude upon them teachers and teachings which they have been taught to regard as of the devil (some of the recent pronunciamentos of the archbishop of Manila are in this connection, and to American ears, literary curiosities), and so to begin the work of a higher civilization by inflaming religious prejudices and by awakening violent religious controversies? I confess it seems to me that this will be a question for the Filipinos as American citizens, themselves, to answer. If they want such teachers, then certainly under our system of government they are entitled to have them, and no wise administration, under whatever pretext, will attempt to interfere with their doing so. Already, as Chaplain Pierce has told church people in the East, there is a remarkable interest in the work of the church not only among Filipinos but among Chinese and others; and the church has qualifications for mission work in those islands which other Christian bodies have with rare magnanimity recognized. But beyond what is already under way, a denominational propaganda of various types would at present be only misleading and confusing. The Filipinos must first understand what Americanism means. They are at present so largely in the dark as to our institutions and those great ideas of political and religious freedom upon which they rest, that the perfectly well-meant, but not always just or considerate presentation of the truth by those whose attitude is one of strong antagonism to the teachings and institutions of Rome would only be inflammatory and unsettling, and might end in a situation in which the illusions of the old faith had been destroyed without the substitution of anything better. If something of the larger and freer spirit of the Roman Church as it exists in the United States, in the case of many members of that communion whom I am so fortunate as to count as my friends, could find its way into these new possessions of ours, it might be better adapted to the situation existing there than something more radical and destructive, and, at any rate, it would prepare the way for that temper of toleration and free inquiry in

which we Americans are wont to find, in this connection, our largest hope. But meantime it ought to be distinctly understood that henceforth in the Philippines any man may worship God according to his own conscience, and, if he is so minded, may invite others to unite in doing so with him."

The Rev. Dr. Grant, in a recent speech in Cooper Union (New York *Tribune*, April 2) threw further light on the difficult points involved in church property in the Philippines, and the power of the friars. He said:

"The real question in the Philippines is the land question. On the one hand, the Filipinos have been robbed of their lands by the friars, and on the other they fear that they will not come back into possession of them under the American administration of affairs. They also fear they will be taken from them in future by great syndicates. Some great ecclesiastics have said there was no hostility to the friars among the natives, yet in one of the first Filipino proclamations it was proposed to abolish all religious orders. And why, if there is no hostility, did the friars, when ordered to go back to their cures by the Archbishop of New Orleans, why did they not go back? They are in hiding. From the beginning in the Philippines there has been a contest of civil and ecclesiastic authority, the ecclesiastic power constantly trying to down the civil authorities, and generally succeeding. Annually the Archbishop of Archial used to spread the Spanish flag in front of the Cathedral, and then invite the governor-general down to see him walk over it. It was a case of the church against the state. Any attempt of the civil authorities to benefit the natives was foiled by the ecclesiastics. The Filipinos were thus between two grindstones.

"No wonder their attitude toward the United States has been a hostile one. American Catholics wish to expand, I believe, and grow strong in the state. The Catholics in the Philippines desire to grow strong at the expense of the state and dominate it. To drive or attempt to drive the friars back to their cures will cause the people to leave the Catholic Church in the Philippines, will continue the war, and is almost equivalent to taking sides with the insurgents against the United States."

Public opinion as represented in the press inclines strongly against the friars, altho they have some defenders. The New York *Commercial Advertiser* (March 30) says:

"If we had no other authority than that of Bishop Potter for the statement that the chief grievance of the Filipinos arose from the oppression of the friars it would be discredited. Bishop Potter belongs to one Christian sect and the friars to another. But every one who has made any serious study of the situation in the Philippines has reached the same conclusion. We believe that Catholics as well as Protestants agree that the friars have betrayed their trust. The cure of this evil is a duty which we do not think the Catholics in this country will regret. In fact, their past conduct has been such as to warrant the conclusion that they will cooperate with the Government when it attempts to make that separation of church and state which must exist in all territory over which the flag flies. It may take some time to bring this about, but we hope that it may be done without unnecessary friction and with an appreciation of the fact that the abuses of which the friars have been guilty have been part of the general abuse of power that has characterized Spanish rule in the colonies. The evil is one of race rather than of religion. The church has had to work with such material as it had, and, unfortunately, some of it was pretty poor. Under the new *régime* all sects will stand on an equal footing in the Philippines, and those which best meet the needs of the situation will be the ones which will thrive. There is certainly room enough for all forms of Christian work."

The Springfield *Republican* (March 25) says:

"Unless the United States clips the wings of the religious corporations, the war may go on indefinitely. On the other hand, does the Administration dare to expel the friars and confiscate their estates, as the Filipinos of all classes desire? In his recent speech in the Senate Mr. Lodge hinted strongly at such a confiscation when he said: 'The land, which belongs to the people, and of which they have been robbed in the past, should be returned to them and their titles made secure.' But Mr. McKinley's Paris treaty contains clauses which seem to insure to the orders the permanent possession of their great landed properties,

through possessory titles if through no other. As for the continued residence of the friars in the islands, the President's inborn love of compromise will incline him to avoid so radical a measure as their expulsion from the archipelago. The final outcome, therefore, is in utter darkness; but the prospect is that war in some form will continue so long as the United States seems to the natives to be protecting the religious orders in their old position of spiritual and economic power."

The Advance (Congreg., March 29) says:

"Evidence is strong that an exceedingly grave mistake was made in the Paris Treaty when the monastic orders were guaranteed possession of all the ill-gotten accumulations which they had filched from the Filipinos by a system of legalized robbery. The extortion and tyranny of these Roman Catholic orders was the principal cause of the original uprising of the people. This is the testimony of Professor Worcester of the two Philippine commissions, of Mr. A. G. Robinson, the correspondent of the New York *Evening Post*, and of many other observers. . . . There is a grave problem here which our Government has hardly touched, or, if it has touched it at all, only to the further injury of the people and of our cause."

Christian Work (Evangelical, March 29), referring to the well-known letters of Mr. Robinson, mentioned above, says:

"In his last letter to that journal [the New York *Evening Post*] he sums up his experience in Luzon by saying that the chief resistance of the Philippines to the United States has been due to the desire of the inhabitants of the island to be rid both of the economic exactions and of the administrative tyranny of the monastic orders. This opinion is shared by almost all who have intelligently observed the condition of the islands. It is charged that General Otis has carried out through the entire period of his command an administration which has favored these orders. The Government at Washington, for some reason not clearly understood, has never been decisive in dealing with them. Great doubt exists whether the title by which friars claim great tracts of land is legal, and there is no reasonable doubt that it is open to moral challenge, for reasons already presented in this journal. This especial phase of the question has not received the attention that it should both from Congress and the public press, due to the extreme reluctance shared by both of discussing subjects connected with the Roman Catholic Church. But as the facts come to be fully understood it becomes a very grave situation that must be faced and determined."

On the other hand, *The Sacred Heart Review* (Rom. Cath., March 24) says:

"The people who think that the property held by the religious orders in the Philippines should be confiscated by the United States will receive very little comfort from the statements made by the Rev. Joseph Algué, S. J., in *The Independent* of last week. Father Algué, who is at present in Washington, having come to this country from Manila, where he had lived for many years, for the purpose of presenting a mass of scientific information concerning the Philippines to the Government, contradicts the assertions made by so many Protestant writers regarding the fabulous value of the friars' property in the Philippines, and says:

"In regard to the estates of the orders, they have a good title to their property. . . . There is, he says, 'a prejudice against religious bodies having property which is not shown against individuals. A man may be worth a million dollars in land, but nobody objects if he has a good title; but let religious orders own a large amount of land by an equally good title and there are many who want to take their property.'"

"In this last sentence Father Algué states exactly the mental attitude of many of those Americans who are at present clamoring for the robbery—to put it plainly—of the religious orders, who, in spite of all the calumny that has been leveled at them, are still recognized, by those who have studied the question sanely and soberly, to have been the civilizers and the Christianizers of the Philippines. Land trusts and combinations, no matter how extensive may be their possessions and unjust their operations, are looked upon as perfectly natural; but for a Catholic religious body to own property, tho it be used in the cause of civilization and of Christianity, is more than some of us can bear."

The Ave Maria (Rom. Cath., March 31) says:

"No doubt there are stray black sheep among the clergy of the

Philippines, and they are opposed by good Catholics there for the same reason that good Catholics everywhere oppose renegade priests. We have strong reasons, however, for thinking that the number of these unfortunates is smaller in the islands than in many other countries. A correspondent in Manila, whose occupation brings him in daily contact with the clergy, assures us that the Franciscans and Dominicans there are just like the Franciscans and Dominicans in the United States. . . .

"No doubt there is rottenness in Manila, but most of it is imported. To the calumniated friars the Filipinos owe all the civilization they possess, as well as their stanch morality. Bigoted profligates have been forced to admire the one and the other."

DR. HILLIS ON CALVINISM.

THE heresy bacillus to which we have already alluded, and whose habitat appears to include countries so far apart as Germany, England, and the United States, and sects so varying as Roman Catholicism, Anglicanism, Presbyterianism, and Methodism, has claimed another victim in Dr. Newell Dwight Hillis, the successor of Beecher and Abbott in Plymouth Church.

REV. DR. N. D. HILLIS.

Dr. Hillis's sermon arraiguing the Presbyterian doctrine of foreordination to everlasting damnation has aroused great attention. On account of criticisms of his course by the Chicago presbytery, of which he has been a member, Dr. Hillis has now resigned his ministry in the Presbyterian Church, and is now a simple layman, or, as he humorously puts it, a man "without any ministerial standing," altho he remains pastor of

Plymouth Church, which is Congregational in its affiliations.

In his sermon (*New York Evening Post*, March 27) Dr. Hillis said:

"On one page Jonathan Edwards says: 'God holds the unconverted over the pit of hell, as much as one holds a spider or a loathsome insect over the fire, and from time to time the generation in darkened lands, without temple, without Bible, without religious teacher, are swept into the future as the housewife lifts the lid from the glowing coals and sweeps flies into the flames.' And to-day one of our greatest denominations still includes that tremendous statement in its confession of faith, saying that certain men and angels are foreordained to everlasting death, being 'particularly and unchangeably designed, and their number is so certain and definite that it can not be either increased or diminished,' and every young man who enters the Presbyterian Church has to solemnly swear to believe and teach this frightful view.

"And every attempt to revise and expel that statement from the creed has been successfully combated by a majority that wishes to retain the doctrine. It would seem that if men believed it reason would be shaken to its foundation. It would seem as if a man would prefer to be burned at the stake rather than hold, or assert, or charge such infinite cruelty upon the all-merciful and all-loving God. The day the scholastics wrote that chapter in the Confession of Faith they got the devil confused with God. What! Read the story of Christ's life, love, suffering, and death, and then charge God with 'particularly and unchangeably designing' the majority of His children to eternal torment? I would rather shake my fist in the face of the Eternal, and fling

every vile epithet toward His stainless throne, where eternal Mercy sits with the world's atoning Savior, than lift my hand with that creed toward God's throne and affirm that I taught or believed it. For the man who does believe that hideous doctrine the hour of judgment has now come. His sun is already darkened; his moon is turned to blood; his stars have refused to give their light."

The portion of the Westminster Confession against which Dr. Hillis directed his criticism is the chapter treating "Of God's Eternal Decrees," which is as follows:

"By the decree of God, for the manifestation of His glory, some men and angels are predestinated unto everlasting life and others foreordained to everlasting death. These angels and men, thus predestinated and foreordained, are particularly and unchangeably designed; and their number is so certain and definite that it can not be either increased or diminished.

"Those of mankind that are predestinated unto life, God, before the foundation of the world was laid, according to His eternal and immutable purpose and the secret counsel and good pleasure of His will, hath chosen in Christ unto everlasting glory, out of His mere free grace and love, without any foresight of faith or good works, or perseverance in either of them, or any other thing in the creature, as conditions or causes moving Him thereunto; and all to the praise of His glorious grace.

"As God hath appointed the elect unto glory, so hath He, by the eternal and most free purpose of His will, foreordained all the means thereunto. Wherefore they who are elected being fallen in Adam, are redeemed by Christ, are effectually called unto faith in Christ by His Spirit working in due season; are justified, adopted, sanctified, and kept by His power through faith unto salvation. Neither are any other redeemed by Christ, effectually called, justified, adopted, sanctified, and saved, but the elect only.

"The rest of mankind God was pleased, according to the unsearchable counsel of His own will, whereby He extendeth or withholdeth mercy as He pleaseth, for the glory of His sovereign power over His creatures, to pass by and to ordain them to dishonor and wrath for their sin, to the praise of His glorious justice."

Secular press comment is for the most part very scathing in its judgment of this Calvinistic doctrine. The *Brooklyn Citizen* says:

"Now, does anybody out of a madhouse really believe this? Do the president and faculty of the McCormick Theological Seminary believe it? That God created men and deliberately, before their creation, decreed that they should be damned to all eternity, and then with a dissimulation worthy of Satan sent His own Son into the world to redeem the world, that through Him all men might be saved? Who in his senses can accept such self-contradictory nonsense? . . .

"The criticism about Dr. Hillis's theology by the rigidly orthodox will prove unfortunate—for them. The standards they are seeking to maintain belong to the world's list of disregarded statutes and formulas that it is not the habit of mankind expressly to disannul, but that by unanimous consent of the intelligent are abandoned to die."

The *Brooklyn Eagle*, however, thinks that Dr. Hillis, in thus violently repudiating this doctrine, threw himself open to objections from those who uphold it, and that he should not have resented their defense of Calvin's faith and the official creed of Presbyterianism, as an "attack" upon himself. Referring to Dr. Hillis's letter of resignation sent to the Chicago presbytery, *The Eagle* says:

"We admire the eloquence and the earnestness of Dr. Hillis's letter. If the situation in theology or in the ministry was what he thinks it is, we would agonize with him. But we do not think it is that any more than we think that the representation of extreme emotion on the stage is the real thing. It is well that the presbytery of Chicago voted to put the letter in cold storage for a fortnight, and appointed a committee to feel the pulse of the situation, take its temperature, give to it cooling and nutritious food, sequester it from distracting surroundings, and report the result two weeks hence.

"By that time the presbytery may feel no necessity to conclude

that Dr. Hillis's arraignments are correct. They may grant to him a release in the same courteous spirit with which a host would accept the regrets of a guest at his inability to be present on a stated occasion, or they may ask him to stay in their fellowship, without prejudice to the views which he advances in his letter, but with pointed dissent from the views which, between the lines of his letter, he may seek, or may seem to seek, to fasten on others."

The *New York Mail and Express* (April 2) says that the question at issue is not one of free speech, in which we all believe:

"No one is obliged to connect himself with the Presbyterian Church, or with any other church. All the denominations are open to him where to choose. But when he has made his choice, and as a condition precedent to membership has subscribed to a certain creed, a certain confession, he has made a committal out of which springs a duty. That duty is allegiance, fidelity to the church of his unflinching choice so long as he retains his membership. No one questions his right to assail it as earnestly as did Dr. Hillis when he opened his batteries on the Westminster deliverance. But does not a decent respect for the proprieties suggest that resignation should precede oburgation?"

The *New York Sun* (April 1), ever valiant in the cause of orthodox doctrine, says:

"Dr. Hillis, of Brooklyn, for example, is horrified by the doctrine of election of the Westminster Confession, yet without it that whole standard of faith would fall to pieces. He would follow only the example and teachings of Jesus, but he relegates Jesus to a merely human place by the methods of his criticism of the faith in which he was reared. That also is the consequence of the teachings of Dr. Lyman Abbott and all his school, including the ecclesiastic who has contended in *The Sun* that 'all things that are good in any man are divine.' The authority of Christ's teachings is thus placed in their intrinsic merits simply, like those of Mohammed, Confucius, or any modern philosopher, and they are opened to criticism accordingly. If that is the view of the church, or if it is a view tolerable by the church, the complete reconstruction of creeds and of theology has become necessary, and in honesty it ought not to be delayed."

The Independent (undenom., April 5), referring to this statement of *The Sun*, which it calls "the brightest of our New York daily papers," which "has much to say about theology, tho' so little about religion," remarks:

"It is not unusual to hear such declarations that if one doctrine of some theological system goes, the whole body of faith goes. The proof that the above statement is not true appears under the old rule, '*Probat ambulando*,' test it and see. The Methodist Church is the proof. It rejects the doctrine of election, and yet the whole standard of faith has not fallen to pieces. The Methodist Church holds nine tenths of the Westminster Confession, all of it that is of any great importance. One is inclined to suspect that the person who says that if the doctrine of election goes, the whole Confession goes, has never read it. Methodists are excellent Christians, as good believers, and as soundly orthodox as are the Calvinists, and yet they reject election."

The Presbyterian (April 4) takes Dr. Hillis to task as follows:

"Dr. Hillis is an attractive preacher, but he is neither an original nor a logical thinker. He has always shown liberal tendencies, and now that he is the successor of noted predecessors, he seems to spread his wings and make a display. . . .

"What right has a man to be a minister in two denominations at one and the same time, or a member of a Presbyterian presbytery and of a Congregational association? Is it not time this double denominational connection should cease; or if it is to continue, that the minister occupying so anomalous a relation shall show such respect for the bodies according him this privilege as not to assail them doctrinally or organically, in private or in public? A fine sense of propriety and honor, if not of justice, would dictate this."

New York's Churchless Avenue.—Third Avenue, in the borough of Manhattan, New York, possesses the questionable distinction of being without a single church along its entire length. Within a space of seventeen blocks, however—the sec-

tion between Forty-second Street and Fifty-ninth Street—there are sixty-five bar-rooms of various sorts, either independent drinking places or grocers' bars. A writer in *The Christian Advocate* (Meth. Episc., New York, March 1) says:

"The state of things morally and spiritually in the district may be gathered from the following facts: Of these 65 liquor-selling places about 40 are so-called 'hotels,' paying their tax of \$800 a year, and running practically day and night, week-days and Sundays. Forty each paying \$800—\$32,000 tax; 40 each paying \$1,500—\$60,000 rent; 40 each paying \$2,000—wages to bartenders and other help—\$80,000 help; 40 each averaging \$3,000 a year—profit, gas, fire, etc.—\$120,000 profits. The remaining 25 saloons and liquor-selling grocers, in tax, rent, help, and profits, must take in about \$5,000 each—\$125,000. The yearly drink bill of this short section of seventeen blocks on Third Avenue—\$417,000. Counting the average weekly earning of the customers of these places at \$15 a week, or, say, about \$700 a year, and counting that each customer spends only one fourth of his earnings for drink, we have 3,000 of such customers necessary for the support of these 65 drinking-places for one year. Then, counting 5 persons to a family for each of these 3,000, we have a total of 15,000 people affected in a direct way by the liquor traffic of this small section of Third Avenue."

THE PASSING OF THE SHAKERS.

ONE of the most interesting of the minor Christian sects appears about to pass out of existence. According to recent returns, the Shakers, who in 1870 had eighteen communities with about nine thousand members, have now shrunk to hardly more than one thousand souls. New members are seldom received from the world, and, owing to the Shaker belief in strict celibacy, there is no chance for accessions from within. Were it not for the considerable commercial value of their community properties, which, besides farm lands, consist of various manufactories, it is believed they would have disbanded before this. A writer in *The Interior* (Presb., March 29) gives the following particulars concerning the peculiar ordinances of these people, who, it will be remembered, figure prominently in Howells's "The Undiscovered Country":

"Everybody has heard of the Shakers, but not one in a thousand otherwise well-informed Christians could tell off-hand what is their origin, belief, or aim. They are the oldest of our communistic societies, and were founded by 'Mother Ann,' who was born in Manchester, England, in 1736, and died in this country in 1784. She was one of the most erratic of the Quakers in their most erratic days. Her followers learned to regard her as a second incarnation of Christ. The particular tenet which came to be considered their distinctive characteristic was the belief that only by living the life of a celibate could one be restored to the proper relation Godward. Those who joined 'Mother Ann' in her belief and joined in her peculiar modes of worship were noted for 'unusual and violent manifestations of religious fervor.' As her converts were at first wholly from the ranks of the Friends, or Quakers, they came to be called 'the Shaking Quakers.' This was popularly abbreviated to simply 'the Shakers.' They call themselves 'The Millennial Church, or United Society of Believers.' Besides accepting the strictest celibacy, they practise the community of goods, holding all their possessions in common. Their first family home was built in 1785, and four or five years later they had eleven communities in operation. New Lebanon, N. Y., has been their best known establishment, and from it have gone forth their chief articles of trade, garden seeds, and family remedies. The world has taken little interest in the strange medley of mysticism they have taught, but has been curiously attracted by their peculiar method of worship, which reminds one of the old Pyrrhic dance of the Greeks or the more modern rhythmic movements of an Indian corn festival. They practise neither baptism nor the Lord's Supper, following in this the customs and convictions of the Friends, from whom they constitute an off-shoot. They hold certain views as to the intercourse of the living with the dead, which reminds one of the teachings common among the Spiritualists of the '50's."

FOREIGN TOPICS.

QUEEN VICTORIA'S VISIT TO IRELAND.

THE official explanation given for Her Majesty's visit to Ireland is that the Queen is so deeply moved by the courage and devotion of the Irish troops that she wishes to give some mark of her gratitude and favor. High hopes have been expressed in the English press of the results to follow this visit. *The Daily Mail* (London) says:

"With Her Majesty's supreme capacity for doing the right thing at the right moment, the Queen visits Ireland early in April. . . . She has also been pleased to order that in future the Irish regiments shall wear a sprig of shamrock on St. Patrick's Day. These two things will do more to bring Celt and Saxon together than untold years of legislation or agitation."

The Times says:

"We cannot doubt that the masses of the Irish people will cordially appreciate the spirit in which the royal visit will be made. Their Queen goes among them as the representative of no party and of no political cause. She goes as the head of the empire, irrespective of the distribution of political power among its different portions and provinces, and she may be honestly and fervently welcomed by all Irishmen who do not wish to sever the golden link of the crown."

The Irish are nevertheless warned that they must not hope for political advantages from this visit. "We do not expect that the Queen's visit will heal political differences; it is non-political," remarks *The St. James's Gazette*; and *The Spectator*, referring to St. Patrick's Day, when sprigs of the shamrock were worn by many in London, says:

"That there is a distaste for the Irish character in this country we should be the last to deny, for the national characters are different, and the incurable defect of Englishmen is lack of sympathy for anything different, or even comprehension of it; but the distaste vanished for the time as if it had never existed. . . . The truth is, the people, who, partly owing to the change introduced by deep-sea cables, have watched this war as they have never watched any war, were profoundly touched by the devotion and daring of the Irish regiments, reconsidered in a moment many prejudices, and were delighted to be led by the Queen in expressing visibly their friendship for those whose conduct they so admired. . . . The emotion may be evanescent, tho men are slow to forget stories of derring-do, but that it flashed across the nation is proof sufficient that the dislike in which the Irish believe is but superficial, and might under favorable circumstances altogether disappear. It is a little difficult to love one's friends just after they have been saying they had rather be rid of you, but it is possible to appreciate their worth even then, and there is no foundation for liking better than full appreciation. That appreciation is just now so strong that it would of itself be fatal to Home Rule. It is the useless partner one lets go, not the partner whose aid in emergency is a rock of support."

The Orangemen are delighted with the visit. *The Belfast Evening Telegraph* says:

"Very likely the conclusion has been borne home that if there had been more royal visits to this country during the past half-century, that if there had been, as Irish Loyalists have so often urged, a royal residence in Ireland—in the same way that Scotchmen have a royal residence at Balmoral—the political state of affairs would have been different to-day."

The Northern Whig expresses itself in similar terms. The *Cork Examiner* arises its voice in warning

"We do not wish to say a word that may seem ungracious, but we can not close our eyes to the very regrettable incidents that occurred when the Prince and Princess of Wales visited us some fifteen years ago. They were received, it will be remembered, as befitted their positions until the respectful attitude of our people was misrepresented in a most unwise, we should say, malicious way. We would urge, therefore, that for once party feel-

ing should be repressed, and it may be taken for granted then that Her Majesty will have little to complain of her reception if it is not effusively enthusiastic. . . . We are sanguine that it marks a new departure of our rulers toward this country. They see that the policy of neglect was a dangerous and foolish one, that an Ireland chafing under many and grievous wrongs was a reflection on the empire, and debarred from its service many who might become very valuable and efficient soldiers."

Evidences of discontent are not, however, wanting. Several prominent Irishmen have refused to take part in the reception of the Queen, either officially or unofficially. The following letter from Miss Anna Parnell has appeared in many papers:

"Since the Queen, whose Irish soldiers have hitherto been punished if they ventured to sport the shamrock, has now ordered them to wear it as a token of their degradation, it seems to me that those Irish who do not wish to be identified with the robber hordes in South Africa should take some notice of this insult to their little plant, whose very humbleness might have protected it from the attentions of the Queen-Empress. I would suggest that those who can not refrain from wearing the shamrock should dip it in ink first until its dishonor has been wiped out by the final triumph of the Boers or in some other way."

The Freeman's Journal remarks that "the Queen comes as recruiting sergeant to Ireland," and declares that the order to wear the emblem of Irish national independence is a piece of English arrogance.

On the Continent of Europe, these concessions to Irish vanity are regarded as signs of weakness, which will have a very different effect from what was intended. *The Vossische Zeitung* points out that the Irish Nationalists were never more violent in Parliament than since the beginning of the South African war, altho many English jingo papers refrained from publishing the text of their speeches. *The Sviets* (St. Petersburg) says:

"England is afraid; England trembles. That is why England, while yelling her defiance to the world, makes her obeisance to Ireland. History records nothing like it—proud England groveling before Ireland! Is not this a sign of the times? Europe should duly appreciate this confession of weakness, and put a stop to English rapacity, for the sake of humanity, for the present and for coming generations."—*Translations made for THE LITERARY DIGEST.*

STRENGTH AND WEAKNESS OF BOER MILITARY ORGANIZATION.

IN the *Volksstem* (Pretoria), Dr. Engelenburg gives an interesting sketch of the extraordinary military organization of the Boers, revealing at once its strength and its weakness. We condense his article as follows:

There is little or no compulsion. The only effective punishment is the fact that men who do not come up to the mark are ridiculed by their comrades. Piet Joubert, the commander-in-chief, wears no uniform, because anything approaching to the European idea of discipline is utterly distasteful to the Boers, and an air of command is not tolerated where the officer is only *primus inter pares*. The orders of the officers sound more like requests. Bragging, boasting of one's exploits, is likely to meet with utter contempt. The Boer acknowledges openly that he has no "feeling of joy" at the approach of battle. Yet he will hold out, if necessary, under a perfect hail of shot and shell. Surrender is an awful thought to the Boer, yet he does not admire foolhardiness. The man who recklessly exposes himself is not decorated or praised. On the contrary, he gets a regular "blowing up" from his veldkornet, for not only does he rob his family or its supporter, in case he is hit, but he weakens the force to which he belongs, and thus lessens the chance of victory.

His greatest weakness is his want of implicit obedience. It is impossible to get the Boer to obey an order which does not seem sensible to him. While thousands of British soldiers do not know what they are fighting for (as conversation with the prisoners amply proves), every Boer fully understands the causes of the

war, is conversant with the arguments on both sides, and is willing to risk everything for his freedom. But he refuses to be butchered uselessly, and expects to be made acquainted with the object of an order. The officers know this, but they also know that the Boer never fights better than when he is in sore straits, and it is no unusual thing for a Boer commander to place his men in a position where they must fight or surrender.

A writer in the *Militär Wochenblatt* (Berlin) points out that this individualism of the Boers, while it strengthens them in positions of defense, makes them unfit for an aggressive movement. Much as intellect, calmness, and individual tact are to be appreciated, confidence in the commander and obedience must accompany them to enable an army to strike a sudden and decisive blow. This criticism has obtained wide acceptance since the failure of the Boers to capture Ladysmith and Kimberley.—*Translations made for THE LITERARY DIGEST.*

THE PASSION FOR MILITARY GLORY IN FRANCE.

NOT within the memory of living men has France been the mistress of continental Europe; yet the memory of her military glory is still vivid among her people, and the expressions of many of her writers show that she has not given up the hope of regaining her proud preeminence. Her Government is, however, and has been for a long time, eminently pacific. For

instance, speaking of the unwillingness of France to interfere in the South African war merely for the sake of justice, M. Delcassé, the minister of foreign affairs, said:

"France has not ceased to be that generous nation which the world has known, has admired, and has sometimes left in the lurch; but France has had many bitter experiences, and altho she will not shirk her duty, she must consider the fact that the balance of power has altered, and that some consideration

COLONEL DE VILLEBOIS-MAREUIL.
Killed in an engagement with Lord Methuen last week.

is due to herself. France has lost none of her noble enthusiasm, but she also realizes that she can not and must not give way to her generous impulses. She has done enough for humanity, and can, without jealousy, allow others to take the initiative."

Despite this peaceful declaration, warlike articles are popular with the French public, and the idea of a war of revenge against Germany, tho less prominent than in former years, is still continually encountered in the French press. "Revenge for Sedan is a sentiment necessary to our national existence," writes Maurice Barrés in the *Journal* (Paris). "France will regain her equilibrium only when her territorial integrity has been restored," writes Joseph Reinach in the *Siècle*. The *Kölnische Zeitung* (Cologne) thinks that such expressions must be remembered. It says:

"It may be argued that the French nation has loved peace for a long time, and that war is not desired by the people in general.

That may be true. The nation did not desire the wars of the First Empire; it did not wish for war at the time of the Crimean campaign; it would not have wanted the war of 1870, had the people been given two days' time for sober reflection. But the nation is not even asked its opinion; it is taken unawares. Ever since the great Revolution, French wars have been made by a few daring speculators, assisted by a 'patriotic' mob, which raises in the streets and in the newspapers a popular cry. Germany, for one, has no reason to relax her watchful attitude as long as the cry '*À Berlin*' has not died out entirely."

At present, the popular hero of the French is the late Colonel Villebois-Mareuil, the "South African Lafayette," an officer of undoubted ability, whose advice to the Boers has certainly influenced the war, and who has been described in the German as well as the French papers as the most capable of the foreign officers who assist the Boers. The *Epoca* (Madrid) says:

"Military glory is a necessity to France," said Napoleon III. after the Italian war, and he was more in accord with popular opinion then than when he declared, in his Bordeaux program, that 'imperial rule meant peace.' This passion for military glory is very catching. Nothing illustrates this better than the wild enthusiasm with which shopkeeping England received the news of General Roberts's successes, and the intolerance shown to the advocates of peace. What wonder that Paris should give herself up to illusions born of historical remembrances. The desire for military glory was at the bottom of the wars waged under the old Monarchy, and still more so during the time of Napoleon I. Again, under the Third Empire, the Napoleonic legend was revived; military glory was regarded as indispensable to France, and by military glory was meant the indisputable supremacy of France in Europe. The attempt failed, and it was not even a coalition then which broke up the power of France, for Prussia, assisted by portions of the ancient German empire, awakened France from her dream. But has the effect been lasting? We fear not. We believe it is necessary to point out, on the eve of the World's Exposition, that those who endeavor to revive the passion for military glory in the French are rendering a sorry service to France."—*Translations made for THE LITERARY DIGEST.*

A SOCIAL PURITY CRUSADE IN GERMANY.

PROTEST meetings in all sections of the country, deputations to call upon the Emperor and the cabinet, threats of parliamentary obstruction, even threats of that specter of the German legislator, a general election, are stirring all Germany. The question that has aroused all this is not one of constitutional rights, or of international policy, or of new taxation; but merely whether German officials shall be permitted to exercise the functions generally associated in this country with the name of Anthony Comstock. We summarize from *Nieuws van den Dag* (Amsterdam) the following statement of the case:

A few years ago, a murder was committed in Berlin, in which certain unsavory elements which form part of the population of every large city figured very prominently. A reform movement set in, and a bill was brought in for the stricter supervision of such people. As a fellow named Heinze had been the chief actor in the drama referred to, the proposed law was named '*der Heinze*.' It would have attracted little attention, had it not been that the Conservatives, Catholics, and Socialists added suggestions for the enforced improvement of morality in general. One amendment provides that the "age of consent" be raised to eighteen. Another protects factory girls, saleswomen, etc., against the undue attentions of their employers and foremen. A third threatens with heavy fines and imprisonment the exhibitors and vendors of indecent pictures, books, etc. A fourth renders actors and managers of indecent plays liable to like punishment. These last two amendments are the ones which cause all the pother. It is feared that the police and the judges will be too narrow in the exercise of the powers conferred upon them.

It must be admitted that the elements which agitate against the *der Heinze* comprise some of the brightest men in Germany.

On the other hand, the majority of the people evidently believe that stricter regulations would do no harm. The *Exha* (Berlin) contains an article in which some of the grievances of the "intellectuals" are enumerated. We take from it the following:

The Centrist, Roeren, himself a judge, declares that literature and the German people would have benefited if plays like those of Sudermann had never been acted. Already the police demand the removal of photographs of paintings by Rubens and Boecklin, tho the originals are in the Royal Museum. Freiherr von Mirbach objected to an invitation to an art exhibition, sent to the ladies of the court, merely because the cards bore the figure of a slightly clad female.

In a meeting which Mommsen, Menzel, Wildenbruch, Liebermann, and other men of like prominence attended, the actor Nissen asked what was to become of the stage? "Romeo and Juliet" could be forbidden if the police were given full discretionary powers. "Othello" could not be acted, for is not Desdemona strangled in bed? "Fra Diavolo" would be prohibited, because Zerlina goes to bed before the hidden robbers.

Politically, the matter rests with the Kaiser. The ministers are afraid of the Centrists (Catholics), but their backs will be stiffened if they can mention the Emperor as their supporter against these objectionable paragraphs.

The *Journal des Débats* (Paris) thinks that there is a curious want of tact in this throwing together of artists and persons of the worst moral character in one law. This alone should settle the fate of the bill. Otherwise, the endeavor to stop immoral practises is praiseworthy. The *Handelsblad* (Amsterdam) asks whether Germany is about to formulate her views of morality after that of England, "the most canting and hypocritical of nations." Dr. Oertel, the editor of the *Deutsche Tages-Zeitung*, supports the bill, even taking occasion to inform the ladies of the court that their dresses are cut too low. It adds:

"Why all this noise? One would think that the artistic representation of beautiful human beings would be impossible under the *lex Heinze*, and that our German classics would fall victim to the censor. Clearly that is nonsense. We wish only to remove that which undoubtedly offends the sense of chastity. That this is necessary has been shown over and over again in the very papers which now agitate against the *lex Heinze*. It was a democratic paper that first drew attention, for instance, to the indecency of some pictures in the mutoscopes. These pictures are still there, as the law does not reach them."

The paper mentions some plays of a shady character, and declares that true art can benefit only by the prevention of such productions.—*Translations made for THE LITERARY DIGEST.*

RUSSIAN POLICY IN PERSIA AND ASIA MINOR.

THE talk of Russian aggression in Afghanistan and India has for the moment ceased, but other rumors are rife that the St. Petersburg Government is taking advantage of England's preoccupation in South Africa and applying coercion in quarters which Western Europe has hitherto succeeded in saving from subjection to Russia. The Persian loan and the railway concessions obtained by Russia from the Shah are regarded as having established a virtual Russian protectorate over Persia—something which British diplomacy would have resisted as an invasion of English interests. But even more serious is the complication that has arisen in Asia Minor. Russia has pressed the Sultan for exclusive railway privileges in that important part of his dominions, and is understood to have peremptorily declined the suggestion of Turkey for control by a joint commission. The massing of the Russian troops on the Turkish frontier and other warlike preparations have been reported, and some newspapers in England and Germany have uttered open warnings to Europe against a war upon Turkey as the only alternative to the surrender by the latter of her rights over Asia Minor.

The Russian papers pooh-pooh these alarming rumors, while admitting the importance of the railway question in Asia Minor.

The original demand, it is understood, related to the construction of a line from Kars to Erzerum; but since then the negotiations have extended over a wider field. The influence of Germany over the Porte has caused some apprehension in Russia, and the latter wants the practical recognition of her supremacy in Asiatic Turkey. One diplomat is quoted as saying that it is essential to Russia to have guarantees that she alone will have the right to construct railways in northern and northeastern Asiatic Turkey. The St. Petersburg *Novoye Vremya* discusses in a long article the Persian, Minor Asian, and Afghanistan questions, and dismisses as idle all suggestions of division and agreements upon spheres of influence. It uses sentences which will be regarded as a confession of the most aggressive intentions. It says:

"From all sides Russia is offered partitions. Not long ago we were not allowed anywhere, whereas now they ask us hither and thither, provided we promise to make no other forward step outside the limits. But why these useless gifts? What we need lies in places that are not mentioned, and that which is offered is of no advantage to us. The English would divide with us Afghanistan and Persia, and Germany would enter into arrangements regarding railroads in Asia Minor, reserving to herself the southern part, and leaving us the mountainous northern part. . . .

"The partition of Afghanistan, Persia, or any other Eastern kingdom would be inconvenient for us simply because it would be—partition. Western governments can readily agree to such partitions, separated as they are by seas from the Eastern nations. We are territorially and directly connected with them, and the acquisition of any part taken from the living whole would cause us endless troubles. On the contrary, we ought to counteract firmly and resolutely every attempt at dismembering Eastern nations, subjecting them to our protective influence and thus grouping them around us. Not only should we not divide Persia with anybody, but we should strengthen the connection between southern and northern Persia. In northern Persia the army is already officered and organized by us, while in the South there is no army, and it is exposed to the predatory and lawless tribes. . . . We must not fail to use our present opportunity and entrench ourselves in Persia."

In regard to Asia Minor the *Novoye Vremya* says that Russia does not contemplate any dismemberment of Turkey and does not demand anything incompatible with Turkish integrity. "All these rumors are of British or German origin. The partition of Turkey, whether overt or masked, has never been part of Russian designs, contradicting, indeed, the principles of our diplomacy."

The *Novosti* takes the same view. It says that Russia is as sincerely for the maintenance of peace as she has been for years; that neither in the East nor in the Balkan peninsula has she instigated trouble or undermined the *status quo*, and that, in spite of the alleged opportunity presented by England's difficulty, the spring will pass without any trouble in any section subject to Russian influence. Neither Persia nor Turkey is menaced, and the rumors of mobilization and coercion are ascribed to foreign sensation-mongers.—*Translations made for THE LITERARY DIGEST.*

WHO SAID "DEAD"?—Punch.

We have no agents or branch stores. All orders should be sent direct to us.

New Summer Suits, \$5.

WE have just received from abroad some entirely new styles in Suits and Skirts for summer wear. We have had these illustrated on a supplement Sheet, which will be sent free, together with our Spring Catalogue and a choice collection of samples of Suits, to the lady who wishes to dress well at moderate cost. We make every garment to order, thus insuring that perfection of fit and finish which is not to be found in ready-made goods. We pay all express charges.

Our catalogue illustrates:

New Designs in summer Suits, \$4 up.

In Pique, Cotton Covert Cloths, Ducks, Linens, etc.

Tailor-Made Suits, \$5 up.

In All-wool Serges, Cheviots, Broadcloths, Covert Cloths, Venetians, etc.

Duck, Pique, and Crash Skirts, \$3 up. Separate All-Wool Skirts, \$4 up.

Bicycle Suits in the newest fabrics, \$5 up. Separate Bicycle Skirts, \$3.50 up.

Rainy-day Suits and Skirts made of double-face materials.

Our line of samples includes the newest materials, many of them being exclusive novelties not shown elsewhere. We also have a special line of black goods and fabrics for second mourning. All orders filled with the greatest promptness; a suit or skirt can be made in three days when necessary.

Write to-day for Catalogue, Supplement and Samples; you will get them free by return mail.

THE NATIONAL CLOAK COMPANY,
119 and 121 West 23d St., New York.

What Are "Arnold" Goods?

When we say that we give you

Health and Comfort Free

There is no deception about it, because we offer you a garment which will secure you both (being a new fabric for the purpose) at the same price at which you buy goods in which health or comfort or both are absent.

Arnold's Knit Gauze Umbrella Drawers

with ruffle of cambric, lawn, lace, or embroidery for Summer wear, do not hold perspiration, cling to the body, or bind, but are porous, cool, elastic and comfortable.

Sixty cents and upwards, according to elaborateness of ruffle. We also make the most sanitary and comfortable Infants' and Children's Knit Outfits, Ladies' Tourist Robes and Dressing Sarques.

Send for Catalogue.

These Are "Arnold" Goods.

NOVELTY KNITTING COMPANY,

320 Broadway

Albany, New York

of 72 pages, "The Test of Time." In it you will probably find a letter from some neighbor or friend that is just as strong as the following from the

Rev. JOS. A. SEISS, D.D., Philadelphia, Pa.

123 Spring Garden Street, Jan. 19, 1900.

Messrs. OSTERMOOR & CO.,

Sirs:—I have had one of your Patent Elastic Felt Mattresses in constant use for twenty-eight years past—it is not in the least matted down, but is just as soft, clean and elastic as when new, although the ticking is very badly worn, so that I think re-covering is necessary.

I certainly would not have a mattress for personal use except the Ostermoor Patent Elastic Felt, for there is not, to my knowledge, anything so satisfactory and enduring as your mattress possible to be obtained. Surely the sight of this twenty-eight year old mattress, and my remarkable experience, must convince doubters, if any are left. The Lutheran Theological Seminary at Mt. Airy, was furnished throughout with your mattresses, where they are proving just as satisfactory. Yours truly, JOS. A. SEISS.

The Ostermoor Patent Elastic Felt Mattress, \$15. Express Prepaid to your door.

is always "SENT ON SUSPICION," which means just this: SLEEP ON IT 30 NIGHTS and if it is not even all you have hoped for, if you don't believe it to be the equal in cleanliness, durability, and comfort of any \$50 hair mattress ever made, you can get your money back by return mail—"no questions asked." There will be no unpleasantness about it at all.

Send for Our Book "THE TEST OF TIME," whether you need a mattress now or not.

It will interest you to know about the best and cheapest mattress in the world.

Take Care! Don't Be Cheated! There is not a single store in the country that carries our mattress; almost every store now has an imitation so-called "felt," which is kept in stock to sell on our advertising. Our name and guarantee on every mattress. Can be bought only of

PERSONALS.

JAMES RUSSELL LOWELL was ever noted for his great scholarship. *The Outlook* (New York) publishes the following anecdote, bearing upon this subject: The Dean of Ely has contributed a little story of James Russell Lowell. He said that on meeting him one morning Mr. Lowell spoke of the difficulty he had had the night before in going to sleep. He added that he finally fell to going over some portions of Julius Caesar's "Commentaries," which led him to add an original chapter to that immortal work. Mr. Lowell imagined Caesar in an impossible situation, confronted by an impassable gorge in the Alps, and extricated the great soldier by an ingeniously impossible expedient, since, science apart, it obviously left time out of account. Mr. Lowell set Caesar and his soldiers to stopping the ends of the gorge with wattles and filling. Then they waited until the rain had made a pond behind the dams. This, on freezing, burst the sides of the gorge in seams, and opened the desired passage. With such classic nonsense did the man of genius woo Morpheus—nonsense truly classic, for, *mirabile dictu*, Mr. Lowell related it all in fluent Latin, in which evidently he had composed it. It was a noteworthy triumph for American scholarship in a land where facility in using Latin is a commonplace of education.

COL. PETER LAVROFF, whose death in Paris was recently announced, would have completed his 77th year in June next, having been born at Melikhovo, in the Pskoff government, in 1823. Like Tolstoy's, therefore, his life covered practically the whole period of the growth of modern Russia. He was a colonel of artillery and professor of mathematics at the Artillery College in St. Petersburg at the time of Karakosoff's attempt upon the life of Alexander II. That was the beginning of the acute stage of the modern revolutionary movement in Russia. The attempt, which took place in April, was followed by Italian measures taken under the direction of Muravieff, and among other radicals Lavroff was arrested, letters and poems which were considered

Sold by all druggists.

Vapo-Cresolene Co., 180 Fulton St., N. Y. City.

compromising having been found in his house. For nine months he was kept in close confinement in the military prison of St. Petersburg. Forbidden any opportunity of open-air exercise, the only times in which he saw the outside of his prison were the three or four occasions on which he was conveyed to the Fortress of St. Peter and St. Paul to appear before the commission of inquiry which sat there. No charge of conspiracy was brought against him, but he was found guilty of having published "subversive ideas" and shown sympathy with men of "criminal tendencies." For these horrible offenses he was sentenced to a long term of "administrative" (i.e., extra-judicial) exile in Vologda. At three small places in this province he was detained for three years. In 1876, with the assistance of the bold and able revolutionist Lopatin, he escaped to the capital, and after a short stay in hiding there and in the country, having obtained a sham passport, he successfully crossed the frontier. Safely beyond reach of the Russian police, he settled down in Paris, where he had since lived with the exception of the years 1877-79, when, first in Zurich and then in London, he directed the Russian Socialist review *Forward*, and some months in 1880, when he suffered expulsion from France. All this time he was actively engaged in anthropological research. His chief works were the early "Historical Letters," which made him universally known in Russia, and a very large "History of Thought." He became one of the honored chiefs of the Narodnaya Volya party, and, politically, stood as a Socialist propagandist between the Anarchist followers of Bakunin and the purely political revolutionists.

About four years ago, says a writer in the Manchester (England) *Guardian*, I visited this "grand old man" of the Russian revolutionary movement in his tidy flat on the sky-line of the Rue St. Jacques, a brisk drive south of the Seine over the cobbles of the Latin Quarter and a dozen steps across a sunny courtyard bringing me to his humble stairs. For the first time I found a Russian revolutionist who had succeeded in reaching a hale, hearty, and peaceful old age, and who, after thirty years spent under the ban, remained true to all his early ideals and busy, so far as might be, in furthering them. It is curious that in England he should have remained so little known. It is true that he was but a short time in this country, and he had lost the little knowledge of our tongue which he then obtained. Since then, too, a younger generation of the movement—the generation of Stepniak and Kropotkin, of Volkovsky and Tchackovsky—had claimed public attention. But Lavroff, tho he had outlived many of his pupils, who was past middle life when the meteoric career of Stepniak was beginning, enjoyed universal honor among his outlawed countrymen.

MORE OR LESS PUNGENT.

Escape Plats.—**QUERIOUS:** "Let's see; the married men all have better halves, don't they?"

CYNICUS: "Yes."

QUERIOUS: "Then what do the bachelors have?"

CYNICUS: "Better quarters!"—*Puck.*

A Reasonable Excuse.—**PROFESSIONAL:**

"Please gimme sixpence, sir, to buy some bread."

MUNIFICENT: "Why I gave you sixpence not half an hour ago."

PROFESSIONAL (taking in the situation): "Yes, sir, I know, sir; but I—I'm a terrible bread-eater."

and are desirous of getting better results with one-half the fuel they now consume, will be interested in the

Jackson Ventilating Grate

During damp days of Spring and cool nights of Fall, do not allow your furnace or steam heater to waste fuel. One Ventilating Grate will heat an entire house of moderate size during these seasons.

The secret of its truly remarkable efficiency is its principle of ventilation, which is entirely unique. You will find it fully described in catalogue "D," which we should like to send you free.

EDWIN A. JACKSON & BRO.
54 Beekman St., N. Y.

"Cook in Comfort."

PRIMUS STOVES

The quickest, hottest, most easily governed and convenient cooking fire ever devised. The stove illustrated is 8½ inches high and 8½ inches wide. It will boil a gallon of cold water in 12 minutes and do a six-pound roast to a turn in one hour. With an oven it is perfect for baking. It costs only \$3.75, and pays for itself in three months in fuel saved, to say nothing of its wonderful convenience and comfort.

It burns vaporized kerosene, and is safer than any coal or wood stove. Fuel costs one cent for two hours. No odor or smoke.

FREE.—We want to send every housekeeper a booklet about our complete line of Primus Blue Flame Stoves and Ranges, for kitchen, camp, yachts.

The Primus Co., Dept. A 197 Fulton St., New York.

Burpee, Philadelphia.

A postal card, addressed as above, with your own address plainly written on the other side, will bring, by return mail, entirely without cost, a copy of

BURPEE'S FARM ANNUAL FOR 1900.

This is a bright book, full of faithful illustrations and true descriptions of the **BEST SEEDS that Grow**,—which are sold direct to the planter without any middleman's profit. Interesting and instructive new features for 1900.

THE PUBLISHERS' POINT OF VIEW.

"A TRULY GREAT BOOK."

Among the manuscripts which came to us last fall was one entitled "Flame, Electricity and the Camera," by George Iles. On the top of the package of sheets was a copy of a letter addressed to the author by Prof. John Fiske of Cambridge, who had read the manuscript carefully and wrote as follows:

"I have read your book with an intense interest growing into red-hot enthusiasm. It is one of the most fascinating books that I have seen in the last ten years. Your points are so well taken, so happily and richly illustrated with examples, and their bearing on the main argument is so skillfully kept in view, that the result is to my mind a truly great book, and I venture to predict for it a great future."

The manuscript was turned over to an authority whose judgment goes far with us. Here is his report:

"You may count yourself fortunate in having had submitted to you a book of this calibre. You can be sure, also, that no other publisher has ever had an opportunity to publish it—as in this case you never would have seen the manuscript. Publish it as quickly as you can, and in the best style you can; it is worthy of the finest work you can put into it, and it will sell for years and years and do you much credit. The book not only shows great research and puts forth vital twentieth century facts in a novel and impressive way, but the author's style is extraordinarily good. One word more: Follow the author's suggestions as to full illustrations—he knows what he is talking about."

The MSS. of "Flame, Electricity and the Camera" was put in hand at once; the illustrations, which include plates showing the three-color process, artistic half-tones, unusual photographic processes, etc., and many other illustrations, have taken long to prepare. The whole work is finished and is just out.

Mr. Iles tells, simply and so untechnically as to be easily understood by any reader, what fire, electricity and the camera have accomplished in the work of civilization; he tells clearly and effectively of the latest wonders in science. His book should be in every public library in the land, and on the shelves of all who are interested in popular science, and we shall do our best to put it there. Price \$2.00 net.

We are anxious to send this book on approval to any one interested.

Dickens'
and
Thackeray's
Works.

THE OLD AND THE NEW.

Pocket
Size
Standard
Novels.

The NEW CENTURY LIBRARY is a radical departure in the art of bookmaking. Each novel is published unabridged in a single volume which is so small that it is equally suitable for the pocket or satchel, and consequently invaluable for summer reading and traveling. As a library edition it is handsome in the extreme. The size is only 4 1/4 by 6 1/4 inches, and not thicker than a monthly magazine. India paper, the thinnest printing paper in the world, is used in making these books. Notwithstanding this the paper is very strong and remarkably opaque. The type is as large and as easily read as that you are now reading.

The volumes are published monthly in three bindings: Cloth, \$1.00 per vol.; Leather, limp, \$1.25; Leather, boards, \$1.50. Already published: *Dickens*—"The Pickwick Papers," "Nicholas Nickleby," "Oliver Twist," "Sketches by Boz," "Old Curiosity Shop," and "Martin Chuzzlewit." *Thackeray*—"Vanity Fair," "The Newcombs," "Pendennis," "Henry Esmond." For sale by all booksellers. Sample page and prospectus mailed free on request.

THOMAS NELSON & SONS, Publishers, 37 East 18th St., New York

ing to get a gratuity from an excessively dandified individual, who in resisting, urged that he had no change—nothing but a £3 note. "I can get it changed for yer, sir," said the youngster. On seeing the dandy hesitate, as if from fear of trusting him with the money, he put it again: "If yer doubts my honor, hold my broom."—*Tit-Bit*.

The Others.—MOTHER: "Was your aunt glad to see you and Tommy and Frankie and Fred?"
JOHNNY: "Yes, ma'am."
MOTHER: "Did she invite you to call again?"
JOHNNY: "Yes; and she told us to bring you and papa and Susie and the dog next time."—*Indianapolis Journal*.

Proper Form.—The society editor of *The Daily Bread*, who was acting temporarily as news editor, worked over in this style a despatch pertaining to a battle: "General Walker announces the engagement of Colonel Thompson with a considerable force of the enemy yesterday afternoon. Colonel Thompson will be at home within the enemy's lines until exchanged."—*Chicago Tribune*.

Insulted.—"I simply had to do it," said Mr. Erastus Pinkly in an apologetic tone. "I had to draw my razor, so's to hol' up my character."
"Did he slander you behind your back?" "No,"

suh. 'Twere to my face. He axed me what business I was in, an' I says, 'raisin' chickens.' Den he look at me solemn, an' says you doesn' mean 'raisin'.' You means 'liftin'.'—*Washington Star*.

Not to Be Caught.—A visitor at the Columbia (Mo.) school the other day asked one of the lower-grade classes this question: "What is the axis of the earth?" "An imaginary line passing from one pole to the other, on which the earth revolves," proudly answered a pupil. "Yes," said the examiner, well pleased, "and could you hang a bonnet on it?" "Yes, sir." "Indeed! And what kind of a bonnet?" "An imaginary bonnet, sir." The visitor asked no more questions that day.—*New York Tribune*.

Her Ruse.—"Does that look annyting loike me late lamined Dinnis, Mrs. O'Toole?" asked the Widow Clinchy, pointing to a lithographed portrait which she had recently hung on the wall. "Tell me, d'yez detect anny resemblance at ahl?" "Oi do not!" truthfully replied the visitor, who had dropped in for a chat, somewhat surprised at the question. "Av me oyes don't desave me, that is a picture av that illigant mon, Admiral Dewey." "Yis, 'tis that," said the widow. "But, phwisper, whin Con Duffy, dhe soign-painter, slips in an' paints, a plug-hat upon its head, a Saint Pathe-rick's Day smole on its face, an' a grane sash across its chist, tell me now, d'yez t'ink ut would fool that foine, fore-handed widower, Phalim McLarrity, who has wake oyes, into bel'avin' that av he wins me he'll be marryin' a lady that is proud av a good husband whin she has wan?"—*Life*.

JERSEY CITY, N. J.

Current Events.

Monday, April 2.

—Details of the attack on Colonel Broadwood's force near Bloemfontein show that seven guns were captured and 350 men were killed, wounded, or missing.

—The burghers are reported to be massing in strong force near the Vaal River, in the neighborhood of Fourteen Streams and Christiania.

—The Italian Chamber of Deputies reelected Signor Colombo as president.

—Borchgrevink reports the location of the South Magnetic Pole.

—In the Senate, the Puerto Rican bill is still under consideration.

Tuesday, April 3.

—General Cronje and a thousand Boer prisoners sail for St. Helena.

—Mr. Chamberlain speaks on colonial representation in the House of Commons.

—In the Senate, the Puerto Rican Tariff and Civil Government bill is passed by a vote of 49 to 35, six Republicans voting against it.

—Queen Victoria arrives at Kingston and will proceed to Dublin.

Wednesday, April 4.

—Queen Victoria makes a formal entry into Dublin.

—Generals French and Colville have returned to Bloemfontein from an ineffective pursuit of the Boers east of that place.

—The Prince of Wales is shot at by an Anarchist, at a station in Brussels, but escapes injury.

—Admiral Dewey's announcement of his willingness to be a candidate for the Presidency comes as a surprise to politicians.

—Judge Taft, president of the Philippine Commission, has a conference with the Secretary of War in Washington.

Thursday, April 5.

—A despatch from Lourenço Marques says that an attack by Colonel Plumer and a sortie by the garrison of Mafeking were repulsed by the Boers.

—General Clements's division, consisting of 6000 men, reaches Bloemfontein.

—Warlike preparations on the part of Russia and Japan continue.

—Admiral Dewey confesses he is a Democrat, but declines to discuss his candidacy for a presidential nomination.

—Another successful test of the battle-ship *Araucario* is made at sea.

—The jury in the "Sapho" case brought in a verdict of not guilty for Miss Olga Nethersole.

Friday, April 6.

—The Boers capture five companies of British troops at Reddersburg, Orange Free State.

—General Methuen captures 30 Boer prisoners near Boshof.

—Excitement is caused in Santiago, Cuba, by the suppression of a newspaper.

—The purchase of the submarine torpedo boat *Edmund* by the United States government is discussed in the House of Commons.

—In the House, the bill providing a territorial form of government for Hawaii is passed with amendments.

—Admiral Dewey says he has always been a Democrat, but has never voted in his life.

Saturday, April 7.

—The Boers are in force about Wepener.

—The Pope gives audience to ninety sailors of the United States training-ship *Dryad*.

—In the Senate, the Indian Appropriation bill is discussed.

—General Otis has been relieved from command in the Philippines; General MacArthur succeeds him.

Sunday, April 8.

—Boers in force south of Bloemfontein threaten Lord Roberts's communications.

—The inactivity of General Buller leads to activity of the Boers in Upper Natal.

—Great loss of property in Texas on account of floods.

—Crances that the House of Representatives will concur in the amendments to the Puerto Rican bill are brighter.

—Advices from Manila incline to the belief that Aguinaldo is hiding in the Tagal quarters of that city.

For Nervous Women, Horsford's Acid Phosphate.

Dr. J. B. ALEXANDER, Charlotte, N. C., says: "It is pleasant to the taste, and ranks among the best of nerve tonics for nervous females."

The New Gymnastics.

To double your muscle, to gain enormous power in hand, fingers, wrist, arm, shoulders and back, to steady your nerves, to cure sleeplessness you need only a **Hendrickson Grip Machine**. A revolution in exercising, which produces marvellously rapid results. It will double your skill at tennis, baseball, pitching, bowling, golf, billiards, piano playing, drawing, because it gives perfect control over arm and wrist muscles. Invaluable to bookkeepers [it cures writers' cramp and cold or trembling hands], stenographers, telegraphers, boxers, all who use their hands.

FREE TRIAL. A pair sent to any address on receipt of 10c. to pay postage and your promise either to send us the regular price, \$1.00, at once or to return them by mail within two days of receipt. Three strengths: athletes', men's, ladies'. Cork grips, polished metal. A simple, splendidly illustrated instruction with every pair.

Q & Q, or Interposes

Successful Fruit Growing.

The address delivered by the superintendent of the Leonard Sprayer Company, of Pittsfield, Mass., before the Lenox Horticultural Society at Lenox, Mass., mention of which we made in previous issues, was such a popular success that the company have been obliged to change the plan of distribution. The address is almost a college education to fruit growers, fruit dealers, and in fact to anybody eating fruit or even having but few fruit trees, or in any way concerned. It was an admirable address, is quite lengthy, about an hour's talk. It is said that had it been placed on the market in book form it might have yielded the speaker a fortune; it no doubt would have sold at a good price. All rights were reserved, however. The full address, profusely illustrated, in pamphlet form, was intended to be sent to fruit growers and owners of estates, free for the asking, but requests for it came from all sorts of people. Dressmakers, school boys and girls, clerks, leaders of clubs, young lawyers, college boys, and many who never owned a fruit tree or even a bush under the sun, sent for it. The company had to draw a line at this point, as it was never intended for these class of people. To prevent imposition, the address will only be sent to people interested in fruit culture, and a fee of 50c. in postage will be charged. This book exclusively treats of the interests of owners of fruit and shade trees, the kind of pumps in orchard work or in parks to be used, with comments upon the "home-made" Bordeaux, made on a barn floor by Mike—or Jim—with a hoe in hand, and its failure. Published on good paper, easy reading, plain in language, free from technicalities. We believe this book to be a good investment for owners of country seats or fruit growers. We have one on our table. The book is all right. Send for the lecture to the Lenox Sprayer Co., 30 West Street, Pittsfield, Mass. "Cut this out before you forget."

Analysis of Score of Cable Match.

The total score of the five matches is, America 25½, Great Britain 23½. The individual scores are as follows:

America.	W.	L.	D.	Great Britain.	W.	L.	D.
Barry.....	3	0	0	Jackson.....	4	1	0
Showalter.....	4	0	1	Jacobs.....	3	0	1
Hodges.....	3	0	2	Blackburne.....	2	0	3
Hymes.....	0	0	3	Mills.....	1	0	4
Pillsbury.....	0	2	1	Atkins.....	1	2	2
DeMar.....	0	1	1	Lynch.....	0	1	3
Voigt.....	1	0	1	Trenchard.....	1	1	1
Newman.....	0	0	3	Bellingham.....	0	0	3
Burille.....	2	1	0	Cole.....	1	0	0
Baird.....	0	1	2	Wainwright.....	0	0	1
Johnston.....	0	0	1	Lee.....	0	0	1
Marshall.....	0	1	1	Ward.....	0	0	1
The others.....	0	7	0	The others.....	0	0	0
Total.....	16	13	29	Total.....	13	25	29

The Brooklyn *Eagle* calls attention to the record made by Barry, Showalter, Hodges, Hymes, and Pillsbury. The only defeats charged against this quintet are the two games Pillsbury lost to Blackburne. Of the other twenty-three games, these five men won 12 and drew 11. The following summary is of special interest:

	W.	L.	Per Ct.
Barry.....	3	0	1,000
Showalter.....	4	0	1,000
Hodges.....	3	0	1,000
Hymes.....	0	3	0
Pillsbury.....	0	2	0

The five leaders of the Englishmen lost 3 games, won 11, and drew 10.

	W.	L.	Per Ct.
Jacobs.....	3	0	1,000
Jackson.....	4	1	800
Blackburne.....	2	0	1,000
Mills.....	1	0	1,000
Atkins.....	1	2	400

FOUR GOOD REASONS why you should buy

1st—YOU SAVE THE DEALER'S PROFIT.
2d—You get all custom made best material.
3d—You get our TWO year guarantee.
4th—You pay only after examining. Our \$29.95 Buggy, \$47.50 Streetcar, \$56.00 Top Family Wagon are wonders for cheapness. 4 tire wheels \$8.35, Buggy Taps \$5.25, Harness \$5.35. Catalog free. Purchasers can become successful agents aided by our private selling instructions.
U. S. BUGGY & CART CO., P. 25, Clarksburg, O.

\$29.95

DOUBLE VALUE

BOTH FOR A DOLLAR!

THE INGERSOLL WATCH AND GUARANTEE

YOU may not catch the "double value" idea without thinking twice, but you have doubtless had experience with non-guaranteed or cheaply guaranteed watches which simply justify our claim. Most our guarantee doubles the value of the Ingersoll Dollar Watch; it insures your having an accurate running watch, without expense, for at least a year.

Reflected further—such a guarantee (read it) stands for more than its face value; a watch that we can afford to guarantee so broadly must be a good one in accuracy and longevity.

Ten years should be its life-time as an accurate timer.

The new two model shows greater progress than ever before and sales are increasing accordingly; "a million a year" is undergoing revision at the rate of nearly five thousand watches daily.

Sold by all dealers throughout the country or sent by mail in U.S. and Can. on receipt of price.

ADDRESS: ROBT. H. INGERSOLL & BRO. Dept. 17 67-CORTLAND ST. NEW YORK CITY.

Keep Your Clothes and Furs from the MOTH! MOTH! MOTH!

Universal MOTH, DUST, and WRINKLE PROOF BAG.

MADE OF CLOTH

Sizes: For Suits 34 x 51
Overcoats 30 x 51

Price, \$1.50, delivery prepaid to any address in the United States or Canada on receipt of the amount.

Entirely new idea, opening at the bottom, and closing so as to exclude moth and dust.

The bag remains hanging while placing the garments in, and while removing them from the bag.

The coat, vest, and trousers are all supported by a combined Clothes Hanger placed within the coat.

Garments always ready for use; no wrinkles, no moths, no dust, no disinfectants, no trouble; saves expense.

IMPERIAL M'FG CO., 56 Warren Street, New York.

MENTION THIS PAPER.

NEW YORK, APRIL 21, 1900.

WHOLE NUMBER, 522

Published Weekly by
PUNK & WAGNALLS COMPANY.

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

SOUTH AFRICA AFTER HALF A YEAR OF WAR.

IT was on the 11th of last October that war, by the terms of President Kruger's ultimatum, began in South Africa; and to-day, after six months of conflict filled with surprises, a situation exists in which each side is finding cause for both gratification and anxiety. No representative of the pro-Boer press in America was hardy enough to predict, last October, that in six months the British, with an army of 200,000 men, would not yet have crossed the borders of the Transvaal Republic; yet there is not a newspaper to-day, even after this record the Boers have made, that expresses a doubt that the British troops will eventually march through the streets of Pretoria. The Boers have suffered most heavily in the loss of generals, such as Pretorius, Joubert, Cronje, and Mareuil, while the chief British loss has been in the rank and file, where wounds, disease, and capture have claimed 23,000 men, more than one tenth of their entire force in South Africa. The campaign has grown steadily in interest, culminating on the British side in the relief of Kimberley, the capture of Cronje, and seizure of the Free State capital in one swift movement; and culminating on the Boer side in the recent daring raids around Lord Roberts's great army, cutting off isolated detachments and threatening his communications.

The *Baltimore Herald* says: "Lord Roberts would seem to have marched his army to a standstill. Their horses are worn out and the men are unprovided with fit clothing. Cooler weather is upon them, and they have nothing but summer uniforms of cotton cloth to campaign in." The *Chicago Tribune*, too, thinks that the blow at the Free State was nearly as bad for the British as for the Boers. "Victory," it says, "is often but little less expensive and demoralizing than defeat. This is what is the matter with Lord Roberts." A new difficulty arises here, thinks the *Pittsburg Dispatch*, for "if the British mounted forces are compelled every few weeks to get a new supply of horses, and to stand idle if they are not at hand, the difficulty of maintaining

the long line of communications from Cape Colony to the Transvaal is an immense problem. It is evident from Lord Roberts's halt at Bloemfontein that he realizes the vital magnitude of this phase of the war; but it remains to be seen how successful he will be in coping with it." The *New York Tribune* thinks that the secret of the Boer activity may be found in the fact "that the commanders find it necessary to keep the men busy in order to keep them in the ranks and under discipline. . . . The army

Phot. by Davis & Sargent, New York.

Who is carrying the greetings of 45,554 American schoolboys to President Kruger.

must go forward or it will go to pieces." Yet even this guerrilla style of warfare, thinks the *New York Times*, altho it may not be "glorious war," may, if it can be kept up long enough, "be very efficient war, especially against an enemy whose means of providing against it are crippled by the condition of his cavalry." The *Cleveland Plain Dealer* thinks that the former high confidence in Lord Roberts "is fast giving way to disappointment and disgust," and, it says, "it begins to look as if all the laurels won in the hills of India and the sands of the Sudan are to be withered on the South African veldt."

Yet the whole complexion of the campaign may be changed when Lord Roberts finds his army ready to advance. Says the *Chicago Record*:

"It may be well to guard against the mistake of supposing that these comparatively unimportant actions will have a serious effect upon the result of the campaign. They are of value chiefly in showing that the Boers were not demoralized by the British

victories, but were still resolutely determined to fight the English advance at every possible opportunity. The blunders of subordinate commanders have brought about several disagreeable checks to the British troops, but the strength of the army under General Roberts has not been materially diminished there-

WEBSTER DAVIS, BESIDE PRESIDENT KRUGER'S PRIVATE CAR.

Snapshot taken in Pretoria by Howard C. Hiltgen for the *New York World*. The portrait in the upper left-hand corner is reproduced through the courtesy of the *Philadelphia North American*. Mr. Davis resigned his position as Assistant Secretary of the Interior in Washington to advocate the Boer cause.

by; and when he shall have finished his preparations for a forward movement he will be able to put in motion a force too great to be held back by the Boers until they shall have the advantage of the defensive positions that are to be found north of the Vaal River."

The *Philadelphia Evening Bulletin*, too, says that "mere transient successes on the part of the Boers can not measurably lessen the enormous disparity of the contending forces," and the *Philadelphia Record* says that "the important fact of the situation" is "the presence in the heart of the Free State of a great army of 70,000 or 80,000 men, which when once equipped and ready for action could afford to disregard entirely any hostile scheme of desultory guerrilla warfare by scattered bands of Atrikanders. The mighty British army which will march to Pretoria will be practically invulnerable to anything short of heavy artillery or a superior force of skilled marksmen." The *Boston Transcript* believes that the Boer raiders "may yet suddenly and that they are playing with the fire. Roberts, Buller, and Methuen are on three sides of the northern republic," says the same paper, and "there seems every reason to believe that in spite of the struggles of General Botha and his lieutenants the net is steadily being drawn around the Transvaal and before long will be sharply tightened."

As most of the news despatches in the daily papers come from correspondents with the British army, the following despatch

from the *New York Herald's* correspondent in Pretoria, giving the Boer view of the military situation at this stage of the war, is of considerable interest. He says:

"The situation is sufficiently definite to form conclusions regarding the probable extent of the war. The relief of Ladysmith and Kimberley and General Cronje's disaster coming together caused the Boers to become panic-stricken, and they temporarily abandoned Bloemfontein. Had Lord Roberts been able to follow up his successes the war might have been ended now, but the British reached Bloemfontein utterly fagged out, and recuperation was absolutely necessary. This afforded time for the Boers to recover promptly from the panic into which they had fallen, and they took a full and renewed determination to resist to the bitter end. On the whole, the military situation is not necessarily more unfavorable to the Boers than two months ago. There are several reasons for this. The faint-hearted have been weeded out of the reserves and the fighting commandos are now composed of resolute men. As the war progresses the Boers learn rapidly and are fighting with greater skill. The progress of the war has also relegated incompetent generals and brought the most able men, like Generals Botha and De Wet, to the front. New fighting tactics have been adopted which have already resulted in signal success. England's political moves have also helped to solidify the Boer national spirit. Lord Salisbury's reply to Presidents Kruger and Steyn's appeal for peace has confirmed their determination. The Boers have formed the opinion that their independence is assailed, and have put the question of peace, except coupled with that of sacrifice, beyond hope. The decision to send the captured Boers to St. Helena makes it certain that the Boers will not surrender except in the last extremity. The average burgher prefers death to exile. General Cronje's surrender, instead of being the crushing blow which it at first seemed, really worked to the ultimate benefit of the federals. The Boers have more men in the field to-day than at any time before. England's only hope of conquering lies in her vast resources, but these are minimized by Boer tactics. If fought to a finish, the war is certain to result in appalling loss. Owing to the shortage of arms and ammunition the latter is manufactured as used by the Boers. Their artillery is stronger than when the war began, owing to the capture of British guns. The English artillery is tolerably served, but does little damage. A military *attaché*, who is much respected in America, thinks six months the lowest probable duration of the war. The Boers will probably continue to fight even if they lose Pretoria, which is unlikely to occur for a long time yet."

Considerable interest has been manifested in the messenger boy sent by the *Philadelphia North American* to carry greetings of sympathy from the schoolboys of New York, Philadelphia, and Boston to President Kruger. He sailed on Wednesday of last week. *The North American* says:

"A message of sympathy from the schoolboys of America may not be of much use to the Boers in a military way, but it means much to them and more to America. It is proof that the belief of the people of the United States in the eternal truth of the Declaration of Independence has not passed away. It means that the teachings of a century have not been forgotten, and that

OOM KRUGER: "Yaas, I hof still some activities left yet."

—*The Cleveland Plain Dealer*.

political expediency has not taken the place of patriotism and love of liberty—liberty for all men—in the American creed."

The rumor that Captain Carl Reichmann, United States military *attaché* with the Boer forces, led the Boer raid on Colonel Broadwood's column at Koorn Spruit has been investigated by the War Department, and found to be untrue. Another report that gained wide currency last week, to the effect that the Boers killed 600 British and captured 900 more in a battle at Meerkatsfontein, near Brandfort, turns out to have arisen from a combination of two reports of a skirmish that had already been reported the week before.

PUERTO RICO UNDER THE NEW LAW.

WHAT effect the new tariff and civil government law will have on Puerto Rico now becomes the subject of considerable speculation. The *New York Tribune* (Rep.), the *Chicago Tribune* (Rep.), and other papers that favor the law are pointing out that its tariff provisions are so framed that as soon as the island's civil government has made a plan for raising revenue, and so notifies the President, the President may remove all duties between Puerto Rico and the United States, and the coveted free trade will be in operation. In any event, the tariff is not to continue after March 1, 1902. "The Puerto Rican incident," says the *Chicago Tribune*, "is closed. Hard up as the Democrats are for issues, they can not make an issue out of it."

On the other hand, some of the opponents of the law notice that by its civil government provisions the President has the power of appointing the civil governor and the upper house of the island's legislature, and that all the principal office-holders in the island will owe their appointments either to the President or to his appointee, the civil governor, so that all departments of the island's administration can be controlled from the White House. "As long as it is governed on the plan now established," says the *Boston Transcript* (Rep.), Puerto Rico "will more closely approximate a British crown colony than any other form of government familiar to the Anglo-Saxon practise." The *Philadelphia Ledger* (Rep.) says: "This Puerto Rico bill, as passed by Congress, is a proposition to treat that colony as George III. undertook to treat us." The *Cleveland Plain Dealer* (Ind. Dem.) says that the civil government sections of the law "will work badly in Puerto Rico, and their provisions, when known in

tariff at the time the President penned his annual message to Congress. By its passage the promises we made Puerto Rico are broken; the officially declared opinions of President McKinley, Secretary of War Root, and Governor-General Davis are set at naught, and, to the discredit of the nation, our flag is made to represent one type of liberty here and another in our new colonies."

Charles H. Allen, who is to be Puerto Rico's first civil governor, has attracted only favorable comment thus far. The *New York Commercial Advertiser* (Rep.) calls him "an admirable choice," and the *Boston Transcript* (Rep.) says that his "Americanism is as unquestioned as his industry." He is "firm without being despotic," says the

CHARLES H. ALLEN,
Puerto Rico's New Governor.

same paper, and he will administer the island's affairs "with an earnest desire to promote the best interests of its people." Mr. Allen leaves the post of Assistant Secretary of the Navy to take up his new duties. The Washington correspondent of the *Associated Press* says:

"His administration of the vast details of the Navy Department has been extremely popular, and it was fully expected that should Secretary Long decline to continue through another administration in the office of Secretary of the Navy, in the event of McKinley's reelection, Mr. Allen would succeed to that post. It is said, however, that his assignment to the governorship of Puerto Rico does not completely remove him from the field as a Secretary of the Navy in the future, for the most that is expected of him now is that he shall inaugurate and put on a sound business basis the new government in Puerto Rico. He will return to the United States when that work is accomplished."

VARIED VIEWS OF GENERAL OTIS.

OF all the many military, naval, and administrative officers who have been treated with praise or blame since the beginning of the Spanish war, few, if any, have found the praise and blame of the newspaper critics more evenly balanced than does General Otis, on the announcement of his impending return from Manila. General Otis requested on April 3 that he be allowed to return to this country to look after his long-neglected private interests, saying: "Wish to sail by May 1, if possible; believe matters here can be placed in quite satisfactory condition by that date, altho large repressive military force must be maintained some time." In reply, General Corbin said that the President "regrets to have you leave the Philippines," but "feels that your distinguished and successful service in both military and civil administration for nearly two years entitles you to prompt compliance with whatever wish you choose to express regarding your assignment to duty." General MacArthur is to succeed General Otis as military governor.

Many papers think that General Otis has performed a difficult task with great credit. Thus the *Chicago Evening Post* (Ind. Rep.) says: "General Otis has been maligned and criticized, but

THE REPUBLICAN PARTY LASH.
—The Detroit Evening News.

the Philippines, will tend to deepen the distrust of American intentions there." The *Baltimore American* (Rep.) says:

"Being the first bit of affirmative legislation necessitated by our possession of insular domain, it was to be hoped that right and justice would characterize its framing; but in this the press and the public are doomed to grievous disappointment. The bill as passed, while a hodge-podge of contradictions, is as directly opposed to the considerations of 'plain duty' as was the idea of a

any other in his place would have had the same experience. Nothing would have satisfied the critics. He can, however, afford to ignore them, well knowing that his services are appreciated by the Administration and by the majority of the American people." The *Baltimore Herald* (Ind.) says: "Otis deserves commendation for the manner in which he has met difficulties and discharged the onerous duties of his post. His record for intelligent handling of troublesome problems, not less than for industry, is highly creditable." The *Rochester Democrat and Chronicle* believes, indeed, that Otis is a greater man than Dewey. It says: "Admiral Dewey destroyed the Spanish fleet, but General Otis has accomplished what some correspondents deemed impossible, the pacification of the Philippines in an incredibly brief time." In the same length of time, declares this paper, "no other soldier or statesman has accomplished as much," and "a man who has achieved so much, often under most discouraging conditions created by recreant Americans, may in time come to be regarded as the greater of the two heroes of Manila."

The *Baltimore American* (Rep.) says of General Otis's labors:

"As civil governor of the Philippines he has brought order out of chaos; established schools and satisfactory municipal government; reestablished the commerce of the islands and made possible the rejuvenation of the archipelago. While engaged in this work General Otis has served as the commander of sixty thousand men, has cared for their wants, and directed vast military operations by which a widespread insurrection has been quelled and the islands pacified. Greater work than this have few Americans done, and few are or ever have been entitled to greater honor. General Otis is not a popular hero, but he is one of those earnest, hard-working, painstaking, and conscientious public servants in the honoring of whom the American people recognize the qualities that go to make and keep our government strong and vigorous."

Many papers, however, feel that General Otis was a failure. The *Philadelphia Ledger* (Ind. Rep.) remarks that the news of Otis's return "is the most satisfactory and important that has come from Manila for a long time," and the *Philadelphia North American* (Rep.) calls him "the military recluse of Manila, who should have retired to an old ladies' home some years ago," and adds: "The only mistake in the recall of this weak and stupid old man was its untimeliness; it should have been a year earlier." The *New York World* (Ind. Dem.) says that the relief of Otis is also a great relief to the rest of the country. "MacArthur may or may not do better," it continues, "but the country will be glad that Otis is 'over,' if the war isn't." The *New York Journal* (Dem.) quotes a returned army officer as saying that "army contractors could steal a million dollars under Otis's nose, and he would fail to see it, while engaged in looking up a discrepancy of ninety-seven cents," and comments: "General Otis has resigned and will soon start for home to attend to his private business." It is not necessary to affront the intelligence of the American people by offering the obvious remark that he should never have attended to anything else." The *Kansas City Times* (Dem.) takes a similar view. It remarks:

"The administration newspapers say the President says 'Otis has earned a rest.' He has. The opinion of the country is, he ought to have taken it before he went to the Philippines. His work over there appears to have been mainly confined to keeping himself busy with the business of collecting all the custom-house duties that were derivable from whatever commerce came into Manila, in censoring all dispatches sent out from the Philippines which told truths reflecting unfavorably upon the practical workings of imperialism over there, in staying sedulously away from the firing line, in withholding credit from officers who had distinguished themselves and manufacturing military reputations for his favorites, and in embarrassing the plans and movements of the generals at the front with his officious intermeddling. These are some of the things which entitle the old grandmotherly martinet and False Alarm to a rest. It should be, and probably will be, a good, long rest, lasting to the end of his natural life."

THE CASE OF SENATOR CLARK.

THE press seem to be as unanimous as the Senate committee on privileges and elections in the opinion that William Andrews Clark (Dem.), of Montana, ought to be denied his seat in the Senate. The Senate committee proposes that Mr. Clark's seat be declared vacant on the ground that his large expenditures in connection with his election prevented a free choice of a United States Senator by the Montana legislature. If the testimony given before the committee is to be believed, Mr. Clark spent between \$400,000 and \$500,000 to secure his election—a sum that seems additionally large when it is remembered that there are only about 50,000 voters in the whole State. One member of the Legislature testified that he was offered \$30,000 for his vote. By direct or indirect evidence, the charge of accepting bribes was fastened upon seventeen legislators, and Mr. Clark himself is said to have admitted that he spent \$139,000 in election expenses.

Mr. Clark's counsel, on the other hand, aver that the agitation against him is a conspiracy concocted by his political enemies, and that none of the testimony shows that Mr. Clark personally attempted to bribe any one. His popularity throughout Montana, they contend, is overwhelming, and the whole animus of the contest is to be found in the desire of a political rival to break down Clark's character.

The *Philadelphia Evening Telegraph* (Rep.) calls Mr. Clark "the champion briber and corrupter of the century," and says that "it is gratifying to learn that he will have spent his money so lavishly in vain, . . . but full justice will not be done unless some further punishment is meted out to this audacious and unconscionable bribe-giver. If his method of obtaining a seat in the Senate has been such as to warrant his expulsion, he deserves to be sent to jail as well." The *Chicago Tribune* (Rep.) says that "Senator Clark's case will stand as a wholesome warning against further attempts to break into Congress by mere might of money," and the *Philadelphia Press* (Rep.) says that "the Senate committee has done Montana and all other States a great service by its prompt and unanimous action in setting the seal of its condemnation on this high crime of bribery in a Senatorial election."

Some other papers, however, harbor a belief that if all the Senate seats obtained by the use of money were "declared vacant," Mr. Clark would not be the only Senator to go. The *New York World* (Ind. Dem.) makes a note of the Clark case as showing "that there is a line beyond which corruption can not safely go in buying a seat in the Senate of the United States," and the *Brooklyn Eagle* (Ind. Dem.) puts it more severely by saying: "There are men in the Senate who bought their seats and have never been 'found out'; that is, they have never been officially found out, tho their purchase of their seats is nowhere doubted. Officially, Mr. Clark is worse than they are; practically, they are about as bad as he is. The hypocrisy of politics and the instinct of self-preservation will require them solemnly to condemn Clark, who certainly ought to be condemned, but who is not especially discredited when he is condemned—by them."

The *New York Evening Post* (Ind.) thinks that "freedom of choice when a Senatorship is at stake is most restricted" by the direct or indirect use of money "in States like Rhode Island, New Jersey, and Michigan." Outside of Rhode Island, almost every Senator from New England, it says, is a poor man. The same paper continues:

"A year ago last winter Indiana elected a young man without any money. Illinois has never known the sale of a seat, nor Iowa; indeed, it has been the rare exception in all that part of the country when a man who was rich obtained his seat solely for that reason, the late ex-Senator Sawyer of Wisconsin having other qualifications than wealth. On the whole, the outlook is rather encouraging. Kansas, for example, is not to-day a State where a Caldwell [a Kansas Senator who resigned under bribery]

SENATOR CLARK.

timous as the Senate committee is in the opinion that William Clark, ought to be denied his seat. The committee proposes that Mr. Clark should have a free choice of a legislature. If the testimony can be believed, Mr. Clark spent \$139,000 in election expenses. On the other hand, it is remembered that there is a charge of accepting bribes from legislators, and Mr. Clark himself spent \$139,000 in election expenses. His popularity throughout Montana, and the whole animus of the affair of a political rival to break down the corrupter of the century," and we know that he will have spent his money but full justice will not be done unless a meted out to this audacious and corrupt. If his method of obtaining a seat is to warrant his expulsion, he deserves it. The *Chicago Tribune* (Rep.) says that the case will stand as a wholesome warning to break into Congress by mere bribery. The *Philadelphia Press* (Rep.) says that the Montana and all other States agree to a unanimous action in setting the seat of a high crime of bribery in a Senator. However, harbor a belief that if all the use of money were "declared" the only Senator to go. The *New York Times* makes a note of the Clark case as showing a condition which corruption can not safely be in the Senate of the United States," and the *Dem.* puts it more severely by saying that the Senate who bought their seats and bribed that is, they have never been officially released of their seats is nowhere declared worse than they are; practically, it is. The hypocrisy of politics and the corruption will require them solemnly to condemn him to be condemned, but who is it when he is condemned—by them? The *Evening Post* (Ind.) thinks that "freedom of money" in States like Rhode Island is at stake is most restricted. Outside of Rhode Island, almost everywhere, it says, is a poor man. The winter Indiana elected a young man who has never known the sale of a seat. It has been the rare exception in all that a man who was rich obtained his seat. The ex-Senator Sawyer of Wisconsin, for example, is not today a Senator who resigned under the

charges about twenty-five years ago] could secure an election. The great difficulty with which we now have to deal is the use of money in ways that do not challenge the public notice nor offend the public taste like the open buying of legislators, but which equally rule out the poor man of ability and merit."

As Mr. Quay's claim to a seat in the Senate is to be decided by that body on Tuesday of next week, the comment of his home organ, the *Philadelphia Inquirer* (Rep.), is of interest. It says:

"The moral deducible from the case of Senator Clark, of Montana, is a simple and obvious one. It is that millionaires who conceive an ambition to become members of what has been described as the best club in the United States, meaning, of course, the Senate, and who have no other means of effecting an entrance than that derivable from the power of the purse, must exercise a little discretion in the nature and manner of their expenditures.

SENATOR CLARK ON THE STEPS OF THE CAPITOL.

They mustn't go about the business as tho buying a Senatorship were a perfectly legitimate transaction. They must show a decent regard for the proprieties. They must assume a virtue tho they have it not, and preserve at least the outward appearance of political integrity.

"It is quite possible for a very rich man who is determined to buy his way into the United States Senate to do so without exposing himself to the mortification and disappointment which, owing to his lack of elementary precaution, have overtaken Mr. William Clark, the 'copper king' of Montana. There is a way of doing these things from which it is not safe to depart. . . .

"All that is needed is that the gentleman who secures admission to the Senate by the means which the committee on privileges and elections has unanimously decided that Mr. Clark employed, shall so conduct his operations as to leave room—not for doubt, necessarily—but for the pretence of doubt as to the truth. He mustn't do the thing in such an open, bare-faced way as to make it impossible for any one to affect to believe that he didn't do them. He must cover up his tracks sufficiently to permit those who are not particularly anxious to discover them to declare without making themselves ridiculous that no tracks are visible. That is just what Mr. Clark, of Montana, failed to do, and because he failed the committee was obliged to recommend with unanimity that his seat be declared vacant."

RADICAL VIEWS OF THE IDAHO TROUBLES.

LONG before the Cœur d'Alene mining trouble the subject of congressional inquiry and considerable publicity, the American radical indignation at the condition of affairs there. Governor Steunenberg himself has described for the last ten years." The *New York Times* printed a most startling series of articles from a special commissioner, Job Harriman, of California, who is candidate for Vice-President on the Socialist ticket at one time a clergyman. He not only counts of the notorious "Bell Pen" and the General Merriam, but also makes some against the Mine Owners' Association, based on his own personal investigations. He says that a class war has been going on between the mine owners and the Miners' Union, and that the mine owners determined to utterly destroy the union, which proved a thorn in their side. He maintains that the Bunker Hill and Sullivan mine at Wallace, Idaho, was plotted and consummated by the mine owners. He quotes a mass of detailed evidence to sustain his case.

Henry George, Jr. (son of the famous socialist) has written the whole trouble at length in the *Philadelphia Record*. He says:

"An aspect of the affair that all trade-unions have a peculiar interest as having a direct or indirect bearing on their own case is that underneath the whole matter is a determination to destroy, if possible, the miners' union. In early in May, General Merriam promulgated a policy which none not entirely suitable to the mine owners, thus undertaking to run the mines for the mine owners. But worse was to come. It now appears from papers introduced at the investigation that General Merriam sent a report to Washington in which he said: 'Since the trouble in Idaho originated in the miners, I would suggest a law making such unions or kindred organizations illegal. Surely history furnishes an argument sufficient to justify a course. . . .

"If the Cœur d'Alene catastrophe has served to give an illustration of the spirit of the most significant to the thoughtful workingmen, that Secretary of War Root is now pressing Congress to create a permanent standing army of the United States of ten thousand men, even tho the Philippine war is not over. Moreover, every man who can read the news applications are being made at Washington for a federal army post in nearly if not quite every State. There are no more Indians to trouble us, and we have no invasion. What, then, is the need of an increasing army, distributed in permanent camps? The Cœur d'Alene experience does not make that it is for their protection."

The *New York Evening Journal* (Dem.) says:

"You know that in that mining region men are ordered, shut the men up in a 'bull pen.' That was the legal adviser of the Standard Oil company who had issued habeas corpus papers he would not have issued. Every man who wanted to go to work was sworn that he disapproved of unions, that he had joined one, and that he would never join another. General Merriam, representing McKinley, sent there by the mine owners hiring any man who had sworn an oath."

Commenting on the general's despatch the *Journal* continues:

"General Merriam, do you know that fifty

than you lost their lives in the work of establishing the right of workingmen to form unions? Don't you know that such uniformed monkeys as you are often get their governments into serious trouble? Don't you know that under just conditions you would spend at least ten years in jail for such an outrageous misuse of your official position?"

The Journal of the Knights of Labor (Washington, D. C.) devotes a great part of its May and April issues to a vivid account

SOME RECENT ELECTIONS.

HAPPILY for both the great political parties, each is able to find some comfort in the returns from the various city and state elections held this month. In Rhode Island the Republicans have elected Gregory, their candidate for governor, and in Ohio the Republicans won the city elections in Cincinnati, Cleveland, and Toledo, leading the Republican papers to believe that the President's State can not be recaptured by the Democrats next fall. In Utah the Democrats elected Judge William H. King, who is a Mormon, but not a polygamist, to fill the seat in Congress from which Brigham H. Roberts was excluded; in Michigan the Democrats gained some important victories in the city elections, due, it is thought, to dissatisfaction among the Dutch voters with the Administration's attitude toward the Boers; and in Milwaukee the Democrats won after a hard fight. The *New York Evening Post* (Ind.) says of these and other election results:

"The local elections out West this week have brought a good many surprises. Michigan is a Republican State, yet the Democrats were more successful in yesterday's municipal contests than they have been for many years. On the other hand, Missouri is a Democratic State, and the Republicans made gains so unexpected and astonishing that some sanguine members of the party were claiming last night that the commonwealth would be doubtful in next fall's election. In Chicago the Republicans secured control of the city council, while in Milwaukee the Democrats reelected their mayor, who was generally thought sure to be beaten. It is obvious that national politics can have had little to do with results so full of inconsistencies and surprises. This is as it should be, and as it is coming to be more and more every year, in the West as well as in the East. The people are evidently learning the lesson that local elections should be decided on local issues."

PROFESSOR MOMMSEN ON GERMAN HOSTILITY TO ENGLAND.

ACCORDING to *The Saturday Review* (London), Prof. Theodor Mommsen, of Germany, "is certainly the greatest living European historian." According to the same paper, the English historian, Froude, regarded Mommsen as "the greatest scholar of the age, and probably of any age." This reputation of the venerable German savant makes his opinion concerning the South African war doubly unwelcome to the British press, being, as it is, very emphatically favorable to the Boers. His opinion is expressed in a recent issue of *The North American Review*, in an article accounting for the change in German sentiment, in the last half-century, toward Great Britain. Professor Mommsen says:

"When I was a young man, England appeared to us as the asylum of progress, the land of political and intellectual liberty, of well-earned prosperity. We thought the English unwritten constitution a model one. We rejoiced when Settembrini and Kinkel were able to put their feet on British soil. We sneered with Byron, we laughed with Dickens. We did not quite overlook the reign of King Cant, the commercial egotism; the officers buying their commissions and the privates bought; there was

DAVID DOSE (DEM.),
Mayor of Milwaukee.

WILLIAM GREGORY (REP.),
Governor of Rhode Island.

PHIL JONES FLEISCHMAN (DEM.),
Mayor of Cincinnati.

WILLIAM H. KING (DEM.) OF UTAH,
Elected to Congress to succeed Brigham H. Roberts.

FOUR SUCCESSFUL CANDIDATES.

of "the Idaho bull-pen horror" and to denunciations of the "misuse of the military for the purpose of crushing, disrupting, and destroying labor organizations." Speaking of the investigation committee now in session at Washington, it declares:

"It is no longer a matter for the people of Shoshone county nor of the State of Idaho to dispose of. Organized labor throughout the country will make the cause of the miners its own, and it matters little what a partizan committee majority may do during the remainder of the farcical performance. The issue is already made up, and it is thoroughly understood by those most interested—the working people, organized and unorganized."

plenty of ignorance and illusion in our English feelings; many a London tailor has been admired in Germany as a living lord. But the horizon, especially in politics, was very dark in every other corner; we held on to the small blue spot ruling the waves. The general feeling in Germany was that Englishmen were happier than Germans, and certainly in politics our betters; and if they were not overcourteous, the which we were not blind to, they had some right to despise their continental cousins."

But, continues Professor Mommsen:

"Now the tables are turned, the illusions have vanished. The radical defects of the English system, the trampling on nations subjugated and despised, and the prevalence of money interests, the leaving of the defense of the country to the billows and to the tars, all this has become too evident. We begin to doubt if Britain, even Greater Britain, may in the long run be able to cope with the great nations of Europe and America."

England's undertaking in South Africa has revealed the full strength of the German hate for the British. Says Professor Mommsen:

"As far as I know, every German is at heart with the Boers, and that not because their cousinship is a little closer than the English, but partly because the hate against your countrymen has reached fearful and, I must add, unjust dimensions; partly because this war is not only, as every war is, a calamity, but also an infamy. The repetition of Jameson's raid by the English Government (I won't say by the English nation), dictated by banking and mining speculations, is the revelation of your moral and political corruption, and of your military and political weakness. If there remains still in England some wisdom and some patriotism, it would send Mr. Chamberlain to Coventry to elaborate there his three-cousin system, and accord to a wronged people not only the peace, but the full sovereignty they have a right to. This is certainly not business-like, but it would be a moral victory, effacing every military defeat."

After reading Professor Mommsen's article, Professor Sonnenschein, of Birmingham, England, wrote a letter to Professor Mommsen, explaining the merits of the British position; but Professor Mommsen's reply, which appears with Professor Sonnenschein's letter in the *London Times* (March 27th), is a still more emphatic condemnation of Great Britain's course. He declares that, while "the Boer government may have given cause for complaints," these complaints "are not the cause of the war,

but the pretext." He asserts, further, that the seizure of Kimberley and the Jameson raid contradict Lord Salisbury's statement, "We seek no territories, we want no gold-fields." The professor indicts the British Government, or a part of it, as "part and parcel of this scandalous crime" (the Jameson raid) because of its treatment of the perpetrators.

Professor Sonnenschein, in reply, declares that "no sensible person believes that Mr. Chamberlain was party to the raid," and excuses the action of the Government afterward as follows:

"As to the punishing of the instigators, our Government was in a difficult position; they strongly disapproved of the raid, but if they had shown too much severity in punishing its authors they might have been thought out of sympathy with the whole policy of reform in the Transvaal, and might perhaps have allowed the Boers the dangerous luxury of thinking that England was afraid of them; on the other hand, in dealing leniently with the offenders, the Government laid themselves open to the suspicion that they had had a hand in the raid."

TOPICS IN BRIEF.

THERE haven't been any indignation meetings so far over General Oiler's return.—*The Detroit Tribune*.

WILL the British finally have to hire detectives to slip up on the Boers and chloroform them?—*The Kansas City Star*.

GENERAL WOOD says Cuba is no place for a man without money. It seems that in some respects Cuba is about like any other country.—*The Kansas City Journal*.

If Admiral von Thiedrichs wants to do something really handsome he might say a few pleasant words about Admiral Dewey's Presidential boom.—*The Washington Star*.

GOVERNOR-GENERAL WOOD has a new ten-pound girl at the palace in Havana, and it is not difficult to determine who will do the ordering around now.—*The Seattle Post-Intelligencer*.

If Messrs. Hanna and Platt do not select a candidate for Vice-President pretty soon, the choice may actually have to be made by the delegates at Philadelphia.—*The Providence Journal*.

BEFORE the stump speakers get through with Dewey it will probably be demonstrated that the battle of Manila Bay was really a species of assassination practised on a gallant but unprepared foe.—*The Chicago Journal*.

"DEWEY'S idea about the ease of being President," said the Cornhill Philosopher, "kindly reminds me of the old story of the young fellow that was asked if he could play the fiddle. He answered that he didn't know, because he had never tried."—*The Indianapolis Press*.

PRONUNCIATION OF WORDS IN CURRENT HISTORY.

THE following is a list of the principal French periodicals from which translations are frequently made for THE LITERARY DIGEST. In this list, syllabic accents are not marked, since in French each syllable is, at any rate from the academic standpoint, supposed to be equally stressed. The sign (a), indicating the sound of French "a," must be understood as very short in length and verging toward (o). The sign (é), indicating French "e" in open syllables, must be understood as similar to the prolonged sound of "e" in "met." The "r," both at the beginning and end of syllables, is slightly trilled:

LETTERS AND ART.

FRENCH DRAMA OF THE NINETEENTH CENTURY.

IF we look at the nineteenth century critically, says Prof. Brander Matthews, we shall find three movements which invite the attention of the critic: "movements of less importance, indeed, than the Renaissance, or the Reformation, or the Decline and Fall, but, none the less, well worthy of inquiry and analysis." These three movements are the rise of Transcendentalism in the United States and its effect on American character; the influence of the Victorian poets and the true relation of each; and, finally, the development of the drama in France during the half-century from 1830 to 1880. With this last movement, Professor Matthews deals at some length in *The International Magazine* (April).

All dramatic work prior to 1830 was, he thinks, but a preparation for the great period beginning with Hugo's play "Hernani":

"The year 1830 is still a date to be remembered, and the battle of 'Hernani' remains a picturesque episode in literary history; and yet, as we look down on the struggle now from the height of the threescore years and ten that have elapsed—the span of a man's life already—the conflict seems petty and the result inconclusive. The Classicists were feeble folk, all of them, and they had no strength to withstand the first onslaught; there was no life in them or in the theories which they thought they were defending; they were dead, even if they did not know it. What vitality can there be in a criticism which asserts that tragedy must fulfil twenty-six conditions, while comedy need fulfil only twenty-two, and the epic only twenty-three—and which is ready with a list of the twenty-six conditions, the twenty-two, and the twenty-three? What real glory is to be gained by overcoming antagonists as pettily pedantic as these?"

"The Romanticists began bravely, but they did not persist. They routed the Classicists readily enough, but when their foes were overthrown, they did not press on to other victories. They were content to rest on their laurels; and very early did keen critics discover the inherent weakness of their attitude. Maurice de Guérin, for example, said that Romanticism had 'put forth all its blossom prematurely, and had left itself a helpless prey to the returning frost.' The real reason for this sterility was that the core of Romanticism was revolt. In so far as it was destructive, it was successful; and it did not really set out to be constructive."

The next influence to follow the Romanticists was the "well-made play"—*la pièce bien faite*. Suggested by Beaumarchais, it was carried to its highest point by Scribe, simplified by Dumas, accepted by Augier, and having had Sarcey for its press agent, says the writer; "until, in the end, it wore out its welcome and was rejected by the Théâtre Libre, which refused to be bound by any formula whatsoever."

Professor Matthews discusses "Cyrano de Bergerac," as a production of the last decade of the century. He considers it entertaining but not enlightening, sentimental but not passionate, an old-fashioned piece with modern improvements. He says:

"The play itself lacks depth and breadth; it is without ultimate sincerity; it has as its basis an unworthy trick, and it holds up before us as a hero whom we are to honor with our approval and with whom we are expected to sympathize, a man engaged in deceiving a woman into a marriage certain to bring her misery so soon as she discovers, too late, the dulness of the man she has wedded. M. de Rostand's play is clean externally, but it is essentially immoral—in so far as it erects a false standard and parades a self-sacrifice which, to use Mr. Howells's apt phrase, is 'a secret shape of egotism.'"

Professor Matthews thus forecasts the coming century:

"If we may guess at the future from our knowledge of the past, we must expect that the masterpiece of the French theater in the twentieth century will be like those of the nineteenth century

and of the eighteenth century and of the seventeenth. It will be a comedy almost on the verge of stiffening into the serious drama. It will deal gravely and resolutely with life, but it will also be charged with satire and relieved by wit. Perhaps it will not be robustly comic—but is 'Tartuffe' really so very laughter-provoking? Its subject will be logically thought out and symmetrically presented—for the dramatic anarchists of the Théâtre Libre are already routed and dispersed. Its craftsmanship will be sure; and it will have the prime merits of simplicity, of straightforwardness, and of sincerity."

IS GRAND OPERA MERELY A SOCIAL FAD?

A SPIRIT of discontent with the prevailing conditions of opera has been in the air during the past season, and has been evidenced in various complaints as to deficiencies of staging, inadequacy of chorus, and defects of acting, as seen in the leading opera-house of New York. Attention has been called to the apathy of the audiences during performances hitherto admired—a tendency noted for the first time this season. It is asked: Is not the public tiring of listening for the tenth or twentieth time to the same cycle of music dramas? It is pleasanter to think that such is the case, says Mr. David Bispham, the principal baritone of the Metropolitan Opera Company, than to believe that music has been merely a social fad which the world of fashion and influence is now ready to drop for some other fad.

The recent changes in opera which have been announced for next winter appear to indicate that the leading promoters of grand opera in this country—chiefly, of course, Mr. Grau—have been moved by these arguments; and it is believed that with grand opera in English, with strengthened chorus, many new works in the *répertoire*, and more moderate prices, a new era of musical enthusiasm will be inaugurated. Says Mr. Bispham (in *Harper's Bazar*):

"The public has heard *ad nauseam*, and small blame to it for wearying, certain works which, tho as finely performed as ever, have for the nonce begun to lose the hold which would have been maintained had there been from the first that judicious mingling which the amateur would gladly hear, but of which the policy of immediate gain will have none! 'Why have we had "Faust" five times on my night this season?' cries the indignant box-holder. 'Madam, if you will honor me by looking at these accounts, you will see,' replied the astute manager. That was three years ago, and, with an occasional excursion into the unknown Niebelheim, it has been going on ever since, until the patience of the rich is wellnigh exhausted, while the less rich go elsewhere to find a novelty—less well sung, perhaps, but better mounted than *is*, as a rule, seen at the grand opera. The majority of the great singers who have been heard in this country in recent years have signed contracts for the performance of certain rôles in which they have achieved their great fame abroad. For singing them they are paid large sums, and they are naturally loath to assume characters in the half-forgotten operas of other years, and far different surroundings, and usually decline to study new works which may not suit them. The public therefore suffers from the fact that a national opera, the business of which would be to provide lyric drama of every school, regardless of fashions of the day, does not exist."

The copartnership between Mr. Grau and Mr. Savage (manager of the Castle Square Opera Company, New York, shortly to be disbanded) does not imply an abandonment of grand opera as given in the Metropolitan Opera House by the Maurice Grau Opera Company. The latter and the new English Opera Company will remain distinct organizations, with a different clientèle and different dates. One will remain perhaps a "social fad" in the "high life" of the community; the other will draw its patrons from music lovers purely, at prices which to the wayfaring man will not be prohibitive. The editor of *The Music Trade Journal* (April 7) says:

"Mr. Grau has long given this matter of English opera earnest

consideration, and he realizes that if presented properly—and that means a good orchestra under able leadership, a large and competent chorus, and a roster of artists who can sing, and sing well—it will prove an investment of profit as well as an important factor from an educational as well as a musical viewpoint. Moreover, it should in time lead to the establishment of a permanent opera here. As Mr. Henderson says, the present opera is exotic. The singers are mostly foreigners, and the company is brought together only temporarily. But a permanent opera would be one in which the growth was from within. We should develop our own chorus and ballet, and the singers would for the most part be the outcome of a system of development extending throughout the whole institution. Instead of 'barn-storming,' as the actors call it, this company would be able to command the patronage of our public for seven or eight months each year. It would be independent of the capricious support of fashion, and would rest firmly on the interest of the musical public. The opera might, and in these circumstances would, cease to be the idle amusement of the society world, and would become a regular part of the pleasure of the great reading public. Thus, in the course of time, we would develop a state of affairs operatic which would place us on ground similar to that occupied by cities like Munich and Dresden."

A FRENCH AND AN ENGLISH VIEW OF TOLSTOY'S "RESURRECTION."

TOLSTOY'S latest book, "Resurrection," is everywhere regarded as a literary event, coming as it does years after the author had abjured the vanities of literature and devoted himself to propaganda by treatises from which he has endeavored to banish all literary artifice. But the qualities which won recognition for Tolstoy's two great novels—"Anna Karénina" and "War and Peace"—are still apparent in this his latest book, thinks the French critic René Doumic (*Revue des Deux Mondes*), tho they are modified by the author's life-long study of social problems.

The most striking feature of the new book, in this critic's opinion, is its "enormous breadth of treatment," which is also the most significant reminder of the author's earlier work. His admirers pretend that this breadth is the result of Tolstoy's sovereign disdain for harmonious and regular composition, and of his escape from the trammels of form and rhetoric. But in this, M. Doumic thinks, they are mistaken: Tolstoy's rhetoric, tho different from ours, is none the less a rhetoric in which the artifice is plainly discernible. The defects which mar his greatest works reappear in "Resurrection." His novels are replete with repetitions, digressions, a wearisome aggregation of details, of which many are useless, long expositions of abstract ideas, and theoretical dissertations that interrupt the narrative, creating a confusion that often results in a loss of interest. Tolstoy's work is admirable, not for these defects, but for the marvelous gifts which his books reveal despite them. He is a poet whose writings exhale the breath of nature, which he loves not only for its fecundity, rich beauty, and eternal youth, but for the lessons man must read in it. Tolstoy is never far distant from nature, whether he be developing some abstract theory or developing a social problem, and some pages of "Resurrection" are among the most beautiful of his descriptive work.

This latest creation, says the writer, differs from Tolstoy's earlier books by its methods, and the strides its author has made in the study of the social problem. While two great novels revealed the author's sympathies and tendencies, the moral study retained its suppleness, the analysis of sentiment its shading. Tolstoy excelled in depicting the mixture of good and evil in the world. To-day he proceeds by more violent measures. In "Resurrection" rascality and virtue are ranged against each other, the rich and cultured on one side, the oppressed and suffering on the other. He has brought all his passionate ardor to

bear upon this picture of the world of revolutionaries and theorists; hatred serves as a weapon to pity; and the violence and bitterness of this satire give it its great literary beauty.

A writer in *The Westminster Review* (March 22), who may be taken as representing the more favorable British view, thinks the title of Tolstoy's new novel a peculiarly appropriate one, for in it we see a resurrection of Count Tolstoy's old self—of the man of genius known to the world of twenty years ago:

"Some writers are described as playing on life with a searchlight, but Tolstoy's instrument in this work is rather a Roentgen ray which pierces to the bone until the reader protests in pity for the victim of the exposure."

"There are, as we have said, some irrelevant passages in this book, and some painful ones. Tolstoy, as Matthew Arnold remarked long ago, writes things down not because they are necessary to his story, but simply because they happened so. One remembers how Levine in 'Anna Karénina' lost his shirts on his wedding day, and how many pages were filled with the confused hunt for them. Those shirts, one supposed, must be going to play an important part in the story. Yet one never heard of them again, and indeed they came in only because Levine, being Levine, would have been sure to lose them at that particular moment. There are numerous *cults-de-sac* of this kind in 'Resurrection,' but Tolstoy's method has always been to paint a picture rather than to weave a plot. Judged by ordinary artistic canons, the picture must be pronounced overlaid with detail and faulty in perspective. Artistic canons appeal to Tolstoy as little as other human conventions. But the merit of this book is its immense simplicity. You are left with an overwhelming impression that the thing described is real, that the characters are living beings, that their life and their fate are of profound significance to the writer and to you. Books of which this can be said are rare appearances in the history of any country, and it is useless to criticize them as the ordinary performances of literary men. We are not converted to any Tolstoyan gospel by this book; but if the object of literature is to criticize life, we can only say that it is a profound criticism from an illuminating point of view."

A GREAT CANTATA FOUNDED ON "HIAWATHA."

MR. S. COLERIDGE-TAYLOR, who, tho one of the youngest of the English composers, is believed by some musical critics to be a man of genius, has attained a very pronounced success in his latest work, "The Departure of Hiawatha," produced a few weeks ago by the Royal Choral Society of London.

The Westminster Gazette pronounces it "a very remarkable achievement indeed," and other journals speak of it in a similar manner. In spite of what the musical critic of *The Gazette* calls "the barrel-organ monotony" of Longfellow's rhythm in the poem upon which the cantata is founded, the composer, it is said, has succeeded in bringing into his work a remarkable variety. The critic writes:

"In particular may be specified the very effective baritone solo in which the hero narrates his vision of the coming of the White Man; the succeeding chorus, 'By the Shore of Gitche Gumee, By the Shining Big-Sea-Water,' and that in which the arrival of the Black-robed Palefaces is recounted; the tenor solo in which the Message of the latter is conveyed to the Redskins; and the concluding chorus in which, gathering up all his forces, the young composer depicts with astonishing success the final scene as Hiawatha floats away in his canoe adown the flaming track of the setting sun—

In the purple mists of evening,
To the islands of the Blessed,
To the Kingdom of Ponemah,
To the land of the Hereafter!

"It is in no way difficult to account for the success which these cantatas of Mr. Coleridge-Taylor have attained. Spontaneous, sincere, and picturesque, full of movement, color, and variety, in equal measure expressive, descriptive, and pleasing on its own account—Mr. Coleridge-Taylor's music has all the elements of

popularity. The mastery of his resources exhibited by the young composer—the ease and fluency and unfailing sense of effect displayed throughout—are nothing less than astonishing.”

The Outlook (London, March 31) also calls the cantata “a remarkable achievement”:

“In the ‘Death of Minnehaha’ and in the concluding ‘Departure of Hiawatha’ Mr. Coleridge-Taylor has fulfilled the promise of the cantata of his student days, ‘Hiawatha’s Wedding Feast,’ and given us a complete trilogy which is one of the most successful productions of its kind now before the public. There is an astonishing felicity, consistency, and sureness about it, and effect after effect comes off in the happiest fashion.”

The work consists of an overture and a trilogy. The first part of the cantata, which as a whole might be likened to a symphony, is called “The Wedding Feast,” and corresponds to the opening *Allegro* of the symphonic type of composition; the second part, corresponding to the slow movement, is entitled “The Death of Minnehaha”; the third part, just completed, named “The Departure,” corresponds in its first portion to the *Scherzo*, and the remaining portion to the *Finale*.

THE BANE OF LITERARY COSMOPOLITANISM.

“It is a question,” wrote Paul Bourget in his “Essays of Psychology,” “whether the spirit of cosmopolitanism, which progress favors in so many ways, is as profitable as it is dangerous. The moralist who considers society as a factory for the production of men must recognize the fact that nations lose much more than they gain by mixing with other nations, and races gain nothing by leaving the corner of the earth where they are greatest. What we call family, in the old and beautiful significance of the term, has always been established, at least in Western countries, by long, hereditary life. For a human plant to increase in solidity, it is necessary that it absorb, by daily, obscure labor, all the physical and moral sap of its individual surroundings. Climate must pass into its blood, with its poetry, sweet or severe, with the virtues which continued effort against an aggregation of difficulties engenders and maintains.”

These sentences are quoted by M. René Doumic (*Revue Bleue*, March 10), as also applying to cosmopolitanism in literature. M. Doumic finds no excuse for the spirit in which certain enthusiasts proclaim the excellence of foreign literature to the detriment of their own. If such a superiority exists it should be recognized without triumph, lest a people be put in the ridiculous position of shouting for a victory against their own compatriots. Says M. Doumic:

“The novelty seeker likes that which comes from afar for reasons of vanity and pride. Vanity seizes upon cosmopolitan literature because it is distinguished, *chic*, elegant—snobbish. In fact, cosmopolitan life itself is elegant, or—what is to-day supposed to hold the place of elegance—rich. It is necessary to be rich in order to pass the winter in Cairo, the spring in Florence, the ‘season’ in London, a month at Lake Geneva, and the summer at Cape North. Meanwhile poor people remain in their familiar corner of the world to welcome the return of the seasons, undergo the sharpness of winter and watch the sap of the trees show itself again in the springtime. In the same way, it is elegant to have a season with Tolstoy, and with the Norwegian literature, while others, college people, people of family, are still citing their Racine, their Victor Hugo, or Balzac. This smacks of the pedant.”

And the social consequences of a cosmopolitan abandon in reading, M. Doumic regards as much more grave. Some foreign books are full of the revolutionary spirit; in Ibsen, the Brands, Rosmers, Solnesses and Noras are impatient of all social restraint; others preach dilettantism; others, mystic catholicism; another, free-thought, Puritan Protestantism, Socialism, or individualism, until the battle of all these adverse doctrines in a

brain produces anarchy or vacuity. Add to this a reinforcement of the same feeling in art, and we have Wagnerian music, Ruskinian estheticism, English furnishings, Japanese decorations, and such an importation of exoticism as can not be overlooked. To quote again:

“The idea of patriotism is indeed more limited than the idea of humanity; but a limit defined by the precise duties which it imposes upon us. The duties of a cosmopolite are set free. He chooses his country where he finds something of interest or pleasure, and changes it to-morrow in accordance with will or caprice. His ideal is an ideal of egotism and pleasure, and it is this that constitutes the immorality of cosmopolitanism. . . . Now, the day that literature becomes cosmopolitan it ceases to be literature and becomes a science. The square of the hypotenuse is the same in all countries, and the properties of hydrogen remain the same in whatever language they may be expressed. Science speaks universally. Literature, on the contrary, expresses the difference between one people and another. It is made up of these differences, showing the concealed, intimate relation of each people and each race.”

M. Doumic believes that the hour when national literatures will be replaced by a universal literature will never strike until there is a universal brotherhood, a universal meaning to life among men. Each people will continue to have reason for living in a manner different from that of their neighbors, each will have a need of the other in order to be itself. And this is the great point—to be oneself. We can then have for foreign literature interest and curiosity without letting ourselves be absorbed by it.—*Translation made for THE LITERARY DIGEST.*

SOME ENGLISH VIEWS OF “TO HAVE AND TO HOLD.”

MISS MARY JOHNSTON'S new story, “To Have and To Hold,” has, almost at a bound, taken a leading position in America as the most popular novel of the day. In England, also, her success seems to be assured; and the leading literary

MISS MARY JOHNSTON.

weeklies refer to her book—which in England is rechristened “By Order of the Company,” in accordance with a common but curious British custom—in terms of decided appreciation. *The Academy* (London, March 24) remarks that modern fiction shows

historical novels we have read for a long time." The critic continues:

"Miss Johnston can write, and she can recreate a period. Particularly, she knows the spirit of the American virgin forest. Perhaps it is the sense of that encompassing beauty and terror which gives so pronounced an individuality to her books, and saves them, despite their lavish and often startling use of incident, from the taint of sensationalism. The present romance is a clear advance in conception and execution on her earlier work, 'The Old Dominion' [called 'Prisoners of Hope' in America], itself a fine achievement. There is the same Virginian setting, but the period, in this case the reign of James I., is more closely realized and more vividly presented, giving, indeed, an admirable study of colonial life with some strong characterization. . . . Exciting episode is crowded on episode—plot there is practically none—and the perils and escapes would grow incredible were they one whit less vigorously related. As it is, there is but one part of the book, the capture of the pirate ship, where belief and attention are somewhat strained. The sea is not Miss Johnston's element; she gathers strength in the gathering shadow of the woods."

The *London Outlook* (March 24)—another English weekly that has taken marked notice of the story—says:

"We have been told that the art of the future is the inheritance of a particular race. Miss Johnston's romance suggests that a particular sex may have something to say in the matter. We will not pay Miss Johnston the doubtful compliment of saying that a man could have done no better; but we will say that it were superfluous to make critical concessions because hers happens to be the work of a woman. And this is saying much. . . . When it is said that the alarms and excursions of the story, the sensational effects, derive their interest not as mere sensations, not as melodrama, but solely from the fact that some very real characters are placed in trying and adventurous situations, sufficient is said to show that Miss Johnston takes high rank among writers of romance."

Literature (London, March 31) is less enthusiastic:

"Miss Johnston has one great quality of the 'historical' novelist, she never does let the story flag, but heaps situation on adventure and sensation on incident until the reader is in a fair way to be hypnotized by her lavish imagination and fluency, and follows the fortunes of her hero and heroine with unreasoning delight. But it must not be supposed that 'By Order of the Company' is a great work of art; it is at best a sublimated form of artifice."

Miss Johnston's work reminds the critic of the *London Outlook* of Stevenson's; there is much in her life-story and in the difficulties she has had to surmount which also reminds one of the heroic author of "Treasure Island." In a brief sketch which Miss Johnston's publishers send out, we get the following:

"As a child Miss Johnston's health was delicate; and, in fact, she has never been in possession of entirely good health, both 'Prisoners of Hope' and 'To Have and To Hold' having been written under stress of great physical difficulty. On account of her frail health as a child her schooling was irregular. When not at school, and yet too ill to wander about the woods, she read. Her tastes were catholic, and, moreover, she had not a great library from which to pick and choose, and so must take what she could find. . . . In later years, her ill health continuing, she was taken from school and had most of her studies at home, and she then developed a fondness for the English dramatists which she has never outgrown. Certainly to the influence of these writers must be due much of the fine constructive qualities which would so admirably fit both 'To Have and To Hold' and 'Prisoners of Hope' for dramatic production. . . ."

"In 1893 the Johnstons removed to New York City, which they made their home for several years. In the following year Miss Johnston's health, always delicate, failed so that she became for a time practically an invalid. Forced to lie quietly and to give up all active effort, she could still read and study, and at length she began to write a little for her own amusement. A year or two later housekeeping was given up on account of Miss Johnston's continuing ill health, and apartments were taken in one of

the big apartment houses overlooking Central Park. Here she began 'Prisoners of Hope.' Work upon it was finished after two years of effort more or less interrupted by seasons of ill health, and published with eminent success for the first work of an unknown author. So well was the romance received that Miss Johnston determined to make literature a serious pursuit."

The Passion Play of 1900.—With the exception of a few minor changes of *personnel*, the Passion Play at Ober-Ammergau remains this year practically the same spectacle that has been seen, at intervals of a decade, since its establishment in 1633. The play of 1900 is discussed by a writer in *The Westminster Gazette* (London). He says:

"Some seven hundred persons of all ages will appear in the representation this year. The part of Christus, worthily upheld by Josef Mayr in 1880 and 1890, will pass into other hands. Mayr had hoped to sustain his former rôle, but an accident in the woods in 1896 left after-effects which have made it quite out of the question for him ever to take the part of Christus again. He will this year recite the prolog, a part for which his splendid elocutionary powers make him peculiarly fitted."

The Christus this year, says the writer, will be Anton Lang, a young man whose blameless life, gentle, reverent face, and quiet dignity of manner render him, it is said, an ideal Christus. He was chosen by acclamation, and has the great advantage of being reverently and carefully trained by Mayr in every detail of the great part he is to play. The other great part, that of the Madonna, will also be represented by a new player, Anna Flunger, described as a young woman of much beauty and holiness of life. Says the writer:

"She is the daughter of the village postman. As at present arranged, Bertha Wolff will play the part of St. Mary Magdalen, Andreas Brann that of St. Joseph of Arimathea, and Peter Rendl that of St. Peter. The old wooden theater has been demolished and one of iron erected in its place. The new building will be roofed over, not open to the sky like its predecessor; but it will be open toward the mountain and the stage, so that the background will not be destroyed. The new playhouse will accommodate 6,000 persons. There will be a grand rehearsal on May 20 and performances on the 21st and 27th of that month. There will be six performances in June, July, and September, and seven in August, in addition to several supplemental representations; and on each occasion the performance will last from 8 A.M. until 5 P.M., with an interval of an hour and a half. Some half a million visitors are expected."

NOTES.

"RICHARD CARVEL" will soon appear in German form in Berlin. It is reported to be highly popular also among the Americans and English in the Philippines, and in Calcutta. This British colonial popularity is perhaps partly due to the fact that Messrs. Macmillan & Co. are the publishers.

THE new "American Anthology," just announced by Edmund Clarence Stedman (a companion work to his "Victorian Anthology"), contains as frontispiece to the first of the two volumes a photogravure of a group of American poets. The poets included in this group are Longfellow, Whittier, Poe, Bryant, Lowell, Holmes, Whitman, and Lanier.

PIETRO MASCAIONI'S new opera, "The Masks," which is to be performed at the Costanzi Theater some time in April, bears an interesting dedication:

To Myself,

With distinguished esteem, and with unalterable satisfaction.

This is done, it is said, as a response to the critics who have handled some of his other operas unfavorably.

A VALUABLE find has lately been made by the Florentine book dealer Leo S. Olschki, of a number of pamphlets bound together, among which is the report of the second voyage of Columbus, printed in 1494. Of these rare booklets, only two copies were known to exist, one of them in the library of Prince Trivulzio in Milan and the other in the Lenox library in New York. The Columbus pamphlet consists of ten sheets printed in Gothic type and contains a comparatively complete report of the second voyage of Columbus, written by the physician and philosopher Nicolaus Syllacius, of Pavia, on the basis of an account sent him from Spain. The pamphlet is in Latin and was printed by Ghirardengi. As Columbus himself did not publish any report of this voyage, the little pamphlet of Syllacius is of great value. It is reported that the lucky discoverer has already sold it for a good sum to an American bibliophile.

SCIENCE AND INVENTION.

A LIFE-SAVING MACHINE.

EVERY one knows that those who have been apparently drowned or suffocated can often be restored to life by proper mechanical treatment. But only recently has it been realized that when such treatment seems to have failed, it may often be made successful simply by continuing it patiently for a sufficient time, sometimes for several hours. Dr. Laborde, a

SAVING A DOG'S LIFE WITH LABORDE'S ELECTRIC LINGUAL TRACTOR.

French authority, uses a device run by an electric motor in the operation that he advocates—that of lingual traction or the pulling out of the victim's tongue at regular intervals. Of this device, and of the general principles involved, M. Henri de Parville, the editor of *La Nature* (Paris), writes in that paper (March 24) as follows:

"Any creature whose heart has ceased to beat and that has apparently ceased to live, if there is no injury done to its principal organs and it is not exhausted by illness or physical pain, may often be brought back to life. In general, this idea of the persistence of 'latent' life in persons asphyxiated, hanged, drowned, or struck by lightning is not sufficiently accepted. A man that can not be brought to life in ten minutes of effort is looked upon as a dead man. At least this is the almost universal way of regarding the matter. This is a grave error which should be corrected. It is my belief that on account of it many persons are allowed to perish who would otherwise have been restored to life."

As an illustration of what may be done, M. de Parville relates an instance where a boy of sixteen, after apparent drowning, in 1898, was brought to life by no less than three hours of persistent effort, using the method of tongue-traction recommended by Dr. Laborde. The writer comments as follows:

"After three hours! No physiologist, no physician, would have dared to assert, before 1898, that latent life could persist for hours. And doubtless even this is not the extreme limit; a person might be resuscitated after a still longer period. We do not know exactly in how many hours real death takes the place of apparent death. The interval of time is probably different with different individuals; but life persists in all cases in subjects whose organs are healthy and not altered by disease. The exterior, objective death of the organism, revealed by the suspension of visible functions, notably by the suppression of the cardio-respiratory function, is not final and definitive death. While the organism in this case has ceased to live outwardly, says Dr. Laborde, it still lives inwardly. That is to say, latent life continues by the persistence of the functional properties of the elements and organic tissues. The properties of sensation are the first to disappear, then the motor nervous functions, and finally the contractility of the muscles. Complete death requires time."

"In fine, the general mechanism may be arrested as a consequence of the cessation of an essential function like that of respiration; but, if the organs are not altered, they may be excited anew and may resume their wonted activity. As long as latent life exists we need not despair of saving a drowned person, one who has been suffocated, etc. The function most indispensable to awaken, the primordial function of life, is the respiratory func-

tion; to revive this, the respiratory reflex must be excited. This reflex, as Laborde shows, happily has extraordinary persistence. We should then devote our efforts to this when we wish to resuscitate one who is apparently dead."

The accompanying illustration shows an automatic device for performing the lingual traction and restoring the respiratory process. It is operated by an electric motor which will run for three hours. The writer goes on to say:

"We now give up all hope of saving drowned or suffocated persons if at the end of a half-hour all the ordinary methods of resuscitation have been exhausted—arm movement, insufflation of air, etc. Nor do we understand any better how to treat with effectiveness syncope due to chloroform, the asphyxia of newly-born infants, etc. We shall understand how in future. After this, when a bather is engulfed in the waves, when a fire-man is overcome by gas, we must have recourse resolutely to rhythmic tongue-traction, not for half an hour, but for hours. And in most cases we shall revive the unfortunate victims."—*Translation made for THE LITERARY DIGEST.*

THE SOUTH MAGNETIC POLE.

THE report that the Borchgrevink South Polar expedition, which returned to New Zealand from Victoria Land on April 1, has located the south magnetic pole and at the same time has reached the farthest point south yet attained by man, has aroused much interest. Says the *New York Sun* (April 3):

"Several years ago Sir Joseph Hooker said that 'the key to the future knowledge of terrestrial magnetism lies in the determination of the exact position of the south magnetic pole; for we are not within three hundred miles of a guess of its exact position.'

"Sixty-seven years ago Sir John Ross discovered the position of the north magnetic pole, but no redetermination of its position has since been made. A knowledge of where the north and south magnetic poles are is needed to set at rest the question, still in dispute among scientific men, whether their position is fixed or variable. If these poles are not stationary, a comparison of their positions at different times will show the direction and rate of their motion. When these data are obtained, the specialists in this branch of physics have high hopes that they may be able to find the law that governs the constantly occurring changes in magnetic declination, inclination, and intensity, so that, perhaps, these variations may be calculated for future periods as eclipses are. This discovery would be not only of great scientific interest, but also of practical utility to all navigators and surveyors. . . .

"If the Borchgrevink expedition has done nothing else than discover the southern magnetic pole, it has paid for its cost."

We are reminded by the *Philadelphia Press* (April 3) that in making this discovery Borchgrevink has beaten the "farthest south" of Sir James Clark Ross by just 40' of latitude. His record, moreover, was made on land, while that of Ross was on water. Just what spot of Victoria Land was reached in making the 75° 50' south latitude is not clear, as the cable is silent as to longitude. Borchgrevink, in traveling over the interior of Victoria Land to the southwest of Cape Adare, has journeyed about five hundred miles, presumably as far west as longitude 160° east. *The Press* goes on to say:

"It can not be long before we shall learn just what this five-hundred mile journey over the Antarctic ice-cap meant. Tho it does not equal Peary's journey of six hundred miles to Independence Bay over the Greenland ice-cap in 1892, the problems that confronted the intrepid explorers in the south were a little more formidable than those encountered in Greenland. . . . As no one ever saw over the ice and land barriers, the interior of Victoria Land was all unknown, and hence Borchgrevink's achievement takes on a peculiar significance."

Of some of the possible results of the Borchgrevink expedition the *Brooklyn Eagle* (April 2) says:

"Borchgrevink believes that weather forecasts will, in time, be made from the Antarctic continent for the whole of Australasia,

and this will mean the connection of Australia with the lands bordering the Antarctic circle—a scheme that not many years ago would have been regarded as the wildest folly, if it is not so regarded still. Yet, as crops and the lives of herds are more dependent on climatic influences in Australia than in the northern continents, this system of weather forecasts is by no means impossible in the future."

HOW THE RAILS TRAVEL OVER THE ST. LOUIS BRIDGE.

ACCOUNTS of the phenomenon known as "creeping" as it affects the rails on the Eads bridge at St. Louis have recently attracted some attention, and the editor of *The Scientific American* has obtained from the superintendent of the structure, Mr. N. W. Eayrs, some interesting particulars. It appears that

Device used at each end of the Eads Bridge to switch the creeping rails out of the track, and introduce the new rails.

Courtesy of *The Scientific American*.

in course of time the rails actually "creep" across from one end of the bridge to the other. Says Mr. Eayrs:

"This movement of the rails occurs not only upon the spans, but also upon the east approach trestle; the movement on the latter is, however, considerably less now than it was before the trestle was reconstructed. The original structure was very light, and in consequence there was an unusual amount of elasticity in the floor. The creeping occurs always in the direction of the traffic; that is to say, the west-bound track runs west and the east-bound track east, and varies in amount with the variation in tonnage passing over the rails. The movement is dependent on the elasticity of the track supports; with increased stiffness in the floor system the amount of rail movement is decreased; in fact, several years ago a portion of the east approach trestle, a wooden structure about 1,000 feet in length, was filled and the track put on the ground. In this portion the rail movement almost entirely disappeared. As corroborating my opinion that the rail movement is caused by the elasticity of the roadbed, I may mention a section of track on the Canadian Pacific, which was laid on a soft marsh. If my memory serves me rightly as to the amount, this section of track moved two feet under a single train.

"In the month, April 15 to May 15, 1899, some measurements of the movements were made at two points, one on the center span of Eads Bridge, and one at the west end of a 5° 43' curve on the east approach. The movements were as follows:

Eastbound Track.		Westbound Track.	
North Rail.	South Rail.	North Rail.	South Rail.
Center span ... 17 ft. 10 1/2 in.	19 ft. 4 1/2 in.	19 ft. 9 1/2 in.	17 ft. 7 1/2 in.
East approach, 25 ft. 9 in.	47 ft. 7 in.	33 ft. 1/2 in.	31 ft. 2 1/2 in.

"The rails on the east approach have a much larger run between creeping points than on the bridge, which accounts for the increased rail movement."

Mr. Eayrs tells us that attempts were made to check this movement, but without avail, for the strain was sufficient to tear fish-plates in two, or to shear off a 3/4-inch track bolt. The track is

therefore now kept continuous by inserting pieces of rail of various lengths at the end where the movement begins, and removing corresponding pieces at the other end. At either end of the bridge there are cross-overs which must be kept in line, and there are two points on the east approach on each track which require protection. Accordingly there are eight so-called "creeping plates" in the track. Says Mr. Eayrs:

"In order to avoid the necessity of keeping a supply of pieces of rail from 2 inches long to 30 feet long at each place, and to dispense with the necessity of keeping a trackman to watch these places, we put in, about fifteen years ago, a device which is shown on the accompanying drawing. This device consists of a pair of switch points, rigidly held to gage by forming part of an iron frame which is bolted to the ties. The main rails of the track which is ahead of the device—that is, in the direction of the traffic—extend outside of the switch points. A full rail is coupled on to the main rail, which, in the case of a trailing point, drags the rail through the jaws, or, in the case of facing points, shoves it through the jaws. In the former case, when the rail has nearly passed through, a new rail is coupled on, and in the latter case the rail is uncoupled as soon as it has passed through the creeper (or the 'Irishman' as the trackmen call it, since it takes the place of the Irishman formerly employed). The rail which has been shoved through the creeping plate and has been taken off, is carried across to the opposite track to be used to feed into the creeping plate, and begins to travel back again.

"The force impelling the rail is so strong that it will drive a straight 70-pound steel rail through a 5° 43' curve, curving the rail during the passage and straightening it again after the rail comes through.

"The movement on the spans can probably never be entirely overcome, as the deformation of the arched ribs under the action of a moving load intensifies the action of the elasticity of the track."

AGAIN THE PROBLEM OF FLIGHT.

THE present status of aerial navigation is given in detail by M. Rodolphe Soreau in a recent lecture before the French Association for the Advancement of Science. The speaker, we learn from an abstract in *Cosmos* by M. Emile Hérichard, stated that the problem admits theoretically of three solutions: the utilization of air-currents either by free balloons or balloons with sails; the dirigible balloon; and aviation, or "flying" proper; that is to say, the sustaining and propelling through the air of a body heavier than the air itself. Neither the free nor the sailing balloon, he thinks, will give much aid in solving the problem. With dirigible balloons, however, we need only a motor twenty or thirty times more powerful than those hitherto used, to arrive at a complete solution. Says M. Hérichard:

"The investigations of Colonel Renard make it probable that the scientist could construct for the army an air-ship with a speed of 10 meters [33 feet] a second, and able to keep in flight for three or four hours. Nevertheless we may foresee that unless we attain a higher speed than this, say 20 meters [about 70 feet], the realization of the problem will be difficult."

There remains the method of "aviation," or the use of flying-machines heavier than the air. According to the author, the conditions that must be filled by the aeroplane are practically the same as for the dirigible balloon, since the part of the propelling force that sustains the plane corresponds to the upward force of the gas in an ordinary balloon. Soreau criticizes Professor Langley for "performing laboratory experiments in the open air," or, in other words, for using a model instead of an aeroplane of

full size. His results, says the critic, at most prove that for the same useful weight the aeroplane has twice the velocity of the dirigible balloon, "a slight result," he says, "in the presence of the difficulties of starting and alighting, of stability during flight, and of various accidents; while in a balloon voyage there is security comparable to that of a railroad or steamboat trip." He goes on to say:

"The bird is, of course, a natural aeroplane, . . . but it is of minimum weight, and the resistance to its forward motion is feeble. . . . The bird of prey, pouncing with accuracy on its victim, gives evidence of extreme stability in flight. For the aerial ship the difficulties are of quite another order; among others, it must move in a horizontal plane, or in one that has a very slight inclination. These differences of condition between the ship-aeroplane and the bird-aeroplane necessitate the employment of means quite different from those that are effective with birds—the use of organs proper to mechanics, whose operation and power are incomparably superior to those of animal organisms. Wings, in particular, must be avoided, for their flapping motion is too complicated; nature has recourse to it only because alternating motion is the only means of setting muscular energy to work."

After a brief mention of the principal attempts at aeroplane flight, such as Hiram Maxim's flying-machine, Phillips's aeroplane of concave slats arranged as in blinds, and also Lilienthal's fatal experiments in flight, the author states the following conclusions:

"Aeroplanes, which are still in the embryo stage, require for their success great additional progress in mechanics; the difficulties to be overcome increase rapidly with the weight used. In short, we must assign very narrow limits to both the characteristic types of aerial vessel—the aerostat and the aeroplane."—*Translation made for THE LITERARY DIGEST.*

Why is Water Blue?—This question may seem to some readers absurd, yet its answer is still, to some extent, in doubt. The received opinion has been that water is not of a blue color in itself, but appears so on account of fine suspended dust that catches and reflects the blue rays just as the particles of smoke do when it is very fine and thin. On the other hand, the experiments of Professor Spring, the Belgian physicist, seem to indicate that the water itself has really an azure tint. Says *The American Chemical Journal*, in a discussion of Spring's work:

"Earlier experiments of Spring led him to the conclusion that water itself is blue, and that the fine particles which it holds in suspension, while contributing very much to its illumination, exert no appreciable influence on the intensity of the blue color. Soret had previously, in 1869, expressed this same opinion. As neither the work of Soret nor that of Spring appears to have convinced every one, Spring has again taken up the subject. With the object of determining experimentally the optical properties of the particles in clear waters, parallel rays from a powerful electric light were passed through (1) distilled water, (2) the drinking-water of Liège, and (3) rain-water that had been allowed to stand. In all cases the presence of particles became apparent, the clearest being the drinking-water. There was no evidence of a blue water."

Further experiment, however, furnished the desired evidence. Light of different colors was allowed to pass through the water, with the following results:

"These experiments show that the particles, to which clear water, distilled or natural, owes its illumination, have the power to reflect the red, the yellow, and the green waves, and that they can not, therefore, be the cause of the blue color of water. Reflecting with equal facility waves of all lengths, they return the sunlight to us without chromatic change. The author concludes that water is blue of itself, and that the particles which it holds in suspension are the principal cause of its illumination. According to their nature, they determine also the modification of the color of the water, and produce greenish tones when they do not destroy all the natural color."

Bubonic Plague in the Bible.—The earliest record of bubonic plague has generally been dated 300 B.C. Drs. F. Tidswell and J. A. Dick have, however, according to *Nature* (March 22), recently brought evidence before the Royal Society of New South Wales to show that the epidemic of 1141 B.C., described in the First Book of Samuel (chaps. iv.-vi.), was true bubonic plague. "After the Philistines had captured the Ark of the Covenant and taken it to Ashdod, severe illness broke out among the people. 'The hand of the Lord was heavy upon them of Ashdod, and He destroyed them and smote them with emerods.' The Ark was afterward taken to Ekron, and here again we are told 'There was a deadly destruction throughout all the city . . . and the men that died not were smitten with the emerods, and the cry of the city went up to heaven.' The word 'emerod' has usually been taken to mean hemorrhoids, but in the revised version of the Old Testament it is stated to mean tumor or plague boil. The epidemic in Philistia occurred at the time of the regular plague season, and mice are mentioned in connection with it, which furnishes additional evidence that the epidemic was plague, for a connection between the death of rats and plague at Bombay and elsewhere has been clearly established. Taking all the facts into consideration, there appears to be contained in the few chapters of 1 Samuel an account of an epidemic of bubonic plague that occurred more than three thousand years ago, or more than eight hundred years previous to the hitherto accepted historic record."

Destruction of Ships by Spontaneous Combustion.—Recent investigations on the spontaneous combustion of coal in ships, according to the *Revue Scientifique*, show that, contrary to general opinion, ventilation does not help the matter, for plenty of well-ventilated vessels have perished in this way. Coal should be as large as possible and should contain no pyrites, which often start the combustion. Humidity is also dangerous and should never exceed 3 per cent. Some kinds of coal, such as cannel coal, are peculiarly inflammable and should never be carried on shipboard. Water and air are best entirely excluded, for in the complete absence of both spontaneous combustion could not occur. The actual cause of the action is oxidation, which generally begins with the included pyrites, and, the temperature thus being raised, spreads to the coal.—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES,

"CERTAINLY one good result," says *The Western Electrician*, "grows out of the occupation of the Philippine Islands by the Americans—the extension of electrical means of communication. When Spain turned the islands over to the United States there were about 2,800 miles of telegraph lines in the archipelago, and it is estimated that within a year the total length of wire in operation will be fully 5,000 miles. New lines are building in Luzon and on the islands in the southern part of the archipelago. The latest reports from Manila show that there are being handled by the Signal Corps in Luzon alone an average of 4,600 messages daily, and as new territory is occupied the work correspondingly increases."

"It is a notorious fact," says *The National Druggist*, "that the pineapple is considered the least healthy of all the edible fruits of the tropics by those who know anything of the matter. . . . The juice of the green and growing plant is accredited in Java, the Philippines, and throughout the far East generally with being a blood poison of a most deadly nature. It is said to be the substance with which the Malays poison their krisbes and daggers, and is also accredited with being the "finger-nail poison" formerly in use among aboriginal Javanese women almost universally. These women formerly (or some thirty odd years ago), and possibly do yet, cultivated a nail, sometimes more, on each hand, to a long sharp point, and the least scratch from one of these was certain death."

PHYSICIANS in South Africa, says a press report, now have another theory for explaining away the charges made by both Briton and Boer that the other is using explosive bullets. The extensive laceration often found in bullet wounds is now said to be due to the air which the bullet drives before it into the wound. "The existence of this phenomenon can be proved easily. If a round bullet be dropped into a glass of water from the height of a few feet it will be seen that when the bullet touches the bottom a large bubble of air will become detached and rise to the surface. In this case the bubble will usually be from ten to twenty times the size of the bullet. Now, a Mauser bullet traveling at high speed is said to carry before it a bubble of compressed air of large dimensions. Experiments made by a surgeon who fired a pistol ball into a glass of water showed the bubble to be one hundred times the size of the ball. From the appearance of the wounds and from these experiments it is concluded that the mass of air driven by a Mauser bullet explodes in the body of the wounded man with sufficient force to cause extensive laceration. This destructive air-bubble is well known to surgeons under the name of projectile air."

THE RELIGIOUS WORLD.

PRAYERS FOR THE DEAD IN THE CHURCH OF ENGLAND.

PRAYERS for the dead are no new thing in either the English or the American branch of the Anglican communion; but official episcopal recognition of them, such as was recently given by the Archbishop of Canterbury in a circular letter to his clergy, is almost unprecedented since the first prayer-book of Edward VI., published in 1549. Dr. Temple's letter, which, he says, was dictated by a spirit of sympathy for the many families in England recently thrown into mourning by the war in South Africa, has stirred up a perfect hornet's nest among the Protestant and Kenseit element of the church; and the archbishop has felt compelled to offer in the House of Lords a formal defense of his action. The London correspondent of *The Church Standard* (Prot. Episc., March 31) writes:

"In the House of Lords, Lord Kinnaird asked the Archbishop of Canterbury whether any precedent could be found in which prayers for the dead had ever been introduced 'by authority' into any special services put forth by a primate, and urged him to 'say something to calm the fears of those who had been surprised and pained.' Dr. Temple is not supersensitive, and when he has a message to deliver halts not for sympathy or response. In the course of an exhaustive speech he showed that his petition was not without precedent. In a form of prayer, issued in 1797, on the occasion of 'many and signal victories,' were the following words: 'And for those whom in this righteous cause Thy Providence permits to fall, receive, we pray Thee, their souls to Thy mercy.' In reply to the common objection that those who are safe need no addition to their happiness, Dr. Temple argued that we are nowhere told that the blessedness of heaven is precisely the same for every one, or that when once it is given can not be increased. He repeated that, according to the Court of Arches, there is no prohibition of prayer for the dead. The abuses of the belief in purgatory pardons, invocation of saints, etc., led to the excision of prayers which might be misconstrued; but no formal exclusion of such prayers took place at the Reformation.

"The Earl of Portsmouth dissented from the archbishop's conclusions, and declared that his petition for the dead was inexpedient as well as illegal.

"A Welsh vicar has addressed a protest to the Bishop of Llandaff on this subject. In 'much sorrow of heart' he feels it his duty to explain to his parishioners his 'total inability to countenance what is nothing short of an official act of public disloyalty and episcopal illegality.' The Bishop of Llandaff replied thus: 'I have to acknowledge your letter . . . in which you were good enough to inform me that it is your deliberate intention to break one of not the least important of your ordination vows, and that you consider yourself more competent than the two archbishops and all their suffragans to decide what is the teaching of the Church of England. Will you allow me to add that in my opinion you would spend your time more profitably if you devoted a little more of it to prayer for a Christian's grace, which, to judge from your letter, you seem greatly to need—the grace of humility.'"

Another prelate, however—the Bishop of Worcester—was not inclined to be so tolerant of the primate's views on prayer for the departed. In a circular letter, which *The Saturday Review* characterizes as a "purely partizan pronouncement," he requested his clergy not to use the forms of intercession authorized by Dr. Temple. *The Saturday Review* (March 24) says of this letter:

"In the first place, it is a gross breach of good manners in face of the attitude of the Archbishop of Canterbury. In the second place, it displays a narrowness of spirit entirely unworthy of the English bench. Merely because he himself does not want to remember his departed relatives and friends in public prayer, Dr. Perowne resents the liberty to do so being granted to those who do feel the want. It is a painful exhibition of intolerance, and in one who could be very tolerant of doctrines even skeptical of

the divinity of Christ, it is worse than intolerant. . . . Toleration would surely allow its use in churches according as the worshipers and clergy felt the need of it. But the bishop draws no distinction between churches where the whole regular congregation would be in favor of using the form in question and those where they would be against the use. This seems to us the height of intolerance."

Many students of religion believe that a change is coming over the evangelical Protestant world as well as the Anglican Church with respect to intercession for the departed. An editorial in *The Standard* (Baptist, February 24) would appear to lend support to this belief. The writer says:

"They that have gone away from us to the good home beyond do not need our prayers. In the keeping of God they are safe and blessed; looking upon the face of their King they are full of joy, and all their sorrow has passed away. This we know because it is written in God's book, and because we are sure heaven must be better than earth. May we not then ever pray to our Father on their behalf? In that most bitter hour when death comes between us and those that we have loved better than life, shall the only prayer be for ourselves, that we may bear it? Never before have we asked anything for ourselves that we have not wished for them. Never have we prayed for patience that we have not besought a richer blessing for them. A mother has lost her child; lost him not forever, because she shall go to him, tho he can not come to her. But he is gone beyond her sight and speech. The boundless reach of her love is not yet daunted; she thinks of him, she longs for him, in her dreams she lifts him in her arms and is comforted to find him cradled there. Shall we seal her lips when she would tell the All-Father of that little son that needs His care? Not for his sake, let us say, but for hers, let that trembling prayer go up to heaven."

"Let us lift our eyes above the strife of men and doctrines," adds the writer, "and seek the truth that lies behind the ancient error." And *The Standard* quotes approvingly the following prayer written by the late Mr. Gladstone, the tender simplicity of which, it says, "may bring a new consolation to some sorrowing heart":

"O God, the God of the spirits of all flesh, in whose embrace all creatures live, in whatsoever world or condition they be, we beseech Thee for him whose name and dwelling-place and every need thou knowest. Lord, vouchsafe him light and rest, peace and refreshment, joy and consolation, in Paradise, in the companionship of saints, in the presence of Christ, in the ample folds of Thy great love.

"Grant that his life may unfold itself in Thy sight and find a sweet employment in the spacious fields of eternity. If he hath ever been hurt or maimed by any unhappy word or deed of ours, we pray Thee of Thy great pity to heal and restore him, that he may serve Thee without hindrance.

"Tell him, O gracious Lord, if it may be, how much we love him and miss him, and long to see him again, and if there be ways in which he may come, vouchsafe him to us as a guide and guard, and grant us a sense of his nearness in such degree as Thy laws permit.

"If in aught we can minister to his peace, be pleased of Thy love to let this be, and mercifully keep us from every act which may deprive us of the sight of him as soon as our trial time is over, or mar the fulness of our joy when the end of the days hath come.

"Pardon, O gracious Lord and Father, whatsoever is amiss in this our prayer, and let Thy will be done, for our will is blind and erring, but Thine is able to do exceeding abundantly above all that we ask or think; through Jesus Christ our Lord. Amen."

The Philadelphia Religious Census Again.—The full returns of the religious census taken in Philadelphia on Washington's birthday are now complete and have excited a good deal of interest throughout the country. *City and State* (Philadelphia, April 5) gives the following summary of the report of the committee in charge:

"It is estimated that the total number of persons reached or

included in the record of the census was, in round numbers, 1,135,000, which, it will be seen, falls considerably short of the population of the city. The total records—meaning families, presumably—is set down at 283,811, and these all, except 30,000 and over, were taken on the day originally arranged for—February 22. About 5,000 representatives of the churches, it is stated, were engaged in the work of enumeration. The larger religious divisions or classes of a denominational sort indicated in the report of the committee are Roman Catholic, 75,490, the other religious bodies including nearly all the rest, saving the Jews. Besides these there was a sprinkling of other non-Christian and a few non-religious bodies. The Methodists numbered 38,804; the Presbyterians of all kinds, tho the Reformed should have been included in that classification, were 31,075; Episcopians of all kinds numbered 30,184; Baptists, 27,293; and Lutherans, 19,270. Tho Philadelphia is widely known as the Quaker City, the Friends are put down as numbering only 1,925. The Jews number 8,538. The enumerators found 6,814 vacant houses: at 7,810 places called at no one was found at home, or the call was not answered; 5,180 responded to the call, but refused to give information; and 17,388 dwellings were found occupied by those claiming to have no religious preference. Not a few in the city who expressed beforehand their interest in the canvass and had high hopes of its usefulness complain of disappointment, and think the enumeration largely worthless."

AN ATTACK ON THE ROMAN CATHOLIC CHURCH IN FRANCE.

THE recent trial and condemnation of twelve Assumptionist priests in Paris is thought by many to be the beginning of another anti-clerical movement such as characterized the earlier days of the Third Republic. A very sweeping attack on the French religious orders is made by M. E. Saint-Genix in *The Contemporary Review* (March). The first point of his indictment is that altho nominally they have foresworn the world, the religious orders have become more worldly even than the worldlings themselves. He writes:

"Monks and nuns are found nowadays occupying all the highways and byways of life, and French Liberals complain bitterly in consequence; trades, industries, and professions are invaded by them to the detriment of the family-supporting layman. You can buy of Franciscan friars beer brewed by Cistercian monks, drink tea, coffee, or chocolate imported and sold by pious Trappists, who themselves never taste any of these concoctions; finish up your dinner with a glass or two of liqueur distilled by holy but rival anchorets, who are believed to have fled in horror from this world of sin and sorrow, and buried themselves in a cloister, in order to give themselves wholly up to God; you can polish the enamel of your teeth with patent powders and sweeten your breath with marvelous elixirs invented by men of God who have themselves no further use for either; you can get shod by enterprising Assumptionists, have your purple and fine linen made by nuns or their orphan slaves, and generally get your perishable body as well as your immortal soul taken in and done for by the members of modern congregations. In certain walks of literature, in the less dangerous domains of science, in the work of education, and, above all, in the schemes and intrigues of subterranean, as well as in the debates of daylight politics, they are indefatigable organizers, clever leaders, venturesome pioneers. . . . On the Continent, especially in Central Europe, a zealous priest will frequent public-houses, chat and crack jokes with the workmen, coax them to the church, and keep them there by means of chains the very furthest links of which can not be said to reach to heaven. The well-known Jesuit, Father Abel, of Vienna, highly approves and zealously employs these latter-day methods. In a speech which he made some months ago to a number of pilgrims in Altötting he said: 'In Vienna I act on this maxim: I catch more people with a glass of beer than with an Ave Maria. I certainly do not exclude the Ave Maria, but to cap an Ave Maria by quaffing off two half-measures, that is a thing I relish. . . . But I will not have anything smacking of the devotee. . . . I tell you frankly those feats which we have accomplished in Vienna have been effected less in the church than in the public-

house. . . . The main point is confession. If a man has confessed well, he will pray a little, and then he is gay and jolly.' Father Abel then went on to describe the nature and extent of the successes which he obtained by this up-to-date method. In Mariazell he once got one hundred and five men to confess to him at a single sitting, sinners whose confessionless years amounted together to eighteen hundred! A second address to the same hearers was begun by Father Abel with the comforting assurance that he would keep them but a very short time so that they might soon get back again to their glass of beer! In this simple way is the great conversion trick performed!"

The value of the property owned by the congregations in France is officially estimated at 100,000,000 francs, altho this is far below the real amount, says M. Saint-Genix. Money and scrip, he says, valued at over a million and a half francs, was found in a single Assumptionist convent searched by the Government last November.

M. Saint-Genix also blames the religious orders for encouraging what he calls quasi idolatrous and debasing devotions to certain saints like St. Anthony, of Padua, carried on, he says, in a spirit of childish fetishism. Quoting from the records kept in various French religious papers, he says:

"Thousands of honest, hardworking people, men and women, rich and poor, young and old, priests and laymen, seriously and solemnly treat St. Joseph and St. Anthony as the sage-age deals with his fetish. There is no essential difference. They flatter, supplicate, and pay him, bribe him and tickle his self-love. Moreover, the worshiper in both cases calls on his little protector to help him to whatever he wishes, and he never asks himself whether the object of his desire is good, indifferent, or bad, nor whether he has any right to it, nor even whether he could not obtain it by his own unaided efforts if he only put them forth. He is in a hurry, as people generally are nowadays, and always takes the short cut, which is a vow to the saint, the promise of a number of candles to his shrine, or, better still, a sum of money to the reverend fathers who play the part of middlemen, and the bargain is struck. . . .

"Whimsical as the pious lads are, the pious girls are much more exacting. Thus, one of them, who applies in the month of April, asks 'for the success of a marriage *before the month of May*,' which is very short notice, even for a saint who makes marriages in heaven. But St. Joseph is evidently regarded as an old hand at match-making, for a young lady comes forward to thank him for that 'instead of one husband asked for she has the choice between two.'"

M. Saint-Genix continues at considerable length to narrate from the French and German religious press instances of these singular religious cults of the French masses. One of the most interesting of these phenomena is the following report narrated in *Le Siècle* (March, 1899, p. 122). He says:

"The subscriber whose story I am now about to give is a nun who, finding that the parish priest was not zealous in the support of clerical schools, prayed to St. Anthony and to St. Joseph for his speedy removal. And the two saints removed him with a vengeance, not only from the parish but from the planet as well. At this the pious sister who had promised five francs for the poor of St. Anthony and the publication of the incident for the greater honor and glory of St. Joseph, comes forward to carry out her vow with zeal and gratitude, not with horror and repentance. . . .

"It is not easy for ordinary outsiders to understand how the morality underlying these sentiments can be made to dovetail with any form of genuine Christianity. It needs a peculiar intellectual twist and moral warp in order to see things spiritual in that Chinese perspective. And yet that lady is the person who has been for years teaching the elements of morality to children with minds like wax.

"Yet the church is obstinately silent on a subject of such vast importance as the deliberate and gross materialization of the ethics of Jesus. Catholicism is being methodically turned into crass fetishism, and the mass of the people, their minds steeped in rank superstition, are being fleeced of their hard-earned wages on the falsest of false pretenses, for the material profit of the

church, and no voice is heard protesting. If public opinion be ever sufficiently aroused on the subject, and the Vatican shamed into taking some tardy steps to suppress the scandalous abuse, Catholic men and women of the intelligent classes will then raise their voices loudly enough against it and take credit for their courage. But at present and for years past they are and have been silent. Now which of these two evils is the more baleful: the belief held by Professor Mivart that after all hell may not be quite so hot as it has been described, nor the devil quite so black as he has been painted, or the cold-blooded system of trafficking on the groundless hopes, fears, and delusions of millions of hard-working men and women kept in dense ignorance for that special purpose, and literally of sucking the life-blood of a confiding and well-meaning people? Yet Rome has eyes, ears, and thunders only for the humane opinion, and remains stone blind, deaf and dumb when the fishers, not of men's souls, but of men's silver and gold, carry on their traffic under the cloak of religion, and keep an entire nation in the mental condition of savages. . . .

"In this way the Roman Catholic Church has degenerated in France, and become a bloodsucking vampire of a kind probably unmatched in history. It keeps tens of thousands in intellectual thralldom and material poverty, that its own ministers may wax fat. And it is on account of these and similar practises that French Liberals are now violently and vainly agitating to bring about the expulsion of the congregations which have organized and are directing the movement."

THE LATE RABBI WISE.

DR. ISAAC M. WISE, who died at Cincinnati the latter part of March, was commonly regarded as the pioneer and leading apostle of what is known as Reformed Judaism, a career for which his eloquence and natural qualities of leadership admirably fitted him. The Hebrew Rabbinical College at Cincinnati, the Union of American Hebrew Congregations, and *The American Israelite* were each founded by him. Altho eighty-one at the time of his death, he was head of the Conference of American Rabbis and was still preaching to his congregation in Cincinnati on the last week of his life.

DR. ISAAC M. WISE.

history of Cincinnati and identified with what is most active and best in the life of the United States, his adopted country. The new leadership, if leadership is found, can not build on the conclusions of Dr. Wise, but must build on his stalwart integrity, his fearless frankness, his civic sympathies, his splendid energy, and tireless ability."

The American Hebrew (Jewish, New York) says:

"Introduced to American Judaism at the end of the 'forties,' he found it very generally of the caliber and consistency of the Judaism of 'cross-town' here in New York. That is to say, devoutness took the shape of formalism; piety was held to consist in attention to ritual details in the home and synagog life; while the public service in the latter was of the perfervid and disorderly variety of worship. He saw that such things were not suited to this country and to our circumstances in the New World; he saw

that enlargement would unfailingly bring allurements toward a less restricted life, one less bound round with ritual, precept, and 'din.' He saw that the synagog, above all, as the place of public appearance for the new Judaism he was sure would here rise, needed to be regulated and conformed with other ideas of decorum and impressiveness than ruled in European ghettos. He saw these things, and fortunately possessed the faith—one might almost say the temerity—to preach these betterments, and with voice and pen to urge and push them."

HAS THEOLOGY STANDING AS A SCIENCE?

A SINGULAR controversy on the status of theology as a science is attracting general attention in Germany, and has called forth articles by leading theological professors, such as Harnack of Berlin, Loofe of Halle, Jülicher of Marburg, Cremer of Greifswald, and Seeberg of Berlin. The occasion for this controversy is the radical work of Professor Häckel, of Jena, the leading Darwinian of Germany, entitled "Weltratsel," and the series of books being published by the veteran Tübingen law professor, Thudichum, entitled "Kirliche Fälschungen" (see *THE LITERARY DIGEST*, January 20). In these works all the canons of the theological scholars are defied, and credence is given to such stories as that Christ was the illegitimate child of Mary and a Roman soldier, and that the four gospels were adopted as canonical by the Council at Nice out of fifty and more apocryphal records of the life of Christ, because these four, in answer to the prayer of the bishops, sprang from the floor upon a table in the presence of the assembled ecclesiastics.

These works were a challenge to theologians that demanded a reply, and this was not long forthcoming. The first to reply was Professor Loofe, who in the *Christliche Welt* (No. 45) gave Häckel a vigorous lashing, denouncing his methods as utterly unworthy of a scholar. Professor Harnack, in the same journal, (No. 49) asks why it is that outsiders can, without fear of making themselves contemptible in the eyes of the whole learned world, venture into the domain of theology as Häckel and Thudichum have done. Harnack says in substance:

On all matters of theology, the most foolish things can be represented as facts, and things may be called into question and the best of authoritative evidence be pushed aside and all that scientific theological investigation has taught can be ignored, and yet the perpetrator can continue to enjoy the reputation of a learned professor. Why has not theology been able to vindicate itself as a science equal in standing to other sciences? Is it not because there is a general suspicion that it has certain secrets to hide, that it is not perfectly honest and open, and therefore not pursued on the same principles that control scientific research in other lines? Is it not for this reason that theology as a science does not enjoy the respect in the eyes of the learned world that by common consent is accorded to other sciences? Here a great work is still to be done by the advocates of genuine theological science.

This view of the case, however, is not shared by other equally prominent theologians, least of all by the more conservative. Further discussion has ensued. In the Berlin *Kreuzzeitung* (No. 593) Professor Cremer writes in substance as follows:

It must be acknowledged that theology is looked at askance by many scholars, and that attacks of the most silly kind can be made by non-theologians upon the teachings of theology without their losing caste; but this will continue to be the case as long as theology must deal with matters that belong to a sphere beyond and above the natural. As long as the fundamentals of Christianity are not accepted, with the great supernatural verities concerning the person and work of Christ, the Trinity, the Atonement, and the like, theology must despair of a recognition by outsiders as a science of the same kind with those that deal with secular matters. Nor can theology afford to secure for itself a wider recognition on the part of non-Christian science by the sacrifice of any of the cardinal principles that belong to it

very life, but which are not the objects of scientific analysis. The story of the birth of Christ, of the resurrection, of the ascension, must be maintained as historical truths absolutely essential to theology and to the church; and if these are the things that theology is suspected of hiding and not treating in the light of day, as Harnack seems to suppose, the reply must be that it would be fatal to secure, by a compromise of such essentials, recognition as a science.

Seeberg, the new conservative member of the Berlin faculty, in the same periodical (No. 601) expresses his full agreement with these views of Cremer, but adds the following considerations:

It must not be forgotten that theologians themselves are to a great extent responsible for the fact that theology is looked upon with contempt in many scientific circles. There are controversies in every department of science, but in none is the personal bitterness so pronounced as in theology. Disagreement in principles becomes personal animosity. This old *odium theologicum* which Melancthon so keenly deplored is largely responsible for the relatively low status of theological science.

In the mean while, Hückel has not been silent. In a newly established Leipsic monthly, called *Kritik und Anti-Kritik* (No. 2), he has endeavored to fortify his position. From this reply, it appears that he based his charges against early Christianity on information derived from the Talmud, on statements of the anti-Christian writers of the first centuries, and on other similar hostile sources. Thudichum has not replied; but he continues to publish his little books, in the latest of which he practically makes Christianity the manufactured product of a priest party of the fourth and fifth centuries.—*Translations made for THE LITERARY DIGEST.*

A SCRIPTURAL ANGLO-BOER CONFLICT.

MR. JONAS A. SMYTH, an American citizen who believes that the British cause in the present war is the just one, has lately attracted attention through a unique correspondence, by cable, with the President of the South African Republic. The correspondence is given in the *New York Sun* (March 29). Mr. Smyth wrote under date of October 19 (from Chicago) soliciting from President Kruger a justification of his attitude toward England and the Uitlanders. Mr. Smyth was surprised to receive the following answer by cable: "Psalm xxxv., verses 11 and 12, and 19 and 20." These are the verses of the Psalm:

False witnesses did rise up; they laid to my charge things that I knew not.

They rewarded me evil for good to the spoiling of my soul.

Let not them that are mine enemies wrongfully rejoice over me; neither let them wink with the eye that hate me without cause.

For they speak not peace: but they devise deceitful matters against them that are quiet in the land.

Mr. Smyth cabled back: "First Timothy, vs. 1 and 2":

Paul, an apostle of Jesus Christ, by the commandment of God, our Savior, and Lord Jesus Christ, which is our hope:

Unto Timothy, my own son in the faith: Grace, mercy, and peace, from God, our Father and Jesus Christ our Lord.

President Kruger's reply was: "Zechariah, ix. 8":

And I will encamp about mine house because of the army, because of him that passeth by, and because of him that returneth; and no oppressor shall pass through them any more: for now have I seen with my eyes.

Mr. Smyth replied by mail, quoting Ezek. xxxii. 2-6:

Son of Man, take up a lamentation for Pharaoh, King of Egypt, and say unto him, Thou art like a young lion of the nations, and thou art as a whale in the seas; and thou camest forth with thy rivers, and troubledst the waters with thy feet, and fouledst their rivers.

Thus saith the Lord God: I will therefore spread out my net

over thee with a company of many people; and they shall bring thee up in my net.

Then will I leave thee upon the land, I will cast thee forth upon the open field, and will cause all the fowls of the heaven to remain upon thee, and I will fill the beasts of the whole earth with thee.

And I will lay thy flesh upon the mountains, and fill the valleys with thy height.

I will also water with thy blood the land wherein thou swimdest, even to the mountains; and the rivers shall be full of thee.

By return mail President Kruger quoted from Matt. vi. 34:

Take, therefore, no thought for the morrow; for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof.

Mr. Smyth again resorted to the cable, sending Hosea x. 13:

Ye have plowed wickedness, ye have reaped iniquity; ye have eaten the fruit of lies: because thou didst trust in thy way, in the multitude of thy mighty men.

Each of the controversialists had up to this time paid his own tolls. Mr. Kruger's next reply came by cable marked "Collect," and was Jer. xviii. 20-22:

Shall evil be recompensed for good? for they have digged a pit for my soul. Remember that I stood before thee to speak good for them, and to turn away thy wrath for them.

Therefore deliver up their children to the famine, and pour out their blood by the force of the sword; and let their wives be bereaved of their children, and be widows; and let their men be put to death; let their young men be slain by the sword in battle.

Let a cry be heard from their houses, when thou shalt bring a troop suddenly upon them: for they have digged a pit to take me, and hid snares for my feet.

The controversy continued some time longer; Mr. Smyth, who opened it, having the last word, which was from Mal. ii. 8, 9:

But ye are departed out of the way; ye have caused many to stumble at the law; ye have corrupted the covenant of Levi, saith the Lord of Hosts.

Therefore, have I also made you contemptible and base before all the people, according as ye have not kept my ways, but have been partial in the law.

WHAT IS SIN?

THE sense of "sin," which was apparently absent from the religious conceptions of the Greeks, but which found its way into the world's thought through Judaism and Christianity, has so profoundly influenced the European races during the past fifteen hundred years as to constitute the basis on which most of their theology and sacramental rites have grown up. Now once more the so-called pagan doctrine of the inherent sinlessness of man seems to be asserting its claim to attention, in the many forms of philosophical idealism which are springing up, such as Mental Science, Christian Science, and the "New Thought." An exponent of the latter school of metaphysics, Mr. Henry Frank, head of the new non-sectarian, non-Christian movement in New York known as the "Metropolitan Independent Church," gives his view of the doctrine of sin and its effect upon the world (in *The Independent Thinker*, February-March). He writes:

"As between the two doctrines of 'total depravity' on the one hand, and the theory of ideal human sinlessness on the other, I would unhesitatingly proclaim the latter. The former doctrine, preached so vigorously for many ages, resulted in the deterioration of human morals, because it was pessimistic and disheartening. It taught man that he was by nature full of sin and the seed of destruction, and by no effort of his own could he ever lift himself above his innate degradation. Only by an exercise of irrational and blind faith in some inscrutable Power could he ever be redeemed, and that only by supernatural interference. The result was that man's will power was weakened; his native timidity and terror in the presence of the unknown and incom-

prehensible were intensified, till he sank into the cowardice of religious resignation and shallow stupidity.

"But in our day the older optimistic theory of man's native and persistent purity has been revived, and with it all the concomitant cheer and hopefulness for which humanity yearns. Because the expression 'There is no sin' has been perverted by the ignorant or the vicious, it has been denounced as the revival of diabolism, and throughout Christendom hands of 'holy horror' have been lifted against it. But serious and sincere thinkers can not be so easily deceived or discouraged. To the sinless man there is indeed no sin. To that Ideal Man of whom the race has ever vaguely or vividly dreamed, the idea of sin is never present. To approach that Ideal, to seek day by day and hour by hour to realize it—that is the trend of this new-old philosophy—that is the force of this seemingly latitudinarian doctrine. But, as I have above intimated, the theory of sin has been rendered unscientific and unphilosophical, because the standard of judgment has been perverted. Man has assumed a definition of Deity (purely hypothetical), and then has undertaken to judge every human action by comparison with this artificial standard. Here was an effort to establish in morals as well as religion the rule of the majority, which here as elsewhere proved to be a tyranny. . . .

"What is virtue to the Mussulman is vice to the Christian. What was vice to the Jew was enlightened morality to the Greek. The solemnity of the Egyptian temple was scandalized by the voluptuous abandon of the Corinthian worship. The conception of sin has always been complexioned by climate. The social freedom of the tropics shocks the denizens of the colder zones. In the far isles of the Pacific the inhabitants are sufficiently clad, beneath the burning suns, with naught but nature's raiment. The bliss of innocence sits undisturbed on their uneducated brows. But where northern tempests howl, where snow and ice imprison earth for half the year, exposure is a vice, because it is an inconvenience; and habit has crystallized the notion into a religious conviction. To the eye of the voluptuary the nude is debasing; to the artist it is exalting.

"What sin is, therefore, can not be decided by any fixed or positive standard. Sin is not an abstract quality; it is purely relative, and dependent alone on the judgment of the individual. Sin is a subject of education and environment; not of authority or imposition. No man may justly declare another to be a sinner. He who declares another to be a sinner reveals himself as such. No other rational meaning can be attached to the words of the Great Master, 'Judge not, lest ye be judged.' That is, declare not what you think another's motives to be, for in doing so you expose the fact that you yourself, if similarly situated, would be inspired by such motives."

A PLAN FOR CHRISTIAN UNITY.

SOME time ago we quoted from an article entitled "The Disappointment of Jesus Christ," by the Rev. Algernon S. Crapsey, rector of St. Andrew's Church (Prot. Episc.), Rochester. Mr. Crapsey has now republished this article on church unity in pamphlet form, and in an appendix he formulates more definitely the lines along which he believes such union should proceed. In view of the fact that Mr. Crapsey has hitherto been regarded as a high churchman, his plea for "absolute intellectual freedom within the church" as one of the essential grounds of unity may be regarded as significant of some tendencies in the American Episcopal Church. The appendix, which is quoted with approbation in *The Ascension Record* (Prot. Episc., March), the editor of which is the Rev. Percy S. Grant, secretary and associate of Bishop Potter in his recent Oriental tour, is as follows:

"First: The subordination of the official organization of the church, from the highest to the lowest of its members, to the church itself, as practised in the Primitive Church, as decreed by the Western Church in the Council of Constance, and as affirmed by the principles of the Protestant Reformation.

"Second: The pastoral rather than the priestly conception of the ministry. It is the office of the ministry to bring the people to God, rather than to be to the people instead of God.

"Third: The statement of Christian doctrine so that it will be

in accord with the facts of the visible universe, as these are discovered and formulated by the processes of inductive thought. The earth's form and motion, man's place in the earth, his past history and present condition, are matters for scientific investigation and settlement.

"Fourth: The statement of Christian doctrine so that it will not conflict with the great primal instincts of the human heart; the instinct for justice, mercy, and truth. No man will be compelled to believe such a doctrine as that of everlasting punishment as taught by St. Augustine in 'The City of God,' or the doctrine of predestination as taught in 'The Institutes of Calvin.'

"Fifth: Absolute intellectual freedom within the church, so that every opinion shall have a hearing, and be taken for what it is worth; to have the force of its author's personal character, learning, and wisdom; and to establish itself by its own truthfulness or not at all.

"Sixth: The submission of the entire content of Christian tradition, both oral and written, to the trained intelligence, that the content, meaning, and value of the whole and of each part may be ascertained, correctly estimated, and set forth, 'That those things which are not shaken may remain.'

"Seventh: The restoration of the church's moral discipline as the only true basis of her spiritual life."

Tolstoy and the South African War.—Everybody knows that Tolstoy's religious principles are at one with the Quakers' on the subject of war. The recent report of an interview in which he is represented as saying that every time he takes up his morning paper he hopes to read of a Boer victory seemed to indicate that his sympathies might, for the time being, have run away with his principles. *The Friends' Intelligencer*, however, gives a corrected version of the reported interview that seems to be more consistent with Tolstoy's character. It publishes a private letter from "a correspondent abroad, enjoying intimate relations with Count Tolstoy." The count is quoted as follows:

"Of course I could not have said, and did not say, what is attributed to me. What really took place was this: a newspaper correspondent came to me as an author wishing to present me with a copy of his book. In answering a question of his as to my attitude toward the war, I mentioned that I had been shocked during my illness to catch myself wishing to find news of Boer successes, and that I was therefore glad to have an opportunity, in a letter to V—, to express my real relation to the matter, which is, that I can not sympathize with any military achievements, not even with a David opposed to ten Goliaths; but that I sympathize only with those who destroy the cause of the prestige of gold, of military glory, and above all the cause of all the evil, the prestige of 'patriotism,' so called, with its pseudo-justification of the slaughter of our brother men."

RELIGIOUS NOTES.

CARDINAL CAPOCIATRO, Archbishop of Capua, according to *The Outlook* (New York), holds opinions opposed to those of the Vatican organs: "He counsels obedience to civil authority; he advises recognition of the actual government in Italy; he even considers the independence, the liberty, and the unity of the nation as genuine blessings."

DR. M. W. STRYKER, president of Hamilton College and lately acting as temporary pastor of the Church of the Pilgrims in Brooklyn, is celebrated for his skill in making epigrams. In a recent sermon on "Loving-kindness," referring to what sometimes goes under the name of love, he said that it was often a case of "matrimony, ceremony, sanction, ceremony, and alimony."

DR. FRANCIS EDINGWOOD ABBOTT, once editor of the old Boston *Index* (Freethought), and a scholar and metaphysician of notable power, has lately issued a pamphlet entitled "World Unity in Religion and Religious Organization," published by the First Free Church of Tacoma, of which he is a member. He says:

"Our little church differs from all the other churches in acknowledging our ultimate human dependence upon nothing but the ideal whole of all churches, namely, the Universal Church of Mankind; and in refusing to acknowledge as our true whole the Unitarian church, or the Protestant church, or the Christian church, or any other mere sect of religion. This is our difference, and it is vital. But we resemble all other churches in striving to live the upward life toward the human-divine ideal; and this resemblance is just as vital as the difference."

British columns are always in danger of isolation and defeat. The Boers certainly are not demoralized, according to the latest correspondence from Africa. The *Süd-Afrikanische Zeitung* says:

"The Boers do not underrate the difficulties which beset them, but they still believe themselves able to win. The English can only hope for success if they have sufficient cavalry. They have only enough to guard their infantry and artillery against sudden attacks by small troops of Boers. We will suppose, however, that Pretoria is reached at last. A regular siege must then begin, for which the field artillery of the British is ill adapted, as it will be opposed by heavy guns. There is a sufficient supply of ammunition and provisions to last the place a year. The main body of the Boer army, however, will not lock itself up in Pretoria. It will endeavor to cut the communications of the besiegers, and the Boers firmly believe that the British army can not lastingly defend the railroad, and that a series of sudden attacks is certain to demoralize the British army."

It has been suggested that the death of General Joubert might seriously affect the Boers, but this is denied. Joubert, it is said, was more noted for his success as an organizer than as a strategist. In regard to ammunition, the *Volkstem* reports that the Modderfontein works supply smokeless powder, shot and shell, and small-arms ammunition in sufficient quantities. A speedy ending to the war is therefore to be expected only when the Boers become convinced of the uselessness of the struggle. The *Frankfurter Zeitung* says:

"It may be that the Boers will not continue the war much longer, either because they regard it as useless, or because they think that it is the will of the Almighty that they should be deprived of their freedom. But it may also be that they are determined to defend every inch of ground by guerilla warfare; that they will rather risk their lives and the lives of their women and children than surrender. Has Lord Salisbury thought of the effect of this? Already the warm sympathies of the entire civilized world are with the Boers. If they fall as did the Spartans at Thermopylae, the English may be hated so much that it must affect their future considerably."—*Translations made for THE LITERARY DIGEST.*

WILL HOLLAND AND GERMANY UNITE?

FOR a long time the people of Holland have believed that the position of their country, including the safety of its immensely rich colonial possessions, is assured, partly by treaties guaranteeing the neutrality of the Netherlands, partly by the jealousy of the other powers. The ease with which the United States has possessed itself of the belongings of Spain, and the absence of an international combination for the protection of the Boer republics, have, however, rudely awakened the Dutch.

This feeling of insecurity leads the Dutch more and more to think of an alliance with some more powerful nation. Germany alone seems to be considered as a possible ally, and the correspondent of a Swiss paper, the *Neue Züricher Zeitung*, declares that the idea of a German-Dutch alliance is making strong headway. He says:

"Since a prominent Dutch paper first suggested the idea, it has not been allowed to drop from public discussion. The Hague journal at first only suggested a customs union; but the brutal annexation of the entire colonial possessions of Spain on the part of the United States has aroused the fears of the Dutch, and they turn to Germany as their natural protector. It will be remembered that the idea of a customs union was found to be impracticable, both in Germany and in Holland, owing to the divergence of economical interests. But since the beginning of the South African war the Dutch are much disturbed. This unjust attack upon the Boer republics is felt as much here as if they were part of Holland, and their annexation will leave as painful an impression."

"Moreover, what is to be done if the United States, or England, or even Japan makes a grab for the Dutch colonies? Noth-

ing, it is argued, can prevent their loss but an alliance with Germany. Hence the idea of an offensive and defensive alliance is visibly gaining ground. No doubt there is strong opposition on the part of those who fear that, after all, Holland's independence may not be unquestioned if she allies herself with Germany; but Holland's wealth is in her colonies, and there is no other way to preserve it."

The *Indépendance Belge* (Brussels) has interviewed a noted Belgian diplomat with regard to this question, who expressed himself to the following effect:

The suggestion of Eduard Hartmann that Holland should incorporate herself with Germany somewhat after the manner of the union of Sweden and Norway, will never be adopted. The Dutch people are too jealous of their independence for that. It is certain that the German Government encourages this Pan-Germanic movement; but the German press is, on the whole, prudently silent on the subject. It is also certain that the other powers would not quietly allow Germany to gain such an advantage, as two treaties, those of 1815 and 1835, guarantee the independence of Holland. But the Germans are patient, they can wait, and they may reopen the campaign at some future time, if it fails now. The matter certainly furnishes food for reflection. —*Translations made for THE LITERARY DIGEST.*

POLITICAL DEVELOPMENTS CAUSED BY THE BRITISH SEIZURE OF GERMAN VESSELS.

MUCH dissatisfaction has been aroused in Great Britain over the publication of a blue-book on the seizure of German steamers made a few weeks ago by British authorities in South Africa. Graf von Bülow, the German minister of foreign affairs, at the time of the seizure used terms in the Reichstag which allayed the fears expressed by some members that German interests had not been protected with sufficient energy. *The Times*, *Daily Mail*, *Telegraph*, and other intensely patriotic English papers intimated that von Bülow was merely "playing to the gallery." The correspondence just published shows, nevertheless, that the German ambassador had been instructed to be very explicit. The following note addressed by Graf Hatzfeld to Lord Salisbury is the one regarded as most objectionable by many English papers:

"I have the honor to request that orders may be given for the immediate release of the steamers. I am further instructed to request you to cause explicit instructions to be sent to the commanders of British ships in African waters to respect the rules of international law."

Many papers throughout the empire openly demanded at the time that England should assert her right to rule the seas, and the news that Great Britain will have to pay the injured steamship company was not everywhere received with equanimity. Thus the *Hongkong Telegraph* said:

"It is somewhat difficult to credit Reuter's statement that besides having irritated Germany we shall be obliged to pay a heavy indemnity for the detention of the *Bundesrath*. . . . May it not be that the telegram has been mutilated and that it should have read as continental opinion and not as a fact? If we are not allowed to search neutral ships, then any little twopenny-halfpenny state which happened to be at war with us could obtain all the arms and ammunition it required by the simple expedient of shipping them in foreign bottoms. We hope there is a mistake somewhere."

The British Government, however, admits the claims, and the company has been instructed to name the amount of its losses. The *Leeds Mercury* fears that very little was needed to precipitate a conflict. The *London Star* says:

"It was, of course, the right of the German ministers to protest. But they did so in despatches of full-blooded Bismarckianism; despatches, in fact, which verged almost on an 'insulting ultimatum,' calling as they did for the immediate release of one of

the detained vessels, and 'requesting'—mark the word 'requesting'—Lord Salisbury to 'cause explicit instructions to be sent to the commanders of British ships in African waters to respect the rules of international law, and to place no further impediments in the way of trade between neutrals.' Needless to say, Lord Salisbury was shocked at this imitation of the Chamberlain method. He had been accustomed to the dulcet tones of the von Bülow flute, and was rather startled at this sudden bang on the big drum."

The Standard thinks Lord Salisbury saved German *amour propre* without compromising British interests. *The Daily News* finds that "there is one thing evident from the despatches. We never had a strong case for interference with these steamships." *The Times* is shocked with Germany's want of politeness. It says:

"If the story which is now told in full had been laid before the British public a couple of months ago, we should have been better able to understand the calculated brutality of the German newspapers, and we should have been spared the trouble of endeavoring to find out how their savage Anglophobia could be reconciled with the customary assurances of the friendliness of the German Government. . . . International intercourse between civilized states is not possible without some respect for good manners and good feeling. Count von Bülow's admirers boast that he is the reviver of the Bismarckian tradition. But to imitate the *Grobheit* of the great Chancellor does not give his disciple any claim to the power or the insight of the original. At any rate, the Germans who think that unmannerly and dictatorial rudeness is the proper method of dealing with this country had better make up their minds that they are on the wrong tack altogether."

The *Manchester Guardian* has a feeling that Lord Salisbury came out "second best," and says:

"*The Times* would lead any one who had not read the correspondence to suppose that Lord Salisbury had won a great diplomatic triumph. The awkward little fact that Lord Salisbury complied with the demands of the German despatch before he complained of its tone is suppressed. *The Standard*, again, is at great pains to show that we were legally right in seizing the German ships, but quite fails to see that the more right Lord Salisbury had on his side the less excusable did his submission become. . . . But what a difference there was between his treatment of Germany's uncivil despatch and his reply to the Boer Presidents! The ideal of the old Roman imperialist, who was not by any means perfect, was 'to spare the vanquished and war down the proud.' The new ideal, it seems, is to yield to the proud and to war down the vanquished."

The *Vossische Zeitung* (Berlin) says that the German Government did not assume a decided tone until it was clear that the English meant to intimidate that Germany would not protect her trade. The *Deutsche Tages Zeitung* asks for evidence that Great Britain is influenced by civility. The *Kreuz-Zeitung* asserts that the French have consuls abroad who know their duties much better than the German officials. It quotes the following note, addressed by M. Amyot, French consul at Lourenço Marquez, to Captain Debonnaire, of the steamer *Cordoba*, which had also been visited by the English:

"You are hereby formally instructed to refuse admittance to officers and sailors of the Royal British navy, as long as you are in Portuguese waters, and until otherwise ordered. You are instructed to use force, if necessary, to prevent such visits."

As a matter of fact, no French vessel was interfered with after that. The *Journal des Débats* (Paris) says:

"What interests us most in the matter is that it furnishes a clue to *The Times*'s new love for France. Only a few months ago Germany was said to defend progress and civilization in unison with Great Britain and the United States against an enemy whom Mr. Chamberlain indicated to be France. Perhaps to-day the thing is turned around. The British press lately carries on a campaign against one continental nation without placing another in opposition to it. It supports itself by continental

enmities which it keeps alive most ingeniously. Blowing cold upon one power, it generally blows hot upon another. But short must be the memory of that country which does not realize the regularity of the phenomenon, and fails to foresee the necessity of preparations for the turn of the tide."

The *Notvosti* (St. Petersburg) declares that whatever Germany may do, she can not escape a war with Great Britain, as German industry and trade compete successfully with British. The same paper adds:

"This economic competition causes political enmity. There is a regular movement against Germany in England, led, as far as the press is concerned, by *The Times*, and this cohort is not at all nice in the choice of its weapons. Their maxim is: 'War with Germany is unavoidable.' The efforts of the German Government to create a fleet can only hasten it. . . . Germany has dared to compete with Great Britain; that is enough."

The Germans themselves certainly hold similar views, for the following, which we take from the *Neuesten Nachrichten*, is only typical of the correspondence received by German papers from London:

"The English papers are full of comments breathing hatred and contempt for the Germans. Partly this is our own fault. The fact that the German abroad endeavors to acquire as soon as possible the language of the people among whom he lives, and his anxiety to conform with his surroundings, arouses the Englishman's contempt. That the Germans are a nation at least equal to the Britons, the latter refuse to admit. The average Englishman believes that the Germans, as a whole, are the most ignorant people in the world, tho there may be a small group of professional thinkers and poets among them. Moreover, the Englishman is convinced that the German believes in British superiority, and is intensely jealous of it. So blind are the English that they actually believe the Emperor to be at variance with his people, but stronger than they, and able to rule without them. All this must lead to antipathies which can not be overcome."—*Translations made for THE LITERARY DIGEST.*

RUSSIA'S ADVANCES IN ASIA.

THROUGHOUT the world the opinion is expressed that Russia's influence in Asia is on the increase, and that Russian troops can attack British India with an excellent chance of success as soon as the Czar gives the order. Mobilization of military and naval forces, long-distance marches of armies, and parades of naval squadrons are indulged in by Russia. Her entire Black Sea fleet was mobilized in the beginning of March, to exert pressure upon Turkey in the matter of railway concessions; but, in the opinion of many continental papers, another object was to give warning to England. The latter country, whose influence in Western Asia has for a long time been as great as that of Russia, is thought to be losing prestige, as the following comment upon the Russo-Persian loan, which we take from the *Mishak*, an Armenian paper, shows:

"As an ordinary financial operation, the matter [the railway concessions] deserves little attention. From a diplomatic point of view, it merely means that British influence is likely to vanish altogether. England realizes this, and her aim is now to strengthen her position in southern Persia, where she still has influence. But even in this she will not succeed if Russia obtains possession of Bender Abbas. Two years ago the Shah's Government wished to conclude an English loan. All formalities had been gone through, and the treaty was ready; but Russia interposed her veto, and the Shah did not ratify the treaty. To-day, when Russia makes a loan to Persia, England protests in a mild platonic way only. England knows that she has lost prestige in Persian eyes, chiefly as a consequence of her serious defeats in the Boer war."

The *Birskheya Viedomosti* summarizes Russian opinion as follows:

Quite a number of responsible British papers picture Persia

already as a Russian province. This is easily explained, from an English point of view. The English statesmen can not imagine Persia as a country which has a right to be perfectly independent. They regard her merely as a territory for constructing strategical roads to India. . . . Evidently the Shah thinks differently. He regards Russia as a natural ally who does not think it necessary to conquer even a very weak neighbor, but is content with friendly foreign relations.

Something seems to be going on in Afghanistan also. The *Kölnische Zeitung* is informed that Great Britain has as silently advanced her military frontier as Russia has advanced hers, and that British troops are now in Candahar. What the Russians are doing is not known, and, since the punishment of an editor who divulged military secrets, it is not likely to be made known. In England, the majority of papers seem to think that "what can't be cured must be endured." *The St. James's Gazette* ends an article on "The Central Asian Peril" with the following sentence:

"But if we do not mean to back up growls by threats and threats by war—and most assuredly we do not—then, in the name of sense and self-respect, let us abstain from the scolding followed by submission to the inevitable which made up our ill-mannered and undignified part in the history of the Russian occupation of Merv and Sarakhs."

The Spectator depends upon the peaceful tendencies of the Czar as the best guaranty that Great Britain will not be seriously disturbed. The *Journal des Débats* (Paris) says on this point:

"The Czar's declaration that Russia does not mean to profit by England's embarrassment is no doubt quite sincere. It is not a question of war with the St. Petersburg authorities. At the same time it is certain that some long-standing differences will be settled. And such settlement must needs result in an increase of Russia's power in Asia. No doubt Great Britain will in the end become mistress of all South Africa; but she will pay for this the price of a notable set-back in Asia, and it can not be said that her Indian empire is to-day as safe as before the Boer war."

The *Tageblatt* (Berlin) remarks that under these circumstances it is easy to understand why Great Britain moves heaven and earth to set Russia and Japan by the ears.—*Translations made for THE LITERARY DIGEST.*

THE CONQUEST OF NORTHERN AFRICA.

WHILE Russia is actively endeavoring to strengthen her position in Asia, her ally, France, is quietly seeking to extend her empire in North Africa. Her most profitable undertaking is at present the opening up of the Tuat country. The *Correspondent* (Hamburg) says:

"The conquest of the Tuat oases was accomplished when In-Salah was occupied. The loss of In-Salah meant for the fierce Tuaregs what the conquest of their chief port meant for the Algerian pirates. In-Salah is the most important point on the overland route between Tripoli and Morocco. It connects the western with the central Sudan, and is on the way to Aïe, to Lake Chad, to Aruan, and Timbuctoo. The Sahara railroad will now be built, and it is quite possible that the nitrate beds may rival those of Chile. French energy has here a wide field, or, as Laforière, alluding to the contemptuous remarks of the representative of another power at the Berlin conference, said: 'The Gallie cock has been given sand without stint to scratch in. We will scratch it, gentlemen. We will put rails upon it, and dig wells in it, and the merry crowing of the cock will greet us from every oasis.'"

But Morocco protests against the occupation of In-Salah, which the Sultan claims as his. Some French cruisers have gone to Tangier, and the long-expected break-up of the last of the Barbary states is threatening, unless the question can be amicably settled between France and Morocco. In England it has been rumored that this question will be used to entice the British fleet

into the Mediterranean, leaving the coast of England unprotected. Yet some English papers advocate British intervention in favor of Morocco. "Great Britain can not idly stand by if this ancient empire is forced into a life-and-death struggle," says *The Morning Post* (London), which is often used as an official organ. On the other hand, warning voices point to the danger of a rising of the Senussi, which would chiefly endanger British rule in Egypt. The *Handelsblad* (Amsterdam), depending chiefly upon French sources of information, says:

"It is rumored that the sect of the Senussi, taking advantage of Britain's troubles in South Africa, is about to throw itself upon the valley of the Nile. Mohammed-es-Senussi is the son of an Algerian doctor-of-law, and was declared to be the true Mahdi in 1859. He preaches morality, hospitality, and strict honesty. Rigid obedience, silence, and chastity are among the requirements of the order of the Senussites, which has nine million followers. The prophet is now fifty-five years old, but only one European, Dr. Nachtigal, has ever met him. He has founded communities in Tripoli, Tunis, Algiers, and Morocco, his influence extends over the Sahara tribes, Somaliland and Senegambia. Everywhere arms have been gathered, and his camels are ready for the holy war which his followers expect him to proclaim at any time."

The editor of *The Review of Reviews* (London) regards this danger as very serious. Mr. Stead quotes from an article in *The Nineteenth Century* to show that "it is indeed the coming of a new Mahdi, no longer merely predatory and conquering, but one endowed with all the moral and intellectual forces which form the basis of a triumphing spiritual movement, a movement which may shake the Mohammedan states, not only of Africa, but even of Asia, to their uttermost foundations." Mr. Threlfall, the writer of the article quoted, says further:

"Failing a war between France and England, it is obvious that the most favorable time for Senussi to act would be when one of the two powers named is embarrassed by a great war, and when it would consequently be unable to put an effective force in the field against him. That favorable moment has at last come. Never since the Crimean war has England been in such a parlous plight. . . .

"As a fighting element, Senussi's followers will be infinitely superior to the wild and ill-armed tribesmen our troops encountered at Abu Klea, Metammah, and Omdurman. Many of them will possess the improved weapons which have been accumulating for years at Jerabub and Joffa. As to their possession of artillery nothing is known, but their remarkable mobility, their wonderful powers of endurance, their marvelous knowledge of this great inhospitable region, coupled with the fact that they can always retreat into the desert whither civilized troops can not follow, are advantages of which they are thoroughly cognizant. If we multiply by a hundredfold the long, exhausting, and costly conquest of Algeria by the French, we may obtain some idea of what a holy war proclaimed by Senussi will mean."—*Translations made for THE LITERARY DIGEST.*

English Tributes to Minister Phelps.—The recent death of Edward J. Phelps, Lowell's successor as our Minister to the Court of St. James, has called forth many words of appreciation in British papers. The *London Times*, in addition to a eulogy one and one-half columns long by its New York correspondent (Mr. Smalley), has an editorial in which it speaks of Mr. Phelps as "one who labored for all that tends to promote the peace of the world and the progress of those social and political principles which are the common property of the English and the American peoples." It says further of his personal qualities: "A very extensive circle of friends in this country mourn the loss of a man lovable and beloved, whose sweetness of nature and personal charm were as fully appreciated here as on the other side of the Atlantic."

The St. James's Gazette and *Westminster Gazette* have biographical sketches similar in tone. Mr. Phelps was, says the latter, "respected by the highest circles in the English metropolis," and he "bound more tightly the bonds of friendship between the two great English-speaking nations." "In England," says *The St. James's Gazette*, "he bore out his reputation among American lawyers as a man of vast learning in his specialty."

PERSONALS.

ELEANOR DUSE is considered the richest actress in the world, not only in artistic gifts, but in material wealth. She was born on a railway train between Padua and Venice, and her birth is registered in the books of the little village of Vigenano as having occurred on October 3, 1858. She comes of a race of actors, for in the time of Goldeni, one of her ancestors, also named Duse, was a famous comedian, and her grandfather was the founder of the Theater Garibaldi at Padua. Her father was Alexander Duse, and was a comedian of considerable fame in his own country. He was the head of a traveling theatrical company. Duse is the first of her family to be an actress, and she is the greatest of all of the Duses. She made her first bow to the public at the age of three years, and has been on the stage ever since. At the age of thirteen years she played *Francesca da Rimini*, and at fourteen, at Verona, the famous performance of *Juliet* that gave her the first breath of fame. It was not, however, until 1879 that she first created a name for herself in other lands than her own, and that was when, at the age of twenty, she acted in "Therese Raquin," when the fame of her powers spread to Paris and London. Duse has received higher prices than any actress who ever lived, for in her own Italy she was paid \$7,000 a night, and when she plays in Paris people willingly pay \$200 a seat to see her.—*Home Journal*.

In the death of Joseph Cowen, England has lost one of her most interesting and picturesque men, says the *Newark Evening News*. His whole life and personality were full of vivid contrasts. He was a millionaire, yet dressed in shabby clothes. As brilliant an orator as ever held the attention of the House of Commons, he was insignificant in

We have no agents or branch stores. All orders should be sent direct to us.

New Summer Suits, \$5.

WE have just received from abroad some entirely new styles in Suits and Skirts for summer wear. We have had these illustrated on a supplement Sheet, which will be sent free, together with our Spring Catalogue and a choice collection of samples of findings, to the lady who wishes to dress well at moderate cost. We make every garment to order, thus insuring that perfection of fit and finish which is not to be found in ready-made goods. *We pay all express charges.*

Our catalogue illustrates:
New Designs in Summer Suits, \$4 up.

In Pique, Crêpe, Cotton, Covert Cloth, Ducks, Linens, etc.

Tailor-Made Suits, \$5 up.

In All-wool Serges, Cheviots, Broadcloths, Covert Cloths, Vests, etc.

Duck, Pique, and Crash Skirts, \$3 up.

Separate All-Wool Skirts, \$4 up.

Bicycle Suits in the newest fabrics, \$5 up.

Separate Bicycle Skirts, \$3.50 up.

Rainy-day Suits and Skirts made of double-face materials.

Our line of samples includes the newest materials, many of them being exclusive novelties not shown elsewhere. We also have a special line of black goods and fabrics for second mourning. All orders filled with the greatest promptness; a suit or skirt can be made in three days when necessary.

Write to-day for Catalogue, Supplement and Samples; you will get them free by return mail.

THE NATIONAL CLOAK COMPANY,
119 and 121 West 23d St., New York.

A HOT BATH IN FIVE MINUTES

So simple any child can use it.

HUMPHREY MFG. & PLATING CO., KALAMAZOO, MICH.

at any time, day or night, summer or winter, fire or no fire, if you have a Humphrey Crescent Instantaneous Water Heater. It is a comfort the more appreciated the longer enjoyed, a convenience which no well-appointed household can do without. An inexhaustible supply of hot water instantly, costing one cent a tubful. An ornament to any bathroom. Guaranteed perfect in every detail. No complicated piping—simply set up and connected with gas and water. You can not afford to be without this great home convenience and luxury. Write to-day for free illustrated price-list and booklet.

stature, of awkward gait, and spoke with a pronounced Northumberland accent. He was an ardent supporter of Lord Beaconsfield's imperial policy, but the friend of every conspirator from Moscow to Madrid, and financed revolutions from his own pocket as readily as other millionaires bought steam yachts. At the risk of his life and through battalions of spies he carried secret instructions to agents in Italy from Mazzini. It was at his house that Orsini, who threw a bomb at the carriage of Napoleon III., and was guillotined for so doing, spent weeks previous to the perpetration of the deed. With such an intensely democratic tendency he was, naturally, a Home Ruler, altho he had taken very little part in political agitation of recent years.

MUSICAL SILENCE.—One evening Sir Arthur Sullivan went to see Rubinstein at his home in London. The Russian composer asked his visitor to step out into the balcony and smoke a cigarette. They sat down, twisted their cigarettes, and puffed the blue clouds into the air. After a long pause Sullivan observed:

"You are a great admirer of Beethoven, I presume?"

"Yes," answered Rubinstein.

"And Wagner?"

"No," was the reply.

That was all. Not another word was spoken. They rocked themselves in their chairs, and smoked away. After a long time Sullivan remarked:

"I think it is time for me to be going."

"Don't say so," said Rubinstein. "Stay a bit longer; it is so nice to talk to you."

Sullivan remained, went on rocking himself and smoking into the small hours, when he at length got up and said:

"I must really be off now; I think we have chatted long enough."

Rubinstein drew out his watch, and shook his head in blank astonishment.

"Half-past two," he said, "Strange how quickly time flies in pleasant company!"—*Collier's Weekly*.

If You feel "All Played Out"
Take Hersford's Acid Phosphate.

It repairs broken nerve force, clears the brain and strengthens the stomach.

AMERICAN WATCH AND DIAMOND CLUB

A BALZAC CLUB for "Literary Digest" Readers

THE UNIVERSITY SOCIETY has decided to offer to a limited number of our readers an opportunity to join a short-time, before-publication, easy-payment BALZAC CLUB. But only 200 sets are reserved for this club.

By joining the club at once, you obtain, subject to approval, one of the sumptuous new sets now in press *at less than half price*.

BALZAC in FICTION—SHAKESPEARE in DRAMA

Readers of the Digest are familiar with the tremendous impetus which the study of Balzac has received of late years. Long considered the greatest of French novelists, he is now called the greatest of all prose-writers. His genius is ranked with that of Shakespeare.

American readers bestow upon him the very highest measure of appreciation. Indeed, so far-seeing a critic as Professor Peck, of Columbia University, says:—"My own belief is that, at the end, Balzac's name will be placed higher than Shakespeare's—at the very apex of literary fame."

He is the creator of an entire society, more than two thousand distinct characters move through his matchless works, classified by him and broadly named.

Professor Trent, a profound student of Balzac, says:—"Of this tremendous throng, an amazingly large number are living, breathing men and women, moving amidst unfading scenes, and they exist for us even more truly than Shakespeare's heroes and heroines."

A FEW DETAILS ABOUT OUR SUPERB NEW EDITION.

The Author's Plan

Balzac conceived the ambitious project of creating an entire human society. For this purpose, in a series of eighty-eight wonderful stories, he presented more than two thousand characters and types, each of independent bearing, but all inter-related in a general scheme, to which he gave the title of THE COMEDIE HUMAINE.

Balzac's plan of the COMEDIE, in brief, embraces seven divisions as follows:—

SCENES FROM PRIVATE LIFE.

Twenty-eight stories.

SCENES FROM PROVINCIAL LIFE.

Thirteen stories.

SCENES FROM PARISIAN LIFE.

Fifteen stories.

SCENES FROM POLITICAL LIFE.

Seven stories.

SCENES FROM MILITARY LIFE.

Two stories.

SCENES FROM COUNTRY LIFE.

Three stories.

PHILOSOPHICAL STUDIES.

Twenty stories.

The Edition Royale

This new De Luxe edition consists of thirty-two volumes, averaging 300 pages, and totaling over 12,000 pages.

Text

This is the most complete and adequate English version yet presented. The text exactly follows the famous Dent-Saintsbury edition, to which we have added three stories not there included.

Notes and Prefaces

The introductions, from the pen of Professor George Saintsbury, are singularly full and clear, and, taken together, they form a complete bibliography to the writings of Balzac. In addition to this, we have included specially prepared indices, which furnish ready reference to any story in the Comédie.

Illustrations

This edition will commend itself very strongly in the feature of pictorial embellishment. The illustrations are from three sources:—First, from reproductions of etchings made by famous English and French artists; second, from redrawings of a collection of quaint old woodcuts; third, from a series of original paintings and sketches made expressly for this edition. These illustrations number some one hundred and thirty, and are reproduced in photogravure and printed on genuine Japanese fibre paper from the original plates.

Paper

The paper is a very fine laid, deckle-edged, presenting a smooth, soft surface, which receives ink evenly and smoothly. Uncut edges and gilt tops.

Type

The type is specially chosen with reference to the paper, and presents a good clear reading surface, restful to the eye and harmonious in page effect. It is specially set for this edition, is perfectly new, and this is the first impression therefrom.

Printing

The greatest care has been exercised in the press work. All imperfect sheets have been thrown out. Regarding the printing of the illustrations, these photogravures were struck off by hand, one by one.

Bindings

Two styles of bindings are offered for this De Luxe edition—cloth and half leather. The cloth is a substantial English buckram, with full gold backs and gold side design. The half leather is carefully selected with reference both to handsomeness and durability; it is stamped with attractive designs.

THE COUPON

will bring you a handsome booklet containing a biography and critique of Balzac, also specimen pages of this edition, and particulars about this club, which cuts the price in two and enables you to make monthly payments meaning

Successful Fruit Growing.

The address delivered by the superintendent of the Leonard Sprayer Company, of Pittsfield, Mass., before the Lenox Horticultural Society at Lenox, Mass., mention of which we made in previous issues, was such a popular success that the company have been obliged to change the plan of distribution. The address is almost a college education to fruit growers, fruit dealers, and in fact to anybody eating fruit or even having but few fruit trees, or in any way concerned. It was an admirable address, is quite lengthy, about an hour's talk. It is said that had it been placed on the market in book form it might have yielded the speaker a fortune; it no doubt would have sold at a good price. All rights were reserved, however. The full address, profusely illustrated, in pamphlet form, was intended to be sent to fruit growers and owners of estates, free for the asking, but requests for it came from all sorts of people. Dressmakers, school boys and girls, clerks, leaders of clubs, young lawyers, college boys, and many who never owned a fruit tree or even a bush under the sun, sent for it. The company had to draw a line at this point, as it was never intended for these class of people. To prevent imposition, the address will only be sent to people interested in fruit culture, and a fee of 50c. in postage will be charged. This book exclusively treats of the interests of owners of fruit and shade trees, the kind of pumps in orchard work or in parks to be used, with comments upon the "home-made" Bordeaux, made on a barn floor by Mike—or Jim—with a hoe in hand, and its failure. Published on good paper, easy reading, plain in language, free from technicalities. We believe this book to be a good investment for owners of country seats or fruit growers. We have one on our table. The book is all right. Send for the lecture to the Lenox Sprayer Co., 30 West Street, Pittsfield, Mass. "Cut this out before you forget."

Play Whist?

Then You Will Be Interested in This Table

It is intended for Duplicate Whist. In the illustration, the large cut is the table set up for use. A small stick in the pocket for holding the cards. It is fastened to the bottom of the table and revolves. The cut on the margin shows the spring which controls. At the side is the table folded. The pocket holds sixteen decks of cards. There are sixteen hands at each player has four hands. After playing a hand, can be replaced in the pocket, and by turning the spring a new hand is before each player. The advantage over trays is no lost cards, no errors and a place to play. The table is made in oak or mahogany and is a handsome, substantial piece of furniture. Price of each \$10.00 f.o.b. case, Green Bay, Wis.

The Starvation Plan

Of Treating Dyspepsia and Stomach Troubles is Useless and Unscientific.

The almost certain failure of the starvation cure for dyspepsia has been proven time and again, but even now a course of dieting is generally the first thing recommended for a case of indigestion or any stomach trouble.

Many people with weak digestion as well as some physicians, consider the first step to take in attempting to cure indigestion is to restrict the diet, either by selecting certain foods and rejecting others or to cut down the amount of food eaten to barely enough to keep soul and body together, in other words the starvation plan is by many supposed to be the first essential.

All this is radically wrong. It is foolish and unscientific to recommend dieting to a man already suffering from starvation because indigestion itself starves every organ, nerve and fibre in the body.

What people with poor digestion most need is abundant nutrition, plenty of good, wholesome, properly cooked food, and something to assist the weak stomach to digest it.

This is exactly the purpose for which Stuart's Dyspepsia Tablets are adapted and the true reason why they cure the worst cases of stomach trouble.

Eat a sufficient amount of wholesome food and after each meal take one or two of Stuart's Dyspepsia Tablets to promptly digest it.

In this way the system is nourished and the over-worked stomach rested, because the tablets will digest the food whether the stomach works or not, one grain of the active digestive principle in Stuart's Dyspepsia Tablets being sufficient to digest 1,000 grains of meat, eggs, or other albuminous food.

Dr. Harlan and Dr. Redwell recommend these tablets in all cases of defective digestion because the peptic and diastase in them are absolutely free from animal matter and other impurities, and being pleasant to the taste are as safe and harmless for the child as for the adult.

All drug stores sell this excellent preparation and the daily use of them after meals will be of great benefit, not only as an immediate relief, but to permanently build up and invigorate the digestive organs.

Indispensable to all authors and literary workers. The result of more than fifty years' research.

Roget's Thesaurus of English Words and Phrases

THE PRESS CO., Meriden, Conn.

Dr. Max Lange.

Max Lange, Doctor in Jurisprudence and Philosophy, who died in Leipzig on December 5, 1899, held a distinguished position as a writer on Chess. *The British Chess Magazine* speaks of his "numerous Chess-works" as "very attractive by their brilliancy and originality of style, and their sound erudition." The following game was first published in Dr. Max Lange's "Sammlung neuer Schach-Partien," in 1867, and is a fine specimen of the deceased Master's skill. The score and notes revised by C. E. Hanken, are taken from *The B. C. M.* We call especial attention to the position after White's 27th move.

Scotch Gambit.

MAX LANGE. White.	VON SCHIERSTEDT. Black.
1 P-K4	P-K4
2 Kt-KB3	Kt-QB3
3 P-Q4	PxP
4 B-QKt3	

This unusual move is described by Max Lange in 1857 as worth trying in practice, but it had not then found its way into the books. He further observes that if Black continue with 4... B-Kt3 ch, the reply is Q-Kt-Q7, and White must recover the Pawn.

5 Castles	B-Kt3
6 Q-Kt-Q7	Kt-Kt3
	P-Q4

If Castles on P-Q7, White, of course, recovers the Pawn by Kt-Kt3. Nevertheless, Castles appears to be his best play.

7 PxP	QxP
8 B-QB4	Q-Qsq
	He should have played now

Q-R4; and if 9 Kt-Kt3, B-Kt3.

9 Kt-Kt3	Kt-Kt3
	Castling, of course, was out
	of question, in the face of the reply Q-R4.

10 Kt-BP Kt-Kt3
11 B-Ktch KxP
12 Q-K5ch P-Kt3
13 QxP Kt-B3

P-QKt3 here was specious as enabling Black to defend his weak QP by P-B4; but White's answer, 14 Q-K5, would have met it quite sufficiently.

14 Kt-B3	R-Ksq
15 R-KKt3	R-KB4
	Black is now in difficulties.

for he is threatened with Q-R-Qsq, and also with Kt-Kt3 ch, and this move does not help him, for White might have proceeded with Kt-Kt3 ch at once, but he prefers to bring his other forces into action.

16 Q-R-Qsq	Q-Q7
17 Q-B4ch	

Perhaps stronger than Kt-Kt3 ch, for then K-Kt3 sq; 18 Q-B4 ch, K-Rsq; 19 Kt-B7 ch, K-Kt3 sq, and now neither Kt-K5 or Q-Q6 ch, is of any use.

Q-Q7	B-K3
	This is weak; the K should

have gone to B5.

18 Kt-Kt3ch	K-B3
19 Q-K5	
	There was nothing to be gained by the exchange of

pieces, and the retreat of the Queen was planned as the preliminary step to a brilliant sacrifice.

20 P-Kt3	B-Kt3
21 P-Kt3	R-KQ
22 R-Ktch	K-K4
23 Kt-K4	K-Q4
24 P-QR4	K-B5
	QxP

Black's last few moves were evidently forced, and if he now play P-Q7 or K-Kt3, it will be seen that he must either lose his Queen or be mated.

25 P-Kt3ch	K-Kt3
26 B-Q7ch	K-R6
27 Kt-B3	

It seems doubtful if this is the best move (see next note). R-Ksq looks more forcible, for then if 27... K-Kt3, 28 R-Kt3 ch, and if KxP, he loses his Queen; or if K-R6 or 7, then 29 Kt-B3, followed by Kt-Q7, and wins.

27 BxP	Kt-B3
	And White announced mate in six moves, the solution

of which we leave to our readers.

The Composite Game.

We have received the names of about seventy players who desire to take part in the Composite Game. Those players are spread over a large area, from California to New York; from Louisiana to Vermont; from Texas to Wisconsin. We purpose beginning with those most distant and finishing in New York City.

Important Books of Reference

A DICTIONARY OF QUOTATIONS IN PROSE.

From American and foreign authors, including translations from ancient sources. Edited by ANNA L. WARD, compiler of a "Dictionary of Quotations from the Poets." Extremely valuable as a book of reference. Crown 8vo, bevelled boards, \$2.00; half calf, \$4.00.

"One of the most useful books of its class that ever came under our notice."—*Book Buyer*.

A DICTIONARY OF QUOTATIONS FROM THE POETS.

Based on Bohn's Edition. Revised, corrected, and enlarged. By ANNA L. WARD. Crown 8vo, cloth, bevelled boards, \$2.00; half calf, \$4.00.

"The more competent the critic who examines it, the heartier will be his verdict."—*Congregationalist*.

A HISTORY OF FRANCE.

By VICTOR DURUY, member of the French Academy. From the seventeenth French edition, with an introductory notice and a continuation to the year 1890, by J. FRANKLIN JAMESON, Professor of History in Brown University. With 12 engraved colored maps. In one vol., 12mo, cloth, \$2.00.

A book widely desired by schools, colleges, and libraries, students, and general readers.

"Of all the short summaries of French history this is probably the best."—*Ex-President Andrew D. White, Cornell University*.

Sent by mail, postpaid, on receipt of price.

THOMAS Y. CROWELL & CO.,
428 West Broadway, N. Y.

DURUY'S GENERAL HISTORY OF THE WORLD.

By VICTOR DURUY, formerly Minister of Public Instruction and Member of the Academy. Thoroughly revised, with an introduction and summary of contemporary history from 1848 to September, 1898, by EDWIN A. GROSVENOR, Professor of European History in Amherst College. 12mo, with 25 colored maps. \$2.00.

"The book is unquestionably the most satisfactory world history of the kind in existence."—*Public Opinion*.

"A marvellous store of information in a small compass. New England may well be gratified that one of its foremost scholars has had the shaping and modernizing hand in a work of this enduring importance."—*Boston Journal*.

"I know of no historical handbook of equal comprehensiveness which is at once so up to date, so authoritative, and so attractively written."—*W. E. Warren, Pres. Boston University*.

"It has the rare advantage of being interesting without the great sacrifice of accuracy and of the scientific spirit."—*David S. Jordan, Pres. Stanford University*.

For sale by bookellers, or sent, postpaid, by the publishers, upon receipt of price.

VOL. XX., No. 17

NEW YORK, APRIL 28, 1900.

WHOLE NUMBER, 523

Published Weekly by
FUNK & WAGNALLS COMPANY,

36 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$2.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

IS THE PHILIPPINE WAR OVER?

THE situation in the Philippines gains added interest from the fact that General Otis considers his work virtually done. To show the feebleness of the native resistance, General Otis recently reported that in the 124 skirmishes since January 1 the American loss was 81 killed and 164 wounded, while the insurgent loss was 1,426 killed and 1,450 captured, most of whom were wounded. The Americans have also captured over 3,000 small arms and 165 cannon. "A number of insurgent officers are surrendering," he said (the insurgent leader Montenegro surrendered last week), "and the situation is gradually becoming more pacific." Last week, according to the Manila dispatches, the insurgents lost nearly 1,000 men in a number of hot engagements, the American loss being only nine killed and sixteen wounded. The *Springfield Republican* (Ind.) thinks that a total Filipino death loss of 20,000 since the beginning of the insurrection would not be an exaggerated estimate. Our own death loss, says the same paper, amounts to date to about 1,500, of whom 1,000 have died from disease, and "a particularly melancholy feature" of the reports is the large number who have killed themselves while insane or have been brought back insane to this country. The *Republican* thinks the climate our worst foe, and says: "No doubt the Filipinos have seen the heaviest of their life losses from this woful struggle. But we have only just begun to count up ours."

Some of the anti-expansionist papers are quoting as proof that the insurrection is not yet quiet the following news report received from Manila about the same time as the above report from General Otis:

"General Young, commanding in northern Luzon, has made several requests for reinforcements, representing that his force is inadequate; that the men are exhausted by the necessity of constant vigilance; that he is unable to garrison the towns in his jurisdiction; that the insurgents are returning to the district and killing the *amigos*, and that it is necessary for him to inflict punishment in several sections before the rainy season begins. Gen-

eral James Bell, who is in command in Southern Luzon, has made similar representations. He says his forces are inadequate, and that he merely holds a few towns, without controlling the territory."

"It is a hornet's nest," says the *Hartford Times* (Ind. Dem.); "we merely hold a few towns, and that only by main force. Everywhere the people are against the American army of occupation." The *Philadelphia Times* (Ind. Rep.) calls this news report "a danger signal to the Administration, and one that President McKinley should fully appreciate," and says:

"Better by far call out additional troops and hasten the complete possession of the Philippine Islands, than permit the war to linger on until the next election with the insurgents recapturing the places we have possessed but can not hold. The Filipino war must be ended, or it will be a fearful stumbling-block for McKinley in the coming campaign. The only safety to the army and to the Filipinos who favor submission to our government is in sufficient forces to hold indefinitely every position we capture, and thus invite the confidence of the Filipinos in our government by showing them that American authority means the revival of business, industry, and trade. If there are not enough troops in the Philippines, send them at once, and the story should never be repeated that a town or locality captured by our troops has been recaptured by the insurgents. It is a serious danger signal, and the President should so understand it."

Mr. Phelps Whitmarsh, *The Outlook's* special correspondent in the Philippines, writes:

"The provinces generally supposed to be pacified, such as Pangasinan, Nueva Ecija, La Union, the Ilocos, and the central provinces, are again in a disturbed and dangerous state. Tagalog propagandists are circulating afresh throughout the country, levying new contributions, stirring up the sheep-like provincials with false reports, encouraging hopes of independence, and preaching the gospel of war. '*Mas resistencia, mas esperanza*' (the more resistance, the more hope) is their watchword. Civil authorities, local and provincial *presidentes*, all appointed by American authority, and professing allegiance to that authority, are known to be insurgent informers and traitors; *asambleas* are again established in all the principal towns; and General Otis has admitted to me that the Hongkong and Manila juntas were never more active than they are to-day.

"Everywhere the *insurrectos* are reorganizing or preparing for it. Everywhere, when one gets beneath the polished surface, one finds the same old hatred toward the Americans, the same hope and belief in ultimate independence. With the exception of a mere handful, too insignificant to be considered, every Filipino in his heart is an *insurrecto* and wishes to drive the Americans from the islands. Even at the present moment the so-called 'pacified' provinces are in a bad state. Small fights, seldom recorded, are occurring constantly in all parts; provision trains are being captured by roving, *amigo*-clad bands; the railway is attacked periodically; it is unsafe for a small party of white men to travel anywhere outside Manila without a military escort; and good American lives are being lost daily. Let those who think that the Philippine war is over visit the islands and judge for themselves. As I have already ventured to say in one of my early letters, unless more stringent measures are taken at once, it will be a question of years, not months, before peaceful conditions obtain."

Mr. Whitmarsh attributes this state of affairs to three principal causes: First, the "intolerably feeble and hesitating manner" in which the authorities in Manila have conducted the war; second, the "wavering," "what-shall-we-do attitude" of the Administra-

tion in Washington, and third, the "immense help and confidence" that "have been given to our enemies by the utterances of such men as Senator Hoar." Indeed, Mr. Whitmarsh says that "this misguided man and his associates have done more to encourage the insurrectionists and to fan the flame of Philippine warfare than all the rest."

General Miles, in a recent interview reported in the *Philadelphia Press*, said: "We have sent, in all, about 50,000 soldiers to the Philippines, and of this number about 15,000 volunteers have been withdrawn. I do not agree with those who contend that the end of the war is in sight."

BRITISH WAR SCANDALS.

UNSPARING criticism seems to be the order of the day in South African military affairs, and military idols appear to be toppling on every hand. Even Lord Kitchener seems to have been relegated to unimportant duties after his encounter with Cronje at Paardeburg, as he has hardly been heard of since then. The recall of Gatacre roused the British press to ask why he alone should be sacrificed for the many blunders of the war, and now that the War Office has made public Lord Roberts's severe comments on Buller, Warren, and Thorneycroft, the angry cry of the press seems to have been only stimulated, and they are calling for more heads, including some of the heads of the War Office. The *London Times*, for example, is asking whether Lord Roberts has not also commented upon General Methuen's operations, especially those at Magersfontein, and if so, whether the War Office has suppressed the comments; and it also wants to know why the criticisms on Buller, Warren, and Thorneycroft, which were dated February 13, were withheld so long and then published. The general tone of press comment on the matter, both British and American, seems to indicate, in fact, a suspicion of jobbery.

No hint is heard, however, to the effect that Lord Roberts's criticisms are undeserved. He censures Buller, Warren, and Thorneycroft for the British reverse at Spion Kop, where Colonel Thorneycroft ordered a retreat when reinforcements were at hand, and where Buller and Warren, according to Lord Roberts, displayed a deplorable lack of energy and judgment. "The impression made by Roberts's review," says the *St. Louis Globe-Democrat*, "is that all the generals at Spion Kop lost their heads, and that a flank movement that should have succeeded fell into confusion, ending in retreat." Some recent letters from the Boer camp in Natal, published in the *New York Herald*, say that the

Boers themselves were surprised at the bad tactics of the British at Spion Kop, and affirm that the force of 2,500 British on the kop were dislodged by a Boer force of 450, who gained a position where they could rake the British trenches with their rifle-fire.

The worst feature of the Spion Kop criticism, however, the press seem to agree, is the fact that Buller and Warren are left in command, while this criticism, that is likely to make their men lose confidence in them, is given out for publication. Spencer Wilkinson, the military critic of the *London Morning Post*, says that its effect "must be positively demoralizing." The *New York Times* says that such treatment of these officers "is like putting them in the pillory to be jeered at by the men under them," and it "is enough to demoralize any army that was ever assembled." The indignation of the British army and the British public, thinks the same paper, ought to fall upon the War Office for this serious indiscretion. Indeed, the *Baltimore American* believes that the real intent of the British Government is "to sacrifice Generals Buller and Warren to cover its own deficiencies." Buller and Warren blundered, to be sure, continues the same paper, but "these blunders, and their disastrous effects, are not now of present concern to the Government of Great Britain. It is looking to its own protection, and in order to hide its own glaring errors it must have lambs for the slaughter. Hence, it tosses Buller and Warren, admittedly two of its most capable and redoubtable generals, to be macerated by public opinion. Lacking the moral courage to act decisively, it throws out General Roberts's stigmatizing report, well knowing that this document will force the two chosen victims to resign and to return to England in virtual disgrace." The same paper goes on:

"The failure of the Government to instantly supersede Buller and Warren upon receipt of Roberts's report, five weeks ago, is wholly inexcusable. Instead of taking prompt and decisive action by recalling these blundering generals, it has permitted them to continue in important commands, thereby confessing its own weakness. And this evidence is increased by Tuesday's action. Even now the Government lacks courage, and can only give its generals as a prey to public sentiment. The effect of this upon the entire British army is easily imagined. It will demoralize the troops, destroy their confidence in the commanding officers, shake the trust in the capacity of the Government to competently and intelligently direct the offensive operations. Such revelations of crimination and recrimination indicate that others of great moment lie concealed in the War Office archives, and with this threatened disaster hanging over officers and their commands such a thing as *esprit de corps* is impossible. Buller, Warren, and Thorneycroft may have blundered, but, viewing the affair from afar, it appears that the Government has blundered more seriously. Withal, Tuesday must be regarded as a calamitous day for the British, and one which will aid the Boers, by its moral effect upon their antagonists, more signally than any victory of arms they have yet achieved."

Yet while these military executions are attended with so much tumult, they may prove to be just what the army needs most. "As the tug of war is yet to come," says the *Baltimore Sun*, "it is not without reason that the British commander-in-chief seeks to get rid of wooden-headed subordinates." The *Philadelphia Press*, too, remarks:

"The trenchant criticism of General Roberts, which ends the careers he criticizes, is but part of the great change this war is making in the English military service. The suppressed feeling of the English public is plain in every line of public comment. The typical English officer, with all the virtues and all the ignorance of a savage chief, brave, reckless, quick to lead, slow to plan, pleasure-loving, and given to no patient study of the art and practice of war, is over. He has been tried and failed. New men will come to the front of the new, modern type alike in war and in industry, men patient, hard-working, painstaking, living studious nights and laborious days, and winning promotion by assiduous devotion to detail joined to that extreme bravery which only high training gives."

BULLER (soliloquizing): "What's the rush so long as I keep my promise?"
—The St. Paul Pioneer Press.

AMERICA AT THE PARIS FAIR.

EARLY interest in the French Exposition, as reflected in American newspaper comment, is drawn mainly to the American exhibit, its size, advanced state of preparation, and general excellence. The number of exhibitors from each of the leading nations is given as follows:

France.....	30,000	Russia.....	1,500
United States.....	6,500	Scandinavia.....	1,400
Belgium.....	2,500	Austria.....	1,000
Germany.....	2,000	Great Britain.....	500
Italy.....	2,000	British colonies.....	500

This long lead which the United States has in number of exhibitors over Great Britain and Germany, our most formidable commercial rivals, has caused not a little jubilation. The *New York Tribune* says:

"American exhibitors are, in fact, more numerous than those from any three other countries put together, and three times as numerous as the French exhibitors at the Chicago Fair. The result will be that the Paris Fair will seem much like a Franco-American exhibition, with the rest of the world taken in 'to fill up the chinks.' Or, at any rate, the millions who visit the Fair who have never visited America, and who perhaps have only an inadequate conception of it, will be made to realize as never before to what a commanding estate in commerce, industry, and arts the United States has risen."

The American exhibits cover nearly eight acres, and in agriculture, food products, mining, and liberal education is far ahead of all outsiders. American machinery, too, holds its usual commanding position. "We may not be quite up to Europe in pure art," says the *Minneapolis Tribune*, "but in the line of practical utility, American machinery is unsurpassed, and Europe is likely to open its eyes in wonderment when it beholds what our inventors have accomplished." The small size of the British exhibit and of some of the other exhibits is pretty generally attributed to an unfriendly feeling toward France; but American manufacturers seem to regard the Fair as a chance for first-class advertising, in which the feeling of friendliness or unfriendliness toward France cuts no figure. Thus the *Baltimore American* says of our exhibit:

"This fine display will bring its own reward, not only to the individual exhibitors, but to the manufacturing interests of the whole country. It will attract the attention of the whole world to American products, and prove their superiority in such a way that larger orders than were even known before are sure to come from the best markets of the world. Such exhibits at such a place are a practical investment likely to be worth thousands of times more than they cost. 'This country has just begun its work as a great competitor in many of the markets of the world, and its fine showing at Paris will help it in its rapid advance toward the highest position as a manufacturing center. Long has the United States been the granary of the world; soon will it become the world's greatest factory.'"

The *St. Louis Globe-Democrat*, too, says:

"International expositions afford a peculiarly ready and profitable method of advertising a country's resources and capabilities. America has moved up to the second place among the great countries in the extent and value of its foreign trade. The United Kingdom is the only country which leads us in this particular, and the gains which we have been making in the past three or four years show that we will soon be in the first place. World's fairs are becoming more and more attractive and profitable."

But in seeking out the many inventions on show at the fair,

M. ALFRED PICARD,
Commissioner-General.

M. DELAUNAY-BELLEVILLE,
Chief of Transportation.

M. HÉNARD,
Architect of the Palace of Electricity.

M. BOUVARD,
Chief Architect.

MAKERS OF THE EXPOSITION.

the visitor is not likely to miss that greatest exhibit, of which he is himself a part. Says the *New York Times*:

"There is another element of pleasure and of profit that should not be omitted from the reckoning—the opportunity that the people of all races and climes will have to study each other. It used to be said that the people of the North and the South, of the East and the West, knew each other only by hearsay until they met in Fairmount Park at the Centennial Exposition of 1876.

That was a serviceable coming together. It is a like service to the people of the world that France has done in once more offering them a chance to take a look at each other."

Indeed, the *New York World* observes, such a gathering brings about a "better understanding among nations" and aids "the cause of peace and human welfare all over the world. As na-

"A HAPPY AND PEACEFUL COUNTRY WELCOMES YOU." —*The Detroit News-Tribune.*

tional hostility and jealousy are based on ignorance and prejudice, so national comity and friendliness are based on a better knowledge of each other among the people of the different nations. . . . One single grand international festival of peace like the Paris Exposition is worth more for the safety of the nations taking part in it than all the expenditures of their military and naval budgets." However true that may be for other nations (England and the Transvaal Republic have exhibits at the Fair not far apart), it is pretty generally believed that the Exposition has been a potent influence in stilling France's impulses to imbroglios, foreign or domestic. As Mr. B. D. Woodward says in *The North American Review* this month: "Peace permeates the entire fabric of an exposition, and throughout the formative period we acknowledge with the utmost satisfaction that the Paris Exposition, with millions of dollars staked upon its success, has appeared constantly amid dark and troubled scenes as a blessed peace factor in the recent history of France."

CUBAN CENSUS RETURNS.

THE results of the Cuban census surprise most of the press. Instead of being dangerously near the condition of Haiti, it appears that there are about 80,000 native white Cubans qualified to vote, as against 26,000 colored. In view of this showing, says the *New York Times*, "there is no slightest probability of negro domination." Another unexpected feature is the size of the population, which numbers 1,572,797. As the population before the last war was reckoned at 1,631,687, this would make it seem at first thought that the loss during that time of sword and fire was less than 60,000. The *New York Tribune*, however, estimates that in the period between the two censuses the natural increase of population was probably 200,000 or more, so that the total loss by the war may have been between 250,000 and 300,000. The papers take as an ill omen the fact that nearly three fourths of the population are illiterate. The *Philadelphia Times* says: "This fact alone indicates that the suffrage will be necessarily a restricted one, and that one of the first conditions of stable, popular government in that island will be the establishment of a system of public schools at which the children of the common people can secure the rudiments of an education."

The most striking features of the census returns, as given in the press reports, are as follows:

"The total population of Cuba is 1,572,797, including 815,205 males and 757,592 females. There are 447,372 white males and 462,926 white females of native birth. The foreign whites number 115,760 males and 26,458 females. There are 111,898 male negroes and 122,740 female negroes. The mixed races number 125,500 males and 145,305 females. There are 14,694 male and 163 female Chinese. The population of Havana City is 235,981, and of the province of Havana 424,304. The population of the province of Matanzas is 202,444, of Pinar del Rio 173,064, of Puerto Principe 88,234, of Santa Clara 356,536, and of Santiago 327,715.

"Of the total population of the island, 1,108,709 persons are set down as single, 246,351 as married, while 131,787 live together by mutual consent. There are 85,112 widows.

"Of the total population, according to citizenship, 20,478 are Spanish, 1,296,367 are Cuban, 175,811 are in suspense, 79,526 are of other citizenship, and 616 are unknown. The Spanish by birth number 129,240. Of the children ten years of age and over 49,414 have attended school. Of the total population 443,426 can read and write, and 19,158 have a superior education.

"The negroes are in the minority in Cuba, constituting only 32 per cent. of the population, being most numerous in Santiago, where they constitute 43 per cent. The native whites constitute more than one half the population, or 58 per cent. The proportion of children under five years of age is unusually small, but the proportion under twenty-one years is normal: about one half of the population. Only 15.7 per cent. of the adults were married. Nearly nine tenths of the inhabitants were born in Cuba. Nine tenths of the children less than ten years of age do not attend school: 43 per cent. above ten years are literate."

Local elections will be held in all parts of the island June 16.

SOME RECENT TRUST DEVELOPMENTS.

SELDOM have the attacks made on capitalists by the radical press been more severe than were the comments of some of the sober financial journals last week on the managers of the American Steel and Wire Company. The *New York Journal of Commerce* refers to them as "our financial anarchists," and the *New York Evening Post* said of their "recent performance" that "there has been nothing worse since the days when Fisk and Gould wrecked the Erie Railway." The charge brought against them by these and other papers is, in brief, that the managers kept up the prices of their wares and stocks artificially, and then "rigged" the stock market and made a large sum by depressing prices. Last week, at any rate, the price of the stocks of the company collapsed, and the managers announced that there was no market for their wares and closed twelve mills without warning, throwing six thousand men out of work. There is no direct proof, of course, that the managers were interested in the stock market at all; but the suspicion that they were seems to be widely entertained. Even if they were not, says *The Evening Post*, "the manner in which they took the step of closing their mills was altogether unprincipled and outrageous." The mills were ordered, in a few days, to begin work again; but instead of allaying suspicion, this was taken to confirm the view that the closing of them in the first place was intended to create a false impression that trade was dull. *The Journal of Commerce* says:

"The rising tide of public opposition to the trust system will be considerably swelled by tactics like these, whatever may be their origin or partial justification. If the combination designed to regulate competition is more uncertain and capricious in its operation than the system of untrammelled industrial strife, it must surrender the one specious apology for its existence. . . . The labor troubles of which we hear so much as an explanation of the restricted demand for steel will be tenfold aggravated if the laborer is compelled to feel that he is a mere counter in a dishonest game of speculation. Trust management directed by any such impulses as those recorded this week will give new

plausibility to the demands of the state Socialists, but their most obvious and immediate tendency in the business world is toward a state of chaos."

Bradstreet's says:

"It is certainly unfortunate for industrial properties in general that such occurrences should transpire at a time when a feeling of certainty in the ability and integrity of their managements is necessary to counteract the effects of public prejudice against 'trusts' and the lack of confidence on the part of investing and financial interests generally in the somewhat excessive capitalizations of many concerns of this character. On the face of the matter Wall Street is not far wrong in comparing the developments of the week with the methods of certain railroad managers during the early 'seventies. The decision reached by the Steel and Wire Company's directors on Friday to reopen the mills and to meet the alleged overproduction by suitable reductions in prices seems to be a repudiation of the recent acts of some of the officials, but hardly goes far enough."

In this connection, it is of interest to note the radical measures framed last week by the House judiciary committee's special subcommittee on trusts. This committee proposes a twofold remedy, a constitutional amendment giving Congress full power to deal with trusts, and a new anti-trust law, making the following additions to the Sherman act:

First: Requiring the branding or marking of trust-made goods shipped out of a State, so as to be easily identified as the product of a trust.

Second: Prohibiting the interstate traffic of trust-made goods not so branded, and making them subject to seizure and condemnation.

Third: Requiring corporations having a capital of over \$1,000,000 or doing an annual business of \$1,000,000, to file a report of their affairs with the Secretary of State.

Fourth: Providing the process of injunction against combinations sending trust-made goods from State to State or to foreign countries.

Fifth: Prohibiting the use of the mails to concerns proved to be trusts and to their officials.

The *Chicago Evening Post* (Ind. Rep.) calls these proposals "ill-advised, preposterous, and futile." It says: "They would demoralize industry if they could be enforced, but they would prove a dead letter in practise. They would be dangerous, in other words, if they were not so quixotic." The *Philadelphia Ledger* (Ind. Rep.) says: "These anti-trust propositions come so late in the day that prospect of their adoption during the present session of Congress is dubious. Apparently they are put forth for political effect, as it is felt that the Republican Party is under the necessity of squaring itself before the public." So, too, thinks the *New York Times* (Ind. Dem.), which says:

"The manifest absurdity of this bunch of thunderbolts shows that they were forged, not to destroy the trusts, but to discomfit W. J. Bryan and take the wind out of his sails. There is a cruel significance in the very date at which the act is to take effect—June 30, 1900, four days before the assembling of the Bryan convention at Kansas City. What boots it how many of the planks of their platform the Bryanites hurl at the octopus? They can not surpass the sweeping savagery of the Republican attack. There is nothing in the issue. . . ."

"Every one of these pains and penalties might with equal propriety be imposed upon all farmers detected in the act of cultivating farms of greater extent than five hundred acres, or in keeping and annually shearing more than two hundred sheep; or against corner grocers who sell yearly a number of gallons of molasses judged by the judiciary committee to be excessive, octopian, and dangerous to the liberties of the people."

The last paragraph of the above comment is especially timely in view of the bruited combination of farmers to restrict the production of wheat and keep the price up to a dollar a bushel. "The farmers have been so much discriminated against by our tariff laws, and more recently by trusts," observes the *Louisville Courier-Journal* (Dem.), "that it is not unnatural that they

should feel like striking back. But the difficulties in the way are very considerable." So, too, thinks the *Cleveland Leader* (Rep.), which says: "This proposed trust is in line with the 'hold-your-wheat' schemes which have originated from time to time in the Northwest, and which have always failed to bring about the desired result."

ELECTION OF SENATORS BY POPULAR VOTE.

THE passage in the House of Representatives, by the enormous majority of 240 to 15, of an amendment to the Constitution providing for popular election of Senators is given added interest at this time by the senatorial scandals which are occupying so much public attention. This is the third time the House

THE CARTOON THAT WENT TO CONGRESS.

UNCLE SAM (to the voter): "Those legislatures have been making some mighty poor catches lately. I think I'll let you try your hand at catching my senators for me."
—*The Minneapolis Journal*.

has passed such a bill; but hitherto the Senate has failed to consider it. More than thirty state legislatures have declared in favor of the principle of direct election. The popularity of this measure, says the *New York Evening Post* (Ind.), is something "that nobody could have expected when the agitation began to grow active ten years ago, and that would have seemed impossible in the middle of the century."

Republican and Democratic papers unite in praising this principle. Says the *Philadelphia Press* (Rep.): "The feeling against the abuses of the present system is strong and growing stronger, and if the Senate is too reckless of public opinion, the demand for a change will become so imperative as to reach through the legislatures to the Senate and compel the abandonment of a system of election which by its results has become highly obnoxious to the people." The *New Orleans Times-Democrat* (Dem.) declares:

"We can not imagine any right-minded person who has followed the open purchase of legislators' votes at \$10,000 each by Clark, of Montana, who has followed the intrigue of Matthew Stanley Quay and Governor Stowe of Pennsylvania to have Quay reelected to the Senate over the heads and in defiance of the majority of the legislators of that State, or who has followed the impudent attempts of 'Gas' Addicks of Delaware to reach the same desired goal through legislators' votes which he brazenly boasts of having bought—we can not imagine any right-minded person, we say, who has noted these disgraceful proceedings, and does not desire to have the established system of electing United States Senators radically changed. Undue influence of one kind or another is employed without difficulty when there

are only from ten to fifty persons to get at; but it would be difficult, if not indeed impossible, to apply the undue influence when there are all the voters of a State to have a say, and take a hand, in the election of Senators."

On the other hand, the *Brooklyn Daily Eagle* (Ind. Dem.) maintains that most of the present Senators would be reelected under a system of popular election, and declares that the majority vote for the measure was a large one because the Congressmen who voted "were comfortably confident that the Senate would never agree to it at all." The *Burlington Hawk-Eye* (Rep.) also opposes the measure.

"The *Hawk-Eye* frankly confesses it is very conservative as to changes in the fundamental law of the republic. The federal Constitution was conceived by great statesmen and under conditions that may be reverently regarded as providential . . .

"When the principle of direct election is accomplished, what will we have? The ideal that is in public thought? By no means. The choice of United States Senators will be taken from the state legislatures to the state conventions of the political parties. The party caucus will continue to select Senators. This is where the theoretical succumbs to the actual practise. The selection will be taken from the legislature, a responsible body, to the state convention, a body responsible to nobody. It will be taken from men in official position, under oath of office, under pay, and responsible to the constituents who elected them to the legislature for a definite term, and it will be transferred to a temporary body whose members are sometimes chosen in conventions, sometimes in caucuses, sometimes by committees, sometimes are merely volunteers and frequently are proxies, and whose county delegations 'cast the full vote of the county,' whether all or only one delegate is present. The party convention lasts one or two days, and then the members disperse, never all to meet again, and never to make an official report to their constituents or be accountable to anybody for their action.

"And this, in the estimation of many good people, is to be the 'improvement' in the method of electing United States Senators!"

The *Boston Evening Transcript* (Rep.) suggests as an alternative plan that Senators be elected by delegates to a convention called for that purpose. The case of Senator-elect Morgan, of Alabama, is cited by some of the papers as an example of what is really direct popular vote existing to-day. Governor Johnston and the state machine were opposed to this Senator's reelection, yet by an active personal canvass among the people, he has captured 116 out of 120 votes in the legislature. The accompanying cartoon from the *Minneapolis Journal* was used by Mr. Corliss, of Michigan, as an illustration of his points during the debate in Congress.

Puerto Rico as a Military Asset.—Captain Mahan, in his new book dealing with the Spanish war and its results, reveals the interesting fact that in the beginning of the war Puerto Rico was seriously considered at one time with a view of making it "the first objective of the war." Special considerations prevailed against that program, but Captain Mahan takes occasion to lay great stress upon the military importance of that island to us in the future. He writes:

"Puerto Rico, considered militarily, is to Cuba, to the future Isthmian canal, and to our Pacific coast, what Malta is, or may be, to Egypt and the beyond; and there is for us the like necessity to hold and strengthen the one, in its entirety and in its immediate surroundings, that there is for Great Britain to hold the other for the security of her position in Egypt, for her use of the Suez canal, and for the control of the route to India. It would be extremely difficult for a European state to sustain operations in the eastern Mediterranean with a British fleet at Malta. Similarly, it would be very difficult for a transatlantic state to maintain operations in the western Caribbean with a United States fleet based upon Puerto Rico and the adjacent islands."

The realization of the importance of our new island possessions

as military and naval bases should have an important bearing, thinks Captain Mahan, upon our treatment of the inhabitants. He says:

"One great element of sea-power, which, it will be remembered, is commercial before it is military, is that there be territorial bases of action in the regions important to its commerce. That is self-interest. But the history of Spain's decline, and the history of Great Britain's advance—in the latter of which the stern lesson given by the revolt of the United States is certainly a conspicuous factor, as also, perhaps, the other revolt known as the Indian Mutiny, in 1857—alike teach us that territories beyond the sea can be securely held only when the advantage and interests of the inhabitants are the primary object of the administration."

OUR CLAIM AGAINST TURKEY.

REPORTS last week of an intended ultimatum from our Government to Turkey, and the possible seizure of the port of Smyrna by American war-ships, have roused public interest in the debt of \$100,000 which the Sultan has been owing our Government for five years. The claim arose from the destruction of the property of American missions in Harpoot and Marash in 1895 by mob violence in which Turkish soldiers openly took part; and the Turkish Government, after ineffectively trying to evade the responsibility, succeeded in compromising the claim of \$300,000 by offering to pay \$100,000 at once. Since then our Government has made several attempts to collect the debt, but the Sultan has proved hard to move by arguments on this question, and the delicacy of the Eastern situation has made the use of force to collect so small a sum inadvisable. Austria, three years ago, having a similar claim against Turkey, sent a war-ship to threaten a Turkish port, and the claim was promptly paid; but in our own case the talk about an ultimatum and the seizure of a port is generally considered extravagant.

The *New York Tribune*, however, thinks that the use of force could not properly be objected to. It says:

"There can be no legitimate ground for complaint or remonstrance by Turkey or any other power at any measures, however summary, which the United States may now adopt for the collection of the debt on which judgment was so long ago confessed. Turkey has a yearly revenue of more than \$80,000,000. If out of that she can not once pay a beggarly \$100,000, it is time for her to resign her sovereignty to some one who can do so."

One point that may be overlooked, however, thinks Mr. Charles A. Conant, Washington correspondent of the *New York Journal of Commerce*, is the fact that while the Sultan owes us \$100,000, we owe the Sultan no small debt of gratitude for preserving peace in the Sulu Islands; and trouble with the Sultan may cost us more than we ever are likely to collect from him. Mr. Conant says:

"It is significant of the ramifications of American interests under present conditions that actual trouble with Turkey might cause uneasiness in the Sulu Islands. Minister Straus rendered a clever service to the Government when the question first arose of dealing with the Sultan of Sulu. The Sultan of Turkey is the head of the Mohammedan Church. It was in this capacity that he was approached by Minister Straus with the tact and skill which have always marked his services as Minister and led him to use his good offices in the Sulu Islands. The result was an arrangement with the Sultan which has kept those islands peaceful and obedient while insurrection and bloodshed have reigned in the northern islands, where the Mohammedan Church is not paramount. It is not probable that the United States will go to war with Turkey in any serious manner, but if it should happen strong garrisons might be required in the Sulu Islands, owing to the sympathy which the natives would feel for the parent church at Constantinople."

AN EIGHT-HOUR DAY FOR DOMESTIC SERVANTS.

THE experiment of Mrs. Emmons Blaine, in Chicago, who for several weeks has maintained the system of an "eight-hour day" among her household servants, has brought to the front once more the perennial servant-girl question. Mrs. Blaine employed two sets of servants, working alternately. Says the *Philadelphia Evening Bulletin*:

"This policy is in accord with the general tendency toward a shorter day in many divisions of labor. But it is manifestly impossible in households of moderate means where only one or two servants are employed, and where the financial resources of the head of the family are inadequate to provide for the payment of successive 'shifts' of domestic workers."

The *New York Times*, however, suggests that "there can be a division of the work among the servants already employed by which they will take turns and work in shifts," and to this plan there would not be the same objection. The *Chicago Chronicle* considers the plan impracticable because the work in the household is never done: "The factory and store may schedule their workers and stop sixteen hours out of twenty-four. But the housekeeping goes on forever. The mistress may not dream of eight hours, of ten, or twelve; she must work until the work is done." The *San Francisco Call* declares:

"There is much in the project to be commended. Every class of workers is entitled to some respite from work, to some time of leisure which they can call their own. One of the chief reasons why American girls dislike domestic service is the continuous round of work it imposes. When the factory closes for the day the factory girl's work for that day is done and thereafter until next morning she is her own mistress. That degree of liberty is highly prized, and if it can be provided for employees in domestic service there can be no question but that it will go far toward making that form of work more attractive than it is."

The *Chicago Journal* printed an editorial on this subject which called forth an interesting reply from "A Servant Girl." She says:

"Mrs. Blaine's system is but the starting-point of what will eventually have to become a law. In New Zealand the servant girl is protected by an eight-hour-a-day law. As servants and an overworked class of women workers we do not expect anything from the servant-employing classes, from the clubwomen, or from society women. We do expect that the workingman or the labor organization of which he is a part will take it up and insist on a ten-hour-a-day law for the domestic servant."

Another kind of solution for the servant-girl problem appears in a new book, "The Domestic Blunders of Women," by "A Mere Man." After some designedly exasperating remarks on women's management of the household in general and of servants in particular, the author writes as follows:

"There is but one remedy. There should be the written or printed agreement, which exists in all other paths of business, between the mistress and the servant. I suppose that the first thing I shall be told is that no servant would sign such an agreement. With all respect, I join issue with this statement. If the agreement were not entirely one-sided, every servant in the world would be only too ready to sign it and abide by it. This is proved by the fact that, wherever a union of men or women is formed, the first demand is for definite rules and a definite agreement. An agreement, if properly drawn up, would be for mutual protection. It would shield the servant from being imposed upon, and from being thrown out at the mere whim of a mistress

in the tantrums. It would secure for the mistress that the work of her house was properly done, and protection from the neglect and destruction of her property. The present lax system breeds nothing but mistrust rather than confidence. This, as every one must agree, is the root of dissension. As matters are at present managed, no servant knows exactly what her work is, and she never has any idea that good conduct and faithful service will result in any reward but the kick-out when she is getting to that age when it is not very easy to find a place.

"If I were managing a house, and about to engage servants, I would require each person whom I employed to sign an agreement. In this document, of which the servant should have a counterpart, signed by myself, it would be set forth that, in the case of, say, a house-maid, she should properly clean, every day between the hours of so-and-so, certain rooms which would be allotted to her, and for which she would be responsible, and perform such other work as was reasonable and was agreed upon. I should also furnish each servant with an inventory of such property as was in her charge, and when any article was broken

COOK: "I can't stay to wash the dishes, ma'am. Time is up."

WAITRESS: "Look at the clock! And me still here, two minutes after hours!"

HOW THE EIGHT-HOUR PLAN MAY WORK.

—The New York Herald.

or missing I should require her to report the matter at once, and, if the amount of damage was over and above a certain percentage of fair wear and tear, I should possess the right to deduct so much from her wages. On my side, I should pledge myself to employ, and pay her a certain wage for a certain time, the said wage to increase after certain dates if still in my employ. I should further insist on my right to mark her character with such offenses as she might be guilty of from time to time, but which should be considered as atoned for after a certain period of good conduct, and I would pledge myself to substitute for that agreement a character which would correspond with the marking of the agreement at such time as she left my service."

LETTERS AND ART.

HAUPTMANN'S NEW PLAY, "SCHLUCK UND JAU."

NO production of Gerhart Hauptmann has perplexed critics and public alike as much as his latest play, which is as different from "The Sunken Bell" and "Hannele," with their poetic idealism, as these were different from his realistic "Weavers." Is "Schluck und Jau" a farce? Boisterous and rather crude in its humor, it is treated as a mere caricature by some German writers, tho it is admitted that Hauptmann must have intended to "point a moral." Hidden significance is therefore sought in the play, whose subject and form necessitated the sacrifice of the literary quality. The plot of the new play, performed lately at the leading Berlin theater, is thus summarized in the German press:

Schluck and Jau are two loafers or tramps. In the first act they are discovered in a wood, not far from the castle of the reigning prince, in a state of hopeless intoxication. They are dressed in rags and their appearance is repulsive in the extreme. Jau incoherently mutters disconnected words, cries for more liquor, and finally falls asleep on the ground. The call of a hunter's horn is heard, and the prince, his bosom friend Karl, and his suite approach the tramps and enter into conversation with Schluck. He finally admits that he and his comrade are drunk, and excuses himself and the sleeping Jau by pleading misery and wretchedness. They drink to forget their sufferings, and not from depravity or love of liquor. The prince orders their removal and imprisonment as vagrants unwilling to earn an honest livelihood. Jau is, of course, unconscious of all that is happening.

In the next act Jau, on waking, finds himself in a princely chamber and dressed like a prince. Karl had hit upon this transformation in order to teach his friend, the prince, a lesson and incidentally to amuse his betrothed, a beautiful princess. All the attendants had been instructed to treat Jau as a ruler and to pretend absolute ignorance of his real past. He is naturally bewildered by the surroundings and thinks it is all a dream. He calls for his mother, talks about the scenes of the previous day, but he is assured that he is a victim of some strange delusion; that he has always been a prince and has never known poverty and vice. He refuses to credit this, but Karl, who acts as the court physician, tells him that princes are subject to a peculiar malady during which they fancy that they had been vulgar plebeians. Finally, Jau is induced to believe these assurances.

In the next scene, Jau and the princely suite are at dinner. He drinks much, talks of his exploits as a hunter, and fully enters into the spirit of his new position. To gratify his love of power, he gives various absurd orders, which are implicitly obeyed. They generally consist in sudden commands to the assemblage to "get up," "sit down," "get up" again. He inquires after Schluck repeatedly, and the latter is at last brought in, dressed in woman's clothes, and as a princess. Jau, of course, recognizes the face, voice, and carriage, but he does not trust his impressions. Schluck plays his part badly and is led away. Jau, after many absurd pranks, gets drunk and is carried out of the room and castle. The princely career is brought to an end.

In the last act the two tramps are back in the wood. Jau, tho awake, still considers himself a prince and scornfully turns away from Schluck, whom he calls tramp and beggar. All explanations of Schluck are in vain. The prince and Karl, with their attendants, again appear, and Jau cries to them that he is one of them, a prince. He is disabused, however, by Karl, and advised to dismiss all nonsense and lead henceforth an industrious, respectable life. All is vanity, says the philosophizing Karl, and there is not much difference between princes and beggars. The same reflections are made by Karl to the prince after the transformation of Jau.

Is this commonplace moral, critics ask, what Hauptmann means to teach by this variation of a theme many times exploited in fable, juvenile fiction, and fantasy? *Die Gegenwart*, of Berlin, which is exceedingly severe in its criticism of the farce,

thinks that the playwright utterly failed to carry out any definite conception, assuming that he had one. It says that here and there the phrases, jests, and irony point to an intention of satirizing "legitimate" princes, but this is negated by the character of Jau. This journal believes that the piece has cost Hauptmann infinite pains, and that he tried to outdo Shakespeare, whose introduction to "The Taming of the Shrew" is founded on the same idea. But far subtler and more delicate humor was necessary for the task, and Hauptmann, conscious of his artistic deficiencies, was obliged to reduce the play to a cheap farce.

But this judgment is not accepted by admirers of the poet. They would treat the play as the product of a sudden whim, of a rest from more serious labors. It is said that Hauptmann was reluctant to permit the public performance of the play, and that he yielded to managerial insistence.—*Translation made for THE LITERARY DIGEST.*

IS RUSKIN OUT OF DATE?

THE art reviews since Ruskin's death devote much space to a consideration of his place in the world of art. Among American publications, *The Magazine of Art* and *The Art Studio* for April are chiefly Ruskin numbers, and the consensus of this expert opinion is distinctly more favorable in its estimate of Ruskin the artist than are some of the opinions lately expressed in leading English reviews. Mr. M. H. Spielmann, the well-known art critic, writing in *The Magazine of Art*, says: "For sixty years the work of John Ruskin has been before the world. In spite of the change of thought and the development of ideas, he holds his empire still—not upon the artist and the student so much as the greater circle of the readers and thinkers of the world." Ruskin's chief mission, Mr. Spielmann remarks, was to proclaim the gospel of art and the beauties to be found in the works of others; yet he placed himself under the best masters of the day, and by hard work and application became "a draftsman of extremely high accomplishment." "His limitations as an artist," says Mr. Spielmann, "are clear and well-defined, but his merits are not less obvious, striking with astonishment every visitor to the University Gallery of Oxford, and silencing even the hostile critic who, as at the Turner Exhibition at the Fine Art Society's Gallery (London, 1878), could see John Ruskin's drawings hanging, not unworthily, beside those of the mighty landscape painter himself."

M. Robert de la Sizeranne, writing also in *The Magazine of Art*, says that the recent tendency to smile at Ruskin's art theories, and to speak of them much in the same tone as we might speak of crinoline, is unworthy of the true art student. Speaking for his own nation, he says:

"It was indeed late in the day before the French 'discovered' Ruskin. The English smiled at our enthusiasm, somewhat as a little girl may smile when she sees a younger companion content still to play with dolls. . . . Some of them seemed to say: 'What, you are so far behind the times that you can still take pleasure in these sermons on pictures? Do you not know that Ruskin is quite out of date? Are you so little acquainted with the younger English school of art that you have failed to note the evolution that has taken place since the days of pre-Raphaelitism? Criticism has gone ahead since 'Modern Painters' was written. It is now exact and scientific; the lyric raptures of Ruskin have given way to calm investigation and to an all but chemical analysis of the characteristics of each master, of the qualities and defects of each school. All the interest of the modern artistic movement centers in this.'"

Is this reproach well founded? asks M. de la Sizeranne. Is Ruskin out of date? He decides in the negative. There is, it is true, much that is old-fashioned in Ruskin's two largest books, "Modern Painters" and "The Stones of Venice," and the writer remarks that the newest notions on technic and ideals of art are not to

be found there. But Ruskin also wrote the "Elements of Drawing," "Lectures on Art," and "Aratra Pentelici"; and where, asks M. de la Sizeranne, are even the newest tendencies of contemporary art more clearly understood and defined, or more eloquently set forth, than in these books? When the French neo-impressionists, after seeking far and wide among the younger critics for a sound theory of the modern movement in art, came to Ruskin, they found here, says the writer, what they had so long sought for fruitlessly elsewhere. Paul Signac, Henry Edmond Cross, and other artists of this school have caused Ruskin's "Elements of Drawing" to be translated into French for their use, "in order to infuse some of these new ideas into the brains of the young school of artists." Those who insist that Ruskin did not understand and sympathize with the new schools have not read his works, asserts M. de la Sizeranne. To Ruskin, too, he says, is due the honor of being the first to initiate the great modern reaction against vicious principles of household art and decoration; for it was at Ruskin's ardent blaze of enthusiasm that William Morris "first lit the torch he held aloft to shine on modern art."

DRAMATIZATIONS OF "QUO VADIS."

THE two rival dramatic adaptations of "Quo Vadis" which have appeared in New York are much alike in a general way, containing much the same drafts from the original. Both were well received, altho the version by Mr. Stanislaus Strange (New York theater) attracts less critical interest than that by Miss Jeanette L. Gilder, editor of *The Critic*. The latter version has the additional recommendation of being authorized by M. Sienkiewicz.

Two dissimilar views of the authorized version (Herald Square Theater) are represented in the following excerpts. The *New York Evening Post* (April 10) says of Miss Gilder's play:

"There are readers who do not place 'Quo Vadis' in the first rank of contemporary fiction, and who are a little doubtful whether it is the spiritual or the carnal side of it that has made it so attractive to the multitude, but no admirer of it can justly accuse Miss Gilder of not treating it with proper respect and sympathy. She has followed the main outline of the story as closely as could reasonably be expected, has been equally sincere and uncompromising in her portrayal of the profligate and savage sensuality of pagan Rome and the religious exaltation of the Christian martyrs, and has avoided the sentimental and disingenuous claptrap which was so conspicuous and offensive in 'The Sign of the Cross.' Whatever the defects of her play—and some of them are sufficiently obvious—she has not subordinated sense to spectacle, or condescended to mere trick for the sake of pleasing the groundlings. She has sought to make the story at least as important as the scenery. . . . The strongest and most moving situation in the whole play is in the last act, where Vinicius, in the foreground, prays for a miracle, which is, apparently, granted when the giant Ursus vanquishes the bull in the arena and saves the life of Lygia. The construction of this set is decidedly ingenious, and the effect pictorially is excellent. Instead of making any attempt to show the arena itself, the scene discloses an approach to the imperial box, with the Emperor and his courtiers watching the events in the invisible arena beyond and below them, whose position and form are indicated by the awning suspended above. From the comments of these spectators the audience is enabled to divine the progress and issue of Ursus's combat, and the effect is much more satisfactory than is generally the case when an attempt is made to substitute narration for action."

In *The Tribune*, Mr. William Winter writes:

"Three hours of stage Christianity, punctuated with three ghost-seeing deliriums, three agonized partings, two suicides, one sermon, one ballet, and one wrestling-match—such is the 'Quo Vadis,' made by Miss Gilder and sanctioned by Mr. Sienkiewicz, that was produced last night in the Herald Square Theater, and was received with abundant applause by a crowded

house. It is not a play; it is a synopsis; but it contains, roughly thrown together, many of the incidents of a popular tale, relative to the persecution of the early Christians in Rome, in the time of Nero; it provides for many sets of showy scenery; its theology is irreproachable, and it suggests the power of saving grace—when reinforced by female blandishments—to convert strong men from everything except a propensity to bellow. The chief convert was Mr. John Blair, as Vinicius; but, altho that ardent Roman changed from a condition of rampant carnality to one of celestial meekness, in the course of the night, he was still shouting, at a late stage of the proceedings. There is scarcely a thread of story in the whole prolix fabric. . . . All these religious plays are very much alike, and they are all tiresome. They please, however, a large class, that habitually shuns the theater but would rally to see an abstract of the Old Testament, and therefore they have their use. To others the stage seems scarcely a fit place for an exposition of the scheme of spiritual salvation. Each to his taste."

SOME CHARACTERISTICS OF ENGLISH FICTION.

MR. GEORGE MOORE, author of "Esther Waters," altho a novelist himself, does not take a high view of the novel and its place in literature. It is only the ideal, the dream element of a book that makes it great, he thinks. Therefore, while Shakespeare, Milton, Shelley, Wordsworth, will make England's name remembered when her empire has passed away and is "forgotten like the Babylonian and the Persian," the great masters of English fiction will disappear, and leave not a wrack behind. He writes (we quote from *The North American Review*, April):

"The servitude of English prose to the things of this world began in the Elizabethan time, when men's eyes did not see so clearly the things of this world as they do now, and so the early servitude of prose was a comparatively light one; and tho the English essay occupies an inferior position to the poem, whether dramatic or narrative, it still holds through the genius of Pater, Landor, and De Quincey a high place in our literature—a place so high that if all our prose literature were destroyed except the works of our essayists and translators, the inferiority between English prose and English verse would probably not strike any one except the discerning critic. It is our prose fiction that brings into striking relief the inferiority of the minds of those who worked in prose to the minds of those whose work is in verse; and that English prose fiction should be the weakest part of our literature is consonant with all that has been advanced here regarding the change which came over the national temper about two hundred and fifty years ago. Prose fiction appeared in England about a hundred years after Cromwell; it was a child, therefore, of our middle age. Twins, I should say, were born to us, for 'Clarissa Harlowe' and 'Tom Jones' appeared simultaneously. But the twins differed exceedingly from each other; one threw back to the early literature; the other dictated the form which the English novel was to take down to the present day. For, so far as we are aware, there exists no instance in our literature of a deviation from the 'Tom Jones' type of novel to the 'Clarissa Harlowe' type of novel, and to appreciate the shallowness of the tradition which has made our fiction, and the depth of the tradition which has made our poetry, we have only to understand the essential differences which divide these novels."

Indeed, for the authors of these two books, Fielding and Richardson, Mr. Moore has little use, dismissing them parenthetically with the remark that neither was a great writer. Nor of Thackeray has he a higher opinion. He pronounces the latter's statement that "no one since Fielding has dared to paint the portrait of a complete man" to be "shallow and evasive": "If he [Thackeray] had said, 'Fielding's portrait is singularly incomplete, for it is composed entirely of lust and physical courage, but as these are immortal instincts the man lives, in the shallows of animal life, it is true, but he lives,' he would have succeeded in defining the merits of Fielding's novel." As for what is com-

monly held to be Thackeray's great masterpiece, Mr. Moore says:

"The merit of 'Vanity Fair' is in the design, in the placing of the characters, in the ingenuity with which the parts are linked together. But if we consider the quality of the mind reflected in this book, we become aware that it is at once trivial and commonplace. Fielding has been compared to Gillray and to Rowlandson. It would be difficult to show that Thackeray's merits are greater than those of Leech or Du Maurier. There is probably not a thought in the little moralities with which Fielding prefixes his chapters which Turgeneff or Balzac would have taken the trouble to write down. His reflections on life are commonplace enough, but they are not obsequious, like Thackeray's. Thackeray did not reflect the mind of the club; he identified himself with it, with the deadly mind of St. James's Street. He is spoken of as a satirist. Well, he twitted young ladies with wanting to get married, but why should they not want to get married? His general outlook on life seems to be that if their mammas would allow them to marry the young men their hearts sighed for, the last reproach that could be legitimately urged against society would be removed."

Of Thackeray's great fellow craftsman, Mr. Moore says:

"Dickens, Thackeray's contemporary, was a man of a deeper and a more richly colored temperament, a man of genius, but one whose genius did not meet with circumstances favorable to an intimate and energetic development. He partakes so largely of the nature of his time that it is open to doubt he achieved any serious literature. In the end it comes to this, that the English novelist does not occupy a higher place in literature than the Italian operatic composer does in music. A story is told of Rossini which might be very well told of Dickens. Rossini had been to hear Wagner, and meeting a friend, he said, sighing: 'I too was gifted, and if I had been brought up in Germany I might have written music.' Rossini knew the truth; he knew that his natural gifts were of a very high order, but they were uncultivated, and he knew they would remain uncultivated because he was wanting in energy of mind. Dickens lived in a time when England had grown inaccessible to ideas, in an age in which facts alone seemed to be worth acquiring, and it is to his credit that in an honest or a simple and unsuspecting way he seems to have been aware of the materializing influences at work, that a second crystallization had begun in England. Mr. Gradgrind is not a great, clear vision of the century's end, but in a limited way Mr. Gradgrind shows that Dickens was not incapable of philosophic speculation. . . . Fettered in a tradition, bad as that which held opera back until Wagner broke it, Dickens could not look humanity full in the face and allow his soul to flow out upon the paper. The English law of fiction was that man had to be considered as a joke or a humdrum creature of habit. Dickens chose the former as Miss Austen had chosen the latter; Dickens could be incisive and poignant; he could even lift a fold of the veil, for 'under the cover of laughter' half a truth may be allowed to pass; but if the instincts were forbidden, and if there were no prose examples showing how they might be utilized, landscape was free to his imagination, and it was in places that Dickens's genius found an outlet. He introduced the spiritual life of places into English fiction; Balzac had done this in 'Seraphita,' but in Balzac we find everything; in other writers we find this and that quality. All that is spiritual in London found expression in 'Bleak House' and 'The Old Curiosity Shop'; the sanctity of the English landscape rises up in the pages of 'Barnaby Rudge.' Dickens was a great visionary, living in a time when the soul was in eclipse; living at almost any other time, his characters would have bulked up in the tragic masses of Rembrandt's imagination."

The women novelists also come in for their share of Mr. Moore's rather contemptuous toleration. "Women," he says, "occupy in art exactly the same place that they do in religion; they worship very prettily the gods that men create for them. They make very good saints, and they carry our ideas very prettily across their fans." Of Miss Austen, who during the past twelvemonth in England has been compelled—if her shade still listens to terrestrial critics—to hear some harsh things of herself, Mr. Moore remarks that "it is Miss Austen's plausible lying that induces us

to bear with her a little, and allows us, when we put a book of hers down, to say that her novels are as perfect as they are tedious." As for Charlotte, Anne, and Emily Brontë, and George Eliot, they are dismissed with the following lines:

"The Brontës wrote some admirable novels, melodramatic and social, but is it necessary to point out that 'Jane Eyre' is not a symbol of a moral idea? that 'Villette' is charming, and that 'Wuthering Heights' is melodramatic? George Eliot tried to think like a man, and produced admirable counterfeits of his thoughts in wax-work. So far her novels may be said to be symbolical. Are Adam Bede and Arthur and the facetious farmer's wife more living than the figures in any wax-work show? They are dumpy and doll-like, their eyes are fixed, and their skins are sallow and reddened. Maggie Tulliver seems for a moment like the embodiment of an ethical principle, but the story is interrupted by a flood, and the critic asks if the subject of the book is Maggie's temperament or the rising of the Floss. Even religion has not won the English novel from its original character; neither here nor in America has religion made a single convert from Fielding; none has had the strength to break away from the raking and hoeing in the beds of rural and urban manners and build again upon the passions. In the English novel religion is lost sight of in the desire to distinguish between Roman Catholics and Baptists, and in intention the religious novel is the same as the social novel. In England the intention is to distinguish between the baronet and the grocer; across the Atlantic to distinguish between Americans who have been to Paris and those who have stayed at home."

FILIPINO MUSIC.

ONE would not be inclined to think of a Malay archipelago as a place where modern music is extensively cultivated; yet a traveler of musical tastes, writing lately from San Isidro, in the Philippine Islands, places a high estimate upon the musical culture of the Tagalos. Music, he says, holds an important place in the esteem of the Filipinos—such music, too, as we know in America and Europe. Many young women of the leading Tagalos families have received careful instruction in both instrumental and vocal branches of the art, and frequently display very considerable talent and cultivation. Even in the smallest towns capable orchestras exist, primarily for church uses, but available also for fiestas and purely social affairs. These bandsmen, he says, are gifted with an extraordinarily quick ear, and perform feats which would put many of our own bands to shame. He says (in the *New York Tribune*):

"That the bands and orchestras play in public entirely without notes is principally due to a marvelous musical memory, and not to their ability to play 'by ear,' the commonly ascribed source of their cleverness. Diligent practise with notes in hand, coupled with a quick perception as to favorite band selections, made it possible for these native organizations to serenade the Americans with their own popular airs almost as soon as they were played by the American bands."

"Occasionally wandering bands of musicians are seen in the smaller towns. They are strollers in the true sense of that word, since they idle their way along the green fringed dusty roads that wander in such an aimless way from village to village. These strolling musicians halt often by stream-side or in shady place seemingly for additional practise of their simple tunes, but in reality stopping out of sheer do-nothingness. This class of music-makers have for their usual equipment naught but sweet, clear-noted flutes, with which to carry the air, and curious double-barreled horns, all of bamboo. Often desperately ragged, and always barefooted, the little group strikes up strange and weird airs, the time being equally as curious as the melody. Dust beats up in little puffs from beneath their splayed feet as the players mark the time; nimble fingers—sadly dirty, alas!—rise and fall or flutter over the openings in the creamy white bamboo flutes, and the quick, limpid notes of the favorite march, 'Viva Pio del Pilar,' are heard. Again they play. This time there trickles from the flutes the sweet notes of the song of the pilgrims to the shrine of Antipolo. They are the sounds of dropping

water, of a crystal bell struck softly, or the clear high notes of the scarlet tanager in the cherry-trees in far-away America. And to the accompaniment of the larger instruments floats the song of the pilgrims along on even and gentle waves of bass and barytone, or sets the hot afternoon air throbbing with the deep 'oomp, oomp' of the chorus of 'Pio del Pilar con valor singular.'

"I have in mind one band in particular. The leader was a small man, even among his own undersized people. The totally blind, he himself had made all the glistening horns and slender polished flutes of his players. It was, perhaps, not music of high order that they gave us while we were halted for rest on the banks of the San Fernando, and yet it was not altogether displeasing. And when, as a finale, there rang in our ears the notes of 'The Star-Spangled Banner,' with accompanying soft breathing from the heavier basses, the blind man stood erect and his tattered hat was dashed to the ground. Soldiers and players alike bared their heads, but none were quicker than the leader. Stage play perhaps it was, but we thought not; for never was an Englishman more devout in his toast of 'The Queen! God bless her!' than was that Filipino when, the air concluded, he stretched out his arms appealingly, and, with choking voice, cried, 'It is the song of liberty. Señors, I, too, was once a soldier and fought for liberty, holy liberty!'

"From their homes we have frequently heard and enjoyed excellent piano music, and on the occasion when General Wheeler and staff were entertained by Señor Ambrosio Bautista, at the latter's home in Panique, after an indescribable meal, a real treat was given by the daughters of the house. Schubert's 'Serenade' and 'Non è ver' took us completely by surprise. And when another daughter played Chaminade's 'The Flatterer,' and played it with that soft insistence that it deserves, our surprise was genuine astonishment."

A COUNTRY THAT HAS NO ILLITERATES.

FOR more reasons than one, the little Finnish nation has come into general notice of late, and all new information on this little known race has only added to the esteem in which it is held. Six months ago, an international committee went to St. Petersburg, bearing with them a petition signed by hundreds of leading scholars from all the lands of Europe, expressing their high appreciation of the character of the Finns and asking that the Russian Government abstain from the measures it had adopted looking to a suppression of their political and national existence. The committee was not received by the Czar, and the Russians have continued their policy of suppression. A confirmation of the justice of the claims put forth in favor of the Finns is furnished in a book published by the Russian authoress, Mrs. O. R. Popow, of St. Petersburg. In the *Allgemeine Zeitung* (Munich, Nos. 31 and 34) appears a review of this book, from which we take the following information concerning Finn literature.

There is in this country practically not one person to be found who can not read or write. There is perhaps not a single peasant's hut in Finland where a political paper is not regularly read, and scarcely a Finnish peasant can be found who can not recite from memory large portions of the writings of Runeberg and Topelius. To an unusual extent, political agitation there is the outcome of the development of literature and especially of a higher type of journalism.

The father of the Finnish movement in modern literature was Henry Gabriel Porthau, who in the last three decades of the eighteenth century aroused in the Finns a national enthusiasm never before known. Early in the present century a society of patriotic Finns was organized to realize in active life national and literary ideals of the Porthauites. At this time, the first literary journal of Finland was founded—the *Turun Viikon Seunomat* (Abo Weekly News). Since then the press of the country has developed in a remarkable degree. Of the thirty-five smaller villages in Finland, there are only five that have not at least one periodical, the total number of papers being 156, one to every 13,000 inhabitants. Equal enthusiasm is shown for the higher types of literature. Almost every school and class of modern literature is represented among the writers of Finland. "The Finnish Literary Association," which has been at work

since 1831, is the chief exponent of the learning and research of this people, and has also translated the best specimens of the literature of European nations into Finnish.—*Translation made for THE LITERARY DIGEST.*

PROGRESS IN SPELLING REFORM.

THE advocates of "simplified spelling" express gratification over the progress of the past year. In spite of the usual amount of newspaper hostility, ranging from humorous to tragically grave, the response made to the recent proposal of the National Educational Association for a revised spelling of twelve words (program, tho, altho, thoro, thorofare, thru, thruout, catalog, prolog, decalog, demagog, pedagog) seems to have been gratifying to the friends of the reform. The new spellings have been either adopted or recommended for use in the public schools of Pittsfield and Northampton (Mass.), in Denver, and in Chicago; also by the Chicago Society of Proof-Readers, by the important educational house of E. L. Kellogg & Company, of New York, and by many less widely known schools and journals. The University of Chicago press resolved to adopt the new spellings in all publications of the university; but this important step was subsequently regarded as too radical an advance by the more conservative members of the university faculty, who, according to the latest reports, have placed their veto on the resolution.

The department of superintendence of the National Educational Association, at its meeting in Chattanooga last year, adopted the following resolutions, action by the association being, however, deferred to this year:

"*Resolved*, That in all the published proceedings of this department, the recommendation of the American and the British philological associations be adopted at once so far as said recommendation refers to the dropping of the final 'e' in words in which it does not serve to lengthen the preceding vowel, but rather tends to mislead the learner; thus spel bay, giv, ar, bad (verb), definit, derivative, amiabl, etc.; and to the substitution of 'f' for ph and gh where the digraphs represent the sound of 'f'; thus spel geografty, fantasm, and enuf, and to the dropping of gh in all words in which this digraf is silent; thus spel thot, bou (bough), ni (night), etc.

"*Resolved*, That in all words in which the amended speling recommended by said associations is in accordance with the etymology of the word, it be adopted in the published proceedings of this department; thus spel coud, sovrar, foren, sithe, hole (entire), iland, gastly, etc."

This report, it is claimed, has met with the general approval of etymological specialists. One of the champions of the report is Dr. I. K. Funk, editor-in-chief of the *Standard Dictionary*. We quote from his letter in the *New York Sun*:

"The report of the committee . . . seems to me to be simply in the line of what must be. It is inevitable as the law of gravity that silent letters, that is, letters that have outlived their significance and are now but dead weight, be dropt out of words. Progress is along the line of least resistance, and in spelling the phonetic is surely that line; a distinct sign for every distinct sound. We have already come a great way. Just note some of the spellings that our great-grandfathers had to put up with, and let us be glad that we live to-day. This is the way they spelt in Shakespeare's time:

Ayre (air), beleene (believe), civill (civil), cuppe (cup), dieuelli (devil), duckoy (decoy), farre (far), fische (fish), horrou (horror), musick (music), sonne (sun), souldiers (soldiers), trewe (true), wiefe (wife).

"'Tis true 'tis pittie, and pittie 'tis 'tis true.'—*'Hamlet,'* act 2, scene 2.

"Ye chouse spirits . . . appear and ayde me in this enterprize"—*'Henry VI,'* act 5, scene 3.

"Here are a few more specimens:

"Pykes, breames, carpes, tenches, and other fysshes."—Act 3 of *'King Henry VII,'* scene 2.

"Her faire yelow haire hung playne byhynd her bak"—*Leland in 'Knechtley History of England,'* vol. I, p. 429.

"He talked of foules, of worms, of fishes."—*Coverdale, I Kings* iv, 35.

"Nor is simplified spelling an untried experiment. By a re-

cent imperial edict, the absolute phonetic is the only spelling taught in the public schools of Germany, and used in government printing. This settles it for common-sense Germany. Italy and Spain are on the phonetic basis, and now the editors of the new dictionary of the French Academy are making some startling changes, so that our French literary phobists may hereafter feel permitted to write a program, join a quartet, and smoke a cigaret.

In the recently published "Prose of Edward Rowland Sill," we find a short essay entitled "The Objections to Spelling Reform." There are, Mr. Sill thought, "two insuperable objections to the proposed reform." The first is that "it would increase the already too great similarity in words." He wrote:

"Syllables that are at present identical only to the ear would then become alike to the eye also. Now the true theory of a visible and audible language demands that *the symbols of ideas should differ as much as the ideas.* *Rite, right, and write* are three wholly distinct ideas, and their symbols ought to be correspondingly distinct. In the natural and undisturbed development of a language they would differ both to ear and to eye; but our present tongue is the result of confusing influences, and the sounds of our speech have been allowed in many instances to lose their differentiation. The eye, however, being a more intellectual organ than the ear, has refused to permit the visible symbols to break down into this indistinguishable similarity. If we can not have every idea represented by a different symbol to the ear, at least let us not throw away at the command of a false notion whatever difference remains to the eye. *Mele, meal, meet; night and knight; sight, site, cite; mine and mined; aisle and isle; by, bye, buy; sent, scent, cent; sell and cell; wait and weight; all and awl*, and a great number of other such pairs or triplets would lose what little is left of their individual identity. Depend upon it, this difference of spelling has not been a result of accident. It has been retained because of a felt instinct of the usefulness of keeping things separate in appearance which are separate in fact."

His second objection is that phonetic spelling "would petrify any language in the forms which it happened to have at the moment of adopting the 'reform.'" He added:

"If a fixed phonetic spelling, backed up by all the power of the more and more tyrannical dictionaries, is allowed to paralyze all the instincts of growth and change in the language, throwing it into a dead and fossil condition before its time, there will be no longer possible such progress as, for example, that from the old English *ic* to the modern *I*."

Results of the New York Opera Season.—The season of 1899-1900, which ended at the Metropolitan Opera House on Saturday, April 14, has during its seventeen weeks comprised thirty different operas, presented at one hundred and two performances—allowing for double bills—on ninety-seven evenings. The New York *Evening Post* gives the following statistical *résumé* of the season:

"Among the thirteen composers represented, Wagner was, as usual, the most popular, his operas having received thirty-four performances; Gounod came next with thirteen, Verdi and Mozart with eleven each, while Bizet had ten, Mascagni, Donizetti, and Meyerbeer five each, Rossini four, and Beethoven, Leoncavallo, Nicolai, and Thomas one each. Five of the thirteen composers were Germans, representing more than half the operas and exactly half the performances (fifty-one). Italy was represented by five composers, eight operas, and twenty-one performances; while France contributed four composers, four operas, and thirty performances. In the popularity of single operas France leads (thanks to Mlle. Calvé), with 'Carmen' ten and 'Faust' nine. All the operas, with the exception of the 'Magic Flute,' were sung in the language in which they were written, the Metropolitan being in this respect—an important one—as in the number of great singers, ahead of all other opera houses in the world."

Zitkala-Sa, the Indian Girl-Violinist.—A young Indian girl, of striking beauty and much musical talent, is attracting considerable attention in Eastern cities. She is the violin soloist of the Carlyle Indian band, now *en route* to the Paris Exposition-*Harper's Bazar* (April 14) says of her:

ZITKALA-SA,
The Girl Violinist of the Carlyle Indian Band.
By Courtesy of Harper's Bazar.

"Zitkala-Sa is of the Sioux tribe of Dakota, and until her ninth year was a veritable little savage, running wild over the prairie and speaking no language but her own. Her first progress toward civilization was made at a Friends' school in Indiana, and she afterward attended Earlham College in the same State. Here she distinguished herself by carrying off the first prize in oratory, and also a first prize in an interesting oratorical contest among several Western colleges. She became a teacher at the Carlisle Indian School,

but resigned to devote herself to the study of the violin in Boston. She has also published lately a series of articles in a leading magazine on the 'Impressions of an Indian Childhood' and the 'School Life of an Indian Girl,' which display a rare command of English and much artistic feeling."

NOTES.

Two announcements made recently will be interesting to the literary and the dramatic world. One is of the dramatization of Miss Mary Johnston's "To Have and To Hold." The other is the securing of the American rights to Mr. Hestand's "L'Aiglon," for Miss Maud Adams.

AN Irish play, "The Heather Field," by Edward Martyn, was presented on the evenings of April 19, 20, and 21, at Carnegie Lyceum. It was the fifth production in the course of Modern Plays. "The Heather Field" was one of the first fruits of the new Irish renaissance movement in letters of which so much has been heard of late. It was originally produced two seasons ago under the auspices of the Irish Literary Theater Society of Dublin, of which W. B. Yeats, the poet, has been the moving spirit.

AN encouraging instance of the growth of musical taste of a high order in the West is the "Messiah week" given each year at Bethany College, Lindsburg, Kans., during the week preceding Easter. Altho this college is but eighteen years old and located in a little town of hardly 2,000 inhabitants, it possesses a great pipe organ and a trained chorus of nearly four hundred voices. Its four "Messiah" renditions are widely known throughout the West and bring great numbers of music lovers to the oratorio.

SIGERIED WAGNER, son of the famous composer, has successfully produced "Der Baerenbeuter," an opera in three acts. The librettist founds his plot on German legends, and it is said that in the opera the love element is predominant, the music is melodious, rich, and rhythmical, and the influence of Meyerbeer, rather than of the composer's father, is strongly manifest. It has been called by some of his admirers the best of recent German operas, and the German audience upon the first night manifested unmistakable approval.

A NEW venture in the publishing world is being undertaken by the Tucker Publishing Company, New York, in reprinting in cheap pamphlet form (7 and 5 cents each) leading articles from English and continental periodicals. Among the articles already so reproduced, we note the discussions by Robert Buchanan and Sir Walter Besant concerning "The Voice of the Hooligan," and the correspondence between Prof. St. George Mivart and Cardinal Vaughan, and Mallock's recent article on "Non-Dogmatic Christianity," in which he takes Mrs. Ward to task.

IN Balzac's recently published "Letters to a Stranger" appears a letter in which he speaks as follows of George Sand: "Whilst I go to bed at six o'clock in the evening and rise at midnight, she reverses the process of talking to her pillow at six in the morning and rising at midday. Naturally I conformed to her habits, and we confabulated from 5 P.M. to 5 A.M. every day. I felt, that I was talking with a comrade. She has the great qualities of a man. She discussed burning questions with the seriousness, the sincerity, the frankness, the conscientiousness of those who are as shepherds, leading the human flock."

SCIENCE AND INVENTION.

UNSOLVED PROBLEMS OF SCIENCE.

THIS is the age of science triumphant; yet the defeats of science have been more numerous than her victories, and many of her most conspicuous failures have been in connection with the most comprehensive and important questions that she has attempted to answer. In an article in *Harper's Magazine* (April), Dr. H. S. Williams points out some of these failures. He first encourages us by noting that science is continually turning the tables on her adversaries, and that the forlorn hope of to-day may be the conquering host of to-morrow; but that there are still many of the forlornest of forlorn hopes he does not deny. He divides these into three categories: (1) Solar and telluric; (2) physical, and (3) life problems. First, where does the sun get its heat? One of the earliest explanations was that the impact of thousands of meteors every second furnished it; but subsequent calculation showed that this would necessitate an increase of the sun's mass that certainly does not take place. Next Helmholtz accounted for it by the slow contraction of the sun itself. This explanation, which has been generally accepted in one form or another, involves some startling consequences. Says Dr. Williams:

"According to Mayer's meteoric hypothesis, there were no data at hand for any estimate whatever as to the sun's permanency, since no one could surmise what might be the limits of the meteoric supply. But Helmholtz's estimate implied an incandescent body cooling. . . . It was only necessary to calculate the total amount of heat which could be generated by the total mass of our solar system in falling together to the sun's center from 'infinity' to find the total heat supply to be drawn upon. Assuming, then, that the present observed rate of heat-giving has been the average maintained in the past, a simple division gives the number of years for which the original supply is adequate. The supply will be exhausted, it will be observed, when the mass comes into stable equilibrium as a solid body, no longer subject to contraction, about the sun's center—such a body, in short, as our earth is at present.

"This calculation was made by Lord Kelvin, Professor Tait, and others, and the result was one of the most truly dynamic surprises of the century. For it transpired that, according to mathematics, the entire limit of the sun's heat-giving life could not exceed something like twenty-five millions of years. The publication of that estimate, with the appearance of authority, brought a veritable storm about the heads of the physicists. The entire geological and biological worlds were up in arms in a trice. Two or three generations before, they hurled brickbats at any one who even hinted that the solar system might be more than six thousand years old; now they jeered in derision at the attempt to limit the lifebearing period of our globe to a paltry fifteen or twenty millions."

After following this noted controversy into some of its more recent ramifications, Professor Williams concludes that the contraction theory of the sun's heat must await the demonstration of observed shrinkage of the solar disk, as viewed by future generations of observers, before taking rank as an incontestable theory, and that computations as to time based solely on this hypothesis must in the mean time be viewed askance.

The collateral problems suggested by the controversy themselves furnish numerous instances of unsolved mysteries. For instance, the thickness of the earth's crust, and the proportion of molten matter within its mass are still in dispute. Still more are geologists and astronomers at odds about the earth's future, and estimates of its ultimate fate are little better than guesses.

Coming to his second class of problems, Dr. Williams notes that of the nature of gravitation—the all-encompassing power of the universe—we yet know nothing. Says the writer:

"The wisest physicist of to-day will assure you that he knows

absolutely nothing of the why of gravitation—that he can no more explain why a stone tossed into the air falls back to earth than can the boy who tosses the stone. But while this statement puts in a nutshell the scientific status of explanations of gravitation, yet it is not in human nature that speculative scientists should refrain from the effort to explain it. Such efforts have been made; yet, on the whole, they are surprisingly few in number; indeed, there are but two that need claim our attention here, and one of these has hardly more than historical interest. One of these is the so-called ultra-mundane-corpusele hypothesis of Le Sage; the other is based on the vortex theory of matter."

In brief, the former theory is that the universe is filled with minute flying particles, and that contiguous bodies are forced together by the impact of these particles, producing the result that we explain as due to attraction. The other is that gravitation is a sort of strain in the ether, due to a suction exerted by the atoms of matter, which are themselves but vortices in the same ether. In all such explanations, however, says Dr. Williams, we are but "heaping hypothesis upon hypothesis." Of course, a hypothesis that violates no known law and has the warrant of philosophical probability is always worthy of a hearing, but we must not forget that it is hypothesis only, not conclusive theory. The same may be said of theories of the ultimate constitution of matter. Altho physicists believe in the atomic theory, they are not ready to tell what the atom is, or even what it is like. The same mystery involves all interatomic action, physical or chemical. To quote again:

"No one knows just what happens when one drops a lump of salt or sugar into a bowl of water. We may believe with Professor Ostwald and his followers, that the molecules of sugar merely glide everywhere between the molecules of water, without chemical action; or, on the other hand, dismissing this mechanical explanation, we may say with Mendeleef that the process of solution is the most active of chemical phenomena, involving that incessant interplay of atoms known as dissociation. But these two explanations are mutually exclusive, and no one can say positively which one, if either one, is right. . . .

"But, for that matter, what is the nature of these intermolecular bonds in any case? And why, at the same temperature, are some substances held together with such enormous rigidity, others so loosely? Why does not a lump of iron dissolve as readily as the lump of sugar in our bowl of water? Guesses may be made to-day at these riddles, to be sure, but anything like tenable solutions will only be possible when we know much more than at present of the nature of intermolecular forces, and of the mechanism of molecular structures."

In fact, Dr. Williams concludes, the realm of atom and molecule is a veritable land of mysteries. But the greatest mystery of science is included under the third head of which Dr. Williams treats—the problem of life. In the first place, is or is not life peculiar to our earth? Science can not tell us whether the conditions that gave rise to it were incidental to our own planet only, or whether all planets have passed or are yet to pass through a life-bearing stage. How did life originate? Was its origin single or multiple? What are its relations to so-called "dead" matter? None of these questions has yet been answered satisfactorily by science. And Dr. Williams notes that, without trying to answer them, it has its hands quite full in dealing with the present phenomena of living organisms. Says the writer:

"Some of the most elementary principles of mechanical construction of the cell are still matters of controversy. On the one hand, it is held by Prof. O. Bütschli and his followers that the substance of the typical cell is essentially alveolar, or foamlike, comparable to an emulsion, and that the observed reticular structure of the cell is due to the intersections of the walls of the minute ultimate globules. But another equally authoritative school of workers holds to the view, first expressed by Frommann and Arnold, that the reticulum is really a system of threads, which constitute the most important basis of the cell structure. It is even held that these fibers penetrate the cell walls and connect adjoining cells, so that the entire body is a reticulum. For

the moment there is no final decision between these opposing views.

"Turning from the cell as an individual to the mature organism which the cell composes when aggregated with its fellows, one finds the usual complement of open questions, of greater or less significance, focalizing the attention of working biologists. Thus the evolutionist, secure as is his general position, is yet in doubt when it comes to tracing the exact lineage of various forms. He does not know, for example, exactly which order of invertebrates contains the type from which vertebrates sprang, tho several hotly contested opinions, each exclusive of the rest, are in the field. Again, there is like uncertainty and difference of opinion as to just which order of lower vertebrates formed the direct ancestry of the mammals. Among the mammals themselves there are several orders, such as the whales, the elephants, and even man himself, whose exact lines of more immediate ancestry are not as fully revealed by present paleontology as is to be fully desired."

In conclusion, Dr. Williams points to anthropology as a science of the future, so vast that its problems are not yet as clearly defined or generally recognized as they are sure to be. To this yet immature science, he says, will fall the greatest of the unsolved problems of the next century.

ASBESTOS AND ITS USES.

AMONG the interesting and novel uses to which asbestos is now being put, one of the latest is the fabrication of a kind of porcelain, which for many purposes is superior to that made in the ordinary way. We learn this from an article contributed to *La Science Française* (March 30) by M. P. F. Lhénoirel. Says this writer:

"Asbestos is called also by miners 'cotton-stone.' Canada furnishes almost all of the asbestos of commerce—about 10,000 tons a year; Italy furnishes a few hundred tons. It has been found also in Corsica, in Hungary, in Sweden, in Russia, in South Africa, and in South America; but what with the difficulty of mining and transportation, as well as the rarity of the product or the insufficiency of the quantity, the amounts produced in these regions are almost nothing.

"Asbestos is chiefly used to pack pistons in steam-engines and joints in conduits for steam, hot air, etc., and to cover such conduits, as well as steam-boilers. It is also employed to insulate electric wires.

"Of it are made filters for acids and for oils, building-paper, brick, cement, and paints. It is used to line fire-proof safes, in gas-logs, and in furnaces. Garments for firemen, glass-makers, and workmen who use fire and acids, are made from it, as well as theater-curtains, and ropes for use in fire-escapes.

"It may be used either alone or in combination with other textile materials, or with rubber, steel, etc.

"Asbestos is very irregularly distributed throughout strata of serpentine rock, and shows itself at the surface in outcrops like solid rock; it is worked very simply, therefore, in quarries at points where it is found in profitable quantities. The deepest quarries do not exceed one hundred feet. The huge blocks of serpentine detached by blasting are broken up, and those of the pieces that contain asbestos are carried to the workshops, where children break them up further with small hammers and separate the asbestos according to quality.

"It has been said that asbestos can be used like any textile material; it is now even dyed. This is effected quite well by the following method: The fibers are placed for two hours in a cold ten-per-cent. solution of albumen and then partially dried in air, after which they are dipped in a dyeing bath raised progressively in temperature till it reaches 90° C. [129° F.].

"A new industry based on the use of asbestos is the manufacture of 'asbestos-porcelain,' invented several years ago by M. F. Garros. Of all fibers, animal, vegetable, or mineral, there is none that has—as shown by the microscope—a smaller diameter than that of asbestos. These fibers, when powdered, give rise to extremely tiny particles. M. Garros thought that if, without the addition of foreign bodies, these particles could be agglomerated, the material thus formed would have very numerous and

very small pores, not only on account of this minute structure, but also because of the facility with which the pure mineral can be obtained.

"The chemical composition of asbestos (silicate of magnesia and lime) led the inventor to believe that a powder thus composed should form, when mixed with water, a plastic paste that by heating under special conditions could be made into an earthenware of considerable hardness. To this he gives the name 'asbestos porcelain.' "

Experiment has shown, the writer further tells us, that the manufacture of such a porcelain is perfectly feasible. The powdered asbestos is of a white or yellowish color, and may easily be bleached. The ware made of it is of a translucence comparable with that of ordinary porcelain. The applications of this discovery are numerous. Owing to the very minute porous structure of the ware, which, it has been demonstrated, is much finer than that of common porcelain and more homogeneous, it can be used for the filtration and sterilization of liquids. While the pores of common porcelain will allow microorganisms to pass, those of asbestos-porcelain are penetrated by these organisms only to a very slight depth, and they may be removed by simple washing with a sponge. Says the writer:

"Experiments made by Drs. Durand-Fardel and Bordas show that water containing 1,200 colonies of microbes to the cubic centimeter, is absolutely sterilized after filtration through asbestos porcelain. Besides this it has been proved to filter more rapidly than ordinary porcelain.

"Other experiments by Messrs. Cousin and Méran on wines, vinegars, and acids have shown that these liquids, after filtration through asbestos-porcelain, are not altered in chemical composition."—*Translation made for THE LITERARY DIGEST.*

A RAILWAY HUNG OVER A RIVER.

THE electric railway system soon to be put in service from Barmen, Germany, through Elberfeld to Vohwinkel, a distance of about eight miles, is a curious departure from existing standards. It has only a single rail fixed to the under surface

GENERAL VIEW OF SUSPENDED ELECTRIC RAILWAY.

of a viaduct, which is supported by a light lattice work. Six miles of the line is over the Wupper River, the construction being shown in the illustrations. Over other portions of the route an arched support is employed. The minimum radius of curves is 300 feet and the steepest grade 4.5 per cent. The following additional data are quoted from *The Electrical World and Engineer* (March 31):

"The cars are suspended flexibly to permit of going around abrupt curves. At a speed of 15 miles per hour the car body is inclined at an angle of 25° when passing around curves,

without, however, any inconvenience to passengers, it is stated. . . . The current is taken from a light rail by means of a sliding shoe held in contact by a spring. In the case of a train of two or more cars, the first car alone is fed directly by the current, a flexible cable of several wires supplying the necessary current to the other cars for motors, incandescent lamps or bells. Every car will have a motor equipment. Westinghouse air-brakes are

METHOD OF CONSTRUCTION OVER RIVER.

used, the reservoirs being refilled at the terminal points of the line. It is proposed to run the cars at a speed of 30 miles per hour, which will give an average speed of from 15 to 21 miles an hour. Trains of two cars will run under a headway of two minutes, and will be controlled by an automatic block-signal system.

"The cost of the line proper will not, it is stated, exceed \$200,000 per mile. The cost of the equipment of the system will be \$140,000, on the basis of a train every three minutes, carrying 100 persons at a speed of from 24 to 30 miles an hour."

THE X-RAYS AND THE EARTH'S MAGNETISM.

MAY the earth's electricity and magnetism be due to an x-ray effect on our atmosphere? The theory that they are so caused, which is acknowledged by its author to be a somewhat audacious one, is advanced by Prof. John Trowbridge, of Harvard, in *Appleton's Popular Science Monthly* (April). Professor Trowbridge bases his hypothesis on the striking property possessed by the Roentgen rays of being able to open a path for a current of electricity. The discharge, feeble in itself, not capable of lifting a pound weight a foot from the floor by means of a motor, is yet competent, Professor Trowbridge notes, to open a path for the current which can set all the trolley cars of a great city in motion. He says:

"To exhibit this mysterious effect we bring the ends of the electrical current which we wish to excite near each other, but not touching, in a glass tube with thin walls, from which the air has been exhausted. When the x-rays fall on the gap between the wires the electrical current immediately jumps across the gap with a vivid light. We have here the mechanism of an electrical relay—the feeble energy of the electric discharge can call into play a giant energy. By what energy does it accomplish this? Is it by compelling molecules to put themselves in line, so that the electrical current can bridge the gap? Is it by breaking down this mysterious ether of space, as if we threw a stone at a turbid bull's-eye in a prison chamber and let in a flood of sunlight? How the imagination is stirred by this process—what seems dead and lifeless can, by a physical agency, be stirred to endless activity! The rays are like the touch of Ithuriel's spear.

"The electrical discharge can accomplish all this, but the story of its activity is not yet told. It can not be told, for each year adds information in regard to these activities, for there are thousands of investigators at work. Another far-reaching manifestation is this: The rays can separate the air or a gas into its constituent particles, much as a strong electrical current separates water into oxygen and hydrogen. They can communicate electrical charges to these particles—positive and negative charges. The charged air-particles, when forced through partitions of spun glass, do not give up their electricity as they do when they are charged by an electrical machine."

It is this curious manifestation that leads Professor Trowbridge to suspect that the electricity and magnetism of the earth may

be caused by an x-ray effect on our atmosphere. The sun and the earth, he says, are separated like the terminals of a Crookes tube—two conductors with a vacuum between, so that electrical excitation from the sun may cause electrical discharge between it and the earth. This may take the form of an x-ray effect which could separate the upper layers of the atmosphere into positive and negative charges. The velocity of the negative particles is greater than that of the positive, and the revolution of the earth, by moving these electrified particles, may generate electrical currents which in circulation around the earth could produce the observed magnetism of the north and south poles, together with the auroral lights characteristic of those regions. The professor says in conclusion:

"This, I am well aware, is an audacious theory. It is certainly a vast extension of the laboratory experiments I have described, but the electrical radiations developed in electrical discharges are as competent to produce powerful magnetic whirls as the heat radiations in our atmosphere to develop cyclones. In the lower regions of our atmosphere the air is an insulator-like glass to the passage of an electrical current. A layer a foot thick can prevent the circulation of the most powerful current which is now used to generate horse-power. When this air space is rarefied at a certain degree of rarefaction the electrical current passes, especially, as we have seen, if it is illuminated by the x-rays. When, therefore, we ascend to a height of 10 or 20 miles the rarefied air becomes an excellent conductor of electricity of high electromotive force. To my mind, the conditions exist for developing an electrical state in the earth's covering of air which is competent to explain the electrical manifestations of the air, the auroral gleam, and the mysterious effect on the magnetic needle which keeps it directed to the magnetic north. Can not we conclude that the study of the x-rays bids fair to greatly extend our conceptions of the constitution of matter and of the action and interaction of nature's forces?"

HEAT-STROKE AND SUNSTROKE.

IT is contended by Dr. Moussoir, a French naval surgeon, that these are two diseases and not one and the same, as has been hitherto supposed. In the *Archives de Médecine Navale* (January), Dr. Moussoir claims to be the first observer to establish this fundamental distinction; and contends further that his discovery may result in a large saving of human life. Says Dr. Moussoir, as translated and abstracted in *The Lancet* (March 31):

"Heat-stroke is a pathological condition produced by the action on the whole surface of the body during a sufficiently prolonged period of a temperature exceeding 104° F., whereas sunstroke is a pathological condition produced by the action on the cranium during a period, which need not necessarily be long, of sufficiently intense solar radiation. The high temperature which gives rise to heat-stroke may be either moist or dry and may emanate from any source. Moist heat, as in a stoke-hole on board ship, brings on heat-stroke by preventing the evaporation of perspiration, while a dry heat, by shriveling up the skin into a parchment-like substance, prevents the exudation of perspiration, and most probably also produces an analogous condition in the pulmonary alveolar tissues. Heat-stroke causes its ill-effects through the superheated blood, which reacts on the nervous centers. It comes on gradually, but may simulate suddenness when the will power by which the subject was sustained is abruptly withdrawn. Stokers are able to endure a damp, hot atmosphere in narrow, ill-ventilated spaces because they work naked or nearly so, whereas soldiers on duty in the open air succumb to heat-stroke because the caloric increases beneath their thick clothing, which also hinders the evaporation of sweat.

"Sunstroke, or insolation, is not induced by high temperature, but by the intense radiation which the sun alone, owing to its enormous volume (1,200,000 times that of the earth), can supply, the chemical rays, the vibrations of which are more rapid and therefore more penetrating than those of their calorific and luminous congeners, being the exciting cause."

The French physician notes that the chemical rays of the sun can pierce through white clouds freely, but are arrested by black substances and partially so by red, and he applies these facts to explain the immunity from sunstroke of negroes and people with swarthy complexions, and the diminished liability to it of the ruddy. He goes on to say:

"To produce sunstroke the rays must impinge upon some part of the brain-case, the effect being transmitted thence to the as yet unlocated heat-center by reflex action. The process precisely resembles what goes on when a perspiring scalp is exposed to a draft and sneezing coryza and other reflex phenomena quickly ensue. Covering the head preserves from sunstroke, but just as is the case with thick clothing a helmet can assist only in the development of heat-stroke. The mean of a series of observations with suspended thermometers showed that the temperature inside a regulation helmet was 10° C. higher than in the shade of a veranda. In heat-stroke the disease begins by heating the blood, but in sunstroke this condition of the circulating fluid is secondary; the fact, however, that in both affections the blood becomes superheated serves to explain the resemblance of the symptoms. Sunstroke or insolation can occur only within the tropics because in that region alone the sun's chemical rays are sufficiently intense to produce the necessary reaction."

The Lancet admits that the doctor has established a *prima facie* case for his contention, but it does not approve of his remarks on the treatment of the disease. He insists upon excitation and antipyrin, with ice, cold affusion, and "the rest of the stock remedies as usually recommended," but discards quinin. To quote the final paragraph:

"Among the predisposing causes of heat apoplexy Dr. Moussoir mentions the horizontal position, contending that the heat-rays, both direct and refracted from the ground, have thus a much larger surface to act on. This would seem to supply an argument against the Indian practise of taking a siesta during the heat of the day."

A Hydraulic Cannon.—A novel plan for imparting an enormous velocity to a projectile has lately been the subject of experiment by Edward Hoyle. As described in *Ingenieurs Civils* (Paris), his method is to use a tube about five feet long having at one end a powder-chamber and at the other end a portion of narrower diameter. While the main body of the tube is about two inches wide, the width of this narrowed part is only about half an inch. The main tube is filled with water and the projectile is placed in the smaller end of the tube. "Things being thus disposed, if the powder is ignited, the explosion acts on the water, which, in turn, acts on the projectile, driving it out at a speed which is to that of the water in the inverse ratio of the squares of the diameters of the two parts of the tube, or 16 to 1. In fact the projectile pierces a steel plate 10 millimeters [$\frac{3}{8}$ inch] thick at 2.40 meters [8 feet] distance. Tresedder's formula indicates for these data a speed of 4,500 meters [14,760 feet] a second. The water may be replaced by a powdered material; the inventor has thus used white lead. The charge was 150 grams [2.772 grains] of sporting powder, which should give to the white lead a velocity of about 280 meters a second. This, multiplied by the ratio of the sections, makes 4,500 meters for the projectile. It is even probable that we might abandon powder altogether and that a strong man wielding a hammer of 6.5 kilograms [14 pounds] might give to a Lee-Netford ball a velocity of 1,800 meters [5,904 feet] a second. Without following the writer into the remarks that he makes regarding a complete reform of the artillery based on these facts, it seems a matter of general interest to give them thus in abstract."—*Translation made for THE LITERARY DIGEST.*

Candy and Jam in Army Rations.—The Germans about ten years ago introduced the use of candy into the diet of their soldiers. "The idea," says *The Medical Record*, April 7, "was the outcome of experiments undertaken by the German Government. It was demonstrated that the addition of candy and chocolate to the regular ration greatly conduced to the improvement of health and endurance of the troops, and at the

present time the army authorities in Germany issue cakes of chocolate and a limited amount of other confectionery. The British were the next to follow this example, and the Queen, as has been extensively advertised, forwarded five hundred thousand pounds of chocolate in half-pound packages as a Christmas treat for the soldiers in South Africa. Jam has also found great favor with the British War Office, and 1,450,000 pounds have been despatched to South Africa as a four months' supply to 116,000 troops. The United States is following in the same path, and candy has been added to the regular army ration of the American soldier. It is stated that one New York firm has shipped more than fifty tons of confectionery during the past year for the armies in the Philippines, Cuba, and Puerto Rico. The candy supplied is of excellent quality, consisting of mixed chocolate creams, lemon drops, coconut maroons, and acidulated fruit drops. These are packed in tins specially designed to fit the pockets of a uniform coat. The question of providing jam with the army ration is also under consideration."

Future Population of the Great States of Europe.—A German economist has recently published a statistical study that proves, as he asserts, that Russia is increasing in population more rapidly than any other European country; it doubles its population in forty-five years. For the same result, he says, as quoted in *Cosmos* (March 31), "65 years is necessary in Germany, 70 in Austria, 45 in England, and 110 in Italy. France would take 860 years to double its population, even if the present annual rate of increase were maintained, which, unfortunately, is not probable, since it shows a tendency to diminish. The loss of Alsace-Lorraine, with 1,200,000 inhabitants, is perhaps less regrettable, from the point of view of national power, than the insignificance of the annual increase of population. During the last five years the population of the German empire has increased by 3,000,000 souls, while that of France has increased only by 175,000; and even this small increase was due in part to foreign immigration."—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

A CONVENTION will be held at Naples from April 3 to April 6 next to discuss tuberculosis from the point of view of public health, so we are told by the *Revue Scientifique*. It will include three sections, respectively, of etiology and prophylaxis, of pathology, and of therapeutics. A hygienic exhibition will be held in connection with the meeting.

FROM RUSSIA comes the news, according to a note in *Popular Science News*, that Professor Norkshewski has invented an instrument the principle of which is the sensitiveness to light of selenium and tellurium, both of which change their quality as conductors of electricity with a variation in the light to which they are exposed. "In stating that the blind can see by this instrument, a relative meaning only is indicated. While their actual vision will be unaffected, they will feel the various effects of changing light by its action. It is claimed that a totally blind man has been enabled to find the windows in a room, and after some practise to distinguish approaching objects. The inventor hopes to make the instrument so efficient that the blind will be able to tell almost certainly when they are approaching an opaque or transparent substance."

THE important part that electricity will play in the modern house is shown, according to accounts in the daily press, for the first time in the equipment of "Villa Julia," a residence now building on Riverside Drive, New York. "One of the new features of this up-to-date home will be an automobile room, and in addition there will be arrangements for lighting, heating, cooking, washing, ironing, drying clothes, ventilation, electric fans, elevator, sewing-machines, bells, fire-alarms, telephone, phonographs and kinetoscopes, all by electricity. The owner has devoted considerable space in his \$1,000,000 house to his carriages, and has arranged to have a connecting wire from the Edison Company, and will charge his own vehicles." While it has been the fashion in Paris for several years to have an auto-room in a dwelling, this house is probably the first one in this city to contain this feature.

A MACHINE designed especially for cutting rubber has recently been invented in Germany. It may also be used for cutting such materials as celluloid, felt, asbestos, and wax cloth. "Altho apparently only a knife device," say *The Scientific American Supplement*, "it differs in this respect that the lever does not turn on a simple pivot, but is guided in slots. A slot bearing is fixed to both sides of the table so that the cloth under the knife can not shift laterally. The cut is therefore always in a vertical line, and at the same time diagonal, as in large paper-cutting machines. This arrangement holds the cloth firmly; but a modification of the machine, whereby a press and cutter are combined, accomplishes this object still more effectually. The device is simple. The journal glides in slotted bearings, and a toothed arc of 45° is fixed to the end of the lever. This arc engages with a vertical rack, guided in the frame of the table so as to glide up and down. The depression of the lever knife raises the rack, which in its turn urges the press downward. The material is thus always under pressure when being cut, and no adjustment for height is needed."

THE RELIGIOUS WORLD.

PRESBYTERIAN CREED REVISION.

TEN years ago the liberal party in the Presbyterian Church made a determined effort to get rid of certain portions of the Westminster Confession, but found the power of the conservative element too strong. Now another effort is to be made either to revise the Confession or to dispense with it altogether. It is impossible as yet to gage the relative strength of the two parties. One of the latest expressions of opinion is by Dr. Charles H. Parkhurst. In a sermon, quoted in *The Independent* (April 19), he said:

"It is obvious that Christianity, which is of all things the most personal, is an affair of the heart and only contingently an affair of the head. You may not have noticed that the word 'brain' does not once occur in the Bible, while the word 'heart' occurs more than a thousand times. One of the most unfortunate mistakes ever made by the Christian Church was to slide into the habit of identifying Christianity with theology. . . . We ought to have a new Confession of Faith. It is surprising that the Presbyterian Church is able to do as much as it is doing with such an incubus strapped upon us as we are tottering under to our present Confession. In the first place, the thing needed is not a system of theology, for that is what our present Confession is; but a simple, brief Saxon statement of a half dozen or so of the vital ingredients of Jesus Christ's message to the world.

"I could get along with a Confession of Faith containing little but what Jesus said when He was trying to make a Christian of Nicodemus: 'God so loved the world that He gave His only-begotten Son, that whosoever believeth in Him should not perish, but have eternal life.' That gives to us the doctrine of God's unlimited love, human guilt, the divinity of Christ, salvation through Christ, faith in Christ, immortality: every word [sic!] Saxon, three quarters of the words monosyllables, profound enough for any elder, simple enough for any four-year-old. At any rate we want a new creed."

The Independent, which remarks that "the Baptists get along very well without any" creed, thinks that if the Presbyterian Church must have a creed, the present is a fitting time to formulate it:

"The time for removal of errors is always; and now revision of some sort begins to be exigent. The Presbyterian Church is suffering for it. The arguments for it are those of truth and charity; the argument against it is that it will delay union with the Southern Presbyterian Church, which is not yet ready for revision. But we doubt very much if revision is the best course to be pursued. Let the old Confession remain as a historical document. It expressed the views of the Westminster Assembly. It answered its purpose then. It was a noble but faulty document. It gave forth all the light its makers had. Put it where it belongs, as an expression, not of what we must believe, but of what its makers believed. They did grandly to express their own faith, but they had no right to enslave our faith, any more than God has a right to enslave our will. There is no nobler intellectual work that a man can do than to formulate what he believes about God. Theology is the noblest of the sciences—a man of intelligence ought never to tire of making creeds for himself. He ought to revise his creed every year. A man's conduct, and so his religion, depends on what he believes about the relation between God and man. More evidence, more discovery, more study, more enlightenment from the Holy Spirit will change his belief, his creed, and so affect his religious duty. We would leave the formulation of a creed to each man's own conscientious study; but if the Presbyterian Church must have a creed—and we suppose it is not yet prepared to do without one—let it formulate a short working creed, one for union, not division, which shall put in the faith of the Gospel and leave out Calvinism, and so be helpful toward the great fellowship of Christendom."

While the Presbyterian Church South is commonly admitted to be far more conservative on all points of doctrine than the Northern body, the Presbyterians beyond the sea are much less

so. In 1892, at the very time when the Presbyterian Church in the United States was repudiating revision, the General Synod of England adopted a revised creed as an alternative for the old Confession, as did also the Scottish Church. In the new creed, which contains twenty-four sections, no mention is made of preterition or of limited atonement; nor, as in the Westminster Confession by implication, of the eternal damnation of non-elect infants. Instead of the damnatory clauses of the latter creed, section xvi., "Of Sanctification and Perseverance," says of Christ's people: "If, departing from God through unwatchfulness and neglect of prayer, any of them lapse into spiritual languor or fall into grievous sins, yet by the mercy of God, who abideth faithful, they are not cast off, but are chastened for their backsliding, and through repentance restored to His favor so that they perish not."

The declarations concerning limited atonement in the Westminster Confession were unwelcome to a large party in the church as long ago as 1797, when chiefly for this reason the Cumberland Presbyterian Church was formed in the regions about southwestern Kentucky. The *Cumberland Presbyterian*, official organ of this body, therefore naturally sympathizes with Dr. Hillis in his recent denunciation of the Confession. Referring to these denunciations, it says (April 12):

"No Cumberland Presbyterian who holds the views above quoted would be in danger of a heresy trial. The doctrine at which Dr. Hillis aimed his philippics is no man of straw. That doctrine is in sections three and four, chapter three, of the Westminster Confession of Faith, which every Presbyterian preacher must 'sincerely receive and adopt.' . . . Heretical as Dr. Hillis probably is on some other vital doctrines of our common faith, he has not only spoken the truth about the awful doctrines of reprobation, but he is in accord with a vast majority of the members and ministers of the Presbyterian Church. As one contemporary, *The Standard*, aptly puts it 'One would be inclined to say that few Presbyterians now hold to the doctrine of reprobation as stated in the Confession, if it were not for the stir which Dr. Hillis's utterance has made in Chicago.'"

The Rev. Samuel T. Carter, in *The Evangelist* (Presb., April 5), writes

"It must be admitted that if a church is honest, that which stands in its Confession is its faith. It must be acknowledged that what is contained in its Confession is the faith of any honest church. The Westminster Confession of Faith is still the unquestioned Confession of the Presbyterian Church. Is the Presbyterian Church honest in its zeal for purity first and peace afterward? . . ."

"Be it known, then, to all the world that the Presbyterian Church by its Confession declares that all the heathen perish, that many men are hopelessly lost from all eternity by the decree of God, and that there are infants in hell. Can the church not be persuaded to stop prosecuting its scholars about the authorship of Isaiah or verbal inspiration, and to attend to these most serious matters?"

"In reality the church does not believe these dreadful doctrines. Then it stands before God and man with a lie in its right hand. It is in the awful predicament of having to choose between heresy and falsehood. Why does it not at once escape the miserable dilemma by formulating a simple creed that it can and does genuinely believe?"

The Christian Observer (Presb., April 11) takes the view that the church should stand by its ancient creed despite Dr. Hillis's "most violent and vituperative language." His withdrawal when he no longer agrees with the Westminster Confession is, it says, "simply the right and proper thing."

The Christian Intelligencer (Reformed Church), which is also an adherent of Calvinistic doctrine, thinks that no good can come to the Presbyterian Church "from a revival of a debate which is almost as old as the Christian Church":

"Logically the supremacy of God and the dependence of men on God lead to foreordination or election. That God elects is

THE ECUMENICAL CONFERENCE ON FOREIGN MISSIONS.

The great missionary conference which is in session this week in New York is the third world-conference held in the interest of foreign missions, and already it appears likely to exceed in numbers and importance any previous gathering of the kind.

The *Philadelphia Bulletin*, referring to the prominent parts taken on the opening days of the conference by President McKinley, former President Harrison, and Governor Roosevelt, calls the gathering "a concrete representation of the militant

Protestantism of the United States." The *New York Tribune* terms the conference "one of the most important religious gatherings of the present generation." The *Brooklyn Eagle*, however, calls attention to the fact that the name "Ecumenical" is a misnomer; since in the conference the 223,000,000 members of the Roman Catholic Church and the 119,000,000 members of the Oriental churches are not represented at all—only the 150,000,000 Christians who make up the Protestant bodies.

1. RT. REV. W. C. DOANE, D.D., LL.D.,
Bishop of Albany, Vice-President Foreign
Missionary Society Protestant Episcopal
Church in United States of America.

2. BISHOP J. M. THOBURN, D.D.,
Missionary of the Methodist Episcopal
Church for India and Malaya.

3. REV. JUDSON SMITH, D.D.,
Chairman of the General Committee, Sec-
retary American Board of Commissioners
for Foreign Missions, Boston.

4. REV. HENRY N. COBB, D.D.,
Chairman of Executive Committee, Sec-
retary Board of Missions of Reformed
Dutch Church in America, New York.

Secretary of the Church Missionary Soci-
ety, London.

PROMINENT LEADERS IN THE ECUMENICAL CONFERENCE.

also distinctly recorded in the Scriptures, and moreover, is supported by the theory of evolution. The Arminian view which substitutes foreknowledge for election does not relieve the matter a whit, for there can be no foreknowledge unless the event is certain, and certainty depends on the fact that the act or whatever it may be has been determined by omnipotence. But the Scripture as well gives space to human choice or free will, and in the administration of God men have been treated as free agents and held responsible for their choice. God has exhibited in the government of the world an amazing regard for the freedom of the will of man. No attempts to reconcile divine sovereignty and the freedom of the human will have succeeded. It is well to remember that secret things belong to God, and the things that are revealed belong to us and our children."

CAUSES OF RELIGIOUS DECLINE AS SEEN IN THE PEW.

IN his recent book, "Why Men Do Not Go to Church," Dr. Cortland Myers finds three reasons for the decline, so frequently noted of late, namely: faults of the church, faults of the man, and faults of society. But Rev. M. S. Young, in an article in *The Lutheran Quarterly* (April), seems to think that the faults of the ministry are unduly emphasized, and the causes should be traced directly to the pew, where a spirit of irreverence is becoming more and more manifest. In fact, he claims that the pew is an enemy against which the pulpit has to combat. He says: "Quite enough has been written on the weakness and declension of the pulpit. Its failings may be admitted, but in magnifying them there is danger of losing sight of obstacles to the church's progress to be found in the pew. It is not amiss to inquire whether the cause of religion may not be sadly hurt and hindered by incompetency, neglect, and devilishness in the pew. The time has come for the discussion of causes of declension in the pew, elements of power or weakness in the congregation, the dead-line among church-members, and kindred themes."

Of these causes, the first to be discussed is ignorance. The lack of knowledge of the fundamental truths of the Bible, more prominent in city than country life, is, he thinks, a menace to the spiritual welfare of the world. Where formerly Bible instruction was an important feature of all education, it is now considered "old-fogyish" by many, and there is a deplorable neglect of religious study. Among one hundred students to whom a series of experimental questions were submitted, only eight pupils answered all correctly, while only thirteen were even approximately correct. The cause for such ignorance, thinks Dr. Young, is that parents are neglectful and indifferent to accurate Scriptural knowledge. Even the school text-books systematically avoid mentioning the name of God. He writes:

"There has been a loss in loosening the reins of family government which in times past required the memorizing of Scripture in youth. The knowledge of God's word gained in the home and church is the influence to which many of our greatest men attribute the shaping of their characters and their usefulness in life, but the methods of instruction which had such beneficent effect in days gone by are no longer popular. The lack of Scripture knowledge in the pew, and the neglect of the use of means by which true enlightenment may be received, continue in spite of the entreaties from the pulpit to give attention to family instruction and the offers of ministers to teach the young.

"The awaking of some of the leading educators of our country to a sense of the peril involved in the neglect of the moral and religious training of the young, is a hopeful indication. Words of warning are spoken by such scholarly and influential teachers as President Harper of Chicago University, who says: 'It is difficult to prophesy what the result of our present method of educating the youth will be in fifty years. We are training the mind in our public schools, but the moral side in the child's nature is almost entirely neglected. The Roman Catholic Church insists on remedying this manifest evil, but our Protestant churches seem to ignore it completely. They expect the Sunday-

school to make good what our public schools leave undone, and the consequence is that we overlook a danger as real and as great as any we have had to face.'"

Speaking of the encroachment of materialism, Dr. Young makes special reference to the power of the saloon. "Are there not," he asks, "congregations which will have no word of censure spoken to the friend of the saloon in the church? Are there not congregations which bridle the tongue of the pastor, forbidding him to utter words of denunciation against the rum traffic?"

An evil next in importance to ignorance among the pew-holders is their irreverence, growing out of the conception of the church as a place of entertainment, where the sermon should be short and racy, and the music as nearly operatic as possible. Dr. Young quotes "Ian Maclaren" (Dr. Watson) who says:

"The center of thought has shifted from eternity to time. . . . The ancient fear of God seems to have departed entirely and with it the sense of the unseen which once constituted the spirit of worship. . . . The church triumphed by her faith, her holiness, her courage, and by these high virtues she must stand in this age also. She is the witness of immortality, the spiritual home of souls, the servant of the poor, the protector of the friendless, and if she sinks into a place of second-rate entertainment, then it were better that her history should close, for without her spiritual visions and austere ideals the church is not worth preserving."

Of the pulpit and the demands made upon it, Dr. Young writes:

"Truth is truth forever and it is to be presented as it is in Christ, who is eternally the same. Sin is essentially the same in every age, and its consequences are the same, but it changes its forms and becomes necessary to apply the truth to changed moral conditions. So it is the duty of the pulpit to study the attitude of Christ toward present-day problems, and declare the will of Christ to this generation in such manner as will meet the peculiar needs of the age.

"The pulpit of to-day must not ignore the demands justly made upon it for support in proper movements for the relief of the suffering and oppressed. It must not speak in a half-hearted, apologetic sort of a way of Sunday rest, of child labor and women labor. The active support of the clergy must be enlisted in the work of investigating and lessening the evils of such abominations as the sweating system and the saloon. Wise and proper movements in the interest of social and political reform deserve from us something more than listless well-wishing."

How Dr. Gladden Would Edit a Newspaper.—

The Rev. Dr. Washington Gladden, of Columbus, Ohio, thinks that Mr. Sheldon's recent editorial experiment was a praiseworthy one, and that most of the criticisms bestowed upon him were the result of misapprehension of his purpose and spirit. That purpose was "as far from any assumption of exclusive or superior Christliness as the East is from the West." But Dr. Gladden's idea of what a newspaper should be differs in a considerable degree from that apparently held by Mr. Sheldon. The former would have it not "goody-goody," but "the brightest, breeziest, liveliest, wittiest newspaper in the community." He writes (*The Independent*, April 5):

"Ruling out filthy details of vice and crime, I should say that any subject in which the people at large are greatly interested is news, and ought to be reported and discussed in a Christian daily paper. Take the theatrical news, for example. Mr. Sheldon ruled it all out. I should have the theatrical performances all reported, and criticized, not from the standpoint of the box-office, but from that of the highest and purest dramatic art. The drama is a great interest of human life; it is capable of great public service; it is now the source of great public injury; it ought to be regenerated. . . .

"This is simply an illustration of what I mean by saying that the Christian newspaper ought to deal with all great public interests. The newspaper can not undertake to dictate to the people what they shall be interested in; the fact that they are deeply

interested in anything whatever is a matter with which it must concern itself. It may be necessary to show them that the thing which they care so much about is a thing unworthy of their thought; keen criticism of popular fads and social tendencies is one of the newspaper's great functions."

A "LIBERAL CATHOLIC" VIEW OF DR. MIVART.

DR. ST. GEORGE MIVART'S death last month while still under the ban of his church for the opinions expressed in his recent articles (see *THE LITERARY DIGEST*, February 3, 17, March 3, 31) has called forth only sympathetic and charitable comment from both the Protestant and Roman Catholic press. Journals of the latter faith express the belief that what they term Dr. Mivart's heresies, after almost half a century of honored membership in the church, may not improbably have been the result of advanced age and declining mental powers, and express the hope that in his last moments he returned to the faith. Indeed, if he were honest in his opinions, one Roman Catholic journal remarks, "he was all right," as Father Lambert said of the late Colonel Ingersoll.

What is entitled "a liberal Catholic view" of the English scientist appears in *The Nineteenth Century* (April) from the pen of Mr. Robert Edward Dell, late editor of *The Weekly Register*, the liberal Catholic rival of Cardinal Vaughan's organ, the *London Tablet*. Dr. Mivart's case, says Mr. Dell, is only one phenomenon "arising from causes which have long been active." Dr. Mivart was the last of the race of eminent converts made up of such men as Faber, Manning, Newman, Oakley, and Arnold. The intellectual vigor and mental breadth of conception of the church's mission introduced into the Roman Catholic body in England by these men—raising it from an obscure sect to an important religious body—have gradually ebbed away, Mr. Dell says, as these great spirits have one after another departed. This process "is now complete":

"Any one who surveys the history of the Catholic Church during the last sixty years can not but recognize the fact that there is a party which is dominant and has in course of time succeeded in gaining a firmer and firmer hold on the machinery and central government of the church. The members of this 'prominent party' (to use the name given to it by an English Catholic bishop) have succeeded little by little in crushing those who opposed them, and in silencing and nullifying those who have no sympathy with their tendencies and their peculiar doctrines: they have made it their aim to destroy originality and initiative and stifle independent intellectual activity, and they have succeeded too well. This party has felt all along the danger of the infusion of new blood, whatever may be its desire for converts who can be led captive at the wheels of its own chariot. In England we have seen John Henry Newman, a prophet sent from God to the Anglo-Saxon race, hampered in every direction, thwarted and misrepresented, and only not driven out of the church because he would not be driven out, by a party of which Cardinal Vaughan was an ardent adherent. Altho Newman received a cardinal's hat from Leo XIII. in the early days of the present pontificate, and his own position was thus happily secured, the general situation was not altered; nor were the feelings of profound distrust in certain quarters in his regard. It is, after all, against the principles and the teaching of the 'Essay on Development' and the 'Grammar of Assent' that the strenuous efforts of the dominant party are directed.

"The party of which I speak is, of course, made up of different elements and various kinds of personalities, but the important matter is to lay hold of what I may call its motive-power, both intellectual and practical; that without which its diverse elements would form a mere mob, wanting in cohesion as well as in tact and intellectual force; that which makes this party (of which it is the backbone) an object of interest and a useful subject of investigation alike to private individuals who value the intellectual and moral progress of Christian nations, and to the states-

men who guide the national destinies. That motive-power is incorporated in the Society of Jesus."

Mr. Dell claims that there has been a deliberate, thoroughly systematized plan on the part of the Jesuits to control and direct the theological trend of thought in England, with a view of ultimately converting and holding England itself, and, through its vast power and empire, of throwing its weight throughout the world in favor of Roman Catholicism. "At the present day the presses are pouring forth one course after another of theology, dogmatic and moral, and of philosophy, by members of the Society of Jesus, written in Latin. These manuals are increasingly used in the seminaries and by the clergy, and are very proper to create an artificial 'consentient teaching' which can eventually be put forward as the voice and the witness of the church throughout the world." But the "deliberate scheme" does not end with theology and philosophy; the Jesuits are applying their *a priori* method, says Mr. Dell, to economics and even to science, and endeavoring to bring these realms also into conformity to "the vivifying intellectual ideas of the Society of Jesus." This is not a Jesuit bugaboo, says the writer; people who doubt the reality of secret Jesuit machinations have only to turn to information "perfectly accessible to any one who reads Latin, has a finely trained intellect, and will recognize the need of mastering the preliminary difficulties."

Dr. Mivart, according to Mr. Dell, was one of the first to feel the heavy hand of the new school of Roman Catholicism which has come into fuller life in England since the death of Newman and Manning, and which, he says, seeks to reduce all intellectual and theological inquiry within the iron bounds of the "Summa" of St. Thomas of Aquin:

"The dominant school, instead of going out into the world to do battle with the ideas of modern philosophy, prefers to attempt to prevent those ideas from gaining an entrance into the minds of Catholics. It is a policy of despair. Their rusty and antiquated weapons have failed them, they have been driven back into their own entrenchments, and as a last hope they have taken refuge from the modern artillery in an underground cavern, the atmosphere of which is becoming so stifling that they can no longer control their subordinates, who are forced to come out one by one into the open air to escape from being asphyxiated. Intelligent Catholics are more and more coming to realize the futility and uselessness of their theological schools, and the inability of their apologists to defend them when they are attacked or to justify their position; left as they are to shift for themselves and to form their own synthesis as best they may, they are more and more ceasing to look to the official exponents of Catholicism for help in finding their way through the intellectual difficulties of modern times."

Mr. Dell believes Father Clarke wrong in his assertion that the doctrine of the church has never undergone and can never undergo modification (see *THE LITERARY DIGEST*, March 3). Dr. Mivart has indeed not distinguished between matters of faith defined by the church and current opinions; but that is the very mistake of the school to which Father Clarke himself belongs: "It is they who are forever insisting that their theological opinions are proximately *de fide*, and that there is practically no difference between them and defined dogmas." The writer continues:

"Dr. Mivart finds, as every student of history finds, that the 'consentient teaching' of the theologians of one age has been 'set on one side' by the theologians of another; that opinions once commonly regarded as essential are now held by nobody; that (as in the case of Aristotelianism) one pope has sanctioned what a previous pope had condemned. It is the fault of Fr. Clarke and Fr. Smith and their friends if those who discover these facts conclude that even defined dogmas may turn out to be non-essential and may be abandoned. . . .

"What the outcome of the present situation will be it is, of course, impossible to foretell. But a salient feature of the situation is the fact that the central government of the church is al-

most entirely in the hands of Italians who naturally share the characteristics of the race to which they belong. And the Italian mind finds the Teutonic and Anglo-Saxon mind almost impossible to understand. 'They know so little of the English character,' said Cardinal Newman, 'and have so little tact (as much as I should have in dealing with the Sepoys) that they may give great offense, as soon as ever they emerge out of the vague terms of courtesy and kindness which Christian charity will elicit from them at the outset.' Of the truth of this judgment (which was shared by Cardinal Manning) we in England have had more than one confirmation in recent years."

IS OUR NEW-TESTAMENT TEXT RELIABLE?

FOR years scholars have pointed to the resultant investigations chiefly of Tischendorf, Tregelles, and Westcott-Hart, in producing, in spite of the two hundred thousand variants of the Biblical manuscripts, a practically uniform Greek text of the New Testament, as one of the greatest achievements of the scholarship of any age. Indications, however, are increasing to show that this joy has been premature, and that a movement is on foot that may lead to a complete revision of the principles that have been currently accepted in New-Testament textual criticism. One of the greatest scholars of the age in this department, Dr. von Gebhardt, in the *Theologische Literaturzeitung* (Leipsic, No. 26), gives us a description of the controversy from which we take the following facts.

It has become more and more evident, says Dr. Gebhardt, that a radically new departure is making itself felt in reference to the New-Testament text. Ridicule of the investigations of such men as Tischendorf and Westcott and Hart is heard. The new movement is based on the rejection of the canon which had become supreme, namely, that the famous old Codices Vaticanus and Sinaiticus constitute the most reliable basis for the construction of the New-Testament text. These codices must, it is said, be abandoned in favor of a peculiar codex commonly known as the Codex Bezae, found in Canterbury, which contains so many strange and divergent readings that the donor, Beza, thought it best to ignore them. Quite a number of scholars are now beginning to show a decided preference for this Codex D, as it is also termed, the leader in this movement being the philologist, Professor Blass, of Halle, who several years ago, on the authority of this code, claimed that St. Luke had published two separate editions of his Gospel and the Acts, one in the shape in which our Bibles contain it and one in a revised shape, with additions, as found in the Codex Bezae. This opinion won the favor of such leading scholars as Professor Zöckler, of Greifswald, and Professor Zahn, of Erlangen, and secured a warm defender in Dr. Nestle. The latter has in his book ("Einführung in das Griechische N. T.") advocated the complete revision of the New-Testament text along the line of the variants contained in the Codex Bezae, altho the exact principles of this proposed revision can not yet be formulated. He speaks of the veneration for the so-called older manuscripts as superstitious, and thinks that this Codex Bezae, which the builders have rejected, will become "the head of the corner" in the new structure of the New-Testament text.

Gebhardt expresses decided dissent from the proposed innovation, and regrets that the work of decades is thus again called into question.—*Translation made for THE LITERARY DIGEST.*

DURING the recent special session of the Protestant Episcopal House of Bishops in New York, the bishops were invited to take luncheon at the Players' Club with Bishop Potter, who is an honorary member. The bishop arranged to have the luncheon served in the grill-room. Says the *New York Sun*:

Just after the bishops had seated themselves at the tables, two members of the club who hadn't heard about their visit came in for luncheon and made for the grill-room. They were stopped by one of the club servants, who told them that members would be served with their luncheon upstairs.

"What's the matter with the grill-room?" asked one of the men.

"The House of Bishops is lunching there to-day," was the answer.

"Who?" inquired the club member.

"The House of Bishops," was the answer. "Bishop Potter and all the other bishops in the United States."

"Great Scott!" exclaimed the club member. "I suppose that, dating from to-day, the stage will be considered to have been properly elevated."

FOREIGN TOPICS.

THE ATTEMPT TO ASSASSINATE THE PRINCE OF WALES.

THE lad of sixteen who attempted to assassinate the Prince of Wales in Brussels April 4, had apparently had his head turned by anarchist lectures and literature, and will probably be sent to a reformatory school. The incident would have no importance were it not that experience has shown that other addle-headed fellows are encouraged by such deeds to repeat the experiment. Hence the British papers, mindful also of the attempt to shoot the Emperor of Russia, doubt that it would be wise for members of the British royal family to visit the present Paris Exhibition. *The Saturday Review* (London) says:

"The assassinations of the late Empress of Austria and the President of the French Republic are cases in point. The prince has most happily escaped, and it is natural to wish not to make too much of the matter. Unfortunately, it throws forward as well as backward. This kind of thing is unquestionably infectious; and one can not shut his eyes to the opportunity the Paris Exhibition would afford to minds mentally and morally diseased, excited and stimulated by Sipido's attempt. Ought the prince to run the risk which would attend the fulfilment of his intention to visit Paris at Whitsuntide?"

A large number of British papers find in the occasion reason for complaint against the continental press for the tone in which they have been speaking of England since the war in South Africa began. The press of different continental countries, so we read in *The Times*, *The Standard*, *The Daily Mail*, and other influential English papers, has been subsidized by Dr. Leyds, and all but the educated foreigners have a wrong conception of England's aims. *The St. James's Gazette* says:

"We should wish rather to think that the persons of our royal family may, and will be, shielded by the force of public opinion abroad, and that those who have directed that opinion into wrong channels may now stand aside and bethink themselves. In ordinary circumstances we should not have expected an attack of this kind to be made by a Belgian subject. Belgium owes her national independence to the enlightened policy of Her Britannic Majesty's Government in the past. France, of course, has a different history. And is it to be concluded that on French soil our royal family is likely to be safer than in the Belgian capital? Is it reasonable to suppose, if the station-master at Brussels was unable to prevent a would-be assassin from obtaining access to the platform, that the Parisian police will be better able to protect the lives of visitors to the Paris Exhibition? We fear that there is but one conclusion to be drawn. It is that his royal highness the Prince of Wales will be well advised to follow the example of his illustrious mother, and to find in the circumstances attending the war in South Africa a valid reason for remaining for the present among Her Majesty's people at home."

Lloyd's Weekly, one of the papers from which the masses in England draw their information, says:

"The attempt of the young miscreant Sipido to shoot the Prince of Wales can not be regarded as an act of boyish folly, on account of the attendant circumstances. He was, without doubt, supplied with the means to purchase the revolver, and his own admissions, coupled with the papers found on him, point directly to pro-Boer influences. . . . A foreign press, bribed with Pretorian gold, has found no charge too atrocious to print against us, and the Boer leaders in South Africa have delighted in reiterating the falsehoods. All this goes to prove the allegation that the Boers are only a half-civilized people, and one result is certain—namely, that when the inevitable triumph of our arms comes these semi-barbarians and their unscrupulous Hollander advisers must of necessity be deprived of the powers they have misused, and rendered utterly incapable of ever again imperilling the peace of South Africa."

Despite some resentment kindled by these charges, the press

of the Continent express sympathy for the prince and rejoice that he was not injured. The *Petit Bleu* (Brussels) says:

"Nothing but temporary insanity could have caused so dastardly an attempt at assassination upon a prince connected with the royal house of Belgium, and who personally has no influence whatever upon the policy of the British Government. It will not be easy to discover any connection between this outrage and the peace demonstrations in Belgium."

The Amsterdam *Handelsblad*, however, says:

"The night before the attempt, a group of Socialists had engaged the Flemish Theater to protest against the Boer war. The meeting was opened by M. Volkaert, who gave a short review of the futile attempts at arbitration, and ended his discourse by saying: 'It is now the duty of the nations to protest. The Prince of Wales will pass through Belgium to-morrow. It is necessary to inform him that the people of Belgium are advocates of peace.' It is not impossible that this remark may have influenced some weak-minded persons to the extent of attempting assassination."

In the Belgian Chamber several members took occasion to remark that disapproval of the deed of this harebrained boy did not mean approval of England's attempt to crush a free people. The Manchester *Guardian* remarks to this:

"Most Belgians will, we think, be sorry that any members of their Chamber of Representatives should have mingled criticism of British policy in South Africa with their expressions of regret for the attempt to murder the Prince of Wales. In face of attempts at murder all sane men and loyal citizens of their own countries should be at one in treating their censure and prevention as elementary points of duty, not to be obscured or confused by any consideration of the politics, or supposed politics, of the objects of such outrages, or of their countrymen or friends. Nothing can be more detestable than the practise of saying, when a man is the victim of some cowardly crime: 'Yes, it is outrageous and intolerable, but then we must remember that he represented, or may have been taken to represent, a policy which human nature can scarcely be expected to view calmly.' Professor Dicey rightly rebuked Mr. Balfour the other day for palliating in this way the attempts of criminal or senseless people to lynch Mr. Cronwright-Schreiner and others at the instance of newspapers of a low type. The rebuke, it seems to us, is also deserved by those Belgian deputies who sought yesterday to treat the question of the justice or injustice of the South African war as relevant to the question of expressing sorrow at a murderous attack on a friend and guest stepping over the threshold of their capital."—*Translations made for THE LITERARY DIGEST.*

FROM THE "STORMY CORNER" OF EUROPE.

OF all the restless nations which have been freed from the Turk during the nineteenth century, Bulgaria remains the most ambitious. That the Bulgarians would to-day submit to Russian rule, few, if any, even of the most jingoistic Pan-Slavists will assert. But under the shrewd Coburger, who has replaced the unfortunate Alexander of Battenberg, Bulgaria has never ceased to be a valuable card in the hands of Russian diplomats—for a consideration. It is now asserted that Prince Ferdinand has made new concessions to Russia, and that the bait held out to him is a royal crown. The *Pechta* (Sofia) has the following to say:

"It is now established beyond question that a secret treaty has been concluded between Russia and Bulgaria. Its most important stipulations are that Bulgaria is to be elevated to the rank of an independent kingdom, and that Macedonia shall be divided between Bulgaria and Montenegro. The Bulgarian and Montenegrin forces will be, in time of war, added to the Russian army. Part of the port of Burgas will be 'leased' to Russia for a period of fifty years, to be used as a naval station. Russia agrees to lend to Bulgaria \$25,000,000, and the Bulgarian Government promises to remove all anti-Russian elements from the army and the administration."

The *Kölnische Zeitung* (Cologne) points out that this would

be in violation of the treaty of 1898, between Austro-Hungary and Russia, as well as of the Berlin convention. There is no doubt, however, that the Bulgarians are again trying to stir up the Macedonians; but the Sofia authorities are very reticent, and the Russian agent there still more so, as the following item from the *Frankfurter Zeitung* shows:

"Of the intended lease of a naval station at Burgas, there seems to be no doubt. The port is not ceded outright to Russia, because the Bulgarian constitution forbids increase or decrease of territory unless sanctioned by Parliament. Nothing more detailed is heard of the secret treaty; but, as it leaves room for all sorts of eventualities, the Turkish Government is suspicious. The Russian representative is a very discreet man. If he is visited by his diplomatic fellow agents with a view of 'pumping' him, he generally asks: 'Will you have a drink?' He keeps a very good glass of *vodka*, but he will not answer prying questions."—*Translations made for THE LITERARY DIGEST.*

DELAGOA BAY AWARD.

THE decision of the Swiss court of arbitration in the Delagoa Bay railway dispute elicits expressions of disappointment from most English papers. It was hoped that the heavy fine which Portugal might be made to pay would lead to the acquisition of Delagoa Bay by England. The award—a little over \$5,000,000, adding the five-per-cent. interest since June, 1889—is not large enough to seriously disturb the finances of even so poor a country as Portugal, and Portugal can not be easily deprived of her colony by reason of this claim. The *Standard* (London) says:

"As things stand, we have nothing but a right of preemption, and an understanding that, if Portugal ever sells Delagoa Bay, we shall receive the first offer. It has often been hinted that the opportunity for acting upon this agreement would arrive when the Berne decision should be given. But, embarrassed as Portuguese finances normally are, it is possible that the Government of Dom Carlos may be able to find the inconsiderable sum payable under the award, without rousing an angry agitation in the kingdom by alienating any part of its colonial possessions. Still, we do not regard the question as finally settled. Friendly diplomacy may yet achieve what recourse to arbitration has failed to accomplish."

The *Times* (London) hastens to inform Portugal that British capital is at her disposal "should Britain's old ally be in financial difficulties." The *Morning Post* advises Portugal to sell the colony at once to Great Britain, as the Transvaal railroads will soon be British property, when Delagoa Bay will become dependent upon British good will for its trade. Nearly all the jingo papers describe the award as a blow to the policy of arbitration. The *St. James's Gazette* says:

"It is impossible not to compare this state of things with what would have happened in the days before that blessed word 'arbitration' came to the front. A bill of damage would have been made out by the two nations aggrieved, and presented to Portugal for payment. A cruiser might have paid a visit to the Tagus, and a gunboat or two could have appeared at Lourenço Marques. The whole thing would have been over in a month or two without difficulty, delay, or expense. . . . For one thing, at any rate, it gives us good reason to be thankful. That is, that we were not hoodwinked into an agreement with the crafty old Dutchman to submit to arbitration matters in dispute in the Transvaal. We are in a position now to judge in some degree what expedients he would have constantly resorted to in order to complicate issues and delay decisions. The experience born of our relations with Delagoa Bay does not put us in love with arbitration in principle. But in particular it must convince all reasonable men that even if admissible on political grounds, it would have been a worthless basis of agreement between England and the Transvaal."

The *Spectator* is convinced that, tho the sum awarded "is only about half what all reasonable experts expected, it is much more than Portugal can raise." For the rest the paper joins in the

chorus denouncing arbitration. The *Manchester Guardian* is one of the few papers which do not think that the judges were necessarily wrong. It says:

"The gist of many of the press comments on the Delagoa Bay award is that since arbitration in this case has not given us as much as we hoped, arbitration in general is a very bad thing. In the same way it was said when the Venezuela arbitration gave us much the best of the dispute that the principle of arbitration evidently had a great deal in it. These comments seem to rest on the belief that arbitration is a mode of getting without war the most that we could get by war, and that in as far as it falls short of this result and does not give us the fruits of an exercise of our superior force without its dangers and expenses, in so far as it proved to be worthless. . . . We must take the bad with the good, the Delagoa disappointment with the Venezuela gratification. We smile at the litigant who cries out against law and law courts because he has lost a case he thought very strong: we shall do the best by our own dignity if, as a nation, we do not imitate him."

Events (Ottawa) voices the opinion of many when it says that the award will not impress the great powers favorably. It adds:

"A few battle-ships could have forced any amount demanded, or in default the territory concerned, out of the weak little kingdom. By submitting to arbitration the United States and Great Britain placed themselves on an equal footing with Portugal, and as the result shows the weaker power has got the advantage. It may be that the award is just, and that arbitration has saved a weak nation from being imposed upon by two stronger ones, but they are not going to look at it in that way. As in the olden times when there was little justice shown the weak, might still stands for right in the great majority of cases. Where a dispute arises between two nations, the stronger gets the verdict if they are left to themselves to settle it. Where they submit to arbitration, they are on an equal footing and the stronger power has no advantage. If the decisions always went to the stronger power, arbitration would no doubt become popular; but while decisions continue to go occasionally in favor of the weaker, the big fellows will not look with favor upon arbitration."

The Globe (London) declares that the Anglophobes of the Continent have but one idea, and that is to prevent Great Britain from getting hold of the key to the back door of the Transvaal. They do not scruple to strike at the British empire through the pockets of the innocent English and American shareholders. The *Journal des Débats* (Paris) nevertheless thinks that the English are secretly pleased, because further complications would force England to place herself openly in opposition to Germany. It adds:

"If it was thought that Lourenço Marquez would be indirectly transferred to Great Britain, it is also remembered that the Secret Treaty of 1898 stipulated that a large part of the African possessions of Portugal should come under German domination, and that prospect is disagreeable to many Englishmen. It has been noticeable for some time that some people dislike to see this treaty enforced. Since Fashoda and the settlement of the worst difficulties with France there is less need of Germany. When one takes this into consideration, one may well ask whether the explosion of fury attendant upon the Berne award will not, upon second thought, give place to resignation, even secret satisfaction. We have here an immediate disappointment which may give way to reconciliation. Perhaps the English prefer it to a new partitioning with Germany, and a new development of that country's power in Africa."

The *Deutsche Tages Zeitung* (Berlin) believes that the Berne tribunal was largely under British influence, and that it would have given its decision sooner had Lord Salisbury wished it. "But the grapes hang too high for the fox," adds the paper, "for the annexation of Delagoa Bay would immediately be followed by a Russian advance in Asia." The *Journal de St. Petersburg* says:

"Even those papers which mentioned the possibility of combined German and English action have not been able to reveal much, and it would seem that they exaggerated the importance of the treaty. However, the award removes the basis of their

speculations, for the difficulties into which Portugal was to be forced do not now exist."

The *Novoye Vremya* thinks England may demand Delagoa Bay as a guaranty that the award will be paid; but hopes that the United States will not join her in making this demand. The rumor that American capital would be advanced, if need be, to pay the award, causes the *Handelsblad* (Amsterdam) to comment as follows:

"It is curious to see the fury into which some English papers lash themselves at the thought that the United States could obtain a lease of Delagoa Bay. People in London are convinced that the Americans would like to obtain an important point on the east coast of Africa, and Delagoa Bay would just suit. But this would lead to a quarrel, for England regards the Delagoa Bay question as a matter of life and death, especially when the republics have been annexed. If the Americans obtain a foothold, all the intrigues of the past few years will be in vain. Hence these fits of temper."

The *Indépendance Belge* says that Portugal will obtain French capital, should her own resources be insufficient to pay the award.

GROWING CORDIALITY BETWEEN SPAIN AND SOUTH AMERICA.

AN Argentine vessel, the *President Sarmiento*, is cruising off the Spanish coast, and it is well understood that she was sent for purposes of demonstration. Her crew is fêted everywhere in Spain, and the South American papers record the fact with pleasure. Yet this visit has no political importance. "It is merely a family affair," remarks the *Imparcial* (Madrid), and the *Epoca* says:
